ROYAL COMMISSION ON TRINITY COLLEGE, DUBLIN, AND
THE UNIVERSITY OF DUBLIN.

WARRANT APPOINTING THE COMMISSION.

WHITEHALL,

June 5, 1906.

EDWARD, R. & I.

EDWARD the SEVENTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas King, Defender of the Faith, to

Our right trusty and well-beloved Councillor Sir EDWARD FRY, Knight, late one of Our Lords Justices of Appeal;

Our right trusty and well-beloved Councillor CHRISTOPHER PALLES, Lord Chief Baron of the Exchequer Division of Our High Court of Justice in Ireland; and

Our trusty and well-beloved :—

Sir THOMAS RALEIGH, Knight Commander of Our Most Exalted Order of the Star of India, Doctor of Civil Law of Our University of Oxford, Fellow of All Souls College in Our said University;

Sir ARTHUR WILLIAM RÜCKER, Knight, Principal of the University of London, Doctor of Laws, Fellow and late Secretary of the Royal Society of London;

HENRY JACKSON, Esquire, Doctor of Letters, Regius Professor of Greek in Our University of Cambridge;

SAMUEL HENRY BUTCHER, Esquire, Doctor of Letters; late Professor of Greek in Our University of Edinburgh;

DOUGLAS HYDE, Esquire, Doctor of Laws of Our University of Dublin;

DENIS JOSEPH COFFEY, Esquire, Master of Arts, Fellow of Our Royal University of Ireland; and

STEPHEN BARNABAS KELLEHER, Esquire, Fellow of Trinity College in Our University of Dublin;

GREETING !

WHEREAS by Warrant under Our Royal Sign Manual bearing date the first day of July, one thousand nine hundred and one, We were pleased to issue a Commission to inquire into the condition of the higher general and technical education available in Ireland outside Trinity College, Dublin, and to report as to what reforms, if any, were desirable in order to render that education adequate to the needs of the Irish People :

AND WHEREAS We have deemed it expedient that a further Commission should issue to inquire into and report upon the present state of Trinity College, Dublin, and of the University of Dublin, including the revenues of the College and of any of its officers and their application; the method of government of the University and of the College; the system of instruction in the College and the teachers by whom it is conducted; the system of University examinations, and the provision made for post-graduate study and the encouragement of research; and also to inquire and report upon the place which Trinity College, Dublin, and the University of Dublin now hold as organs of the higher education in Ireland, and the steps proper to be taken to increase their usefulness to the country :

NOW KNOW YE that We, reposing great trust and confidence in your knowledge and ability, have nominated, constituted and appointed, and do by these Presents nominate, constitute and appoint you the said Sir EDWARD FRY (Chairman); CHRISTOPHER PALLES; Sir THOMAS RALEIGH; Sir ARTHUR WILLIAM RÜCKER; HENRY JACKSON; SAMUEL HENRY BUTCHER; DOUGLAS HYDE; DENIS JOSEPH COFFEY; and STEPHEN BARNABAS KELLEHER to be Our Commissioners for the purposes of the said inquiry.

And for the better effecting the purposes of this Our Commission, We do by these Presents give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to, and examine all such books, documents, registers, and records as may afford you the fullest information on the subject; and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these Presents authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid, and to employ such persons as you may think fit to assist you in conducting any inquiry which you may hold.

And We do by these Presents will and ordain that this, Our Commission, shall continue in full force and virtue, and that you, Our said Commissioners, or any three or more of you, may from time to time, proceed in the execution thereof and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any three or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do.

And We do further ordain that you shall be at liberty so far as proper for the purposes of your said inquiry, to consider the reports of the before-mentioned Commission of the first day of July, one thousand nine hundred and one, and the notes appended thereto, and also the evidence taken before the said Commission, but shall not take evidence upon matters inquired into by the said Commission.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us under your hands and seals, or under the hands and seals of any three or more of you, your opinion upon the matters herein submitted for your consideration.

Given at Our Court at *St. James's*, the second day of June, 1906, in the sixth year of Our Reign.

By His Majesty's Command.

H. J. GLADSTONE.

Appointment of Secretary.

DUBLIN CASTLE,

June 8, 1906.

JAMES DERMOT DALY, Esquire, M.A., Barrister-at-Law, has been appointed Secretary to the Royal Commission upon Trinity College, Dublin, and the University of Dublin.

ROYAL COMMISSION ON TRINITY COLLEGE, DUBLIN, AND THE UNIVERSITY OF DUBLIN.

MINUTES OF EVIDENCE.

FIRST DAY.

TUESDAY, OCTOBER 16TH, 1906.

AT 10.30 O'CLOCK, A.M.,

At Trinity College, Dublin.

Present—The Right Hon. Sir EDWARD FRY, P.C., D.C.L., LL.D., F.R.S., F.B.A. (Chairman); The Right Hon. C. PALLES, P.C., LL.D., Lord Chief Baron of the Exchequer in Ireland; Sir Thomas RALEIGH, M.A., D.C.L., K.C.S.I.; Sir ARTHUR RÜCKER, M.A., D.Sc., LL.D., F.R.S.; HENRY JACKSON, Esq., D.LITT., LL.D.; S. H. BUTCHER, Esq., M.A., LL.D., D.LITT., M.P.; DOUGLAS HYDE, Esq., LL.D.; DENIS J. COFFEY, Esq., M.A., M.B., F.R.U.I.; S. B. KELLEHER, Esq., M.A., F.T.C.D.;

and J. D. DALY, Esq., M.A., Secretary.

ANTHONY TRAILL, Esq., LL.D., M.D., M.CH., Provost of Trinity College, Dublin, called in and examined.

1. CHAIRMAN.—Before we begin to ask any questions, Dr. Traill, I am directed to thank you on behalf of the Commission for the way in which you have answered our written questions so fully, and for the great hospitality you have extended to us in giving us the use of your room. (*Witness*).—I am very happy to have you here. It is no inconvenience at all, and the Board Room would have been quite too small for you.

2. Have you prepared a statement which you wish to lay before us, or shall I take you by way of examination?—What I propose to do is this. I have written separate documents on several subjects. I have, of course, been thinking upon them for a long time, and it struck me that perhaps the most convenient plan would be to give my opinion upon each subject, and then, before going on to the next, to be asked any questions the Commissioners thought fit upon that particular subject, rather than have all the subjects mixed up together and questions asked on them all at the end. I want to deal first with the scheme put forward by certain of the Junior Fellows and Professors for extending the usefulness of Trinity College and the University of Dublin. The next question would be that of the introduction of a second college into the University of Dublin.

3. On that you gave a great deal of evidence before the Robertson Commission, did you not?—I have never read that since, so that I do not remember much about it. But at any rate I want to go into that, as there have been changes even since then. The third subject would be the question of the Governing Body of Trinity College and the claims of the Professors, and the next would be the Divinity School question. It seems to me that these four questions are so separate that, if it suits your convenience, I would read what I have to say on each, and then be examined on them separately.

Scheme of certain Junior Fellows and Professors.

I presided at all the meetings of Junior Fellows and Professors, and can state that the discussions took place with the most *bona-fide* anxiety to meet the Roman Catholic Church in every way possible to secure their members coming to Trinity College in large numbers. Their Committee were in communication with a Committee of Roman Catholic laymen, and they agreed in the main on the basis of a new arrangement. I sympathise entirely with that move-

ment, though I do not agree to all its details, and I was in hopes that the Roman Catholic Bishops would consider the strong lay opinion of their co-religionists and give way in the matter. I was prepared, as those who have agreed to the offer were, to sacrifice temporarily the principle of the Tests Act of 1873, and to admit on a Governing Body eminent academic Roman Catholics as such, to tide over the interim during which the entrance of sufficient Roman Catholic students might take place, to secure their future representation on the various faculties and on a Governing Body. In going so far I wish to say that I never intended to transform Trinity College suddenly into a college with a Roman Catholic atmosphere, as I contend that at present it has no Protestant atmosphere outside the Divinity School, and I would be quite ready to give it a Roman Catholic atmosphere to the same extent. In other words, there should be no special atmosphere in secular studies of any denominational kind, but all religions should be treated alike, as far as their representatives would agree to be so treated. The document* signed by some 467 Roman Catholic laymen is a very remarkable one, and if its principles were accepted by the Bishops of their Church a solution of the difficulty would be reached. But we cannot shut our eyes to the fact that the proposal to have mixed education in Trinity College has been condemned by the Hierarchy of an Infallible Church, and it can only be got over by those who are independent enough to choose for themselves and their children. I submit the following reasons to show that the scheme put forward by the Junior Fellows and Professors and accepted by the Roman Catholic laymen cannot be tried with any chance of success.

In the first place it has been openly condemned by the Roman Catholic Hierarchy.

Again, Dr. Delany says:—"I am unable to conceive any such change in the constitution, mode of government, and system of education of Trinity College, which would make it acceptable to the Catholic body in Ireland as well as to the Protestants of Ireland for whose benefit it has existed hitherto."†

Father Finlay says:—

"The constitution and government of Trinity College cannot, it appears to me, be so modified and

Anthony
Traill, Esq.,
LL.D., M.D.,
M.C.E., Provost
of Trinity
College,
Dublin.

altered as to make the College an acceptable 'organ of the higher education' to Irish Catholics. The impossibility arises as well from the Catholic requirements as from those interests which are bound up with the College as it exists at present."

Again he says:

"Catholics as a body insist . . . that the teaching even of subjects not directly concerned with religion, such as history, philosophy, biology, and others, shall not be made a means of attack on Catholic doctrines or on the Catholic Church. . . .

"They demand a University . . . which shall have that colour of Roman Catholicism that is given in respect of Protestantism in Oxford, Cambridge, and Dublin,"

"To secure all this in Trinity College as it exists at present seems quite impossible. It is an essentially Protestant institution. . . . And it must cease to be all this before it can become acceptable to Roman Catholics. . . . This would mean the utter destruction of Trinity College—of the Trinity College which Irish Protestants have founded and built up.

"Catholics, as such, have no wish to destroy Trinity College. They would not, I think, lessen its distinctively religious character."

He further adds:

"A scheme"—this is referring in anticipation to the scheme I have mentioned—"might be put forward which should appear to lessen in some degree the Catholic objections to it, while preserving its Protestant 'atmosphere'—Catholics might obtain representation on its Governing Body, Catholic professors might be appointed in . . . philosophy and history—a Catholic Chapel even might be built within the College grounds and Catholic services held in it if the Catholic Bishops consented—but these and such like measures could never render Trinity even tolerable to Irish Catholics."*

But though I personally would be delighted to see 1,000 Roman Catholics brought in, with the 1,000 Protestants who are there, I cannot shut my eyes to the fact that the persons who have the real control of the matter are not the 467 Roman Catholic gentlemen, or even any number of that kind, but those who own the schools in Ireland. The intermediate schools, from which—if the Bishops threw themselves heartily into a plan of this kind—we would expect a large accession of students, are absolutely in the hands of the Bishops or of the Jesuits, and they control them. If they will not allow boys to come here, it seems absolutely hopeless, however anxious a certain number of Catholic laymen may be, that such a scheme will succeed. The Jesuits, I must say, have shown greater liberality towards the constitution suggested than any other Roman Catholics, because we have constantly had a very fine set of students from Clongowes and Blackrock College, and from the Jesuit Colleges in England, also.

Under these circumstances I am prepared to deal with the Roman Catholic laymen alone, and to make every reasonable concession to meet their views, but not to upset the ancient constitution of the College for the limited number likely to come.

As mixed education is condemned in the College, so it must be condemned in the University, and therefore no second college can reasonably be introduced into the University of Dublin. But a solution must be found, and it seems to me that you can only arrive at such by legislating for two different sections of the Roman Catholic community. Give the Bishops and those laymen who are prepared to work on their lines a college of the kind they ask for, in connection with the Royal University, and let those Roman Catholics who wish to come to Trinity College be perfectly free to do so. Two conditions, however, should be attached to this double solution. First of all, the college to be taken into the Royal University should not be run on the same lines as Trinity College. It should be understood to be practically denominational, for, as I have shown elsewhere, Trinity College has a right to be protected from an unfair competition. There is not room in Dublin for two open colleges run on the same lines, especially if the second college charged lower fees, so as to attract numbers of our students, Protestant as well as Roman Catholics. Such a college might safely be placed at Cork, where there is a great

demand for it, or Maynooth might be restored to its proper position under its original Charter, which provided for a lay college beside the ecclesiastical one, which lay college was actually in existence for fifteen years from 1802 to 1817. Again, it should be an absolute condition to be laid down by the State, that no public money should be given to such a college as I have indicated, which is to meet the requirements of those Roman Catholics who wish to be educated under the care of their Church and under ecclesiastical authority, unless at the same time the boycott is removed, not only from Trinity College, but from the three Queen's Colleges, and every Roman Catholic layman left free to exercise his own judgment as to where he should send his children. I am not prescribing legitimate advice being given to laymen by their spiritual advisers, but only protesting against coercion, through their faith, being applied; in other words, against the terrors of the Church being used to enforce the orders of the Bishops.

Then there is another matter in connection with extending the usefulness of Trinity College to meet the requirements of Roman Catholic boys throughout the country; it is a question of money. One of the great difficulties is the amount of the fees. It has been suggested that the amount of the fees, especially the entrance fee, has been a great deterrent to the entry of poor students. It is not easy to deal suddenly with fees upon which almost the entire income of a number of the Junior Fellows depends. Moreover, it is not desirable that poor men, who have not sufficient ability to derive real benefit from a reduction in the fees, should enter Trinity College. I have had experience for many years of the class of men who come up of the poorer classes, and have done everything I can, both pecuniarily and in every other way, to help forward men of ability from the lowest ranks of society, and I am glad to say that numbers of them are now successful in the world. But I have had experience of ambitious men without brains coming to Trinity College, and I have generally advised them after a year or two to go to some other employment, as they were not suited for the profession they seemed to be anxious to get into. If they are not brilliant and have the money, let them pay. The poor man or youth with brains is the one to be helped. The sizarships in Trinity College go far to meet that case, and an extension of those valuable helps would go far to increase the usefulness of the College and University. A sizar has cheap rooms, free commons, and no fees to pay. There are thirty of them. In two or three years he is sure to obtain a scholarship, with an additional endowment, which will practically put him through his course and secure his degree with honours of further money value. It is a very remarkable fact which I have just ascertained on investigation, that in the last sixty years twenty-two sizars have become Fellows of this College. Of these, twenty still survive, three of them are ex-Fellows, and seventeen are still Fellows; i.e., more than half of all the existing Fellows, senior and junior, have been sizars. I confess I did not know that before.

4. That is valuable evidence?—It is very remarkable. Trinity College, instead of being put forward as the rich man's college, is in that respect most certainly the poor man's college.

5. Dr. JACKSON.—In the last how many years?—Sixty. That finishes the first subject.

6. CHAIRMAN.—I think the result is this—that you propose two schemes: one for those Roman Catholics who follow the Bishops, which would be a denominational college elsewhere than in the University of Dublin?—Yes.

7. And the other is a modification of Trinity College, so as to facilitate still more the entrance of those Roman Catholics who, like some who are sitting at this table, have thought fit to come there?—I have come to that conclusion.

8. Dr. JACKSON.—When you say a "denominational" college do you mean a denominational college or a *practically denominational* college?—We understand a denominational college to mean one as asked for by themselves. I do not say that Protestants are to be excluded from it at all, but it is to be recognised that the Bishops have control over it; that is to say, they can exercise control over the professors, over the lecturers, over the books used; what is called denominational government; but I do not say that Protestants should be excluded from it.

* See Appendix to First Report (Cd. 3176), 1906, page 123.

The demands put forward by the Bishops are in writing; we know what they are. But a large number of Roman Catholics wish their sons to come to Trinity College. There are more Roman Catholics here than Presbyterians and Methodists taken together, or than all other denominations except the Church of Ireland. There have always been about ten per cent. of Roman Catholics here; and it is our contention that every pressure to keep them out ought to be withdrawn if a large sum of money is to be devoted to the purpose, which I think they are fairly entitled to, for those who wish to go under the Bishops' rule.

9. CHAIRMAN.—On the lines of the Resolutions passed in 1905?—Yes.

10. Although you do not make it a condition of those Resolutions that they should satisfy the Hierarchy of the Roman Catholic Church. That is to say—even if the Roman Catholic Church, through its Bishops, does not accept these terms in satisfaction of all their claims, you would be prepared to offer them, nevertheless?—To the Roman Catholic laymen.

11. Yes?—Certainly. If I cannot deal with the Bishops I would deal with the laity.

12. Is it possible to carry these resolutions into effect without the consent and assistance of the Roman Catholic Hierarchy?—I do not quite understand your question.

13. You recollect the resolutions which you passed in 1903, I think?—Yes.

14. You will find them set out in Dr. Bindon Stoney's Statement?—Yes.

15. What I was going to suggest to you is, that it would be difficult to carry those into effect without the assent, consent, and assistance of the Roman Catholic Hierarchy?—Certainly, as regards appointing Roman Catholic teachers; the Bishops have the control of them.

16. You could not get any Roman Catholic teachers, I suppose, except through their assistance?—I do not suppose we could. That is a question we would settle with the laymen, if they could arrange it. The Presbyterians have appointed catechists for more than twenty years.

17. Still, these resolutions do practically require the assistance of the Roman Catholic Hierarchy, do they not, to carry them into effect?—I see some evidence by some of them in this book in which it is pointed out that elsewhere that liberty has been allowed. There is a remarkable statement in this month's *Ecclesiastical Record** that the Bishops' duty would be to appoint a catechist.

18. I am afraid we cannot teach the Bishops their duty. Practically, it would be very difficult to give effect to the views and wishes contained in these resolutions if the Roman Catholic Hierarchy maintain the position which they have expressed in their last statement?—I cannot deny that.

19. You do not make it a condition of carrying this into effect that the Roman Catholic Hierarchy accept it?—I cannot make that condition at all. That is for the Roman Catholic laymen to settle with the Bishops.

20. LORD CHIEF BARON.—Your statement of facts is perfectly clear, Mr. Provost, and as to matters of opinion I do not propose to ask any questions.

21. Dr. JACKSON.—Would it be proper for me to ask whether the Provost has considered other schemes, and has anything he desires to say to us about those other schemes?

22. CHAIRMAN.—You mean schemes in relation to the religious question?

23. Dr. JACKSON.—Yes, schemes in rivalry with the one he has marked out to us.—I am quite ready to answer any questions which are put to me. I do not know exactly what schemes are referred to. There seem to me to be only the three solutions. But I am quite ready to answer any questions about any scheme.

Dr. JACKSON.—I think, perhaps, I had better not ask any particular question.

24. Mr. BUTCHER.—You mentioned the question of fees. I should like to know your opinion. Fifteen guineas is the entrance fee, is it not?—£15.

25. Do you not think fifteen guineas, even admitting the help given by sizarships and such means, is an excessive entrance fee?—It is too high a fee; I think it should be lowered to £10, at any rate. But a sizar does not pay that.

26. But the ordinary undergraduate. It compares with fees of one or two guineas in other parts of the United Kingdom. You are aware how much higher

it is in Dublin?—I think it is too high, and that it is a great deterrent.

27. I quite see the importance of fees as a source of income, but does it not point to a re-adjustment of the whole financial system if the fees are too high?—I do not think that eight guineas for the half-year is too high for teaching. They are all entitled to be taught here. The ordinary fee of sixteen guineas is not large for a residential teaching college, but £15, I think, is too high for entrance.

28. If it is desired to make Trinity College useful to a larger section of the poorer and of the professional classes, is not sixteen guineas a year still rather high—it is nearly double what it would be in Scotland?—But Scotland goes in for a different system altogether.

29. But this is almost double?—It is being demoralised by too much money altogether. I would, however, be glad to have the fees reduced; but it is altogether a matter of money. Twenty-five Junior Fellows' incomes depend entirely upon fees and examinations.

30. I am pointing rather to the necessity of putting the fees on a different basis, and not making the fees so essential a part of the payment of the Fellows. Might I ask what the fees for Medicine are; the sixteen guinea fee is for Arts only, I imagine?—Yes. The fees of a young man going through the Medical School, from first to last, paying everything, would be about £200. That is a very cheap fee for Medicine and Arts together. The fees are all given in the Calendar. I do not keep them at my fingers' ends.

31. Mr. KELLEHER.—It is about £240, I think?—That would cover Arts and everything. That is a very cheap medical degree.

32. Dr. COFFEY.—When you approached the body of Catholic laymen in connection with the terms on which Trinity College might be opened up to them, did you feel that in gaining their adhesion to any scheme of broadening you would have met the full grievance of the Catholic people in reference to University education?—You must not misunderstand me about the scheme. I am not responsible for it, in any shape or form. I purposely did not call the Governing Body, as I thought the subject should be considered perfectly freely, without any expression of opinion of the Governing Body, which I thought would be hostile to it. I wished to give my colleagues a perfectly free hand, but my own hands I kept entirely free. I never communicated with any Roman Catholic laymen whatever on the subject; I thought it was my duty to provide the utmost facilities for discussion and communication. We kept a number of our staff here during vacation discussing the matter, and the reason the names put to it were not more in number was that they all scattered the next day; but the division was about twenty to four in favour of the scheme.

33. I misunderstood. I thought that as you presided you might have been more fully identified with the initiation of the project. I noticed in the *Church of Ireland Gazette*—

CHAIRMAN.—I think we had better not cite newspapers, if you will excuse my saying so.

34. Dr. COFFEY.—Certainly. I was unaware. It has been stated that the Trinity College men interested in the broadening of the College, approached the Catholic Laymen's Committee with a view to finding on what terms they would accept Trinity College as the University for Irish Catholics. Then you said you presided at some of the meetings held by the Fellows and Professors in connection with it, and that is what led me to think you might have known about it from the beginning. But in any case, once identified with it, that is, once co-operating with the men who were moving in Trinity College, I should like to know your opinion as to whether their scheme could possibly meet the whole Catholic position in Ireland in regard to University Education?—As I said before, if the Bishops agreed to the scheme, I think it would. That is the whole point to-day; but I cannot shut my eyes to the fact that the declaration they issued condemned the whole thing *ab initio*, and that being so I do not see how it is possible.

35. The fact that you suggest that Catholics might have a College in the Royal University indicates that you recognise that there is a bigger question than that which touches Trinity College?—I said distinctly that the wishes of both classes must be met; you cannot mix them both up in the same question. There is a very marked cleavage on this question of whether it is a

hardship to be in a University or College that is so completely under the control of their Bishops. Some object and some do not. Why not legislate for both? That is the whole of my proposition.

36. As a matter of fact, those who are interested in the Catholic Laymen's Committee do, I think, very largely represent the Catholics who have always come to Trinity College?—I did not analyse the 467 names; I do not think they were all in Trinity College.

37. Oh, not all; but judging by the names, I think they largely represent them—you have always had some Catholics in Trinity College?—Yes.

38. So that by legislating for that party, or even for a larger section than is represented by that party, you do not touch the big question outside?—I do it by saying, "Give them what they want outside." The fact that they come to Trinity College is a proof that they are well served there, that there are no difficulties in the way, and we are prepared, as far as I am concerned, to make the modifications required. But the larger question can only be settled as I say: if the Roman Catholics like to have a College under the Bishops they are quite entitled to it, and therefore I would give it them.

39. Mr. KELLEHER.—I take it that this scheme of Fellows and Professors of Trinity College, as far as Trinity College is concerned, is a possible scheme of settlement of the University Question, so far as it can be settled by means of Trinity College?—It would be a possible settlement if it had the consent of the Bishops.

40. As far as Trinity College is concerned, that scheme could go through?—I am not prepared to turn Trinity College upside down for a certain number of laymen, which does not solve the big question. I am quite ready to make modifications in the constitution if it solves the big question altogether, but I am not prepared to change the constitution of Trinity College if it will leave the larger question for the greater bulk of Roman Catholics outside who wish to be still in Colleges under the control of the Bishops. I am prepared to make concessions to the Roman Catholics to make Trinity College acceptable to them if it solves the whole question for Ireland; but I am not prepared to turn Trinity College upside down if it will not settle the question altogether.

41. It has been urged against it that the men in College would offer such violent resistance to it that it could not be carried into effect?—A very violent opposition would undoubtedly be offered by some of those of old-fashioned views, but I would hope that the majority of the whole body would be in favour of a scheme of the kind if it would really solve the whole question.

42. If this scheme were accepted by the Bishops, would it certainly be accepted by Trinity College as a whole, with some modifications, of course?—It would not be accepted by the present Governing Body.

43. I was not referring to the Governing Body; I meant the general body of opinion in Trinity College is in favour of a solution on these lines?—I should hope that a majority of the whole staff would be in favour of such a solution if the Bishops went in for it. I cannot answer for anybody but myself, but I can answer for the Board of Trinity College, that they would be opposed to it.

44. That scheme was not a scheme for settling the whole University Question for Ireland; it was a proposal intended to show how Trinity College could be made more useful to the nation?—Yes.

45. Considering the many questions which are mixed up with University education—the questions of the religious atmosphere, of the political atmosphere, of the fees of Trinity College, and so forth, it was obvious to us—at least to the men in Trinity College—that no such solution would settle the whole question?—Yes.

46. And so it would be necessary to supplement a scheme which involved making Trinity College the only great College in Dublin by a scheme which involved what would be the practical modification of Queen's College, Cork, so as to turn it into a University with a lower scale of fees?—Yes.

47. Do you mean that there was no reason, so far as Trinity College was concerned, why Queen's College, Belfast, should not be made into a University if it cannot get on satisfactorily with Queen's College, Cork, in a common University?—There is no reason

in the world why Belfast should not have a University.

48. And as far as we can gather, there is no reason why Maynooth should not be affiliated to the University at Cork. The only thing you insisted on was that if such a modification were made the ban on Trinity College should be officially removed?—I think that would be only fair. If the Roman Catholic laymen who wish to come here are to be forced into another institution which some of their brother laymen wish for, I think that no public money should be spent upon such an institution, unless every man was left perfectly free, as they are now by leave of His Holiness the Pope, at Oxford and Cambridge. It has been agreed to there; they can go into a Protestant College freely there, and there is no reason why the liberty should not be given here. But I do not think the State should give any money for the other solution, unless the boycott were removed from Trinity College and the Queen's Colleges.

49. CHAIRMAN.—I think you said you were going to come to the larger question of a second College in Dublin?—I will read what I have to say about that now.

Second College in the University of Dublin.

I wish to bring forward the following arguments against the introduction of a second College into the University of Dublin. Such a College must be either a free, open one, like Trinity College, not under any ecclesiastical control, or it must be what is demanded by the Roman Catholic Bishops and a section of the Roman Catholic laity, i.e., a College subject to the supervision and control of the bishops, both in relation to the professors and the books in the courses. If the second College were to be simply a replica of Trinity College, though started with a Roman Catholic "atmosphere," it would not be required in Dublin, for it would obviously be as unfair to Trinity College to place it here as it would be to start a second College in Belfast on the same lines as those of the Queen's College there. I do not think anyone would think of proposing to set up a second College in Belfast on the same lines as the Queen's College, and it would be equally unfair to put up a second College here on the same lines as Trinity College especially with a lower scale of fees. That is an objection I always had to Mr. Balfour's scheme. If, on the other hand, it were to have the support of the Bishops, it could not be worked on the same principles as Trinity College. These principles require absolute freedom with regard to science, philosophy, and history, whether for discussion or research, and that no ecclesiastical authority should interfere with such investigations. The Roman Catholic Bishops, as against these views, claim that it is within their province to decide on the orthodoxy of the lectures of a professor, inasmuch as they consider themselves to be the guardians of the faith and morals of their people. These principles are inconsistent with each other, and could not be followed out within the same University. The clerical influence pervading the second College would extend itself to the University. The field of studies would become what Bishop O'Dwyer calls a "cockpit." In the Colleges at Oxford and Cambridge there is separate teaching, but joint teaching by the University professors. Here the University lectures would require to be common to both Colleges, because they could not be duplicated, and if mixed education is forbidden in the Colleges, how can it with any consistency be allowed in the University? The claim for a second College must inevitably involve a further claim that the system and limitations of that College should be applied to the University, so that books would be subject to an "Index," and the Professors left without their freedom. In all University examinations the examiners would have to balance each other on a religious test as on all public educational boards in Ireland at present. In the examinations in the professional schools this would give rise to constant suspicions. If the students of one college were more successful at the University Examinations than those of the other, suspicions, perhaps charges, of cheating would arise, and that could only be got over by importing a whole staff of "external examiners" to secure fair play, and the cost of this would be enormous. All examinations for degrees, whether in Arts or in the Professional Schools, must be above suspicion.

Aberdeen, where I have recently been, at its

quater-centenary celebrations of its University, supplies a unique example for us, a good object-lesson. King's College is the one which is 400 years old, Marischal College came some centuries later, and they each had separate University powers. It was found that there was not room for two Universities in a town not too large, and after a great deal of soreness on both sides and predictions of failure, the Universities were recently united under the one name, "The University of Aberdeen," but so far is this from furnishing an analogy for two colleges in this University, they are practically parts of one college as well as of one University, though they are nearly two miles apart. The old King's College takes charge of Arts, Divinity, and Law, while the more modern Marischal College has the Medical and Science Schools, with the necessary laboratories assigned to it, and it was the large addition recently made to it by some wealthy citizens of Aberdeen that gave occasion to the King's visit to open and inaugurate those buildings.

50. CHAIRMAN.—I thought that Law went with Science at Aberdeen—but it is quite immaterial to your argument?—It may be so, but it is a matter of detail; I simply mention it as a curious object-lesson in the matter. Everything there works smoothly now. But, further, the tendency of the present day is entirely in favour of single colleges with University powers, as against the duplication of colleges in the University. In Manchester, Liverpool, and Leeds the federal idea was tried under the most favourable circumstances, but the experiment failed, and separate Universities have taken the place of the federation of colleges. Dr. Delany has well remarked upon this, "How much more difficult it would be to make such an experiment successful in Ireland where 'the problem' would be complicated by racial and religious and political animosities, which had no parallel in the Victoria University."* Dr. Coghlan,† of Maynooth, has stated very plainly in this month's edition of the *Irish Ecclesiastical Record* what the claims of his Church over University Professors are. "The Church would not give 'formal approval' to a college if the professorships were by law equally open to all, Catholics and non-Catholics. The Church does not approve of the mixed system of education." This remark must apply equally to the Professors of the Joint University of Dublin, if this second college were introduced. Again he says, "The Church can cut off the University Professor from the Church; but it cannot remove him from his position of danger to the faith and morals of his students, unless the State recognises, formally or equivalently, her right of effective vigilance in respect to the faith and morals of her University students." It would be simply impossible for Trinity College to work with such a college as is proposed to be introduced into the University, without constant friction, caused by the essential difference between the principles on which they would expect such a conjoint University to be worked.

51. CHAIRMAN.—You do not doubt that there is a great difference between a denominational University and a denominational College in an undenominational University; I mean, you may have a denominational College in a University which is undenominational?—I do not think so at all, if the same rule as is applied in a denominational College is to be applied to the University professor, which is what they claim.

52. Take the case of London University, which used to have as affiliated colleges Stonyhurst and St. Edmund's, both Roman Catholic colleges?—That was only an examining body at that time.

53. No, at that time it was a University with affiliated colleges?—But London University had nothing to do but to examine. That is a very great difference. There is no difficulty in the Royal University.

54. You agree that it is a very different thing to have a denominational college in an undenominational University and to have a denominational University?—There would be difficulties about the examinations, as has been seen in the case of the Royal University itself.

55. But it is possible for a University to be so independent of its colleges as to be able to carry on examinations successfully?—I think the evidence before the last Commission was that, in connection with Belfast, they were unsatisfactory.

56. LORD CHIEF BARON.—Do you not think that you

require in some sense to modify your statement that professors in Trinity College must have absolute freedom in teaching science, philosophy, &c. There is something understood by all of us when we state that as a general proposition?—No ecclesiastical authority has the slightest authority in this place; no Bishop has any place; the Church of Ireland never had any power, even over the Divinity School. There is absolutely no analogy between that and a college such as is proposed to be put into the University of Dublin.

57. You would not allow one of your professors to teach his class atheism?—We never would ask the question unless it were brought under our notice in a most extraordinary way.

58. But if it were brought under your notice?—What do you mean by atheism?

59. That there is no God?—If he did that as against religion he might be interfered with, but if he meant that investigation in physics and so forth led him to that conclusion we would not interfere with him.

60. Would you allow him to teach anti-Christian doctrine?—I do not think a professor in a secular subject would be allowed to make a crusade in religious matters. I might mention that one professor had to be rebuked for interfering in religious matters with a class on a secular subject.

61. You would not allow him to teach any doctrine that was contrary to law—that boycotting was lawful, for example?—I cannot imagine any of our professors doing such a thing at all.

62. That brings me to this: There must be some limitation?—Theoretically, if you like.

63. If there is to be a limitation, who is to decide whether the limitation has been exceeded?—A body of laymen.

64. There must be some body to decide?—I would object altogether to any ecclesiastical authority dictating inside this or any College of a University what the secular teaching was to be.

65. CHAIRMAN.—The Governing Body of the College?—They should be the only persons to deal with it, and that Governing Body has now practically become a lay body, because since tests were abolished all the clergy except four have disappeared, so that it now practically is a lay college.

66. Sir A. W. RÜCKER.—Are you at all acquainted with the revised University of London?—I have had some experience of it on the Advisory board for military education, but I am not acquainted with the details of it.

67. You are aware that there are denominational colleges within it now, completely governed by different denominations?—I am aware that it has become a teaching University.

68. But beyond that, in that University there are colleges which are completely managed by their own denominations?—I am not acquainted with it personally. I received three or four handsome books from London University yesterday, and I shall find it all there. But denominational colleges in England and denominational colleges in Ireland are very different places.

69. Dr. JACKSON.—I noticed that you said more than once that mixed education was forbidden in colleges by Roman Catholic Bishops?—Yes.

70. And that you did not see how, if it was forbidden in colleges, it could be allowed in a University?—Yes.

71. But it is the fact, is it not?—I gather it from the papers—that the Roman Catholic Bishops would be prepared to admit mixed education in a University while they would refuse it in colleges?—I have never heard that statement, and I never saw it. I do not see how they could make the distinction between a University lecturer on biology and a college lecturer in metaphysics. If they are going to have the control over a college lecturer in metaphysics, they certainly would claim control over the University lecturer in biology.

72. I certainly thought we had a statement to that effect?—I have never seen it.

73. Unfortunately my papers have not arrived, else I think I could have pointed to it. Possibly some other member of the Commission will remember?—I never saw it.

74. CHAIRMAN.—I have an impression that they did not object to undenominational examinations, though they did object to mixed education?—That was rather the impression I got.

DUBLIN.

Oct. 16, 1906.

Anthony
Traill, Esq.,
LL.D., M.D.,
M.C.H., Provost
of Trinity
College,
Dublin.

75. Dr. JACKSON.—I may be mistaken, but I certainly thought that they distinguished between mixed education in one College and mixed education in a University.—I never saw that. Their principle is that Roman Catholics and Protestants should not be educated together. That is quite distinct.

Dr. JACKSON.—I am sorry if I am wrong.

76. Mr. BUTCHER.—I think Professor Jackson is right, especially if you read the evidence of the last Commission—in a good many subjects the Catholics would accept some form of mixed education, and they point to the fact that already, in the Catholic College in Stephen's-green, there are Catholics and Protestants attending classes together in certain subjects, though no doubt the College would maintain a control—a general control—over those classes?—I think it is very easy to explain the appearance of Protestants there, when the staff of that College had such enormous influence on the examinations at the Royal University.

77. But on principle they do not object to mixed education in all cases?—I am quite prepared to admit that there are exceptional cases.

78. Dr. JACKSON.—Mr. Daly has kindly pointed out to me in a paragraph on page 82 of the Appendix to the First Report:—

"It is quite another thing when we come to speak of Dublin University. Students, of different religions, and of various social and political views, may fraternise, with advantage, in the same University, and if a scheme were formulated for setting up in the University of Dublin another College, in addition to Trinity College, we should be prepared to consider it with open minds."

The very fact that it has been stated more than once that they were prepared to recognise a second College in Dublin University seems to me to show that they were drawing to the conclusion to which I have referred?—There is a way in which that might be interpreted—some have held that the second College should conduct every examination for itself; that they should conduct their examinations by themselves, and the University should give degrees upon that. If that solution were put forward, that the entire staff in our College and in the second College were to be duplicated, and there were no University examiners at all, that the University had nothing to do but confer degrees on people as a result of separate examinations of the two Colleges, as far as we are concerned that would never do, because that would be giving our degree for a different standard altogether from that which we adopt.

79. CHAIRMAN.—The last declaration is in this paper:*

"To sum up then, the Standing Committee of the Catholic Bishops feel that they are safe in stating that the Catholics of Ireland would be prepared to accept any of the following solutions:—(1) a University for Catholics; (2) a new College in the University of Dublin; (3) a new College in the Royal University; but that on no account would they accept any scheme of mixed education in Trinity College, Dublin"?—That is what I refer to.

80. Dr. JACKSON.—That is all of a piece with what I am saying. I only want to note that they distinguish between mixed education in a University and mixed education in a College. I think it important that that should be noted as a possible basis for a scheme.

81. Dr. DOUGLAS HYDE.—Would your objections be equally strong supposing what Professor Jackson states turns out to be the fact, that the Bishops would allow mixed education in the second College inside Dublin University; would you object equally strongly to that?—I cannot make suppositions which I cannot hope would be accepted at all. I can only take their written or published statements. If they all change their minds, and if such a proposal is made to me by responsible persons, I shall be prepared to consider it; but I cannot answer it as an abstract question on the supposition that the Bishops are prepared to go back on the statement I read out.

82. You do not object on principle to Roman Catholics being educated in a purely Roman Catholic atmosphere—it is only to such a thing being thrust into Dublin University that you object?—I do not object to it on principle in this sense. It is not my idea of proper education, but if the large majority of Irish

laymen say they wish to be educated in that way, I say they are entitled to have it, and I am perfectly prepared to give up my opinion altogether. We think they might come here, but if they wish the other they are entitled to have it, provided those who wish to come here are free to come.

83. Would you be opposed to a separate University in Dublin which should have that Roman Catholic atmosphere which satisfies the Catholics?—A separate University raises questions that I have nothing to say to. It is a political question, and if England, or any other country, is going to establish a University for Roman Catholics on a purely Roman Catholic basis, I do not think it at all a likely thing. I do not think that any country, let alone England, would give denominational power in a denominational University in the present day.

84. But suppose that University were not a denominational University but a University which Roman Catholics would attend while it remained undenominational, with an atmosphere which might be dominantly Catholic?—I object altogether to two Colleges together in Dublin on the lines of Trinity College; there is not room for the two.

85. Would you have any objection to such a College as is outlined in the Robertson Report?—I have already stated that they are entitled to such a College in the Royal University.

86. But you would object to a new University in Dublin?—That is a State question. I do not think it is a practical problem. If the University is to be on the same lines as Trinity College there is not room for two such Universities in Dublin.

87. You think there is not room for two such Universities in Dublin. Then you think that Trinity College satisfies all the functions of a National University?—I object to the word "National" altogether. "National" is a very ambiguous expression in Ireland. Trinity College is a College which is open to the world as far as its honours, emoluments, and everything else go. If Roman Catholics had come in when tests were abolished thirty years ago there would have been a very large number of them now. Since tests were abolished the change has taken place very gradually, and people outside do not know that we are now practically a lay College. There are only four clergymen left out of the whole thirty-two that were here when tests were abolished; they happen to be at the top because they go up by seniority, but in a few years it will be absolutely a lay body.

88. By the word "National" I understand a thing which is of use to the nation, and is resorted to by the nation. Now, you cannot get over the fact that for a great series of years the University of Dublin has not been resorted to by the nation?—That is not our fault; we have done all we can to meet them.

89. But in spite of what you have done to meet them the fact remains that the people of this country have not resorted and are not resorting to the University of Dublin. Why do you think there would not be room for another University alongside of it to which the people would resort?—As I said before, it altogether depends on what kind of a University it is. If it is on the same lines as Trinity College, I do not see why it should be duplicated; if it is not, it is for the State to say whether they will have a University to be practically denominational when tests have been abolished here.

90. Why should it not be duplicated here in order to give University education to a greater number of people who would like University education of a kind which, for some reason or another, you are not able to offer?—I cannot help what has been done to prevent their coming into here. We have done everything we could.

91. But is it not the fact that more people matriculated this year in the Royal University than there are students on the College books altogether?—The Royal University does not educate them.

92. Still, it shows that there is a large proportion of people who would attend a University if they had such a University as they would like to attend?—I have already said that I am perfectly prepared to give them a college for that purpose. If you put it in Cork it would be a still better place; that is the place which wants it most.

93. I think there would be a serious objection to placing it at Cork, because it would be cutting off the capital of Ireland from having any part in the

* Appendix to First Report (Cd. 3176), 1906, pages 80-82.

higher education of the people of Ireland, outside Trinity College?—And outside Dublin.

94. You object strongly to the word "National" in the sense of a National University. "National" may be interpreted in another way, that is a University for teaching people about the nation. Would you say that Trinity College as it exists—

95. CHAIRMAN.—I think you are getting a little far from the question. The question of a second college in the University of Dublin is at present under discussion, and I think it would be better to reserve other questions for the moment.

The Provost.—What people in England and elsewhere ought to realise is, that there are two nations in Ireland; the sooner they realise that the better; there is not one nation in Ireland.

Dr. DOUGLAS HYDE.—And you educate for only one of them. But there will be an opportunity to continue that line of argument before the Provost concludes, will there not?

96. CHAIRMAN.—The Provost has only been dealing with the question of a second college in the University of Dublin; you will have another opportunity, I have no doubt.

97. Mr. BUTCHER.—I should like to put one or two points as to the practical difficulties in the creation of a second College within the University of Dublin. As to the first and most important of these, what is to be the constitution of the University—can you suggest what the constitution of the governing body of the University would be—must be—if there is to be a second College co-equal with Trinity?—In the first place there would have to be large University funds supplied, of which at present the University has none. Trinity College is a College with University powers, and the University of Dublin has no funds as such, unless you are to say the fees for degrees might be considered University funds. But I cannot contemplate the constitution of the University for a second College. I do not contemplate a second College.

98. Would it not become a practical necessity to have a governing body constituted almost exactly on the lines of the Royal University of Ireland, by which I mean the one and one system—a balance of the denominations?—That would be the curse of the whole thing.

99. Can you think of any other method of constituting that body which would be deemed to give equality as between the Colleges?—I don't think so. I think our experience in Ireland is that all the trouble arises because Protestants and Catholics have to be balanced, and it is a most unfortunate thing, because it puts an end to the selection of men on their merits.

100. Then comes the question of how you are to secure a common standard of University degrees. Different methods have been suggested, the chief being these—first, the scheme which was put forward a couple of years ago, which everybody in Ireland knows, which was called the MacDonnell-Dunraven scheme. As I understand it, according to that scheme each College was to conduct its own examinations. There was to be no University control of these examinations, and the University was to exist merely as a body for conferring degrees on those who had passed the examinations as certified by the College. Was not that supposed to be the scheme?—Yes; but I cannot conceive a more unfair scheme to put forward. In other words, to give the degrees of our University to a new College—they to examine as they liked and on any standard they chose, and yet our hall mark to be put upon them. I object altogether to such a scheme.

101. The other method would be to bring in outside examiners in sufficient numbers to secure uniformity of standard?—Yes; I particularly mentioned that.

102. And you mentioned certain objections?—We have had experience of it in the Medical School under the regulations of the Medical Council. We are expected to provide external examiners. The cost of that is very great. I forget at this moment what it is—something out of all proportion. Our own examiners will examine for a guinea a day, but you cannot expect gentlemen to come over here from England under ten guineas and expenses, and in the Medical School we do it on account of the Medical Council; but if you have to provide them for the University the objections would be still more serious. Besides, this is a serious reflection on our examiners, who are as impartial as can be in every respect. While I make no reflections on any other place, I must say our own are above any impeachment.

103. CHAIRMAN.—It is hardly a reflection upon the examiners that external ones should join with them?—I think it would be if it were brought into Arts, where there is no competition for public posts.

104. Mr. BUTCHER.—Apart, however, from the question of expense, I suppose there is a deeper reason why there is a difficulty, namely, that you would have two Colleges with discordant ideals of education and learning, requiring very different courses of examination, including the examinations for degrees. You would need to have this system of denominational balance throughout the whole government of the University?—You would.

105. That is the chief reason?—Yes.

106. I know it has been suggested that if the young men in these two Colleges were brought together within one University that they would have an opportunity of meeting one another at University lectures, if not College lectures, and also at games, and in other social intercourse. Do you think there would be any kind of *rapprochement* between the young men of different denominations?—Our experience here is that there is not the slightest difference between them, but if there was a College in which there was a number of students, such as appeared lately at the Royal University, to play at games with our boys—why they would break each others heads.

107. You think if you labelled each College with a distinctive denominational title you are bound to have two hostile rival Colleges?—I think so. There would be perpetual rivalry and hostility.

108. If a new College is started it cannot be close to Trinity. It must be at some distance?—I should think it ought to be.

109. But from the nature of the case there is no place here in the heart of the city in which you could plant a new College—No, not that I know of.

110. Does not that at once raise a certain difficulty; in the way of realising the idea that the young men would meet freely in the two Colleges, as they would if they were together in Trinity?—Certainly. I do not see how they could meet if you cannot build another College in the same grounds.

111. Can you see any method by which in daily social life, the students in these two Colleges placed at a distance could meet and get to know one another as young men do who are within the same College—taking into consideration that here you are in the heart of a great city without any available site for the other College within your own grounds?—Do you speak of two Colleges in one University or a separate University?

112. Two Colleges in the one University of Dublin?—I think it would be impossible for them to get on together.

113. Might I ask another point? If there is to be a second College within the University of Dublin will not the claim be made in connection with that College which was made in connection with the proposed reconstituted Catholic College of Stephen's Green, namely, that Maynooth College should be recognised as part of the Faculty of Arts of the second College?—Yes.

114. Might it not conflict with the constitution and government of the University if you had a Seminary outside forming part of the Arts Faculty of the University?—We offered, as far as the Divinity students in Maynooth are concerned, if they chose to come here for Arts examinations we would give them exactly the same privileges in their Arts course as the Divinity students of the Church of Ireland who come here.

115. The point is, Maynooth would not come to you: you should go to Maynooth, so to speak. That is to say, your Faculty of Arts would include an affiliated Faculty of Arts at Maynooth, and you should recognise the teaching carried on there?—That would be involving another College altogether for preparing for the same University.

116. Dr. COFFEY.—I was much interested in your reference to a second College in Dublin University, that one which you described as in organisation a replica of Trinity?—That would depend on its constitution.

117. You appear to think that would not be to the benefit of the University—in fact that it was quite unnecessary?—Yes.

118. Do you not think the existence of a second College within Dublin University, considered from an academic point, would in many ways benefit the

educational drift of the University of Dublin?—I really do not see why the public should be put to that expense.

119. But there is an educational grievance, and the people of Ireland want a good University system. Suppose you had a second College in Dublin University, would it not be possible to have University Chairs embracing a greater variety of subjects?—We have now a very large variety—far greater than many people seem to know. This is a residential tutorial College of Fellows, with Professors added, and everything is looked after by the tutors, and you will find in most residential Colleges that they require that. I have often heard complaints made in Belfast that there is no tutorial system there, but you must have a very large expenditure on Fellowships. Here good work is done in the Arts by lecturing, and we find a great difficulty in supplying lecturers now.

120. I fully recognise the expense of the system, but coming back to the residential character of the University, is the residential side of the University quite successful? You have only got 261 in residence out of 1,200?—About 500 live in Dublin. We cannot accommodate more than 250 inside.

121. Yet residence in College is the essential feature of a University of the type of Trinity?—Residential does not mean solely residing within the walls. The tutors have entire control of the students and correspond with their parents.

122. In connection with this system a very large proportion of your funds go to endowments of Fellowships obtained in classics and mathematics?—Oh, no; the Fellows teach a good deal more. There is metaphysics, and also experimental science, besides a great many of the Fellows teach in the schools. I taught in the Engineering School myself for ten years. Dr. Sullivan is Professor of Pathology in the Medical School.

123. With a second College it might be possible to have variety in the Fellowships in each. I am thinking of Cambridge, and the development of one science in that University—the subject of physiology has been largely forwarded there, and it strikes me that the reason is in part that different Colleges provide different types of Fellowship. Has your attention been directed to this, and do you think that a second College might in this manner help the University?—With all respect, you are under an entire misapprehension. There is plenty of research carried on, though there is not the full accommodation asked for; but with the new buildings which would be required, there would have to be enormous endowments if that system was to be carried out completely. We have been doing everything we can of late years, but the Fellowship system was undoubtedly a prize system; and men knew, when they were going to give up their lives to it here, they were getting prizes equal to some prizes at the Bar. If a man rises to Senior Fellowship here he only gets an income a second-class lawyer gets as County Court Judge. But you are not to suppose that the tutorial system is so weak. We have got men of the highest calibre here, and in the last few years the changes have been very great. This new laboratory, which Lord Iveagh has presented, when it is open will make a vast difference, but the bringing in of another College to assist us would be an insult to our staff.

124. Does not the University need a higher prestige than it has at present?—There is no University distinct from a College. It is simply a College with University powers.

125. In respect of attracting Colonial students to Dublin in such numbers as they go to Edinburgh, have you thought of the possible effect of a second College—a College favoured by the Irish people—and of its bearing on the influence and prestige of the University?—Since I went to South Africa I have eleven young Boers inside the walls at present.

126. The number of Colonial students is not large?—There are eleven young Boers here at present. We are pushing in every direction we can to bring in Colonial students. Of course, we always have had men from Australia and Canada. I think you will find in ten years we will have more Colonials from South Africa than Edinburgh.

127. The Celtic people—the Irish people—have large extensions in the Colonies, and with the Celtic people, which means to a large extent the Catholic people, recognised here you might look for a great

accession of numbers?—I would be glad to see them, but I do not see how you are to increase the prestige by tacking on another College.

128. Colleges or Universities may nowadays advance rapidly?—And surely this College is going forward with great rapidity. If you only knew what is going on here—I have ample proof of it—within the last few years you would recognise that.

129. Mr. KELLEHER.—One great objection the men in Trinity College have to the establishment of a second College in Dublin University is that it would result in an unhealthy competition between the Colleges, and a demand on the part of one to maintain its lawful place as the dominating factor, and on the part of the newer one a claim to what it was entitled to on numerical grounds. Do you consider that that single objection prevents any such solution?—I do not see how it would work.

130. CHAIRMAN.—Trinity, it suggests, is an autonomous College. If another College were added it would cease to be autonomous?—Yes.

131. And that would be a dangerous experiment?—That is so.

132. Dr. JACKSON.—I should like to put one or two questions which have been suggested to me by remarks made. As to the Degree examinations, it has been suggested that if there were to be in future two Colleges in the University, each College would have its own examinations, and the University in conferring its Degrees would have to depend largely upon external examiners. Would it be impossible in non-controversial subjects that the teachers of the two Colleges and the professors in the common University should conduct the examinations?—That is a thing that unfortunately exists in the Royal University—the duplication of examiners and the balancing of examiners against each other, which is a disastrous thing.

133. Would conflict of examiners be inevitable because one comes from one College and another from the other?—In the Medical School the thing was hinted at already. If you had two examiners from opposite Colleges there might be rivalry between them as to which man would be passed, and you could not persuade people outside if a man was "stuck" in his examination that there was not a certain reason for it.

134. Sir A. W. RÜCKER.—It might happen here, but that system has been in vogue in London for years?—It is quite a different thing in London.

135. Dr. JACKSON.—I should have thought these difficulties were not inevitable?—In the Medical School external examiners are necessary. What would happen in this new University if the examiners were not entirely above suspicion, and absolutely fair? While it is not in any way my wish to cast any reflections on any of the examiners, at the same time it is obvious that a student belonging to the College from which the examiners are drawn is at an advantage over other students. If a man comes up from Belfast to the Royal University, and is examined by the Medical Staff here in Dublin, the examiners may be as impartial as you like, but the Dublin men have been taught by those examiners, and the Belfast man has not. That is why I believe it would be necessary to bring in external examiners, in order to make the examination above suspicion; and that would be a very expensive system.

136. If the examiners were to be, not Fellows of either of the two Colleges, but Professors attached rather to the University than to the Colleges; would not that give an assurance of impartiality?—I am supposing that the University Professors are the men who would conduct the examinations for the Degrees, and, as I have already pointed out, if a second College were established here, it is inevitable that the same claims would be made in respect to the University teachers and Professors as in the case of those of the new College.

137. Then, in regard to the word "duplication" I speak as a member of a poor University which is perpetually desiring to add to the number of its Chairs in consequence of the specialisation which is going on in science. When we have got, perhaps, one Professor of a particular science we are perpetually wanting a second and a third. I should have thought that if you had a College, added to your great College, within the University, it would be no mere duplicating if you gained Chairs in new departments of the old subject?—But what you referred to at London is not duplication; it is the creation of new Chairs.

138. Do you not want the creation of new Chairs ?—We are constantly creating new Chairs here ; there have been several created during the last few years.

139. You are very fortunate if you have got all the money you want for that purpose. I should have thought that you would gain a great deal if there were another College established, which would bring in more money ?—No, our margin of money is very small, and if we had £50,000 more to spend we could spend it quite easily ; but the duplication of Professors is totally different from the multiplication of Chairs.

140. Mr. KELLEHER.—If mixed education is objected to in a College, would not the same objections seem to hold against mixed education in a University unless the ecclesiastical authorities had control over the Professors ?—That is what I have stated particularly.

141. So that it would be necessary that each College should have its own Professors ?—Yes.

142. Dr. JACKSON.—I understand you think there would be sure to be friction between the two Colleges—that is to say, between Trinity College, Dublin, and, say, King's College, Dublin, in the same University of Dublin ?—Yes.

143. Do you think that the friction would be in any way diminished if there were to be, perhaps, four Colleges united in the University—Trinity College, Dublin, King's College (or whatever it might be called), Belfast College, and Cork College ? Would a federation of that sort, in your opinion, be likely to mitigate the friction ?—I think it would only still further increase the confusion. The whole tendency nowadays is to put an end to that affiliation of Colleges. Look at the Victoria College—Liverpool, Manchester, and Leeds have now separate Universities, and Sheffield has a separate one. All experience is against that, because you have to bring the examiners of one College down to another College. The difficulty of the Royal University is at present such that it would be better to give Belfast a University and Cork a University, than to have a system of federation of all Colleges—those at a distance as well as those near at hand. The tendency of all modern ideas on the subject is against the affiliation of Colleges, and it is thought better that the multiplication of Universities should be substituted for it.

144. Mr. KELLEHER.—May I ask you if you know of any reasons for the establishment of a second College in Dublin. Dublin University has no funds as distinct from Trinity College, has it ?—Certainly not.

145. And therefore to include a second College in Dublin University would be no gain so far as finances are concerned, because the University has no funds ?—No, you could not get anything from the University in the way of an augmentation of funds.

146. And no reason has been adduced why a second College should be introduced into Dublin University at all ?—I see none whatever. In the cases of Cambridge and of Oxford (of course, I speak under correction), each College has to subscribe to the University funds, and there the University has money to spend. The University here, except in so far as the conferring of degrees is concerned, has no authority of any kind whatever.

147. Do you know that in a letter that has been sent by the Archbishop of Dublin to an Irish newspaper a quotation is given from the Recollections of Aubrey de Vere, a quotation from Cardinal Newman, in which he talks of falling back upon a second College in Dublin University—"We can in that case fall back upon a second College in the Dublin University, one on as dignified a scale as Trinity College, and in all respects its equal—one doing for Catholics what Trinity College does for Protestants. Such a College would tide over the bad time, and eventually develop into a Catholic University" ?—Yes, I saw that, and I think that is perfectly true.

148. That illustrates clearly what the objection of Trinity College is to such a College—that it would be regarded as only an expedient to tide over a bad time, and that it would develop into a University of its own ?—Yes.

149. LORD CHIEF BARON.—I should just like to ask one question in relation to what you said to my friend, Mr. Butcher. After the lapse of a short time, when the new College would have a full body of graduates, could not the governing body of the University be constituted by the election of one-half by one College and the other half by the other College ?—I suppose it

could—the mere election of a governing body. It depends upon what powers you are going to give them. If they are going to appoint the Professors for both Colleges, that would be a powerful body ; but would they be allowed to appoint the Professors ? That is the point. I do not see why they should.

150. CHAIRMAN.—I suppose there might be this scheme: you might separate the University of Dublin from Trinity College, Dublin ; you might give it graduation fees, and appoint certain Professors who would teach the students in both Colleges, and you would give the residual teaching to the tutors or Professors in the separate Colleges. That is a conceivable scheme, is it not, although I do not say that it is a desirable one ?—Our Professors are called University Professors, and the heads of schools are University Professors.

151. You might give the University power to appoint teachers at both Colleges ?—The fees of the students should not go to the University at all, in my opinion.

152. The CHAIRMAN.—I do not know that there are any other questions on that head which we need ask you. What is the next subject you propose to deal with ?—The next question is as to the governing body.

The Governing Body.

In this case I cannot say that I speak for the Board ; I speak for myself only. A great fallacy exists as to the governing body. Mr. Gladstone stated, when his Bill was before the House, that it was the most expensive of its kind in the world, and in the returns before you it is assumed to cost £11,268, omitting the "Private Estate" of the Provost. The income of the Senior Fellows, including their offices, is £9,918, and that is supposed to be the cost of governing the College. This, however, includes the amounts of their retiring pensions, £1,100 a year each for seven persons. That would amount to £7,700 a year, so that practically the cost of the government is £2,000 a year, which is not very high. If the offices were held by permanent officials, there would not be much saving. But from the nature of the offices, they should mostly be held by men who have had many years' experience of the working of the College. A College tutor who has had a large number of pupils is likely to be the best Senior Lecturer, his duty being to make up the marks of examinations, and to decide who is to be passed and who stopped. A Junior Bursar who has had charge of the finances of the tutorial system, on which the incomes of the Junior Fellows almost entirely depend, generally advances to the office of Auditor, where he becomes acquainted with the books and finances of the College, and from that to the office of Bursar. That officer is the most important of all ; he has the control of all the inside expenditure of the College, rooms, kitchen, parks, &c., and has to pay the salaries of all College officers, Fellows, Professors, assistants, lecturers, and servants, and has in addition the management of the College Estates and the oversight of the College Agents over the same. The Registry would be better kept by a permanent officer to preserve its continuity than by a Registrar, elected from year to year, as at present. The Senior Proctor presents for the higher degrees, and has to be responsible for the qualifications of the candidates and for the receipt of their fees. The offices of Senior Dean and Catechist are almost sinecures, the work of the former being performed by the Junior Dean, and that of the latter being so analogous to that of the Senior Lecturer that it should be merged in it. The office of Vice-Provost is a sinecure, except where, on rare occasions, he has to take the place of the Provost, and is generally given to the Senior Member of the Board. The experience gained by the present Vice-Provost, when he was Bursar, is of much value to the Board. The ordinary work of the Board at their weekly meetings, outside the work of their offices during the week, consists mostly in deciding questions of administration, appeals, fines, money grants to the various professional schools for assistants, or for apparatus, and grants for the many laboratories now at work in the College, and there are also other questions relating to the administration of the estates. So far as the time of the governing body is taken up with administrative work, questions of the estates come in occasionally, and sometimes very large questions turn up, such as would be better dealt with by a larger and wider governing body, but at present every Saturday's

work is taken up with pure questions of administration. The returns sent in to the Commission show that the funds at the disposal of the Board have been liberally used to meet all necessary requirements, and especially has the outlay upon buildings been extensive, amounting to £70,500 in the last fifteen years. Of this sum, however, £7,500 was entrusted to them by graduates on the occasion of the Tercentenary Celebration of 1892, for the construction of what is now called "The Graduates' Memorial Building." That is that handsome building outside in the courts. It is a very important matter, bearing on the present state of the governing body, that the loss of promotion amongst the Fellows, since the Disestablishment of the Church of Ireland in 1869, has entailed two consequences—first, that the age at which they arrived at the Board has been much increased, and secondly, that the number of years during which they have sat on the Board has been greatly diminished. Taking the Board which existed from 1890 to 1897, their average period of duration as Junior Fellows was forty-two and three-quarter years, and their length of time as members of the Board was nine and three-quarter years. The average period during which the present members of the Board have been upon it is less than seven and a half years, after an average period of thirty-eight and a half years as Junior Fellows, and, omitting the Vice-Provost, the average period for the rest is only six and a half years. The average age of the present members of the Board is seventy-two; but as the ages of the Junior Fellows at the top of the list do not differ much from the ages of the younger members of the Board, in ten years the average age of the Board, if constituted as at present, would be fully seventy-six, so it is obvious that the governing body should be reformed, from the mere consideration of age. I look forward to a dangerous state of affairs if things are allowed to continue as they are, and therefore in my opinion something must be done. I am speaking for myself in this matter, and not for the other members of the Board. It will be necessary, as I think, to introduce a representative element into the constitution of the Board, and to throw the offices open to Junior Fellows who are competent to transact the business appertaining to them, while a certain number of the then Senior Fellows will have to be placed upon the retired list. It will be always an expensive matter to retire competent men, say, at £1,100 a year for present members, or even at £800 a year for future members of the governing body. Four competent men could transact the most important business of the Board; others whose opinion and advice, based on long experience, are valuable, can do useful work of a lighter kind, without the heavy cost to the College of large retiring annuities. I think the Vice-Provost has mentioned in his letter to the Commission that if he had been retired at the age of sixty-five it would have cost the College £15,000, and he has been able to do good work up to the present time. About £4,000 a year, the interest of the money given to the College as compensation for the loss of its advowsons, is available for a few pensions, and, when not used for such, may be used for general College purposes. This fact has enabled the present Board to effect great and rapid improvements during the last few years. One important laboratory, for electrical and mechanical engineering, has been entirely erected and equipped from this source, at a cost of some £3,000. That is the red building out in the park. Large improvements in the buildings of the Medical School, and new equipments for modern science, could scarcely have been carried out, but for these available funds. It is difficult, however, to secure retirements under the existing law, for the person involved has to declare, under his hand, that he is incapacitated, and the more incapable he is, the less likely he is to declare himself so. Having shown that the necessity will arise for the introduction of a new or representative element into the governing body, it remains for me to suggest in what way this should be done, even in advance of that necessity. The Professors have advanced a strong claim for representation on the governing body. There are two modes in which representation could be within their reach. One would be by introducing them gradually into the body of Fellows, i.e., into the Corporate Body, so as to preserve the corporate nature of the governing body. If the Professors were to come in in that way, they would be part of the Corporate Body, and could be elected in the way proposed there. The

other mode would be by direct representation, and I understand that the Fellows would rather have it in that way. It would, however, be impossible to admit the claim of the Professors that the eleven heads of departments should all become members of the governing body. They would not have leisure from their duties to attend as members of the governing body. Representation is all that is required, and they could select a representative in the following manner. Let each Professional School and the Arts Professors (excluding Divinity, which must be treated separately) choose one—Medicine, Engineering, Law and Arts, four in all. Let these four select one of their number to sit on the Board. In like manner the Junior Fellows could select a representative. Let each grade of tutors choose one, and let the remaining Junior Fellows choose one, i.e., four in all. Then let these four select one of their number to sit on the Board. It has been suggested that promotion to the governing body might be autonomous, but the difficulty about autonomy is that the one who comes in order of seniority is not of necessity the most competent man; therefore, my idea as to the mode of selecting a representative to sit on the Board, for Professors and Junior Fellows, is as I have described. For practical work it is essential that the governing body should be a small one, especially when you come to deal with the finances of the College. These representative members could attend specified meetings of the Board, when subjects relating to the general work or interests of the College and University were to be brought forward for discussion, or when money votes were to be taken, but it would be quite unnecessary for them to attend meetings when mere matters of college discipline and college administration were before the Board. The remuneration of such representatives should be small, to prevent a scramble for office. Powers should be given to the Board to elect certain of the Professors from time to time, after long service, to the position of Honorary Fellows, with the privileges of rooms and commons, and a right to a pension. Unfortunately, a feeling of jealousy has existed for a long time amongst certain of the Professors as to the name "Fellow." I think a sentimental grievance of that sort could be got over if we had the power to elect Honorary Fellows after a certain number of years' service, and to give them the privileges I have mentioned. It has always to be borne in mind that this is not a purely Professorial College, but a Residential College, incorporated with Fellows from the foundation, the Professors being added from time to time to meet the requirements of the age, and the increase in the subjects of learning to be taught to the students. I think it would also meet the wishes of the Professors, as put forward by them, to substitute for the present Council of the University a Board of Studies to represent the various faculties, arrange the courses of study, and elect those Professors whose election at present is in the hands of the Council. Such Board of Studies might be constituted as follows. I should mention that the present constitution of the Academic Council is composed in this way: The Senior Fellows elect four, not necessarily of their own number. The Junior Fellows elect four. The Professors who are not Fellows elect four; and the General Senate elect four; and these sixteen, with the Provost, constitute the present Council. I think it would be better to have the representation of the faculties, because at present the greatest anomalies take place. The largest school (the Medical School) at present has no representation on the Council at all, which is very unfortunate, because the Medical School ought to be represented. Such Board, then, ought to be constituted as follows: Each Faculty (excluding Divinity) to select representatives according to their numbers—say, Medicine, 2; Engineering, 2; Law, 1; Arts, 4; these nine, with two members of the Board and the Provost, making the full Board of Studies. There might also be a Board of Finance. The finances of the College cannot be entrusted to a large body, and while the financial body should contain a representative element, it would be better that it should contain members of the Corporation in a majority, who can judge more fairly how the available funds should be distributed, than to allow such funds to be divided out by persons interested only in single Departments. Such a Board might be constituted as follows:—One representative of each of the Faculties already mentioned, with four members of the Board and the Provost. I may say,

from my experience of the Board, that they do look most carefully into what I may call the rival claims of the schools for money. Of course the great claim of late has been for what may be called the Science School; all the available money of late years has been devoted to the Science School, especially since Lord Iveagh gave us the magnificent building, which cost £16,500. The Board has spent a great deal of money on the Medical School, and also on the Engineering School. If the whole body had the spending of this money it would be impossible to say how they would deal with the rival Schools, and therefore, with the modifications I have mentioned, such a Board seems to be the fit and proper instrument to protect the finances of the College from what I may call "raids" by different Departments. From the statement before you it will be seen that we have practically spent up to our income, and I should mention in that regard that on one occasion, where we seem to have over-spent our income money delayed by the sale of estates came back in the next year, otherwise it might look as if we had deliberately over-spent our income for that particular year. I think that covers all that I want to say about that particular question, excepting this—that in order to meet the requirements of the future, the system of electing to Fellowships should be largely modified. The system of competitive examination has in the past produced a number of brilliant scholars in the purely Arts Courses, Mathematics, Classics, and Metaphysics, but it fails to meet the many requirements of a teaching staff in the present day. Modern languages and the experimental sciences involving laboratory work find no place in the Fellowship system. It has, however, produced a valuable set of College tutors, to whom the care of the students has been entrusted, both intellectually, morally, and financially. No Professorial system can meet this want, and where there are so many students within the walls of the College, or residing within easy reach in the city, the tutorial system should not be lightly discarded. A necessary reform, however, should be effected by considerably reducing the number of the Tutor Fellows to whom the care of the students should be entrusted. There are practically nineteen Tutor Fellows at present, and about fifteen taking pupils, and if the number were reduced to, say, five, the other ten would be set free to devote themselves more largely to teaching or to special research. The competitive system for Fellowship in the past has had one enormous advantage. The man who has succeeded, and won a great prize, owes no thanks to anyone, but has the credit of success by the labours of his own brains, and is appointed neither by political nor by ecclesiastical authority, and I have already shown how, out of the present body, a large proportion started as poor men. But while it is an excellent test for purely Arts subjects, Classics, Mathematics, Metaphysics, &c., it is not suited for the selection of the best candidates in experimental or natural sciences, and scarcely for Modern Languages. The Fellows for the future ought to contain amongst their number experts in Modern Languages, and scientific men of a high order of intellect, but of large practical experience, qualified to undertake Professorial duties. We have an examination in Experimental Science, and always have had it in modern times, and that has turned out some remarkable men, such as the late Professor Fitzgerald, but at the examination itself there was no practical test whatever, and these gentlemen had to qualify themselves afterwards by actual laboratory work, and I think that Professors in that subject ought to be selected not entirely by examination. Selection on the results of Moderatorship Examinations, combined with reputation gained by post-graduate studies and laboratory work, and if necessary with a qualifying examination, will best secure the Physical Science expert. I am satisfied, indeed, that that is the only way of securing the Physical Science expert. A high literary qualification, tested at Moderatorship Examination, combined with sufficient residence abroad, and practical acquaintance with the teaching of Modern Languages, should secure the necessary expert in that subject. We have been obliged to provide a special expert in French, which the former system did not provide. The consequence of allowing French to be substituted for Greek is that we have a very large accession of students, especially

women students, for French, and we, therefore, have to provide a special staff for that, and we are very anxious to get that into the Fellowship system.

153. CHAIRMAN.—In what you have just said you have covered a very large area of subjects. I should like to ask you a few questions, in the first place, about the Fellowship system. It strikes one as an extraordinary system altogether, because, as I understand, the whole of the Fellows have hitherto been selected by examinations held from year to year; the Fellowship, of course, is held for life, and, according to some of the statements before us, the average number of times that a successful Fellow comes up before being elected is five. That produces, does it not, a very unfortunate effect upon the lives of these men, because a larger number of men must be competing for these Fellowships year by year, and, being under the necessity of keeping themselves qualified to stand these examinations, they must be diverting themselves from original studies or professional pursuits; and as most of them must, of course, fail in ultimately securing a Fellowship, there must be an immense waste of energy in the pursuit of Fellowships in this way: is not that so?—Yes; we feel that very much.

154. Is it not possible to substitute for that system a system of election to Fellowships from a certain class of students—that is to say, from students who had won a certain number of Moderatorships—men who had passed in Honours up to a certain extent. What I am suggesting is that such students as those should form a class which would be eligible for these Fellowships, and that from their ranks you should select those who, by their subsequent skill in research or otherwise, had shown their competency for high office in the College?—That is very right in a way; I think the Moderatorship Examinations should be largely taken into account, and should count largely in the selection of a Fellow; but Moderatorship Examinations would never give you what is required for a Professor of Mathematics, for instance. The difficulty of the Fellowship Course is enormous.

155. I am not suggesting that the Moderatorship should carry it, but only that success in the Moderatorship Examination should be a *sine qua non* of election, to prevent favouritism in election.

156. That such a man should be competent to stand for a Fellowship, though of course showing his skill in Mathematics in any way you may think fit to require?—Yes. It is hard to make an absolute rule. I agree with you that the Moderatorship Course ought to have very much weight.

157. I only suggest that it should be a *sine qua non*, and that then, on the top of that, you should judge of their fitness by whatever standards you may think proper?—Yes. My friend over there (Mr. Kelleher) got in at the first shot, but that has not occurred for fifty years past.

158. LORD CHIEF BARON.—But we are not all Mr. Kellehers?—No.

159. CHAIRMAN.—I think it is stated in some of these returns that the average number of "shots," to speak popularly, before a man succeeds, is five?—I think that is very likely.

160. Now, would it not be advantageous to attach certain Fellowships to the Professorships, so that the Professors should be always Fellows. As you are aware, at Oxford and Cambridge that is so. Would not that be an advantageous way of using up Professorships?—At Oxford and Cambridge you have a tremendous number of Fellowships that we have not here. The list of Fellows here is most carefully guarded from top to bottom, and if it were going to be interfered with in any way there would be considerable outcry among the Fellows. I have made a proposition about the election of Professors into the Fellowship system, and I should like very much to see, say, every second vacancy filled up in that way. I would like very much to see the Professors of the principal Chairs, by election or otherwise, coming to be Fellows.

161. Would it not be more convenient to attach a Fellowship to the particular Professorship?—Then we should have to reduce the number of Junior Fellows and Tutors. The number of Junior Fellows at this moment is at the limit; the number of students is so great that it takes all the staff to provide for their requirements for lecturing purposes.

M.CH., Provost
of Trinity
College,
Dublin.

162. As I understand, your whole staff of Tutors consists of Fellows—there are no Tutors who are not Fellows?—That is so.

163. Would there be any difficulty in introducing Tutors who are not Fellows? What I mean to suggest is rather the breaking up of the Fellowships into three or four classes, such as the Fellowships attached to offices like the Bursarship, Fellowships attached to a Professorship, and Fellowships attached to students of research, what may be called prize Fellowships?—How about the men who have gone through the competitive examination? They have gone through the mill which the others you speak of have not.

164. I am proposing the fixing of a certain line of Moderatorships, and then election by examination after that?—Under an Act of Parliament we can only elect to Medical Professorships for seven years.

165. LORD CHIEF BARON.—It is quite possible that an Act of Parliament might be required to carry out our recommendations, and then there might be a suggestion to alter any Act of Parliament that stood in the way of your conducting the College in the way you thought best?—Yes. On the other hand, there is a great difference between a Professor in a School and a Tutor Fellow. If there is a Fellow who does not come up to the mark, and just gets through his work in a shilly-shally way (I am not saying that there are any such), it might be that no irremediable harm should happen to the tutorial system, but it would happen under the professorial system, because if the head of a department gets inefficient for any reason, that department goes to the wall. We had to make a complete clearance in one school.

166. CHAIRMAN.—I was struck by what Lord Rosse said in his memorandum*?—I have not seen it; it was not in the first volume of documents.

167. No; it has come in subsequently. He says: "There is no doubt that the present system of election to Fellowships, by examination alone, or nearly so, in a course, the more important part of which and one essential for success is either the Latin and Greek Classics, or Mathematics Pure and Applied, no longer meets all the varied requirements of a University, and the teaching staff has to be largely added to by Professorships in important special subjects, but generally of more uncertain tenure and with inferior pecuniary prospects. The difficulty in the way of appointment to Fellowships by any form of selection, as opposed to examination, is, of course, the possible imputation of party bias in a country where political party spirit runs so high, but it has been suggested, and I think very fairly, that selection on the merit of published work for the Fellowships, or at least some of them, on the plan which seems to work well for the professional chairs might meet the case." Of course, I suggested, in addition to that, the Moderatorships?—Yes.

168. "There seems no doubt that the present examination system involves too long and severe a strain on the candidates, causing in some cases a permanent injury to their health, and in most cases an indisposition for scientific or literary work for the rest of their days. The system, too, gives the advantage to men of exceptionally great powers of memory rather than of original genius." Is there not great weight in that?—I quite agree with that, but the results stated are not so general as he thinks.

169. Another point I should like to call your attention to is this:—Ought not the subjects for the Fellowship to be enlarged?—Yes—that is what we have been discussing for some time past, and this Modern Language question and the Laboratory question is all to be brought in if we can do it.

170. As I understand, a man cannot now get a Fellowship in the University and College without showing skill both in Greek and Latin and in Mathematics; am I right in that?—Oh, no, the Classics and Mathematics are separate; they are either Classical or Mathematical Fellowships; but the combination generally is that a Mathematical Candidate either takes Metaphysics, or Experimental Science in addition, while a Classical Candidate takes Metaphysics and Hebrew as his extra subjects.

171. But cannot a man become a Fellow merely upon his knowledge of Mathematics, and, say, Physics?—Mathematics and Experimental Physics will give him a Fellowship.

172. Can he on Modern Languages?—No, and it is a subject which it would be very difficult to introduce, because it is a very easy examination, and you cannot make it difficult like Classics.

173. Can he in History?—Well, of course, in the Classical Department a great deal of history comes in, but it is mostly ancient history, naturally.

174. Therefore, roughly speaking, a man must be either a Mathematician or a Classical Scholar?—Yes, that is the present system.

175. And a pure Physicist can never become a Fellow—or a pure Chemist, would, perhaps, be a better case?—A pure Chemist, no.

176. Or a pure Physiologist?—No.

177. Would it not be desirable, in your opinion, to arrange that persons of great knowledge in those subjects should be eligible for the Fellowships?—You cannot reduce the present staff for the Arts Course—with the large number of students who are taking not only the Arts Classes, but Honours, it takes a very large staff to do the work—but if you could suggest additional endowed Chairs for them I should be glad.

178. Lord Rosse suggests that by some re-arrangement of the finances it might be done. There are two points he mentions to which I will call your attention. He says:—"I am not sure whether certain considerable economies are not possible, however. The incomes of the various members of the staff do not appear duly proportioned. It seems quite right that a young man on entering upon his duties should, beginning with a modest salary, receive additions to it, gradually, up to middle age; but it does not seem in accordance with precedent that at a time of life when he is no longer capable of rendering as efficient service, and his expenses should probably be diminished owing to his family being provided for, he should, by seniority, step into a position of comparative affluence. The position of a Senior Fellow is said to be worth nearly double that of the senior group of the Junior Fellows"?—Oh, no, that is not the case at all. Look at your return.

179. "And that of the Provost about double again. There is reason for an augmentation of income on appointment as head of a large College. The expenses which the position entails are greater, but I do not conceive that expenses are increased on promotion from the position of a Junior to that of a Senior Fellow. The result of this augmentation of income may be expected to be an unwillingness to accept voluntary retirement, and the retirement must be expensive to the College funds, as it will be based upon the scale of an augmented income. Probably the salaries of the Juniors may be scarcely sufficient to repay at once the delay and labour entailed in seeking the position. It is needless to say that suggested changes should be made with due regard to vested interests. Beyond what may be gained by the re-adjustment of incomes, suggested above, in two departments, viz: the Observatory and the Botanic Garden, perhaps retrenchment may be possible. The former, situated, as it is, some seven miles from the College, loses thereby much of its educational value, though for original work the staff are freer from interruptions and the climatic conditions are, I have no doubt, better than if a site nearer to the College, or not so far inland had been selected. Under these circumstances, it would appear reasonable that the Observatory be treated more as a State institution, like that at Edinburgh, and that the College be relieved from some part of the burden of its upkeep and running expenses. The Botanic Garden has been considered by many as not yielding advantages to the College commensurate with the expenditure upon it; some considerable reductions in the expenses have, however, been recently effected on the occurrence of a vacancy in the Curatorship." Do you agree with those remarks?—We have always viewed those two institutions as sources by which we could save income, and if the result of this Land Purchase Bill is to cut down our income from estates, we would be glad to part with this Botanical Garden. And we have always thought that the State ought to take over the Observatory, which cost us a lot of money.

180. Now, going from the question of Professorships, I will ask you one or two questions about the Governing Body. You agree, I think, that the Governing Body wants reform?—I think so.

181. At present, if I understand rightly, there are three bodies who are concerned in the government of the University and College—that is to say, the Board, the Council, and the Senate?—The Senate?

182. Yes?—Oh, the Senate has no power except in conferring degrees; they cannot even discuss a question unless it comes from the Board.

* See page 344.

183. They are a convocation of the whole body of graduates?—Of the past graduates living in and near Dublin. There are about 400 members of the Senate. A man, by paying a certain sum of money—I think it is £4 10s.—becomes a life member of the Senate.

184. But they have no practical interest?—No practical interest whatever. Then the Council have no governing power; the Council have the election of those Professors who are Arts Professors, and they are not restricted to that, but they have the election of the Regius Professor of Physics and the Regius Professor of Surgery.

185. But even that requires confirmation by the Board?—Everything requires confirmation by the Board.

186. So practically everything rests with the Board?—Yes, but the Board have never interfered with the election of Professors by the Council.

187. How many would your proposed Governing Body consist of; I did not quite follow?—Well, I was only devising a plan to show how the representatives should be added. Supposing my proposal was carried out, there would be nine besides the Provost, and I should hope that if the retirement money was available at that time (I am, of course, looking forward) there would be considerable economy effected in that way. But, as I said before, the retirement system is very expensive indeed if you take an efficient man (and many are efficient long after seventy) and give him £1,100 a year, and replace him by another man. A great deal is useful for what you may call advice—men holding what I call sinecure offices. A very great defect is that we are not sufficiently in touch with modern sciences, and the Junior Fellows have been so long kept out of the Governing Body, and I think they ought to get representation on it.

188. Then your proposal is to retain the seven Senior Fellows as the nucleus of the Board, is it?—I think so; there is such a vast vested interest there of all the Fellows from top to bottom that it would be very hard to say how you could cut away that vested interest. At the same time, no man has a vested interest in any particular office when he gets on the Board.

189. You would say, keep the present Board and add to it?—Yes; add to it representatives of the Junior Fellows and Professors. I do not see anyone else to be represented. I would take away from the Board all about studies, and give that to the Board of Studies.

190. Then the Board of Studies will be merely advisory, and will not have any power?—They would have power over the studies; at present the Council and the Board have equal power over the studies.

191. But I mean the power of introducing anything with regard to the studies would still be with the Board?—No, that is equally in the hands of the Council at present, and would be transferred to the Board of Studies. A change in the courses, or anything of that kind, can be originated either by the Board or the Council.

192. It would come to this: you would require the consent of the two bodies—of the Board, and of the Board of Studies?—They would very seldom differ; the Board of Studies is really an Advisory Board, and what they advise the others would accept as a matter of course. The Medical School Committee has always worked very well; I have been Chairman of it for a great many years, and any recommendation coming from them or from the Professors of the Medical School is, as a rule, accepted by the Board. In the Engineering School we allow the Professors to meet together, and any suggestion of theirs is accepted by the Board as a matter of course.

193. LORD CHIEF BARON.—You mentioned that there were certain sinecure offices; what are the offices which you consider sinecures?—Well, you see, the Senior Dean, under the old statutes, was supposed to work effectively, and the discipline of the place was in his hands; but after a time it was practically left to the Junior Dean, and what the Senior Dean has to do is to come on Saturday mornings and go over the lists of fines and say whether such fines are proper. That is the Senior Dean's business, and as a matter of fact anyone could do that, instead of having a man retired at £1,100 a year. In the same way the Catechist now has a very light duty, because we supply catechetical instruction, but have made it non-compulsory, just as I have put an end to compulsory chapels on week-days for students, although the chapel is open for them if they choose to go. Formerly a man could not rise

from one class to another unless he had a certificate from the Catechist that he had attended the Catechetical Lectures, and so on, but now we hold that that should not be made a test for a degree. The work that is done by the Catechist could be done quite easily by a clerk, but as things are that work occupies the attention of a very valuable member of the Board, Mr. Gray, and instead of retiring on a pension of £1,100 a year, he just performs the offices of Senior Dean and Catechist together. Then the Senior Proctor, Dr. Abbott, has to bring forward the degrees, and see that no man gets a degree unless he qualifies; and with regard to honorary degrees the Board have always been very jealous about honorary degrees, and have held to their right of originating them with great tenacity. No honorary degree can go to the Senate without being first approved by the Board. The Librarian is Dr. Abbott, who is a great student and a very valuable Librarian. The question comes to this: You have a Governing Body, the cost of which is only £2,000 a year, and it is a question whether that could be done cheaper than by the present system. It is a very expensive matter to retire a competent man.

194. Is there any other besides these four offices you have mentioned which you consider sinecures?—Well, the Board objected to my calling it a sinecure yesterday, but the Vice-Provost has nothing to do, as such, except in the absence of the Provost.

195. I will not pursue that, but anyhow you think there are some sinecure offices filled by members of the Board, and that the question merely is whether it would be cheaper to abolish these offices or have them filled by some gentlemen entitled to retire on pension?—That is so, and when they get these offices, even if they are sinecures, it makes their incomes up from £1,100, which is the amount they can retire on, to £1,300, and if a man gets £1,300 to stay and £1,100 if he goes, naturally he declines to regard himself as incapacitated.

196. I see in some of the papers here a suggestion by some of the Fellows that appointment to Fellowships should, in the first instance, be provisional only, and that, when the College has had for some years experience of the man's ability the question should be considered whether he should not be appointed a permanent Fellow?—Yes; that is a proposal which is exceedingly well put by Dr. Tarleton, and there is a great deal to be said in its favour. We could not give them rooms and commons, but there is a good deal to be said for taking a young man and giving him a provisional professorship for seven years, and trying him; you might give him, say, £150 a year, and let him lecture for only one hour a day, leaving him the rest of his time free for study and research; and if at the end of seven years he shows that he is likely to rise, he could be elected to the permanent body. It is very well worth while considering. Financially it is a large thing, of course, and affects the whole tutorial system, which is a very delicate thing to touch.

197. We could hardly be supposed to go into all the minute financial details of these matters?—No; all you could do would be to adopt some principle, and let the working out of the details be guided by experience.

198. If the principle were adopted, the Governing Body would then be able to go into those matters of detail?—Yes. There is one difficulty about these seven-year men—that there would always be the danger of keeping a young man hanging about the place hoping to become a Fellow, and never becoming one, who might have done a great deal better had he been encouraged to enter the Church or go to the Bar, or to some other profession at the start.

199. CHAIRMAN.—You would find it very hard to reject them?—Yes.

200. LORD CHIEF BARON.—One other question about the suggestion of appointing Readers?—That is nearly the same as Provisional Fellows. It is the same idea—to reject them if you do not like them.

I called the attention of the Secretary to the Return* you asked for as to the number of students on our books on the 1st July, and I pointed out to him that it would be better if the numbers were taken on the 1st May. I have given him the return, and it shows that on the 1st May there were 1,250 students—i.e., 929 members of the Church of Ireland, 140 Roman Catholics, 88 Presbyterians, 33 Methodists, and 60 others. That is the proper return, and I hope it will appear in the Second Volume.†

DUBLIN.

Oct. 16, 1906.

Anthony
Traill, Esq.,
LL.D., M.D.,
M.O.B., Provost
of Trinity
College,
Dublin.

201. Sir ARTHUR RÜCKER.—You spoke of retiring pensions of £1,100 a year. On what salary are those given—I mean what is the salary of the person before retirement?—The Senior Fellow has £1,100 a year plus his offices. A Senior Fellowship pure and simple is £100 a year Irish, and about £200 a year from "Decrements," derived from students' fees; then £800 a year what is called compensation for renewal fines, when the Board used to renew their leases year by year. Then when a man retires he receives what is called the average of all the offices held by members of the Board: the office of Bursar is £500 a year, the office of Senior Lecturer £400 a year, the office of Registrar £300 a year, the office of Senior Proctor £200 a year. The office of Auditor £200 a year. The office of Vice-Provost £379. Catechist and Senior Dean £150 each. That comes to very nearly £2,300 a year in the offices. When a Senior Fellow is going to retire, he retires on the average of all those offices with his Fellowship, and that amounts to practically £1,100 a year.

202. Then it is possible for him to retire on a pension larger than the salary he actually receives at the time of his retirement?—Oh, never; his Fellowship and the office gives him £1,300 a year. Dr. Ingram retired at £1,100 a year, and also the previous Senior Fellow. That is not a very big figure compared to the outside professions. The important matter is what the Chairman has called attention to—that the Fellows begin at low salaries and work for forty years on a comparatively rising scale, and for the greater part of their life, when they have to support their families, they do not get much, and it would be, perhaps, better for them if they got it a little earlier, instead of later on, when their families have begun to go out into the world. At the same time, the Junior Fellows' incomes are very precarious, because they depend upon the number of students. At one time these were as low as 95s; the figures now, as I have said, come up to 1,250, as will be seen by the return I have given in to-day, and they are going up again rapidly, from the great stir and improvements in various directions.

203. I did not want to go into that; I only wished to know the relation borne by the retiring pension to the actual salary at the time of retirement?—Yes. Then I pointed out that to take the cost of government of the College as being represented by the salaries of those gentlemen was rather a fallacy, because if they retired at sixty-five—which they do not do at seventy-five—it would be very expensive, so that it is cheaper for the Governing Body to use men who might otherwise retire.

204. Dr. JACKSON.—I should like to ask one or two questions which, I think, follow naturally upon the answers you have just been giving. I am asking for information. "Compensation," you said, was compensation for renewal fines?—Yes; that is a very old story, which goes back to more than half a century ago.

205. May I just add a word, because I think I know what "renewal fines" means—what I wanted to ask you was—how were the fines disposed of before these compensations: were they used in the payment of the Provost and Senior Fellows?—Yes; I understand that what they did was this. The leases were for twenty-one years; if those leases had run out the lessees who held them would lose them, and they would become the property of the College. What they preferred was every year to pay a renewal fine, and so keep the twenty-one years' lease up constantly. At that time the individual members of the Board got either the renewal fines or ran the lease out, and dealt with it then as a part of the College property that had fallen in. Then the Queen's Letter came in, and compensated the Senior Fellows by a definite figure of £800 a year.

206. As I understand the residue of this fund is expended in improvements?—Yes.

207. Do the Junior Fellows specially participate in the advantages which accrue to the College from the renewal fines?—Nothing whatever, nor do the Senior Fellows either at present, as there are no such fines now.

208. But they participate in the renewal fines?—Well, they do so far as they receive compensation for renewal fines. Compensation for renewal fines is an old story. It goes back half a century ago.

209. What do you mean by decrements?—That is part of the fees of the students which the Senior Fellows always got. It is a variable amount, depending, of course, on the number of the students. It is

still an addition to the income of the Senior Fellows. Decrements increase in amount with the number of students. If the number of students falls they fall, and if the number of students rise they rise. The Senior Fellows get their share of that, so as to keep them, I suppose, up to the diligent discharge of their duties. We inherit all these matters from our predecessors.

210. There is another question I want to ask you. About the payment from the Junior Bursar: I see that in one place it is called a payment per Junior Bursar, and in another place it is called a payment from tutorial fund?—I want to explain that. What are you reading from?

211. From the returns of the emoluments and salaries of Junior Fellows.—Yes, the Bursar receives 2½ per cent. on the fees that he receives, that is, £371 12s. 4d. He is Registrar of Chambers, for which he has a salary of £55. Each young man who gets chambers has to pay fees, and these fees are collected by the Junior Bursar, and he receives poundage upon them. He has a great deal of work to do, and that work must be done by somebody. I would be very glad to see a clerk doing it, but it is done by the Junior Bursar, and he has to take charge of a large fund.

212. You will excuse me for asking all these questions—I want to understand clearly?—Oh, certainly. He gets a share of the students' fees and poundage upon fees which he receives.

213. Mr. KELLEHER.—It is right to state that the Junior Bursar is a tutor and one of the Fellows, and he is elected by the tutors as Bursar?—Yes, one-half of the fund goes to the Bursar and the other half to the Junior Fellows.

214. Dr. JACKSON.—Now about the Fellowship system. I am old enough to remember a very similar system at Cambridge, but of late years we have found it absolutely necessary to supplement the examination system by requiring from every candidate for Fellowship at Trinity College, Cambridge, a dissertation or some sort of original work. I ought to begin by saying that we have an age limit, because otherwise a number of young men of promise would be hanging about, and might ultimately fail?—May I ask what is the age limit?

215. The limit is strictly speaking not one of age but one of standing. When a man has a certain University standing he is excluded from competing for a Fellowship. No man can now gain a Fellowship with us by examination only. He must offer some sort of original work, and in point of fact gets his Fellowship for specialised work and not for a general examination. At the present time we are more and more discontinuing the examination for our Fellowships; in fact, examination in Mathematics has been dropped except so far as a man may be examined on the dissertation which he has written?—Does it apply to classics as well as to Mathematics?

216. Yes, it applies to Classics as well. I want to emphasise the fact that forty years ago we had a system like yours, but we found it expedient to change it, and to require from each candidate an original dissertation. Have you ever considered how far this might be adopted in Trinity College?—Oh, yes; we have been discussing these matters of late very much, but there is always the difficulty in estimating accurately the value of dissertations, especially in scientific work. Some examiners might set great value upon a dissertation and others might set very little value upon it, and in every case it is only experts who can form a proper judgment upon the value of an original dissertation. A mathematician should be the judge of the work of a mathematical dissertation, and in the same way with dissertations upon any other subjects. It is a very difficult thing to accurately estimate the value of such work.

217. I may frankly tell you I know the difficulties of the system as well as anybody can. I may tell you that I do not know any work more difficult and unpleasant than the election to Fellowships. It is the most hateful work in which examiners can be engaged, because of the difficulty of setting a value upon the work done in various branches of study. Still, with us the change in the mode of electing Fellows has been in the direction of granting Fellowships not upon examination, but upon original work.—That is very interesting indeed to me.

After a short adjournment,

218. It seems to me that we have had an experience like yours, but have got into a stage somewhat beyond that. It may be that if you change your system you will get in advance of the stage in which we in Cambridge are now.—We have often debated that matter with regard to the change in the mode of examination for Fellowships. Anything of that kind would require to be introduced very gradually. It would be a terrible injustice to a large number of men, gifted men, who were waiting for a chance of obtaining Fellowships on the present system. We could not make any such change *per saltum* without great injustice to a large number of young men who have been waiting for a long time for a chance of passing the examination. For example, next year we expect that some candidates will come forward and offer themselves on the existing system. I should be very glad if next year we could elect a Fellow in Experimental Science, Modern Languages, or Literary Work, but we have no power to do it. We want powers. We could not get any power to make that alteration unless we got it through a statute or a King's Letter.

219. At the Cambridge Trinity we have the power to elect to a Fellowship anybody whom we consider fitted to perform the work of the College, and we are using that power. Two years ago, for instance, we imported a lecturer in history from an American College, and within the last three weeks we have admitted two Fellows, one in History and another in Engineering. Don't you think that the power to elect Fellows for the service of Trinity College without examination would be a valuable power?—I think it would be very valuable indeed. May I ask are these Fellows elected for a certain number of years or for life?

220. They are elected for twenty-five years, so long as they work to the satisfaction of the College. The pension they receive is at most £400 a year, and they are liable to be retired at the end of twenty-five years.—I am afraid very much that such a system would create dissatisfaction among the Junior Fellows here. At a recent election of a Junior Fellow the majority of the Board elected him contrary to the marks, and the Junior Fellows were very much dissatisfied. I am afraid that they would have no confidence in the selection of Fellows by the Board without examination. You see there is in Ireland so much jealousy and suspicion outside that the responsibility of the electing body who would appoint Fellows to Fellowships without examination would be open to hostile criticism. In England it is very different.

221. In England we have got a College Council which takes the place of our old Seniority, and manages the affairs of the College. The Council appoints a Committee of two or three to make careful enquiry. Would not the holding of a Professorship be a guarantee that a man was worthy of a Fellowship?—In a case of that sort, where a Professor was appointed and made a Fellow without examination, the difficulty would be that he would have to be put on at the bottom of the list.

222. Why not?—Well, a man of that sort, of course, would be about thirty or forty years of age, while a good many of the Junior Fellows get their Fellowship from twenty-five to twenty-six years of age. It might make a very serious difference to take a Professor of thirty-five or forty years of age and make him a Fellow and put him at the bottom of the list of men whose age was twenty-five or twenty-six.

223. Passing from that point. Is it desirable that the Governing Body of the College should be chosen simply and solely by age?—I think not.

224. It seems to me that you would have a great difficulty in effecting a change from the present Governing Body to another Governing Body, and I have wondered whether the Senior Fellows might continue to hold their emoluments and pensions, perhaps performing some honorary duty, the actual government of the College being transferred to an entirely different body, a Council representing not the senior members of the institution, but the institution as a whole. Would it be possible to arrange that, the Senior Fellows should hold their emoluments and pensions, but that the Governing Body of the College should be representatives chosen by vote?—I am afraid that the expense of any such change as that would be tremendous. There are such a number of vested interests which would have to be dealt with, a num-

ber of men, Junior Fellows, who have been kept out of their promotion by various circumstances. It would be unjust to deprive them of their chance of promotion. I think that it is very undesirable that the Governing Body should be confined to a few men who have attained their position merely by age. I don't know whether you would include on the Governing Body Professors who are not Fellows of the College.

225. For my own part, I would not put on the Governing Body of the College anybody who was not a Fellow of the College. I should be sorry to see persons who were not Fellows admitted to the responsibilities of the society?—I was not contemplating that these Professors should be Fellows at all. I was assuming that there would be *ex-officio* members paid a salary for the posts which they hold, and that the elected members of the Board would be a changing body, not having any additional salaries for that duty except only on a small scale.

225A. I was suggesting that scheme to meet your difficulty about the vested interest of the persons who would be adversely affected by the change. Their vested interest is the expectation which they have that in time they will become Senior Fellows, and I was trying to devise a scheme which would form a Governing Body independent of the vested interests which these persons have?—Certainly they have a vested interest, not only in the income which they would get as Senior Fellows, but also in the position which they would acquire on the Governing Body.

226. In my opinion, none of the offices of the College should be restricted to the oldest members of of the society. I would propose that they should be thrown open to all?—Your question seemed to be in the direction of giving the Professors a direct representation on the Governing Body, but that no members should go on the Governing Body unless they had been elected as Fellows. I would be in favour of that, except for the difficulty of determining which Professors should be elected to be Fellows. You would have to deal with men who have been a long time in office, such as Dr. Atkinson and Dr. Dowden, and the Professor of Engineering and other Professors who have been a long time in office. I take it that your suggestion is that such men should be appointed as Fellows, and they should have in that capacity a voice in the Governing Body. I would like that very much. Power could be given to the College to do that by King's Letter.

227. CHAIRMAN.—Is there any provision in the charter which gives that power?—Yes; and I would wish to impress this upon the Commission, that these changes can be all carried out by King's Letter without an Act of Parliament. Power is given by the Charter to enable all such reforms to be carried out with the consent of the Governing Body of the College by King's Letter.

228. Can you refer me to the passage of the Charter in which that power is given?—Well, I cannot do so just at this moment.

229. Dr. JACKSON.—Suppose you were about to alter your regulation for the Fellowship examinations, would you require a King's Letter for that?—Well, I don't like to say that without consideration. There are certain things that can be done by the Board and Visitors without a King's Letter, but I would not like to say you can make an alteration that was fundamental without it. I don't think that you can make a constitutional change in the Fellowship examinations without a King's Letter.

230. Suppose it were desired to make one of the offices hitherto held only by members of the Board tenable by a Junior Fellow, would that require a King's Letter, or what would the process be?—I think the Board and Visitors could do that, but if a serious objection was raised by anybody, it might require a King's Letter to do it. I am not quite certain on that point. The Vice-Chancellor of the University, Mr. Justice Madden, who will be examined before you, could answer that question.

231. Have the Junior Fellows in respect of such proposals any voice?—None.

232. The reason I ask this question is because if changes are made in Trinity College, I should like to see them proposed on the part of the College itself, and therefore I have been considering whether it might not be desirable to have some sort of legislation in regard to the Governing Body which would enfranchise the Junior Fellows before any great

changes in Trinity College were suggested from within?—I quite agree in that. There have been proposals made from time to time in reference to changes in the Governing Body, but to every proposal that was brought out by us objections were raised, on one side and the other, and the Junior Fellows, I may tell you, have been quite as impracticable as the Seniors.

233. Mr. BUTCHER.—With reference to the Governing Body of the College, your suggestion is that the seven Senior Fellows should still remain members of it, and that there should be representatives of the Junior Fellows and Professors?—Yes. I could not propose less than one each.

234. Don't you think that would be an extremely inadequate representation?—Well, I would not object to it, if you thought there should be two representatives for each of them, two of the Junior Fellows and two of the Professors.

235. I think the Junior Fellows would be dissatisfied with such a small representation?—Well, I think not. To be a member of the Governing Body interferes greatly with a man's work, and they have plenty to do without time being taken up with the governing of the College.

236. It was suggested now that the Governing Body should be taken from the Fellows and from Fellows only. Does this view occur to you that if you are dealing with a College only, like Trinity College, Cambridge, that principle might very well apply to such a Corporation, but that other considerations come in when you are dealing with a College which is also a University, and that is that the relation of Professors and Fellows is quite different in such a College from what it would be if the College was not a University?—Yes; such a Governing Body has a good deal to do, to deal with various things, one of the most important is that of the Board of Studies. I would give the power to the Fellows on College matters. I would not do so in relation to the Board of Studies. I would give the Professors representation on the Board of Studies. The present Board have, to a great extent, the management of these things concentrated upon them. It appears to me that a Board like ours, a Board of Studies, might fairly include some of the Professors.

237. But even with regard to the general administration of the College, the Professors have a large interest in the University?—Certainly.

238. They would like to have a share in the government beyond the regulation of studies?—I propose that they should have, even on the Committee of Finance.

239. Yes; you propose to give them representation there?—Yes; I think they should have a voice in that. At the same time there should always be some steady body to control the application of our funds, which are, of course, limited.

240. Is it your intention that anything that was done by the Board of Finance should require the sanction of the Governing Body of the College?—Well, it should be formally sanctioned if you like, but in practice they would agree, I take it, to everything that was proposed by the Committee of Finance; it would be sanctioned by the Governing Body.

241. There is no power now to elect outsiders to Fellowships?—No, but outsiders are appointed as Professors. We have a Cambridge man, for instance, occupying one of our Chairs. We have a Professor who has come from Clifton, and another who came from Cardiff.

242. With respect to the tutorial system, you divide the tutors into three classes?—Yes.

243. And you propose to get rid of the tutors, except five?—No, they still remain tutors.

244. I mean the tutors who are in charge of pupils; you propose to reduce them to five?—Yes; I think five are plenty for those duties. And the reduction of the number to five would give us an opportunity to select the best five, because all the Fellows are not exactly suitable for the post of being in charge of students as pupils.

245. You propose to reduce the number who have charge of pupils to five?—Yes, that would give the others time for research. If a man, even of thirty years' experience, has charge of pupils he has to give a great deal of his time to that duty, and it is a very

serious tax upon a man's time, and some of them are not suited for the post of taking charge of pupils. Take the case, for instance, of Professor Bury, who has gone to Cambridge now. He was a very able man, but was not of much use as a tutor, though a splendid scholar.

246. The Fellows who have pupils get £800 a year, don't they?—Yes. Some of those high in the list.

247. Is that made up of tutorial fees?—Not all. It is made up of a number of other things.

248. Does not that seem a very large remuneration for a man who has a Fellowship?—Well, I don't think so. You must consider the class of men they are, men who devote their lives to the Fellowships here.

249. I confess it struck me as large?—Most of the Tutor Fellows lost £100 a year by the falling off in the number of students before the last three years.

250. CHAIRMAN.—I suppose that was in consequence of the Boer War?—Well, yes, but the number of the students had declined before the war began.

251. Dr. JACKSON.—May I add a word in respect to the last remark of Mr. Butcher. I think I should mention that ten of the Junior Fellows here have larger incomes than almost anybody at Cambridge?—That may be so, but they have served for a very long time.

252. Dr. DOUGLAS HYDE.—Every Fellow of Trinity College who is on the Board has a voice in the government?—Yes.

253. As I understand you that is a thing to be looked forward to by the Junior Fellows independent of the monetary advantages of being Senior Fellows?—Of course.

254. And do you mean that a Junior Fellow would have a right to compensation not merely for the monetary advantages which he would lose by reason of not becoming a Senior Fellow, but also because he loses the position of being a member of the Governing Body?—He has a right to compensation for the monetary losses, but not to compensation for being deprived of the hope of being a member of the Governing Body.

255. CHAIRMAN.—You think he has not a right to compensation for that?—No; no man has a right to be compensated for not being a Bursar, for example, and in the same way he has no right to compensation for his loss of power when being a member of the Governing Body. I should mention that we want the power to make a Junior Fellow a Bursar. In the present circumstances and constitution a Bursar must be a Senior Fellow. We want the power to make a Junior Fellow a Bursar. We should then have power to select the most competent person to discharge the duties.

256. Dr. DOUGLAS HYDE.—In the issue of a King's Letter for the admission of women to the degrees of the University was not that done at the instance of the Board?—Certainly. The King's Letter is always at the request of the Board. I may mention that that question of women's degrees was a singular one. It was discussed for the last twenty years, and a majority of the Fellows and of the Professors was, for some time, in favour of it, but the Provost was against it, and refused to consent, and he had absolute power. I then proposed to leave it to the Senate to decide and the Provost consented to that, and they decided in favour of it. We had a grand field day discussing the matter. I was on the side of the ladies and Mr. Gray was against them. The result was that we carried the application for the King's Letter by a majority of seventy-seven to eleven.

257. CHAIRMAN.—Can the Crown issue a King's Letter without any application by the College?—Well, I don't know as to that, but in practice they have not issued a King's Letter without an application by the Board.

258. Does the Charter of the University reserve power to the Crown to issue a King's Letter without any application by the Board?—Well, it is not for me to pronounce an opinion on the law of the matter; I am talking of the practice. The practice may be outside the law. The Crown may have power for aught I know to issue a King's Letter without an application by the Board. It is for you and the Chief Baron to decide that.

259. Dr. COFFEY.—The tutorial income of the Junior Fellows, does that go into the accounts of the revenue of the College?—Well, the way it appears is this. If you look opposite the name of each Junior Fellow you will see what he gets in tutorial fees.

260. Then, to the total income of the College set forth in the table sent in as over £70,000, you have to add that amount, £7,000 or £8,000?—Yes; that is so. The tutorial part of the income does not appear in the Bursar's account.

261. The tutors, according to your scheme, would be five in number?—Yes; the tutors taking pupils would be reduced to five. I should say that I recommend that because the time of the tutor is taken up to a very great extent by correspondence between pupils and the Board, and in a great many ways they have duties to do with regard to the pupils. There is a great difference in that respect. Some tutors have got 100 or 150 pupils, and another tutor may have, perhaps, only about thirty. What any particular tutor may get out of the tutorial fees is estimated in this way. Take the whole number of pupils, suppose last year, and divide that by the number of tutors who could have pupils. That gives an average—any tutor can have an average and a half, but not more, so that if two-thirds of the tutors had full chambers, the other one-third could have no pupils. Each tutor gets a capitation fee, and the balance of the fund is divided between the three grades of tutors in the proportion of 3 : 4 : 5. With most of the tutors the lecturing work occupies two hours a day. Some may have three hours. The tutorial work is not like professorial work. The professor may have fifty or one hundred men to lecture to, but he has not the work of the tutor who teaches each individual.

262. Your scheme would give these Fellows who had not pupils time for original and research work?—I may mention that I never heard of a man getting any pecuniary advantage by research work. There are a number of Fellows who are good writers and are engaged in research work, writing books, but the men who do it don't make any pecuniary advantage by it. They do it over and above their ordinary college work. We have always done our best to facilitate anyone who is engaged in research work, because I should mention that research work is not limited to scientific work. It applies to classical and mathematical work as well. When a man, for instance, like Professor Bury was engaged in research work we always relieved him of other work as far as possible, and we would do that for any man who wishes to devote his time to research. He is relieved of other duties, so far as we can, and to relieve a number of the tutors from tutorial work in charge of pupils would give them a great deal of time for research work and original work, and that would be, in my opinion, a great advantage.

263. With regard to the co-option of Professors as Fellows do you propose that should apply to all the professors?—Certainly not. There are thirty-five Professors. As a rule the large professors have better incomes than most of the Junior Fellows. Very few of the Junior Fellows reach the income in fees that is paid to the large Professors. For instance, the Professor of Anatomy receives £750. Again, the Professor of Chemistry makes over £900 a year, and he has only been here a couple of years. The pay of a Professor depends upon the number of his students, besides a fixed income.

264. Mr. KELLEHER.—A Fellow of the College is far more intimately connected with the life of the College than a Professor?—Certainly.

265. A Fellow enters College as an undergraduate, remains in College during his undergraduate terms, and continues, as a rule, to live in the College after he gets his Fellowship, whereas the Professors may come from anywhere, and perhaps never live in the College at all?—Yes.

266. It does not seem to be advisable to make all the Professors Fellows of the College?—Certainly not. It should be a limited number.

267. It is not desirable that the Governing Body of the College should be largely widened merely on sentimental grounds?—No. I now wish to offer some remarks upon another very important subject, that of the Divinity School.

The Divinity School.

I have separated the Divinity School from the other Schools, in relation to the election of representative members of the Governing Body, for three reasons: First, because I propose a different system of government for that School; secondly, because, in dealing with other possible Divinity Schools within the University, a like rule must be applied to them; and, thirdly, because the Governing Body, in relation to the other Schools and Faculties, must have a secular aspect only, and bear the same relation to all denominations. The first thing to be borne in mind is that the Theological Faculty, historically, was the first in the University, that we are dealing with an ancient University, and not establishing a modern one. There is no precedent for removing a Theological Faculty from an ancient University, while there are precedents for its introduction into a modern one, as in the cases of the London and Victoria Universities. A curious idea has got abroad, that the Divinity School and the Church of Ireland dominate Trinity College and University. As a matter of fact, the Church of Ireland has never as such had any voice in the government of the College, one whit more than any of the other Schools, and the Bishops of the Church of Ireland have never had any control over the School, have never had a voice in the election of the Divinity Professors, or in the selection of the books for the Divinity Course. It has always been the Divinity School of Trinity College, and it has educated clergymen for the Anglican Church all over the world, as well as for the Church of Ireland. But as the Fellows, in time past, were bound to be clergymen, the Bishops had every confidence in the government of the School. They, and other members of the Church of Ireland, are, fairly enough, alarmed at the gradual change in the *personnel* of the Fellows since the abolition of tests in 1878, and though the interests of their Church have been safely guarded and carefully looked after up to the present, they ask for guarantees that it shall be so in the future. The question, then, naturally arises, shall the School be separated from the College, and handed over, with or without its endowments, to the Church of Ireland, as represented by its General Synod, or shall it be retained in Trinity College, with such alterations in the mode of its government as shall secure the confidence of that Church? I have no hesitation in saying that, both in the interest of the Church and of the College, the latter course should be adopted. It is a fundamental principle of the Church of Ireland that the clergy and laity shall be educated together, not only at lectures, but in their daily lives. They should mix freely, dine together in residence, and join in their sports together. In no other way can the clergy learn to understand the lay mind with which they have to deal in their after lives. Other Churches may prefer separate education for their clergy and laity. If so, let them have it; but that is no reason why we are to be forced to adopt their system. To its honour be it said, the Roman Catholic Church has never demanded the expulsion of the Divinity School from the College. On the other hand, certain leading representatives of another Protestant communion have made that demand. In the paper* laid before the Commission, signed by the Moderator and an ex-Moderator of the General Assembly of the Presbyterian Church, the demand is made for the expulsion of the Divinity School, to secure what they called the "Nationalisation of Trinity College," by which they mean the "Secularisation of Trinity College," for they don't propose to use the College, even after the road has thus been cleared for them. In this paper there is shown a complete ignorance of the changes that have taken place in Trinity College since the abolition of tests in 1873. They speak of "the predominating ecclesiastical influence of the place." There is no clericalism dominant. Only four Fellows have taken Holy Orders since 1873; and of the nineteen Clerical Fellows at that date, only four survive. Quoting from the history of two centuries ago, this paper complains of "inequality" of treatment of denominations, the exclusive use for Episcopalian students of the College Chapel, &c. But the Church of Ireland students have always outnumbered the students of any other Protestant denomination by ten to one, and do so at present. The statement made that "the best education of the country is withheld from them, except on conditions that tempt their sons to abandon the faith of their fathers," is so far removed from the truth that absolute ignorance of the place can be their only

excuse. However, I will leave this matter to be dealt with by those laymen of their Church who have passed through Trinity College, and taken full advantage of its education. Assuming, then, that the Divinity School is to remain connected with Trinity College, what modification should be made in its government? I adhere practically to the reply I gave in 1877 to a similar question asked me by the Belmore Commission, with a very slight modification.

Three being members of the Church of Ireland to be named by the Board of Trinity College.

The two Divinity Professors (the Regius Professor and Archbishop King's Lecturer),

One to be chosen by the Assistants to the Professors, together with the Professors of Ecclesiastical History and Biblical Greek,

And three to be chosen by the Bishops of the Church of Ireland.

Nine in all; and let the Archbishop of Dublin be the Visitor of the Divinity School in relation to Doctrine, with the right of appeal to the Court of the General Synod to those aggrieved by his decision. The Visitors of the College to be, in all other respects, the Visitors of the School.

As to the finances of the School, I consider that it is entitled either to be carried on with the same funds as heretofore, or else that it should receive from the State an equivalent endowment, on the same principle as that by which endowments were given to Maynooth, and to the Divinity School of the Presbyterian Church in Belfast, under the Irish Church Act, 1869. I also consider that, in return for the control over the School thus conceded to the Church of Ireland, a substantial sum of money should be contributed to the funds of the College, in return for the professional education of the Divinity students, who at present, as in the case of the Law students also, pay no special fees for that education.

268. CHAIRMAN.—Don't they pay the same fees as other students?—They pay the ordinary Arts fees, but they pay no special fees for the Divinity education.

269. You suggest that the Church of Ireland should make a payment to the College in respect of the Divinity students?—Yes; I do not see why the Divinity students should not pay for the special education they get, any more than the students of Medicine or Engineering.

270. Do the Divinity students pay no fees?—They pay no fees for Divinity, and the students of the Law School pay no fees for law, though both pay Arts fees.

271. The Professors of Divinity are paid by the College only?—Yes. The Regius Professor of Divinity, Dr. Gwynn, is paid £1,200 a year, and Archbishop King's Lecturer, the Dean of St. Patrick's, gets the endowment of Archbishop King, which is raised to £700 a year by the College. I do not ask the Divinity students to pay fees individually, but I think the Church of Ireland should pay a reasonable sum to the funds of the College, in return for the control over the School thus conceded to the Church, and in return for the professional education of their Divinity students. The interest of the sum of money already lodged with the Church Representative Body for Divinity purposes goes at present to increase the incomes of minor incumbents.

272. It is said that both the School and the Chapel are Protestant institutions?—Yes; but we are ready to admit any other Divinity School.

273. The idea is to retain the School as a Protestant foundation?—Yes.

274. It is conceivable that, in the course of time, the whole body of Fellows of Trinity College might be Roman Catholics?—Of course, it is; but I do not see why that should be an objection. They are not all doctors, yet they could manage a Medical School. I do not object to a Medical School being managed by a Board not doctors, and I think they would be able to manage the Divinity School; but, in my opinion, we are bound to make a concession in answer to the strong memorial which the Church has addressed to us. I think they are entitled to representation on the government of the School; but I think the staff of the College should have a majority, and I give them six out of nine.

275. A statement has been put before us as to the advantages of an education in theology in a University?—Yes; I agree with that. I think it has a great effect, and is of considerable importance. I say it with all deference and respect for Maynooth, that

it is not wise to separate theological students from the laity, and I think Bishop O'Dwyer was anxious that the students of Maynooth should participate in Arts education. I entirely sympathise with him in that; I think it is a very important matter.

276. LORD CHIEF BARON.—It is right to say that it appears from the statement of the Catholic Bishops that they are anxious that the Maynooth students should participate in the Arts education of the new College?—Yes; and we offered to give them the same professional privileges in Arts as our own Divinity students, if they were allowed to come here.

277. In the statements that we have before us, it appears that there were some negotiations between the Irish Church Synod and the Board of Trinity College a considerable number of years ago with the view of coming to an agreement as to the management of the Divinity School?—Yes.

277A. As I understand, the views of the College and the views of the Church of Ireland are identical up to this point, that they both wish that the Divinity School should be continued in Trinity College?—Yes.

278. And nothing remains except the question as to the terms on which it should remain?—Yes.

279. Has any effort been made to come to an agreement as to those terms?—Yes, negotiations have been carried on for a considerable time, and we have had different discussions about it. I thought their request was reasonable, that we should, in appointing Professors of Divinity, submit the names to them, not necessarily giving them a veto, and also that we should not make any alterations in the course of studies without submitting them to the Bishops. They made that proposal, and it is a curious thing that the Board to whom the matter was proposed was equally divided upon it; the four laymen voted for the Bishops' proposal, and the four clergymen voted against it.

280. Then it is hopeless to expect that an agreement will be come to between the Church of Ireland and the Board?—Not at all; I think they will agree to my proposition—in fact I am sure they will.

281. I think that Lord Justice FitzGibbon, Dean Bernard, and the two Bishops, Dr. Archdall and Dr. Crozier, will not put any unreasonable obstacles in the way of an agreement?—Quite so; if you ask them the question, I firmly believe they will agree to my proposition.

282. MR. BUTCHER.—There is an Address by the Archbishop of Dublin to the Diocesan Synod, reported in to-day's papers from which it appears that he is in favour of a suggestion of that kind?—Yes. The only difference between it and the proposition I made in 1877 is that in 1877 I said the three members were to be named by the members of the Board of Trinity College who were members of the Church of Ireland. I struck that out, because I think the Board of Trinity College—I care not what religion they are—are quite competent to name representatives for the Divinity School. If I give three members to the Bishops, as against six from inside the College, I think that is all they are entitled to, and it is all they ask.

283. Is a student in Divinity allowed to follow his Divinity course while still a student in Arts?—Yes; a student in his third year in Arts is allowed to read in Divinity.

284. So that for one or two years he is reading concurrently in both?—Yes.

285. Is that a good arrangement?—Yes, it is a very good arrangement. A man studying for any of the professional schools can do it during part of his Arts course. That applies to all students. There is no object in the student's reading in Divinity in his first or second year unless he is a man of mature age. Any man who comes here may take up his Divinity reading in his third Arts year, and he may drop one of the courses in Arts, and the Divinity course will count as an additional one; he may drop Mathematics or Classics. A classical man, as a rule, will drop Mathematics, and a mathematical man will drop Classics.

286. SIR A. W. RÜCKER.—You do not think that that unduly interferes with what the student ought to read for Arts?—No; the same regulation also applies to medical students, and they have no trouble about it, although the medical students have to attend the hospitals at nine in the morning, and work again in the evenings.

287. There is no denominational test for a man who wishes to enter the Divinity School?—No.

288. CHAIRMAN.—There is no "confession of faith"?—No; I suppose they are all taken to belong to the Church of Ireland. I don't say that is absolutely so, because we have an arrangement with the Presbyterian Church in Belfast that a student can take his first year of Divinity here; and that is counted in Belfast in their theological year.

289. Could a professed Methodist become a Bachelor in Divinity of the College?—He could, because the degree of B.D. is not limited to the Divinity School. A theological Faculty is one thing; a Divinity School is a different thing.

290. There is no theological test of the students?—There is no test for the theological faculty, nor is there any test to prevent a man entering the Divinity School. Of course a Roman Catholic would hardly join it, but he would not be refused.

291. A Bachelor of Divinity must graduate in Arts?—Yes; he must take a degree in Arts. I may mention that Mr. J. R. Garstin, a layman and D.L., took the Degree of B.D. Anyone may take the degree by examination.

292. He can go through the curriculum?—Yes.

293. No matter what denomination he belongs to?—Yes; if he attends lectures, and passes the examination, I don't see what there is to stop him getting the degree. Of course it will be a different thing when he comes to be ordained.

294. Are the lectures apart from the degree?—Yes. A Divinity testimonium does not involve a Divinity degree at all, though most men will take the degree of B.D. if they can, and perhaps afterwards the D.D.

295. Sir A. W. RÜCKER.—Is the discipline of Divinity students under the Governing Body of the College, or under the Divinity School?—Under the Governing Body of the College. The Governing Body of the Divinity School that I propose is only a Governing Body in this sense, that they will have the selection of the Professors, the selection of the course, and the Professors will certify the testimonium for degrees.

296. Is it considered that it would be a proper thing, in preparing a man to be a clergyman, to require him to attend chapel?—Oh, yes; we do require him to go to chapel.

297. The College would require him?—No; the College would not interfere, but if he did not attend chapel his testimonium would be stopped.

298. Mr. BUTCHER.—I observe that your proposed scheme of nine representatives agrees, except in two respects, with the scheme put forward by Dr. Gwynn and Dean Bernard; one is that they include, in addition to the nine, three representatives of the Junior Fellows—that difference does not seem to be very important?—I don't think it is.

299. The other difference is that they say all the nine members of the Governing Body must be members of the Church of Ireland?—They must be, on my proposition also.

300. Then there is only one point of difference. You proposed in 1877 that, in selecting the Governors for the Divinity School, only those members of the Board who belonged to the Church of Ireland should have a right to vote?—Yes, but I have changed my mind about that.

301. So that in that proposal you differed only in one respect from the scheme I have referred to?—Yes.

302. Dr. DOUGLAS HYDE.—You ask that the Synod of the Church of Ireland shall compensate the College for the concessions it is proposed to make for them?—Yes. I don't suppose the Synod would like to pay it, but I think when a concession is made to them they ought to pay some compensation. I don't ask the students to pay individually, but the Church ought to pay for them.

303. LORD CHIEF BARON.—Supposing you required the students in Divinity to pay certain fees in addition to what they pay at present, of course you know, as a practical man, that the number who entered the school would fall off?—Yes, of course; but I don't propose that they shall pay.

304. And in the end the College would lose?—No. I propose this as a substitute for increasing the students' fees. I know I am singular in that proposal.

305. CHAIRMAN.—Though you suggest it, it is not one of the essential things in your scheme?—No; we

can ascertain the opinion of the Church on the matter.

306. Dr. DOUGLAS HYDE.—Does not the Church of Ireland give the College a *quid pro quo* in the number of students that are attracted by the College in order that they may enter the Divinity School?—The Synod of the Church of Ireland has nothing to do with sending pupils at all.

307. Yes, but the students would not go to the College if the Church did not accept the teaching as qualifying them to become clergymen?—That is so; but I give them a voice in the selection of the Professors and of the courses. I should state that we have always been on friendly terms with the Synod of the Church of Ireland, but we feel that the education of the clergy and laity is so vital to the Church that it is not a hard thing to ask them to contribute to the support of the Divinity School. We want to increase the usefulness of the College, and to get as many students as we can.

Dr. DOUGLAS HYDE.—I only wanted to emphasise the point that the College does really get a *quid pro quo* from the Church.

308. Sir A. W. RÜCKER.—In the course of your remarks you stated that in the London and Victoria Universities they had found it necessary to introduce a faculty of theology; and that is quite true; but in neither of them is it denominational. We have the Church of England, and the leading Non-Conformist Churches all working together, and working the whole thing?—Yes, and they are all Protestants.

Now, Mr. Chairman, with your permission, there are two other questions which I wished to deal with. The first is about the ladies.

Lady Students.

In the paper that has been sent in by Miss White, the Principal of Alexandra College, which you will find at page 134 of the Appendix to your first Report, there are a number of statements which I must correct, because they are not at all accurate. Miss White complains, and Dean Bernard backs up her complaint, that we do not recognise Alexandra College in the same way as Girton and Newnham Colleges are recognised in England. I do not see how we could recognise Alexandra College unless we recognise such schools as that of Mrs. Byers in Belfast, or the Roman Catholic College in Merrion Square, or Miss M'Iliderry's on the North side of Dublin, or Miss M'Killip's in Londonderry. I do not see, in fact, how we could recognise it as a College at all.

309. Then it is stated that the Board of Trinity College do not recognise the lectures given in the Alexandra College?—We did offer to recognise four gentlemen whom we named, members of our own staff teaching there. We said we would recognise them, but it would be an unheard of thing that we should recognise all the teachers whom they may employ there. The case of the Women's Colleges in England which she mentions are different from that of Alexandra College. Newnham College, for instance, is connected with one University, and prepares students for it. Alexandra College is connected with the two.

310. Sir A. W. RÜCKER.—I have seen in London a recognition of individual teachers?—Yes; and we have offered to do that when they are members of our own staff.

311. Mr. BUTCHER.—I was going to suggest whether it might not be worth while to consider the desirability of recognising individual teachers and their courses; you could not recognise the whole staff?—Certainly not. I may observe that we have never recognised outside teachers; except that in our Medical Schools we recognise the Catholic University School of Medicine and the College of Surgeons, as far as one year's course.

312. Sir A. W. RÜCKER.—That is a recognition of an institution, not of a teacher?—Yes; I do not see how we could recognise the instruction given in the Alexandra College at all.

313. Mr. BUTCHER.—You mean in allowing attendance at its lectures to count?—Yes; we could not do that. We at one time said that if they could produce a class of eight students, who desired to attend lectures by one of our Professors, we would send one of them, provided we could get one who had time at his disposal to lecture to them; and they did send an application for one of our Professors, but on inquiry we found it was impracticable.

Then Miss White says, "I have taken no notice of the honor student attending honor lec-

tures and taking honor examinations all through her course. The University has made adequate provision for such students, but they must always be in a minority," inferring that we have failed to make provision for the majority. She is under a complete mistake about that. Miss White also, in estimating hours and fees, omits to mention that a student can attend as many honour lectures as she wishes, without extra payment. She admits that the provision for honour students is adequate, but adds that such students must always be in the minority. That this latter statement has, so far, been exactly reversed by the facts is proved by the subjoined table :—

Senior Sophister Year—13 women students, of whom 3 are medical, 8 honour, 2 pass.

Junior Sophister Year—17 women students, of whom one is medical, 14 honour, and 2 pass students only coming up for examinations.

Senior Freshman Year—22 women students, of whom 3 are medical, one reading for Mus. Bach., 14 honour, and 4 have not yet done honour work.

Junior Freshman Year—15 women students, of whom one is medical, 11 have attended honour lectures or taken honours, and 3 have as yet only come for pass examinations.

It will be seen that all the women students are devoting themselves to special studies which require their attendance at the Medical School, at honour lectures, or for work in the library. To require them to attend their pass lectures outside Trinity College would entail many irksome complications on the students, and involve the authorities in needless expenditure. Miss White also states that Trinity College is devoting itself too much to professional studies, rather than Arts. That is a most extraordinary statement. She has no occasion to criticise our professional schools for men; she has to do only with women. The young women whom she represents are distinguished and successful students, as women students generally are. One of them Miss Purser, last year got marks amounting to seventy per cent. at the Scholarship examination, and in fact there was only one young man able to beat her, and that was Mr. Wilkins, son of the headmaster of a school, and nephew of one of our Fellows.

Law School.

Now, there is one other matter to which I wish to refer. It is a remark made by Dr. H. Brougham Leech in reference to the Law School, at page 61 of the Appendix.* He has made a tremendous onslaught on the Law Schools, both of Henrietta-street and Trinity College; and he states: "In the year 1902 considerable changes were made in the Trinity Law School, but not only was the opportunity missed of making an attempt to correct these deficiencies, but any such attempt was made more difficult in the future. In that year, acting upon the advice of a Committee selected by the Board, from which every Law Professor had been excluded, the College authorities determined to establish a Moderatorship in Legal and Political Science, i.e., an Honour Degree in Arts, to be preceded during two years by the usual courses of lectures and examinations connected with Law and Political Economy. Theoretically, we all believe that the examination system has been overdone; but this makes no difference in practice; and accordingly six additional examinations were introduced into the course in Arts, which included such technical subjects as Real Property, Contract, Criminal Law, Equity, the Law of Evidence, and Private International Law." He says he protested against this, and was supported in his views by the majority of his colleagues, and by Sir Edmund Bewley, and he omitted to state that the Board's Committee included Lord Justice FitzGibbon, Mr. Justice Madden our Vice-Chancellor, and Mr. Serjeant Jellett, the highest educational authorities. The reason Mr. Leech was not called in to give advice was because he gave the most determined opposition to it from first to last, but Dr. Hart, who opposed it at first, has given his adhesion to it. Mr. Bastable and Mr. Baxter, the other Professors, were entirely in favour of it, and Lord Justice FitzGibbon, Mr. Justice Madden, and Mr. Jellett united in recommending it, and all the Professors were afterwards called in to carry out the details. Already eleven gold medals and seven silver medals have been obtained at the new Law Moderatorship examination.

314. LORD CHIEF BARON.—The opinion of these gentlemen was followed and adhered to by the Benchers of King's Inn. We think it a most beneficial reform?—Yes.

315. CHAIRMAN.—One of the complaints which have been made on behalf of the Professors is that their position is uncertain and insufficiently guaranteed?—Under the School of Physic Act we can only elect Medical Professors for a term of years. Some people recommend that we should not make them professors for life, because if appointed for life we might not be able to get rid of them when they become unequal to the discharge of their duties. There is a difference between the Professor and a Tutor Fellow. An ordinary Tutor becoming useless won't affect a large number, but if the Head of a Department becomes inefficient that Department will go to the wall—if we don't re-elect him he is generally pensioned. Dr. Thompson came to us from Belfast Queen's College, where he had an income of £500 a year with a pension attached, and he accepted a Professorship in Trinity College, and there is no reason why he should be disturbed. He was nominated for the position by the College of Physicians, and they pay him £92 a year, but we, the College, pay the greater part of his salary.

316. There is a question raised as regard the Medical School and the College of Physicians. I suppose you saw the memorial on the subject?—Yes, I saw the Registrar about it and have been talking to him. I see no reason for the present state of things being disturbed. Of course persons like Dr. Thompson, and holders of professorships like his, there is no reason why they should be disturbed, and if the College of Physicians choose to re-elect such men over and over again they won't want pensions. Dr. Thompson, however, is a physiologist, and gives his entire time to the discharge of his duties. A great portion of it is devoted to the subject of research. I may state that I am in favour of retaining officers who give their entire time and of their being liberally treated, especially as regards pensions, so far as it can possibly be done. They state that the insurance offices, if they pay a premium of about £8 10s. a year from the age of thirty-eight to sixty-five, will give them £100 a year for the rest of their lives, but this College has not funds to do that, and if they can get provided for by such a figure as £8 10s. I don't see why they should not pay it themselves. We cannot undertake to saddle the funds of the College with retiring pensions, though, as a matter of fact, we have given pensions to a good many men whom we could not keep.

317. DR. DOUGLAS HYDE.—With regard to the Arts course and the whole trend of study in the University, I wish to ask you is there anything in our Arts course here that differentiates it in any way from the trend and scope of the Arts course in Oxford and Cambridge?—I have not studied the Arts course in Oxford and Cambridge, nor do I know all their requirements. I would be sorry to criticise anything that is done in either of those Universities. I don't think, however, they require attendance at lectures as much as we do. I think in Oxford and Cambridge attendance depends more upon being on the premises than upon the actual number of lectures attended.

318. I was now referring to the kind of subjects in which the students were examined and the mode of examination in Arts. It must be the same thing in Trinity College as in Oxford and Cambridge?—Yes; I believe so.

319. DR. JACKSON.—I did not ask you any question about the teaching because I understand that that matter will come up more properly when Professor Mahaffy comes here?—Yes; he is the Senior Lecturer, and is competent to give you all information on that subject.

320. CHAIRMAN.—With regard to the provision that is made in Trinity College for post-graduate study and the encouragement of research, so far as I understand, you have no regular system for the encouragement of post-graduate study or research, but you have, from time to time, given encouragement to it where a special occasion has arisen?—Yes; I may say that in the Medical School within the last two years we have had a system of post-graduate study. This year twenty-three doctors came from all parts, and we put them into some of the students' rooms which were vacant, and we also supplied them with breakfast and dinner. We had a naval gentleman, and one from China, and one from Canada, and they came here

* Appendix to First Report (Cd. 8176, 1906, page 61).

and worked as hard as possible at post-graduate study for several weeks, and went away delighted with what they had done here. We selected a number of eminent young doctors lately in our School, and not yet in too large practice, and they under our own staff devoted their special attention to these post-graduate students, who paid £12 12s. for the course.

321. In the Arts classes was there no post-graduate course?—No.

322. I believe you have no endowment for it?—We have no endowment whatever for research. If you can get us an endowment we will be only too delighted to have a course of post-graduate study in Arts. We could carry it out in the new buildings here. One thing I should state, that the Professors have really not much time at their disposal. We would require to have Professors for the purpose. A Professor's whole time is taken up with his duties on account of the large number of students.

323. But there is no provision made for research in the way of endowment?—No; no provision.

324. There is another matter I wish to bring to your notice. In England, as you are aware, the Universities take part in the examination and in the inspection of schools. I believe nothing of the kind is done here?—It is done in Ireland by the Board of Intermediate Education. I should also say we have an army class here which has done very good work. We have a splendid army class now. I am a member of the Advisory Board on Military Education at the War Office, and we have been promised by the War Office seventy commissions during the next five years. In that class we are doing good work.

325. In England, I may mention to you, provision is made by way of scholarships by the Universities for sending promising boys from the primary to the secondary schools and from that to the Universities. Is there anything of that sort in Ireland? Have you any scholarships or bursarships?—Well, there are

Exhibitions which are to be got at entrance by young men, but we have nothing to bring boys up from the primary to the Intermediate Schools. There are the Erasmus Smith Exhibitions, but the Royal School Exhibitions have come to an end in Trinity College, having been otherwise disposed of by the "Educational Endowment Commission (Ireland)," Sir John Nutting has also given a fund for those boys who have answered best at the Intermediate Examinations, and the Board doubled the number so as to take in those who did not exactly come under his scheme.

326. Dr. DOUGLAS HYDE.—Are these exhibitions open to women?—They are. I had a letter about a young lady recently who wanted to enter College with the help of one of them.

327. Is there any limit of denomination?—No; no limit at all. Sir John Nutting has offered £5,000 towards the erection of a chapel inside the College, and he was immediately denounced as a "souper" for doing it. It is a rather strange thing to say when he offered to provide that amount at his own expense. In conclusion, I must express a hope that all reforms recommended by the Royal Commission will be carried out by King's Letter, and not by Act of Parliament. Power has been reserved sufficiently by the Crown under our Charter to enable all such reforms to be carried out with the consent of the Governing Body. Everyone interested in the future of the College must see that nothing could be more injurious to its interests than to let them become the play of parties, or be subjected to debates, by persons who cannot understand the questions involved. Educational institutions are very tender plants and require very delicate handling. Sudden revolutionary changes may have effects that cannot be foreseen, and nothing can be more injurious to the work of a teaching staff than to have hanging over their heads impending changes of a serious nature, and alarms which will distract their minds from their congenial work.

Anthony
Traill, Esq.,
LL.D., M.D.,
M.CH., Provost
of Trinity
College,
Dublin.

The witness withdrew.

The Commission adjourned till the following morning.

NOTE.—The Provost's supplemental evidence is printed at page 147.

SECOND DAY.

WEDNESDAY, OCTOBER 17TH, 1906.

AT 10.30 O'CLOCK, A.M.,

At Trinity College, Dublin.

Present:—The Right Hon. Sir EDWARD FRY, P.C., D.C.L., LL.D., F.R.S., F.B.A. (Chairman); The Right Hon. C. PALLES, P.C., LL.D., Lord Chief Baron of the Exchequer in Ireland; Sir THOMAS RALEIGH, M.A., D.C.L., K.C.S.I.; Sir ARTHUR RÜCKER, M.A., D.Sc., LL.D., F.R.S.; HENRY JACKSON, Esq., D.LITT., LL.D.; S. H. BUTCHER, Esq., M.A., LL.D., D.LITT., M.P.; DOUGLAS HYDE, Esq., LL.D.; DENIS J. COFFEY, Esq., M.A., M.B., F.R.U.I.; S. B. KELLEHER, Esq., M.A., F.T.C.D.;

and J. D. DALY, Esq., M.A., Secretary.

FRANCIS A. TARLETON,* Esq., LL.D., SC.D., Senior Fellow of Trinity College, Dublin, Bursar; and the Very Rev. JOHN H. BERNARD,* D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity, called in and examined.

DUBLIN.
Oct. 17, 1906.

Francis A. Tarleton, Esq., LL.D., sc.d., Senior Fellow of Trinity College, Dublin, Bursar; and the Very Rev. John H. Bernard, D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity.

328. CHAIRMAN.—I think, Mr. Dean, that you with Dr. Tarleton appear before us as representing the signatories to what appears as Statement I. in the Appendix to our First Report; that is to say, "Statement submitted by the Provost, Six Senior Fellows, and Twelve Junior Fellows?"—(Dean Bernard)—That is so.

329. And that deals with the religious question?—Yes.

330. And you call our attention to the fact that in 1903 certain resolutions were passed by way of offer, as it were, to the Roman Catholic Hierarchy in regard to Trinity College?—Yes.

331. Of course, we should like to hear what you have to say upon them, and I should like to present to you the point which appears to me to require attention. Do you think that the offer is made and is continued subject to any condition implied or expressed that it shall be accepted by the Roman Catholic Hierarchy in satisfaction of their claims, or do you propose to put it forward as a thing which might be considered for what it is worth as satisfying such of the Roman Catholic laity as choose to avail themselves of it? I do not know whether I have made myself quite clear?—I understand the question to mean: Is this put forward by Trinity College without any condition, or subject to the approval of the Roman Catholic Hierarchy.

332. Yes?—I understand the statement as appended to this document which I have signed is merely put forward as a statement of fact of something which happened in the past, a proposition which was made in the past and which was rejected. I am not in a position to say whether the authorities at Trinity College would be willing to make this offer without any formal acceptance of it on the part of the Roman Catholic authorities.

333. Acceptance, as it were, in full satisfaction of all claims?—I am not prepared to answer that. Perhaps I may say that we had arranged, subject to your wishes, that Dr. Tarleton should make his statement first, as he represents and is a Senior Fellow.

334. Then I will ask that question of Dr. Tarleton?—(Dr. Tarleton)—Would you be so good as to repeat the question?

335. The question is this, referring to the offer made in the Resolutions of 1903, which you have set out in your Statement, that offered certain terms to the Roman Catholic body; it appears at present that those terms have been refused, and there does not appear, as far as I can see, much probability of their being accepted in the near future. Do you stand to those terms unconditionally, or do you make it an implied or expressed condition that they shall be accepted by the Roman Catholic body in full satisfaction of their claims in University matters?—It is a difficult question for me to answer. I cannot answer for the Governing

Body of Trinity College; I have no doubt they would be willing to renew the offer; that is my own conviction, but that is all I can say.

336. I should like to hear anything you may wish to say on the Statement which is before us?—Am I to go on?

337. I understood from the Dean that you were rather put forward as the speaker for this Statement?—I suppose it was merely from a strictly collegiate point of view; of course, from that point of view, I would take precedence, but from the popular point of view no doubt the Dean would.

338. We shall hope to hear you both?—As I understand what I was asked to do was to try and support the document which was put forward opposing the institution of a new college in the University of Dublin, put in expressly for the purpose of satisfying the claims of the Roman Catholics. I would like to say two things; first of all, that in most of what I say you must consider me as expressing my own opinion, because although a great many gentlemen signed that document it is impossible for me to say what are the reasons which actuated them; one person may have been actuated by one reason, while another person was actuated by a different reason. I can only give my own views on the matter and my own reasons for signing. I believe that those reasons are the same as those which actuated a great many others, but I cannot speak for that with absolute certainty.

339. But I think you are deputed by that body to represent their views to us?—Certainly. The next thing I should like to say is that it is impossible for me to say anything new. I have already expressed my opinions on the subject at great length before the Commission which investigated University matters two or three years ago, and everything I can say now has been said before either by myself or by somebody else.

340. I need not remind you that the whole of the evidence given before Lord Robertson's Commission is before us, and that we are required to consider it, and we have considered it?—The proposition which I am here for the purpose of opposing as far as I can is, as I understand, the introduction of a Catholic College into the University of Dublin. That introduction may mean one or other of two very different things. That Catholic College may be quite separate from Trinity College, and each College may have practically a University power: that is, they may prepare men in every way for their degree, and the only common bond between them may be simply that the degrees shall be conferred on the same day by the same person in the same hall and be called by the same name.

341. You mean Colleges examining as well as teaching, do you?—Examining and teaching and sending the men up and saying that these men are fit to have degrees, and all that the University would do would

* Representing the Signatories to the Joint Statement I. [printed on page 22 of the Appendix to the First Report (Cd. 3176)] submitted by the Provost, six Senior Fellows, twelve Junior Fellows, and twenty-nine Professors, Assistant Professors, and Lecturers, and Members of Council.

be simply to confer the degree through a Vice-Chancellor, who, I suppose, would be common to the two Colleges. That is the plan, as I understood it, which Mr. Wyndham contemplated at one time. That really appears to me to be having two independent Universities tied together under a common name. The chief objection I have to that plan is that it would be in fact a sham; it would be merely a way of throwing dust into the eyes of the English public, founding a new University and making them suppose that it was nothing of the sort. It would also be giving the name of the degrees of the University of Dublin to the degrees conferred by what would really and *bona fide* be a new University.

342. Of course you are aware that part of the suggestion would be to have independent external examiners who would do their utmost to make the degrees in the two colleges equal?—I am supposing that each college presents a man for a degree. I am supposing that that is your plan; I do not know whether it is your plan or not; I do not know in the least degree.

343. Oh, we have no plan as yet?—I am only arguing against that. It would be simply a sham. Otherwise it appears to me much less objectionable than the other plan.

344. Is not that plan pursued in the Welsh University?—I really know very little about the Welsh University, but I suppose there is the same Welsh University examination for all the Colleges.

345. I believe that each College examines with the aid of external examiners who send up the students for the degrees?—And the University does nothing but confer the degree.

346. Yes?—Well, that may be, but I think it would be a great misnomer to call two Colleges, which are really independent Universities, one University. The difference from having two separate Universities, so far as I can see, would be more or less to deceive the public, and to give a fictitious value to the Degrees conferred on the students of the new College. Those are my reasons for opposing that plan. But my objections to the other plan are much deeper. The other plan is, I think, very much more dangerous to the interests of education. The other plan, as I understand it, would be to have a real University, with subordinate Colleges. Now, if you had a real University, that would, of course, imply that you had University examinations, University lectures, and University Professors, as distinguished from Collegiate examinations, Collegiate lectures, and Collegiate Professors. I think if we examine into it we find that in the present case that plan would not work in a satisfactory manner. We must consider what the probable character of the new College would be. As I understand it, the new College, if founded at all, would be founded for satisfying the claims and the aspirations of what I may call devout Catholics. That in itself is, of course, a very legitimate object, and one to which I have not the slightest objection, but I would prefer to have it done in some other way. By "a devout Catholic" I understand a man who belongs to the Catholic religion, and is thoroughly devoted to his own Church, and what he desires, so far as I know his aspirations, is an education which is thoroughly approved of by his own Church, and, therefore, in the last resort, entirely under its control. What he fears above all things is the slightest taint of heresy; what he seeks to avoid above all things is peril to any of his religious beliefs. I take it that if a new College was founded it would be founded in such a way as to satisfy the aspirations of the kind of man I have described. On the other hand, the educated Protestant in general requires in higher education the free investigation of truth by purely scientific methods, uncontrolled by any Church, and the free exercise of thought and reason. Therefore, it appears to me that the two Colleges in the new University, or, I should rather say, in the modified University of Dublin, would differ in reference to the fundamental principles in accordance with which education should be regulated. Now, if the University were a real University the effect of this would, I think, be disastrous. As I said before, to make a University a reality as distinguished from a College there must be University examinations, University Professors, and University lectures. In respect of all of these there would be, in my belief, a struggle between the two Colleges which would be most detrimental to the interests of education. In the new

University Trinity College would in all probability advocate a knowledge of books and theories which the Catholic College would regard as dangerous or heretical. This same difference of opinion would extend to the subjects and the modes of treatment deemed desirable in the University lectures. The governing body of the University would then be composed of two camps. If Trinity College should triumph in the struggle, which, no doubt, would take place, the devout Catholic would come to regard the University of Dublin as dangerous; if the Catholic College should triumph Protestants would look upon the education given by the University of Dublin as one-sided, incomplete, and antiquated. This would, I think, be extremely detrimental to the interests of education, and would to a great extent defeat the ends of this Commission. The University of Dublin would not be satisfactory to the whole of the people of Ireland; it would not, I think, be satisfactory to any part or section of them, because each portion would spoil it for the students of the other portion. In respect of University Professors the state of things would be, perhaps, still worse. The two Colleges would be balanced one against the other, and in all probability one-half of the Professors would be Protestants and the other half Roman Catholics. The result would be that when a Professorship became vacant the primary question with respect to a candidate for the post would be, not whether he surpassed the other candidates in knowledge of the subject, but whether he was of the right religion. Indeed, it would in general be necessary that the occupant of a particular Professorship should always belong to the same religion, because when a Professorship fell vacant, if a man of the same religion were not appointed the balance would be destroyed. I have now stated as briefly as I could the grounds on which I personally am strongly opposed to the institution of a second College in the University of Dublin, and I think, so far as I know, that a great many of the people who signed the document hold pretty much the same opinions as I do, but, of course, I cannot say with absolute certainty that they all do.

347. We are much obliged to you for your statement. I gather that you conceive it almost impossible, in Ireland at any rate, to establish a denominational College in an undenominational University?—Yes.

348. Such things have existed elsewhere?—If it takes part in the government of the University as distinct from the College, I think it would spoil the government of the University.

349. Would it not be possible to have an examining University at the head of two denominational Colleges?—I think not, without spoiling the examinations. Who are to settle the courses for the examinations?

350. Of course, the University would settle those?—How is the governing body of the University to be selected; I presume by persons elected from the Colleges, each College having equal representation. I fear there would very often be very strong differences of opinion as to the courses between the representatives of the two Colleges.

351. I suppose you are aware of the fact that Roman Catholic Colleges in England have been in the habit of sending their students to the University of London, and, as far as I know, without any objection to the questions at all; I never heard of any difficulty arising?—That is a totally different thing. Roman Catholics, I think wisely, adapt themselves to circumstances, and in England they are quite ready to do things which they will not do in Ireland.

352. I think your view comes to this, that either in the Professorships or in the Senate of the re-modelled University continual conflict would go on?—Quite so.

353. That is a very short view of the case. Do you wish, Mr. Dean, to add anything to the statement of Dr. Tarleton on this subject?—(Dean Bernard)—Yes; if I may be permitted, I should like to add a little in supplement of what he said. In reference to the first question put to me, as to whether we were authorised to say that the resolutions adopted by the Board in 1903 were put forward unconditionally or with a qualification, I say I have received no instructions to answer that question, but I have not the slightest doubt as to what the answer of the Collegiate authorities would be. I have not the slightest doubt that the Board or the Council would be willing to renew the offer if there was the slightest prospect that it would

DUBLIN.

Oct. 17, 1906.

Francis A. Tarleton, Esq., LL.D., sc.D., Senior Fellow of Trinity College, Dublin, Bursar; and The Very Rev. John H. Bernard, D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity

DUBLIN.

Oct. 17, 1906.

Francis A. Tarleton, Esq., LL.D., SC.D., Senior Fellow of Trinity College, Dublin, Bursar; and The Very Rev. John H. Bernard, D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity.

be taken advantage of by the Roman Catholics of Ireland and approved by the Roman Catholic authorities, even though it were not regarded as a final settlement.

354. Then, that involves the approval of the Roman Catholic Hierarchy?—I am afraid it could not be done without. There is the supervision of religious observances by clergymen of their own Church, and if the Roman Catholic Hierarchy do not approve, Roman Catholic clergymen cannot be expected to come.

355. Practically you think it could not be worked without the assent of the Roman Catholic Hierarchy?—I do not think so. In reference to the larger question, it might be convenient to follow the lines Dr. Tarleton has taken up. I quite agree with him, and those whom we represent would all agree, I think, that if there is to be a real University, the University authority must exercise some control over the courses of study and over the examiners in the constituent Colleges. The analogy of the Welsh University is, I submit, not complete, because in the case of the Welsh University you have the spectacle of two or more Colleges animated by the same ideals of education, pursuing a common end, desiring to reach the same goal. There is a healthy rivalry between them, but it is not a rivalry infected by theological or political partisanship. These conditions do not obtain in Ireland. The proposal, as I understand it, is that there should be two Colleges autonomous not only as regards domestic discipline but as regards courses of study, and as regards examinations, and that the degrees which should be given by the University to the students of each College should be identical; that is to say, that the students of the new Roman Catholic College would claim the degree of the University of Dublin, which is well spoken of, and I think deserves to be well spoken of, because of the past history of the University—they would claim that degree and would get it, although they would not have conformed to the conditions under which alone that degree has been given in the past. It does not seem to me that you can have a University which has no control over its constituent Colleges. The control which it is suggested should be exercised by external examiners would not, I believe, in the conditions of Irish life, be adequate, and the friction that would go on would be intolerable. As regards what I venture to think is the larger and more statesmanlike proposal, the attempt to have one real University which should exercise the same kind of control over its constituent Colleges that Oxford University exercises over its Colleges—that, I think, is impossible for this reason. It is an attempt to combine in the same institution two inconsistent ideals. As Dr. Tarleton has pointed out, there are two ideals of education which are very well understood. One I may call for shortness the "liberal" ideal, according to which all research and investigation should be free. It is not necessarily an irreligious ideal at all, but it is quite distinct from the ultra-montane ideal which demands that at every point investigation should be checked by the ecclesiastical authorities. Those are inconsistent and incompatible ideals, and any attempt to combine them in one institution would only breed confusion and disaster, not to speak of friction. I would point to the fact that the Roman Catholic Bishops, in the very remarkable statement which they have presented to the Commissioners, seem to be quite conscious of that, because they have mentioned three alternative proposals for the future, any one of which, they say, they would be prepared to accept, but they are careful to point out that there is only one of those proposals with which they would be satisfied.

356. Is that so?—Those are the words in the Statement.*

357. 'Any of the following solutions'?—"Prepared to accept," not "satisfied with." "That solution, indeed any solution that would give us a College instead of a University, falls far short of what the Catholics of Ireland have a right to claim." That is one passage in which they point out that they would not be satisfied with any solution short of a University, and there are other passages.

358. May I call your attention to the very last paragraph of all:

"To sum up then, the Standing Committee of the Catholic Bishops feel that they are safe in stating that the Catholics of Ireland would be prepared to accept any of the following solutions"?—

I think the phraseology is very carefully chosen. They do not say that they would be satisfied with any of the following solutions, and I see no reason for supposing that if any solution short of a University for Roman Catholics were given them they would cease to ask for something further.

359. Mr. BUTCHER.—In the last paragraph but three there is a similar statement to the effect that they "have a right to a University in harmony with their principles," which is the real demand, of course?—Yes; that is their demand, and any solution short of that—although they would be prepared to accept it—they do not say that they are prepared to accept as a final or complete or satisfactory solution.

360. Dr. COFFEY.—But is not that paragraph based rather upon the numerical strength of the Catholics of Ireland than upon any question of system or of ideal: "It is unnecessary, therefore, to refer here to them further than to express the conviction that the Catholics of Ireland, who are 74 per cent. of the whole population, and have shown, in the Royal University, not only by the number, but by the ability and attainments of their students, their capacity for higher education, have a right to a University in harmony with their principles." That is really based on the numerical strength of the Catholics and their academic successes, is it not?—It is based on a great deal more than that; it is based on a question of principle.

361. I do not see where that comes in?—Paragraph three, from the end, says: "The Catholic Bishops of Ireland regard this as the true and adequate solution of the University question." I think those are very strong words, and very carefully chosen words; then they go on to say they would be prepared to accept other solutions, but I submit that they have not said that they will be satisfied with other solutions.

362. Sir T. RALEIGH.—I read the document as you do, Mr. Dean, and think they chose their language very carefully?—The point I had reached was that the attempt to combine these two inconsistent ideals not only will lead to endless friction, but that it will not really satisfy the only persons who have any right to speak on behalf of the Roman Catholic body—that is, the Roman Catholic Bishops. It would lead to friction, and I must say that they must be conscious of that. They have more than once, I am glad to say, said that they do not wish to injure Trinity College or the system of education pursued there; but they wish to have such a system of education as they can recommend their own people to adopt. Then, it seems to me and those whom I represent to be an unwise thing to tie them, or attempt to force unwilling partners into a union. To tether two people or parties together, one of whom is very unwilling to be a partner to the contract, and the other of whom says he is prepared to accept it, but does not say he is satisfied with it, is, I think, a rather dangerous proceeding, looking at the question in the light of experience. We have tried this system of denominational balance in Ireland before, in primary education and in intermediate education, and it has led to the most scandalous and shocking results. I am speaking of what is notorious and admitted when I say that if an appointment is vacant under either the Intermediate Board or the National Board, on which I had the honour to sit for six years, the first question always is not "who is the best man we can get" but "is it the turn of the Roman Catholics or of the Protestants to appoint?" It is inevitable that that would happen again if you had a University with two constituent Colleges, one of which was professedly and avowedly Roman Catholic in tone and temper, if not in constitution, and the other of which was professedly and avowedly Protestant in tone and temper, if not in constitution. If you had to appoint a Professor of History, or a Professor of Mathematics, and the University Court appointed twice running Presbyterian Professors in History or Anglican or Roman Catholic Examiners in Mathematics, there would be an outcry all over the country. That is not mere vague prophecy; it is based on the results of experience. That is what has happened over and over again. It is most lamentable that it should be so, but this fundamental divergence in principle between two sections of the Irish people is at the root of the whole difficulty. Therefore, I maintain that if we are to try to "nationalise" Trinity College or the University of

* Statement XXV. Appendix to the First Report (Cd. 3176), page 80.

Dublin—I think “nationalise” is the phrase used—we should put very clearly before ourselves what we mean by Nationalisation. If you mean the offering of equal opportunities without any privilege to all creeds, the University of Dublin is National. If you mean by Nationalisation the attempt to combine in one institution two incompatible and inconsistent ideals of education, then the nationalisation is a mere idle dream. Then, there is another point of view which I think is deserving of attention when people speak of the importance of Nationalising the University of Dublin. Is it really a desirable thing to have only one type of University in a country? I notice that Bishop O'Dwyer, in the very remarkable evidence which he gave before the Robertson Commission, says this: “One of my strongest convictions as an educationist is the utter inadvisability of having only one University institution and having all the intellect of the country shaped in one mould. I do not believe in that principle, and therefore I have always been opposed to interfering with Trinity College.” I entirely concur in the view put forward there. There is a need in Ireland for a University of a somewhat different type from the University of Dublin. There are two types of Universities in England. There are Oxford and Cambridge, on the one hand, which are the homes of learning and research, and represent the old traditions of education, to the great benefit of the country. In addition, there are the modern Universities, like Birmingham, Victoria University, Manchester, and, to some extent, the Welsh University, which are very largely congeries of technical and professional schools. Their aim is not so much to produce scholars and promote research as to fit young men to earn their living as doctors, lawyers, engineers, and so forth—a very intelligible and admirable ideal, but a distinct ideal from the other. It has been put in this way, that what Ireland needs at this moment is not so much a Roman Catholic University as a democratic University—a University where young men of the humbler classes will be able to receive at a cheaper rate such education as would fit them for the professions. That is the real need of Ireland at the present moment, but it is quite intelligible that that is a different kind of thing from a University like Trinity College, Dublin. I do not think a greater misfortune could happen to education in Ireland than that the University of Dublin should depart from its own ideals and endeavour to transform itself into a University of the modern type; and if it is to satisfy the needs of our Roman Catholic countrymen, it will inevitably have to transform itself into such a University.

363. When you connect the idea of a modern University adapting people to industrial pursuits with the idea of a Catholic University, you would not wish to have a University which excluded Protestants from industrial education?—Not at all. But the number of Protestants in this country of the type I speak of is very much less than the number of such Roman Catholics.

364. Your idea would be to have a Catholic Industrial University?—I would not put it as strongly as that?—I would say a University of the modern type. Then, again, if I may refer to the Statement made by the Roman Catholic Bishops, that seems to me to be what they have in their minds. There is a remarkable sentence on p. 81*:—“Then it is well to bear in mind that, as a body, the Catholic students who seek a University degree are not rich, and would, as a rule, find the cost of Trinity College prohibitive; while its studies, which have run in one groove for ages, to suit the requirements of certain classes of the community, could with difficulty be now brought into a modern shape, so as to meet the actual needs of the country.” That seems to me to indicate the view of the Roman Catholic Bishops, a view which is shared by a great number of other people, that what is desirable in Ireland is a University of a more modern type than the University of Dublin.

365. But with a predominant Catholic atmosphere?—Yes.

366. LORD CHIEF BARON.—It should include these other subjects?—I would say that it would lay itself out rather to provide these other subjects.

367. CHAIRMAN.—Would not the Protestants of Ireland feel it a grievance to be excluded practically from this modern University?—I do not think so.

368. You think there is not a sufficient number of

them?—There is not a sufficient number of the class I speak of—sons of farmers in the south and west of Ireland, young men who do not need and could never afford to pay for a University education of the older type, but who might be very much benefitted by residence and instruction in a University of the modern type.

369. You would not exclude the older studies?—No, I should not exclude them, but I think it very improbable that, if a University of that type were established, the older studies would be given at all the same position that they have in the University of Dublin. I may take a simple illustration. I do not think it is likely, if a modern University were established in Ireland to-morrow, that there would be any Professor of Arabic.

370. There would be a Professor of brewing instead?—I think so. Those are the main grounds of my objection.

371. LORD CHIEF BARON.—Do you know London University, with its Colleges in its modern and reformed development?—I have no practical personal experience of the working of London University, but I have friends who are somewhat intimately acquainted with its work. Dr. Headlam, Principal of King's College, London, is a friend of mine, and I have heard a great deal about it from him.

372. Of course, you are aware that there are a number of denominational Colleges in the University of London, and that the University itself is strictly undenominational?—Yes.

373. Now, taking that for a moment for a type, and viewing it in your second aspect—that is, as a real University—I want to consider some of your objections to it?—Perhaps I might just correct what I said a moment ago. I acquiesced in the statement that there were Colleges in London University of a denominational type. I am aware that there are Colleges that are recognised by that University, but I am not aware how far it would be correct to regard them as constituent parts of the University, as the Oxford and Cambridge Colleges are parts of those Universities.

374. Of course you have studied the final Report of the Robertson Commission?—Yes.

375. And you are aware of the character of the College it suggests should be founded in the Royal University?—Yes.

376. The only matter in which the question of religion comes in there is in reference to the tenure of the officers of the College; is not that so? I will just read it for you from the Report†: “The Governing Body would manage the property and business of the College. It would see to the carrying out of the examinations for degrees in accordance with the requirements of the University. Its sanction would be required to the graduation courses of study to be proposed by the Professors for submission to the Senate of the University. The President and the Professors would be appointed by the Governing Body, subject to the approval of the Crown, and each of these officers would hold under King's Letter. They would hold office for life (or a term of years), or until grave moral misconduct, proved to the satisfaction of the Visitors. It would also be a condition of their tenure of office that they should not teach or publish anything contrary to the doctrine of the Roman Catholic Church.” That would be the only essential difference between a Professor of that College and a Professor of the other College, say Trinity College?—In regard to his tenure—he would be subject to an ecclesiastical authority, directly or indirectly, in addition to the ordinary academic authority.

377. No; it is not proposed?—Not directly.

378. It is not proposed by Lord Robertson's Commission. I will proceed to read to you: “No Professor should be deprived of office except with the concurrence of all the Visitors. The duty of choosing books for use in College, so far as not prescribed in the course of studies settled by the authorities already specified, should be with each Professor in regard to his own class, subject only to the disciplinary powers of the Visitors. We think the Visitors might be four in number—two of His Majesty's Judges and two Bishops of the Roman Catholic Church. The Judges need not necessarily be members of that Church. In cases in which it is alleged that a Professor has taught or published something contrary to the doctrine of the Roman Catholic Church, the question of fact—what was said or published—would

DUBLIN.

Oct. 17, 1906.

Francis A. Tarleton, Esq., LL.D., Sc.D., Senior Fellow of Trinity College, Dublin, Bursar; and The Very Rev. John H. Bernard, D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity.

be for all the Visitors. The question—what is the doctrine of the Roman Catholic Church in the matter in question—would be for the Bishops alone. The question whether what had been taught was against that doctrine as interpreted by the two Bishops would be for all the Visitors, and so would the question of punishment.* The only thing that is left to the sole determination of the Bishops is the doctrine of the Catholic Church?—I am quite aware of that. That is the scheme which is put forward over and over again in evidence before Lord Robertson's Commission.

379. And, as I understand, the papers put forward by the Bishops, they would be satisfied with a College of this type; therefore I am not passing from this type of College. The sole distinction between this and an ordinary College is that the Bishop Visitors would settle what was the doctrine of their own Church?—You say that that is the sole distinction; it is all that is on paper; but I submit that the indirect influence of the ecclesiastical authority in a College so constituted would be enormous, and must necessarily be very great. If any Roman Catholic College, constituted in that way, or in any other way, is to be successful, it must command the approval, as regards its general teaching, of the Roman Catholic Bishops. It must do that. If the Bishops do not approve, the students will not go; therefore no matter how meagre may be the restrictions on paper, in fact the College must be such, and the courses must be such, as will satisfy the Roman Catholic Hierarchy.

380. CHAIRMAN.—Otherwise the fate of the Queen's Colleges would be repeated?—Yes.

381. LORD CHIEF BARON.—You assume that they will not be satisfied by a College which simply answers to that description. I am trying to take a College of this description and see what it involves?—That is what I am trying to see too. I think they probably would be satisfied, or they would be "prepared to accept," as they say, such a College; but I think they are prepared to accept it because they see quite clearly, as I do myself, that it would be in fact under their control.

382. Now, I will take for a moment, if you please, Trinity College, in which, as we all know, the teaching is said to be free. In that word "free" of course this is involved, that there are certain matters which your Professors in Trinity College would not be allowed to teach, and for teaching which if he was brought before the Board he would be punished—is not that so—I mean when you say a "free" University, that is not inconsistent with a religious University?—I do not think it is. The pursuit of truth may be consecrated by religious observances and religious belief.

383. Exactly. In other words, a University College is a place of religion as well as of learning?—I hold that it ought to be.

384. We have that even on the face of Fawcett's Act of 1873*?—Yes.

385. Very well. Being a place of religion, as well as of learning, we all know that the Board of Trinity College would not allow anti-Christian doctrine to be taught?—In the Divinity School, no.

386. In the ordinary Arts course?—I think it would be inconsistent with Fawcett's Act to lay down any such principle. There is nothing distinctively Christian in the constitution of Trinity College.

387. Do you think it would be inconsistent with Fawcett's Act to reprove a Professor for teaching doctrines that involve atheism or agnosticism?—I am sure it would be reprov'd in fact by the Board; whether they would be acting legally or not if they attempted to dismiss a Professor for so doing is a question I should prefer to leave to the lawyers.

LORD CHIEF BARON.—I am quite prepared to take what you are sure the Board would do, because I am sure the Board would do it too.

CHAIRMAN.—The question might arise whether it was relevant teaching.

LORD CHIEF BARON.—I am not speaking of irrelevancy.

CHAIRMAN.—But would not that probably be the ground on which the Professor would be rebuked?

388. LORD CHIEF BARON.—I am putting as the ground of the rebuke that he taught anti-Christian doctrine, for instance, atheism, agnosticism, the denial of the divinity of Christ, perhaps the denial of the inspiration of the Scriptures?—I am entirely satisfied that the Board would not interfere in reference to the last two subjects you mentioned.

Whatever anyone may desire—I do not express any opinion—but I am quite sure the Board would not interfere in any matter of that sort in the case of a Professor, say, of moral philosophy. They would seem to me to be going quite beyond their province under Fawcett's Act.

389. You wish that in the University of Dublin all creeds should have equality, should be treated equally—is not that so?—Equally, yes.

390. Now, when you speak of creed, of the Roman Catholic Creed, why do you not take into consideration the article of that Creed which says that the doctrine of the Roman Catholic Church is to be ascertained by the teaching of the Bishops?—I think I do recognise that to the full, and that is the reason I think you cannot have teaching that shall be satisfactory to the Roman Catholic Bishops in a University constituted like Trinity College.

391. Is it not that you think that in a University constituted like Trinity College the Catholics cannot have equality?—They cannot have that exceptional privilege for which they ask. The claim they make is a claim not for equality, but for privilege on account of religious scruple. That they cannot get; therefore, I do not think it can be satisfactory to them.

392. Not for privilege, but for equality, having regard to, not a scruple, but a part of the intrinsic doctrine of their own Church. How can you divide their doctrine into two parts, and say, "We will satisfy your religion so far as one part is concerned, but not so far as the other part is concerned." I take it as an integral part of the religion. I do not accept the distinction which my friend Dr. Tarleton drew between the "devout" Catholic and any other Catholic. A Catholic is a person who believes in the Catholic religion, and to the best of his ability is anxious to abide by its dictates?—To admit their claim to supervise University studies for the benefit of Roman Catholics in a University would be unjust to those who are not Roman Catholics.

393. It would be an infringement of their privileges?—The equality of opportunity is offered, as I understand, in Trinity College at this moment. The authorities are willing to give exactly as much to that creed as this, exactly as much to Roman Catholics as to the Church to which I belong. But the Roman Catholic authorities quite consistently say, "We cannot accept that, it is not sufficient; the safeguards you offer are not sufficient, in our judgment, for our young men." I say, "You are the best judge of the safeguards."

394. Do you not see that it is a part of the Roman Catholic religion, a part of the Roman Catholic Creed, that prevents their being satisfied with it?—Certainly.

395. Therefore, you do not make any offer to the Catholics, for the offer is made in such terms that they cannot accept it, just in the same way as we were not at liberty to enter Trinity College before the Act of 1793 was passed, because they could not take the oath?—I am afraid that is so. I have never thought that the Roman Catholics were simply unreasonable people because they would not come in, and I have never said so. I hold that a University such as Trinity College cannot go further than it has done without being false to its own first principles; and that being so, I have to come to the conclusion that it is impossible to unite these two ideals of education in one institution.

396. Then is it not a fact that there is not equality between Roman Catholics and Protestants in the University of Dublin?—From the point of view of the State there is, because equality of opportunity is offered; but from the point of view of the Roman Catholic Church there is not.

397. How can there be in the view of the State if you take the creeds into consideration, and the fact that a person of the Roman Catholic Creed cannot join the University?—I never said that; I do not say he cannot join the University.

398. How can he?—A great many go.

399. Can he, assuming he is anxious to act up to the dictates of his religion?—My answer to that must be that a great many Roman Catholics have entered Trinity College. I have known a great many Roman Catholics in Trinity College during the thirty years I have been here, but I have never known one to become a Protestant, although I have known several Protestants who became Roman Catholics.

* (36 Vict., cap. 21), University of Dublin Tests Act, 1873.

400. My experience has been much the same in reference to that, but of course you are aware that the conditions in reference to Trinity College are not exactly the same as they were in the early fifties?—No.

401. You evidently look upon Trinity College and the University of Dublin as the same entity. You have used the two phrases in the course of your evidence as meaning the same thing?—I may say at once—perhaps it will shorten matters—that I am not prepared to offer an opinion upon that extremely complicated legal question. I know the Master of the Rolls has used the expression which I have used, and that it has been commented upon unfavourably.

402. You can understand an alteration being made in the University of Dublin as one entity, leaving Trinity College untouched as another entity, although the relations between them must necessarily change?—The introduction of another college would certainly affect Trinity College. I do not think Trinity College could be untouched, because it is now autonomous as regards its degrees, but it would cease to be autonomous as regards its degrees if another College were introduced which had equal representation on the University Court.

403. Have you studied the history of the University of Dublin and of Trinity College sufficiently to be able to answer the question whether you are of opinion that the College has captured the University?—Again I am not a lawyer, and I think that is a question rather for lawyers. But if you ask me for my own opinion, I think it has. I think that at one moment there was an intention to introduce a College of an undenominational character.

404. CHAIRMAN.—Whatever the intention, it has never been put into execution?—Never.

405. LORD CHIEF BARON.—One of the questions is whether it should be put into execution now. Of course you are aware of the results of the Intermediate Examinations during a long period of years?—Yes.

406 Generally?—Yes.

407. Now, why is it you assume that the Catholics would not wish to have a University in the true sense of the word, a home of learning and religion, where the old type of University teaching should be given?—I have never for a moment supposed that the Roman Catholics desired a University which should not be the home of religion. I have never seen one word in any statement put forward on behalf of the Roman Catholic authorities—I may have been unfortunate, but I have never seen one word which suggested that they considered that one of the functions of a University was the promotion of research. I have read a great deal about the advantages which would accrue to Irish life professionally from a University training, but I have never read anything about the promotion and encouragement of research. I do not think it is in the minds of those who have been agitating.

408. I can only say what is in my mind. My idea of a University is exactly the same as yours, and I should be very disappointed indeed if, in any College or University that was now founded, we had not learning in the true sense of the word, the old types of learning that were taught in the old middle ages Universities, accompanied, no doubt, by all the modern faculties which have been introduced into the later Universities. But I do not think I will trouble you on that question.

409. Sir THOMAS RALEIGH.—You suggest the foundation of a distinctively Catholic University, well equipped in practical subjects. Would you place the headquarters of such a University in Dublin?—Before I answer that might I say that I am now speaking only for myself. I have not been instructed by my colleagues to put forward any constructive policy on their behalf, but only to put forward reasons which lead them to believe that the second College solution would be a bad one.

410. I do not wish to press the question, but if you have an opinion on that point I should like to hear it?—I am quite ready to give it. The question is whether a Roman Catholic University should have its headquarters in Dublin. My answer is, Yes, I think so.

411. Have you thought out the future of the Royal University?—I have always hoped that the Royal University would be dismissed to that limbo from which it came. I do not think it has been at all

a satisfactory experiment in Ireland. It has degraded the whole idea of University education in this country. People do not understand what University education means now in Ireland; they think it is enough to pass a certain number of examinations.

412. If the Royal University disappeared, what position would you give to the three Queen's Colleges; with what University would you connect them?—That is a large piece of constructive policy. I think that it would be better for the interests of the country, if there is to be a new University—if Dublin is to continue as it is, and if a Roman Catholic University is to be established, which is perhaps somewhat doubtful—but on those hypotheses, I think the best solution would be to establish a University in Belfast.

413. CHAIRMAN.—A University in Belfast with a College in Dublin?—No; Queen's College, Belfast, to be a University.

414. Sir THOMAS RALEIGH.—What about Cork and Galway?—Galway, I do not think is of any use whatever, although I am a Visitor of it. Cork, undoubtedly, might do useful and good work, but I do not think it would be necessary to retain it except as a College of the Roman Catholic University; it might be retained as a College of the Roman Catholic University.

415. Might I take it that a reason why the Royal University has tended in some respects to lower the standard of education is that it is merely an examining University, examining all and sundry, without asking where they come from?—That is one reason, yes. I do not think the public have ever had confidence in the examinations of the Royal University, and about that I do not wish to make any statement of my own; there is a Statement to that effect in the Report of the Robertson Commission.

416. If the University system of Ireland is revised, would you approve of a general application of the residential principle—I do not mean actual residence in Colleges, but residence under the supervision of Colleges—Certainly; I do not think a degree ought to be given without attendance on lectures.

417. Sir ARTHUR RÜCKER.—If a separate Catholic University were established in Dublin, you would not have it an essential part of the arrangement that there should be any difference in the subjects taught at the two, would you?—I should leave that altogether to the authority of the University. I do not think it is for us who have Trinity College, with which we are satisfied, when reformed, to say what shall be taught or what shall not be taught at the other University.

418. You would impose no limitation on Trinity College, on the other hand; it might develop as it pleased in the future?—Yes.

419. There would almost certainly be a certain amount of competition between the two?—Certainly.

420. Do you think that that competition could be more regulated if both institutions were colleges in one University than if they were separate and independent Universities?—It would be just as intense a competition.

421. Take the case of fees. If there were two independent Universities there might be underselling, to put it plainly?—I think there would be, but I think Trinity College must be prepared to face that.

422. You are prepared to face that?—I am prepared, speaking for myself.

423. But you do not think it would be an advantage if the two Colleges were in one University, that the University might have something to say as to the fees in the Colleges?—It would be some advantage from a financial point of view, but the disadvantages would be so enormous that they would outweigh it. I do not think Trinity College can ever hope to attract a very large number of students. I should rather hope that it would work out its ideals in quite a different way, having regard rather to the quality of the education than to the number of young men it educates.

424. The next question referred to in your evidence is with regard to the relations of the denominational Colleges in London with the University, and how far they were similar to the relations between the Colleges in Oxford and Cambridge and the Universities. Those relations are complicated, but may I take

DUBLIN.

Oct. 17, 1906.

Francis A. Tarleton, Esq., LL.D., Sc.D., Senior Fellow of Trinity College, Dublin, Bursar; and The Very Rev. John H. Bernard, D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity.

it that you would agree that this is a general description of the relations between a College and the University at Oxford; it is an independent institution; it has control of its finances; it is generally subject to the University as to the conditions on which degrees are obtained?—Has it absolute control of its own finances? I rather thought there was a contribution.

425. There is a contribution, but we are putting the contributions aside, as they were established not so very long ago?—As far as I know I should think that would be a fair description.

426. Putting aside the contributions, that is a description of the Colleges in London, so that they are very similar to the Oxford and Cambridge Colleges?—Yes.

427. You do not think it would be possible in this country to bring a denominational College into such relations to the University?—No; the religious bitterness is so intense in Ireland that I think endless friction would result.

428. Do you think any inference is to be drawn from the fact that there is no Roman Catholic College having those relations to the University of London?—I should think that it points to the fact that the Roman Catholic educational authorities see that such influence as they would have would not be sufficient.

429. I should like to have a little more closely to the question of the arrangement of the courses on the assumption that the two institutions were connected. Do you think the University would have any difficulty in laying down courses of study which the Colleges could follow out in their own way, provided only that the precise books which were to be studied in moral philosophy and so on were put in either as options to suit the two colleges, or were left to the choice of the Colleges?—The case we are contemplating is the case in which the University court has real control over the course, is it not?

430. I want to distinguish between the laying down of the general outlines of the course of study and the freedom of the teacher to follow that particular course of study in different ways. Do you think it would be possible to combine the two systems of a Catholic College and Trinity College if the teachers were left more freedom as to details, while the general outlines were laid down by the University?—I do not think so; I do not think you would get a uniform standard in that way.

431. You do not think that, even with alternative questions on the examination papers in examinations, that end could be obtained?—I do not; I do not think the public would have the slightest confidence in the equality of the standard.

432. Dr. JACKSON.—I should like to ask one or two questions with reference to the second of the two combinations of colleges in one University. It seems to me that if there were to be two colleges with separate teaching and separate examinations and only a common degree, that would be, as has been said, a sham, and therefore I put that aside forthwith. But I should have thought it possible to combine two colleges in one University, and I was a little surprised to hear that their ideals must necessarily be diverse. I should like to ask whether their ideals would be different in such subjects as mathematics, classics, physics, biology?—The way in which physical sciences would be taught would necessarily be different. They would be under different control; the investigations of the scientific professor would be subject at every point to the ecclesiastical authority in the one case and not in the other. In the one case the educational ideal would be—I want to use a general term which shall not be offensive—that of ultramontanist; the teachers would have to work there entirely subject to ecclesiastical authority.

433. I am assuming that the second college would be undenominational, although presumably there would be a considerable number of Roman Catholic students there.—Undenominational in theory.

434. In theory, yes.—If it is not denominational in fact it would entirely fail to satisfy the purpose for which it is created.

435. I can only express my surprise at hearing that there would be so much difficulty in such a subject as physics.—Perhaps I might say a little more on that point. I deplore the fact that there would be, in my opinion, this difficulty. I have heard again and again scientific men speak of the difficulty that would ensue if there were these two colleges put in common

relation to the University. This is not merely my own opinion, but it is the opinion of many of my colleagues pursuing the study of science.

436. Would it surprise you to hear that in my own University there has been certainly one instance, and I think more than one, of a theological student of the Roman faith taking the theological tripos?—It would not surprise me at all, because I know it. I know two or three of the Benedictines attended lectures at Cambridge, and that that should be possible at Cambridge is a most satisfactory and admirable thing. But no one who knows anything about the conditions of Irish life would suppose for a moment that it would be possible here. I regret that it should be so, but it would be absolutely impossible.

437. I would pass on to another point, the question of the relations of Trinity College, Dublin, to the University of Dublin. I noticed when you were answering the Lord Chief Baron that you spoke of Trinity College as being autonomous as regards its degrees. Surely the degrees are the degrees of Trinity College so far as it is the University of Dublin; in fact, there is a difference.—Again, I do not want to offer an opinion as to whether Trinity College is distinct from the University of Dublin.

438. Is it not a fact that there are at the present time very important members of the University of Dublin who are not members of the Corporation of Trinity College?—The only members of the Corporation of Trinity College are the Provost, Fellows, and Scholars.

439. Are there not important members of Trinity College in so far as it is identical with the University of Dublin who are not members of the Corporation of Trinity College?—The large bulk of the professors are not.

440. Therefore, there is already the nucleus of a new University in the professors. If there were to be in the University an undenominational college, which, not being Trinity College, might be resorted to by Roman Catholics, and also perhaps a Cork College and a Belfast College, might not difficulties be removed in so far as there would be a number of people with a common curriculum and independent teaching to do the examining work? Is that an impossible solution?—I have not quite caught all the details, but if I understand it is simply this: I am asked why do I think it impossible that the University of Dublin might incorporate two or three additional colleges, and follow the model of Oxford and Cambridge; is that the question?

441. Yes.—My answer is that the success of the Oxford and Cambridge system depends ultimately on the fact that the various colleges of which the University is composed are animated by the same ideals of education, and that they desire to pursue the same objects in the same way. Therefore, I think it would be possible for, say, a college like Queen's College, Belfast, apart from the geographical difficulty, to be a constituent member if the University of Dublin without undue friction arising, because the educational ideal of the College is not widely different from our own or from those of Oxford and Cambridge Colleges. But if the denominational College which is to be set up, or which it is proposed should be set up to satisfy the claims of the Roman Catholics of Ireland, is really successful its ideals will be quite different. Friction will inevitably be introduced, and difficulty will arise at every point. We have tried that system of educational balance in Ireland ever since the establishment of the National Board, and it has proved a most hopeless and ghastly failure.

442. You do not think that the moderating effect of common work amongst colleagues would tend to smooth away the difficulties of which you speak?—I do not think the difficulties would be removed. I do not say that the difficulties would not be smoothed, but I certainly think they would be insuperable; they could not be got over altogether.

443. Mr. BUTCHER.—There are two plans which have been put forward for bringing Trinity College or the University of Dublin into fuller relation with the higher education of the country. One is the plan which we have been considering of having a second college within the University of Dublin, the other is the scheme for making the University of Dublin a federal University, comprising several colleges scattered over Ireland. I would like to ask you

a further question or two about the first scheme before proceeding to the second. In regard to the first scheme, I have seen it argued—in fact, we have it in several of these statements—that there should be a new autonomous college, similar to the Catholic College proposed by the Robertson Commission, within the University, alongside of Trinity College. What I would ask you is this: do you think that the same measure of freedom could be granted to a second College within the University of Dublin as seemed to be necessary in the case of a college in a federal university whose colleges were as far apart as Dublin, Belfast, Cork, and Galway? Or do you think the tie must be closer between two colleges in one city than between scattered colleges over the country?—Yes, I think it must.

444. If that is so, it would make a very important difference as regards the constitution of the University. The proposal of the Robertson Commission gave almost complete autonomy to the Colleges, and in the matter of examination for graduation, you remember, it was proposed that they should each conduct their own examinations, but that certain external examiners should be appointed by the University. But this is what I have observed—that it is assumed by several persons in the written communications sent in to us that the new College within Trinity College would be autonomous in precisely the same sense as it was proposed to make these other Colleges within the re-constituted Royal University autonomous. Father Finlay says* that such a College must satisfy certain well defined conditions. "It must be such a College as the Royal Commission of 1901 recommended for Catholics in the Royal University." He mentions several points as regards equipment, endowment, and so forth; then he adds: "And, above all, it ought to be autonomous; while a member of the University of Dublin, it should be free to shape its own destinies;" and "Catholics," he goes on to say, "should have the power and the responsibility of making it what they conceive a Catholic University College ought to be." Now, does that view agree with what you conceive to be the general demand of those who favour such a second College?—I think that nothing short of that would satisfy those for whom this College is sought, and to give as much as that would be impossible without wrecking the University of Dublin.

445. One of the objections you take to this new College, I understand, is that you would have in the governing body the same lines of religious cleavage that you have in the Royal University of Ireland, on the National Board, on the Intermediate Board, and throughout the educational system of Ireland. Is not that one of your very strong objections?—It is.

446. And you would lay emphasis on the fact that it is one of the most disastrous influences on Irish education?—I call it the scandal of Irish education; it has been the very worst.

447. Can you imagine any other principle under which you might constitute a governing body, than that of equality, first of all, between the Colleges, and then the basis of denominational difference; can you imagine any other way of making a University governing body?—No; there must be representatives from the two Colleges, and, therefore, you at once bring in the denominational difference on the University Court.

448. And they would have to be equal, I suppose?—They would have to be equal.

449. Passing to the other plan of having a University of Dublin with federal Colleges scattered through the country, I do not think you have said anything directly about that, though I imagine your general principles would be unfavourable to it?—It has not been very much in the air lately. It was talked about some years ago, but it seems to me to be rather a sham.

450. It is, of course, roughly speaking, Gladstone's scheme of 1873?—Yes.

451. Do you consider that anything in the way of recent experience helps to commend that scheme?—I do not think that anybody desires it. No, I do not think so; as far as I can see, it has not been asked for of recent years.

452. It was part of the Dunraven scheme, you know, so far as that was made articulate at all?—That was so very shadowy.

453. And it was understood to be part of Mr. Wyndham's scheme. It, therefore, requires some discussion now?—It was never formulated in detail.

454. Not in detail, no?—I think it has very grave difficulties attaching to it. Again, I fear there will be the great difficulty of friction on the University Court.

455. And do you think you could have a Federal University consisting of Colleges so unequal in importance, one College being an old University with a 300 years' life, and another the Queen's College in Galway?—It would be an extremely unfair thing to call such a new institution the University of Dublin, and give the Degrees of the University of Dublin under its auspices.

456. Could you have a Federal University composed of elements so heterogeneous?—I think it would be very difficult.

457. Hitherto we have been familiar with Federal Universities, the Colleges of which have themselves developed into Universities. Is there any instance in academic history of an old University being resolved into a number of Federal Colleges?—I do not know of any.

I do not either, but it is a point of curious interest.

458. Dr. DOUGLAS HYDE.—Do you not think, supposing a second college were added to the University of Dublin, that that college would have completely different ideals from the ideals which prevail in Trinity College at present?—I think it would.

459. Do you not think it would represent a completely different trend of mind and tone of thought; that it would represent rather the old inhabitants of this country, who have never found a place in Trinity College?—I suppose it might be put in that way.

460. And do you not think, also, that it would make it its first business to attempt to increase the wealth of this country by the application to our industries of the various chairs that it would be within its power to establish?—I have already said that I think it would tend to be a congeries of professional schools.

461. Do you not think that this country has been under a great disability owing to Trinity College being so very devoid of these chairs, which should make for the wealth of the country, so to speak? Would you not naturally expect that in a new college in Dublin University there would be a school, let us say, of fermentation, considering that we are a great brewing country; and a school of chemistry, as applied to dyeing, considering we are a great spinning country? And do you not think that a school of agriculture would be of the first importance in a country like this?—In regard to some of these matters Trinity College has already made provision. For instance, there is a professor of applied chemistry. But in regard to the others, there is no provision for them in the University of Dublin; there has been no provision in the past in this University any more than in the other older universities. But the tendency in Trinity College now is to consider the desirability of appointing chairs of the kind to which you refer; and opinions differ as to whether that is a wise policy for the University or not. We have established a school of agriculture.

462. Would not the University of Dublin be immensely strengthened by this second college, which would be equipped from the outset with all these chairs that popular feeling seems to ask for; would not that be some compensatory advantage to Trinity College in the way of increasing its prestige to a certain extent, and increasing its usefulness?—I do not think there would be any gain in prestige by its being associated with a quite new and untried institution. A hundred years hence, possibly, there might be some gain.

463. In the scheme of dual colleges there would be university lectures, I presume, in law and in engineering, etc., which students from each college would attend equally. Do you not think there would be some compensatory advantage in the students of the two colleges coming together in these University lectures? I only wish to point out that there would be some compensatory advantages?—It would be a very good thing if the young men of Ireland could be brought together to pursue a common life—attending lectures in common, attending laboratories in common, having their sports

DUBLIN.

Oct. 17, 1906.

Francis A. Tarleton, Esq., LL.D., Sc.D., Senior Fellow of Trinity College, Dublin, Bursar; and The Very Rev. John H. Bernard, D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity.

in common. All these things would be good, and for the benefit of the country; but I hold that they are impracticable, because of the religious difficulty.

464. Do you not think that a second College inside the University of Dublin would tend to make it more practicable than any other scheme which you can possibly devise for students to come together in common University lectures on Law, Engineering, and so forth, especially if the Colleges are fairly contiguous? Supposing a second College were established close at hand, the students would be fairly contiguous and would mix a great deal?—The question assumes a great deal. It assumes that a number of University lectures would be given in common. Who is going to appoint the University Professors of a common University course? You immediately have the whole question of whether he is to be a Roman Catholic or a Protestant. If you were going to appoint a Professor of Brewing to-morrow, the first question asked would be, "Who had it last? If a Protestant, then it must be a Roman Catholic this time."

465. Dr. COFFEY.—You spoke of two ideals—the liberal ideal and the ultramontane ideal—in education, and you identified the liberal ideal with the system in Trinity College, and the ultramontane ideal as that which the Catholic Bishops look for?—Yes.

466. Trinity College is mainly worked by members of the Church of Ireland?—For the most part, yes.

467. Seeing that the Church of Ireland is just as denominational as the Roman Catholic Church in reference to primary education and secondary education, and that this University of Dublin is mainly in the hands of members of the Church of Ireland, who are fully satisfied with it, is not the "liberal" system just as denominational a system in practice as a Catholic system might be?—No, I do not think it is a denominational system in practice at all. Nobody who has been in Trinity College for the last twenty years would dream of calling it denominational.

468. It is the Act of Parliament which justifies it as undenominational?—I called it liberal.

469. And "liberal" in practice means "denominational"; it means Church of Ireland and Protestant?—I could not admit that at all. Every prize, post, emolument and dignity is open to all comers.

470. It has come down from a time when the University was officially Protestant or Church of Ireland, and the University has remained largely with the Church of Ireland. In other branches of education that Church holds strictly by the denominational system. Therefore, as a practical matter Trinity College must be denominational in its tendency?—I think you would be justified if the principles of the Church of Ireland were inculcated upon all students who come here.

471. At that famous meeting in the College in 1892, at which Judge Webb and Lord Justice FitzGibbon were present, it was admitted very fully that it was Protestant in its atmosphere?—I admit to the fullest extent that it is Protestant in its atmosphere if you mean by Protestant non-Roman; I do admit that fully.

472. Those who are excluded from coming to Trinity College are such a very large portion of the Irish people that whatever system of education is given to them, it should be done, is it not so, on a scale proportionate to their numbers and the prestige which they have as the old Celtic race of Ireland, and also to the abilities they have manifested whenever occasion offered? That being the case, whatever may be the scale on which the University problem is settled, it must be a very much bigger matter than as a congeries of professional schools. I hope you have not excluded in that description the establishment of a residential college?—You will permit me to go back to the beginning of your question; there are some points to which I take exception. I do hold that if any provision is made for University education for Roman Catholics—here I speak merely for myself and not for my colleagues—it should be done on a handsome and liberal scale. I do not admit that we should work on a scale ascertained by counting heads. Three-fourths of the Irish people probably are Roman Catholics, but it is absurd to say that three-fourths of the university-going population of Ireland are

Roman Catholics. The grievance has been enormously exaggerated when heads have been counted. The number of Irish Roman Catholics who are debarred by their religious scruples from entering Trinity College is comparatively small. The overwhelming majority of Irish Roman Catholics are poor peasants who will not be directly affected by the creation of a new university or college. One of the greatest needs of Ireland is that the labour of these people shall be expended upon the land which costly legislation has secured for them. To do anything which would divert the Irish peasantry from farming, or give the impression that manual labour is not as honourable as that of a clerk, would be a national crime. Therefore University education should not be provided with such a lavish hand as to attract the unfortunate sons of labourers to a University.

473. As regards the whole, the disability might perhaps be overstated?—I think it is not an overstatement to say that the large majority of the Irish Roman Catholics are poor peasants.

474. If you wish to proceed I will come to that point afterwards?—I hope that whatever provision is made for Irish Roman Catholics will be on a large and liberal scale; if the thing is done at all it ought to be done handsomely. If you ask for figures, I would say that the cost of a modern battleship would be quite sufficient.

475. What about the question of a residential college?—I think a residential college is extremely desirable, and I by no means wish to exclude that, because a university which does not provide teaching lectures as well as examinations is only half equipped.

476. Do you think that in its organisation the college or university to be established for Catholics ought to approach the type which we have in Trinity College?—It is not for me to say. I think if the money is handed over to the Roman Catholics to do exactly what they like with, it is not for me to say what they should have. The tale of previous legislation is that Roman Catholics have been given money for the things for which they did not ask and which they did not want, because other people thought them good for them.

477. You seemed to think that the University should be a congeries of professional schools?—I do not profess to say what it ought to be, but I predict that that is what it will be—a university of a modern type, including arts and science teaching, but largely depending for its reputation and its students upon its professional schools.

478. You referred to Arabic, and said that that might be excluded?—I thought it would be probable. It was only a prophecy, and perhaps it was foolish to prophesy.

479. As to the difference in the circumstances of the average member of the Church of Ireland and of the Catholic in Trinity College, those who seek the education of the Divinity School pay no fees?—I do not quite catch the point of the question.

480. In the case of the Divinity School you apparently have an offer made to meet the circumstances of people who are poor: they are not charged fees in the Divinity School?—Yes.

481. If that is a true way of representing it, you have the University providing for people whose circumstances are not so very different in that respect from the circumstances of the Catholic people?—I do not think that is the reason. The reason that no fees are charged is historical, and it arises out of the fact that the Divinity teaching was at the very beginning so fundamental a part of the instruction given here that it was regarded as the normal thing. But I think the position I suggest about fees is simply this. People ought to be prepared to pay for University education either in brains or in money, as I said before the Robertson Commission, and I should hope if a University for Roman Catholics were established it would be endowed in such a way as to enable the fees to be low, because I think the majority of the people who would seek to enter its doors would not be able to pay large fees. Dr. Tarleton reminds me that law students pay no fees either.

482. They pay fees to the Benchers?—They do, to the Benchers of King's Inns.

483. Then one point in connection with the number of Catholics who are available for a higher type of

University education. You are aware of the numbers of students who take exhibitions in the middle and senior grades of the Intermediate?—Yes.

484. In those grades, which may be taken as the test grades, the Catholics outnumber the Protestants?—Certainly.

485. Judging by the ability they show there and by the stage which they have reached in secondary education, you have a very large number of people available for higher education in Ireland?—There are a good many things mixed up in that. I should not like to commit myself to the proposition that everybody who passed the senior grade—

486. I said exhibitioners?—Very well; that every exhibitioner was therefore a person who ought to go to the University. I do not think that success in secondary education involves as a matter of course that that person will be benefited by going to a University, any more than that success in the higher standards of the primary school means that a boy should necessarily go on to the Intermediate.

487. That introduces one of the conditions into which it is very difficult to inquire?—I only mean that the inference is not obvious.

488. So far as numbers go, they are suggestive at any rate. Then in reference to the difficulty of adjusting the different standards of education in a common University, you pointed out the difficulties which would arise in connection with books, lectures, and all that. In the case of the Royal University, at present the Queen's College, Belfast, and the University College, Dublin, send up students in all the subjects—

CHAIRMAN.—Should you not rather put questions to the witness than state facts to him? I rather suggest that you are stating your own views and facts; the object should be rather to elicit the views of the witness.

489. Dr. COFFEY.—Certainly. Does any difficulty arise in reference to the books and lectures in these courses which are provided by the examining body of the Royal University for the students of Queen's College, Belfast, and University College?—I do not know.

490. There is one other point in reference to the difficulty which you think would arise in connection with physics and biology. Do you know of the existence of the school of biology in the University of Louvain, which includes some very eminent biologists?—I know there is a great University there, but I do not know about it in detail.

491. LORD CHIEF BARON.—There is just one point in reference to the probable number of Roman Catholic students who would enter a University. Do you not think it would be for the advantage of the country that the students who were about to enter the Roman Catholic Church should be students of the Roman Catholic College?—Oh, indeed, I do.

492. There seems to be an intention on the part of the Bishops, evidenced in the papers here, to cause the students of Maynooth to enter the new college. That would be a desirable matter, and it would bring in a large class, would it not?—It would. If you ask me, I think it would be very desirable that they should get a university education in addition to their own seminary education. But I recall that the evidence given on that subject by the Bishops before the Robertson Commission is most conflicting, some Bishops holding that it was desirable that theological students should be educated with lay students, and other Bishops holding that it was not.

493. There is another class of student that it would be very desirable to bring in—I mean persons who contemplate being teachers in intermediate schools?—Yes.

494. It would be desirable that they should be brought in?—Yes.

495. So that there would be many more than those coming from the farming class?—There would be a substantial minority, who would be practically of the same class of people as those who come to Trinity College.

496. Mr. KELLEHER.—I would like to ask one question in reference to the proposal to have a second college in Dublin. I would like to ask the Bursar whether there is any University fund which would make it desirable for any college to affiliate itself to the University?—(Dr. Tarleton).—Well, the only funds I know of that would be at all described as University funds would be the fees paid for degrees,

and I suppose they would be held to be University funds; but there is really no difference between the College and the University at present; they are merely different aspects of the same institution, like the convex and concave surfaces of a circle.

497. CHAIRMAN.—Before I take you to the statement which you have put in, there is just one general question I should like to ask. Suppose we advised the retention of Trinity College substantially as it is at present—I mean, of course, introducing minor modifications—have you thought out what would be, in your own opinion, the best general scheme for all the residual university institutions—whether you would keep them all together in one University, or what would you do?—(Dean Bernard).—That is exactly the sort of question which I have no authority to answer.

498. I quite understand that, but at the same time as you have thought so much about the subject, I should like to have your opinion if you have formed any?—You mean the residual institutions would include the colleges at Belfast and Galway?

499. Yes, and even Maynooth?—Even Maynooth, yes. Well, what I should personally, speaking only for myself, wish to see would be a Roman Catholic University having its headquarters in Dublin, with Maynooth College and Cork College; and I should like to see the Queen's College, Belfast, turned into a University if there was any strong feeling on the part of the Belfast people for it.

500. Then your scheme would be the introduction of two Universities—one at Belfast, the other a federal University?—That would be it.

501. Dr. DOUGLAS HYDE.—It is the fact, is it not, that some of the University buildings and College buildings were built by the Irish Parliament, or assisted by a grant of money from the Irish Parliament?—In the case, I think, of the Library that was so?—(Dr. Tarleton).—Yes, I think that was the case with several of them, but they are all College buildings.

502. Are not several of them University buildings?—I do not think so; they are all entirely under the Bursar—all the College buildings.

503. CHAIRMAN.—You have been good enough, Dr. Tarleton, to give us a statement, which is printed at page 65 of the Appendix to our First Report, and in that you have stated both the evils which you think exist, and also the way in which you propose to remedy those evils. You say:—"The evils which I have enumerated I propose to remedy in the following way:—By increasing largely the number of subjects by means of which a Fellowship can be obtained. By doubling the number of Fellowships open to competition each year. By making every Fellowship when first obtained temporary, or, in accordance with the nomenclature used in my scheme, provisional. By greatly diminishing the number of Tutors having pupils under their care, and greatly increasing the number of Tutor Professors. By giving permanent Fellowships to those Provisional Fellows only who are elected to Professorships, Assistant Professorships, or Tutorships with pupils, before the expiration of their Provisional Fellowships." That, I think, is the outline of the scheme you propose?—(Dr. Tarleton).—That is so, as far as regards the Tutorial and Fellowship systems; and then there is also, of course, another part of my scheme which deals with the Governing Body.

504. We shall be glad to hear anything you wish to say to us in reference to these proposals, beyond what you have written in the statement which has been printed. I suppose you are of opinion that the present system of electing to Fellowships is a considerable waste of intellectual energy, are you not?—No; I think the present Fellowship system, with the slight alterations I have mentioned in my scheme, is an admirable system.

505. It has been put before us that the number of attempts to obtain a Fellowship, on the part of those who are ultimately successful, is about five on an average. Does not that mean that a man who for five years is under the necessity of getting himself ready to answer questions at an examination, instead of applying himself to independent research, or preparing for some other profession, is to a great extent wasting his intellectual energy?—I have endeavoured to deal with that by doubling the number of Fellowships. If you have two vacancies every year, and two men elected to a Fellowship instead of one, the effect upon the competition will be simply enormous; you will not have anything like the amount of competition that you have now.

Francis A. Tarleton, Esq., LL.D., Sc.D., Senior Fellow of Trinity College, Dublin, Bursar; and The Very Rev. John H. Bernard, D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity.

506. Would it not, in your opinion, be necessary to elect the men to some extent on their merits, independent of their power to answer questions at an examination?—No, I think that if you once began to do that you would destroy the whole Fellowship system as it at present exists. That is of course a very big question. I took it for granted in preparing my scheme that the Fellowship system would be retained, and that it had great merits, and my object in the earlier part of the scheme was to show a way in which I believed that its defects could be remedied, and a way whereby the system could be placed upon a more secure footing than is at present the case. Of course it may be disputed that the Fellowship system has any merits at all, and it might possibly be thought better to do away with the system of competitive examinations altogether, but I think that that is a very great question. The merits, as they are, in my opinion, are briefly hinted at in my scheme, but I hardly thought it necessary to go into them in any great detail. In the first place, I think it would be very difficult to substitute any other system which would be so useful for bringing forward Irish young men and enabling them to start on a successful career as the Fellowship system. Any young man who is well educated, and who has sufficient ability, may get a Fellowship by open competition, and then he is fairly started, at any rate, upon a successful career. If you had the Professorial system—I mean electing simply to Professorships on the ground of attainments, and on the ground of the things that the men had done in science or in literature, the result would be that there would not be that opening for young Irishmen of ability at all, and I think that the majority of the class of young Irishmen that I have now described would leave the country altogether. A few would, no doubt, remain, and try for success in the professions, but a great many that we keep now would go. Also, the effect upon University life in Ireland would, I think, not be what I should like; it would be found, I think, that the majority of our Professors would have to be got from England or some foreign country. Very few Irishmen of ability would devote themselves to the academic life at all, or if they did they would not remain in Ireland to do so, but would go elsewhere.

507. Must there not, on the present system, be a number of men who have spent a lot of time seeking for Fellowships, and who have ultimately gone elsewhere, after having lost four or five years of their time?—Not necessarily lost their time; many of these men succeed in getting Professorships elsewhere, and perhaps get on better than if they had obtained Fellowships here. For instance, one of our most eminent men, Sir Robert Ball, is now a leading Professor at Cambridge, and another instance is that of Mr. Townsend, who is now a Professor at Oxford, and who read for Fellowship here. Both these men, if the Fellowship system had not been in existence, would very likely have gone to India, or done something wholly different from what they did do, and it was the prospect of getting a Fellowship here that kept them here, and although they did not ultimately get a Fellowship, it was owing to a variety of what I may call accidental circumstances, and they have had very successful careers elsewhere. I think the Fellowship system is a very admirable system, and I should be very sorry to see it destroyed, and in my scheme I have taken the hypothesis that it is worth keeping; the whole point of my paper was to make it better and more useful than it is at present. I think the Fellowship system as it exists at present generally gives us men of great ability, fitted to rise to the highest positions in the literary and scientific world, but I think that owing to the way in which we work them now, their time is greatly wasted after they have got their Fellowships, and they have a lot of petty interruptions and trivial duties which take up a great deal of their time and do not leave them sufficient leisure and opportunity to bring themselves up to the top of the tree in the subjects which they have taken up, and it is against that system that my scheme is chiefly directed.

508. Those are the observations that you would make upon the first part of your paper?—Yes.

509. Then with regard to the Governing Body, what have you further to say upon that point?—With regard to the Governing Body, the obvious fault of the Governing Body is the advanced age of the men who form it, and the fact that changes in

the feeling or sentiment in the junior part of the staff is not reflected with sufficient rapidity in the Governing Body, and the scheme that I have suggested would, I think, to a great extent, meet those objections. I think it would be a mistake to do away with Senior Fellows altogether, because I think if you want to get really first-rate men, men of first-rate ability, to seek for Fellowship, you must make the post which they are ultimately to get worth something. My ideal would be that men of the same type and of the same calibre should compete for Fellowships as those who afterwards become Attorney-Generals and Judges, and leaders in the various professions. Now, I do not think you would get men of that type unless you held out a prospect of some sort of prize, some sort of career which is fairly good. You have, of course, in that return of our accounts which was put before you, complete particulars of all the incomes here, and you see that they are not so very excessive. The highest income amongst the Senior Fellows is not half that of a Judge, and I think, therefore, that Senior Fellowships ought to be preserved, and that it is highly desirable that there should be a large element of the Governing Body composed of men whose interests are entirely bound up in the place, who have spent a long time in it, and who know all about the work, and therefore I propose, in my scheme, to keep a good many of the Senior Fellows on the Governing Body. But, in addition to that, I have proposed that four new elected members should be put on, two to be elected by the Fellows and two by the Professors. You will have observed that in my scheme the Fellows include not only the permanent Fellows, but also the provisional Fellows, and if the scheme was in full working order there would be twenty of these provisional Fellows, so that their voting power would be very large, and the men who would be elected as representatives of the Fellows would, to a great extent, be elected by the provisional Fellows. Therefore any change in the sentiments or general character of the people who get Fellowships would be almost immediately brought to bear upon the Governing Body. This, I think, is an important feature of my scheme.

510. Then you would not give one representative to the provisional Fellows and another to the complete Fellows, would you?—Well, that is a mere detail. I should not object to that in the least—not in the slightest degree. I think that is a very small thing, but there are a great many details in my scheme which could, of course, be worked out afterwards, and which possibly might result in its being greatly improved. It is only the main features that I am now pressing—that a man should not be elected to a permanent Fellowship until he has shown that he is really fit for the highest departments of academic life, and that the number of men engaged in tutorial work, in mere keeping of accounts, and managing the affairs of the institution, should not be nearly so large as it is at present, which would save, as I think, a great deal of valuable time. Those are the two main features of my scheme.

511. You divide your tutors into those who do the strictly tutorial work—the teaching—and those who do administrative and other work?—Not exactly. Teaching and administrative work are both done by a Tutor having pupils. The word "tutor" is an ambiguous word: it may mean that the man's income comes partly out of the tutorial fund, and these are called tutor professors; but it also may mean not only that the income of the man comes out of the tutorial fund, but also that the man has the charge of pupils.

512. LORD CHIEF BARON.—There is a vast amount of detail in this which, if the principle were once settled, could be worked out by another body than the present Commission—say by the Governing Body of the College?—Certainly.

513. It should first be arranged what the Governing Body of the College should be, and perhaps whether the system of Fellowship should continue or not, and then everything else is mere matter of detail, which would be more properly worked out by the Governing Body?—Quite so, but I went into detail of great minuteness, chiefly to satisfy myself that the thing was possible at all.

514. We are much obliged to you for doing that, but I have been considering the possibility of our going into all these details, and it seems to me that if once, with your assistance, we were able to decide upon the Governing Body, and perhaps the Fellowship

system, some other body would be necessary in order to work out those details fully, and that body would very likely, I should think, be the Governing Body?—The financial details could, of course, be left to be subsequently dealt with. The document now before you was not originally drawn up for this Commission at all, and was prepared chiefly in order to satisfy my mind that the thing was possible, because it struck me that many of the plans proposed and schemes put forward were quite impossible, and inconsistent in their details.

515. Dr. JACKSON.—I should like to put one or two questions to you. I observe that you say that the Fellowship system is principally useful for bringing young men on in their career: do you mean in an academic career or in any career generally?—Well, if you take the plan I have sketched out, it would bring them on in any career, because a good many of these provisional Fellows would not devote themselves ultimately to an academic career, but would go to the Bar, or into the medical profession, or any other profession that they elected to follow; but they would get enough to live upon in Dublin while they were starting in their profession. I think that would be a most valuable thing to do.

516. I recognise that there would be that advantage in the scheme of widening the examination which you propose: but I should like to ask whether, as a matter of fact, during the last twenty years, the effect of the competition for the Fellowship, or rather the effect of the successful competition for Fellowship, has been to advance men in a career away from Trinity College, or mainly to start them in Trinity College. In other words, have the successful competitors for Fellowship mainly remained in Trinity College, or have they presently gone off to other things, and abandoned the academic career?—Oh, the vast majority of them have remained, because the Fellowship as it exists at present is a permanent thing; it is for life, and very few have given it up. There have been a few who have done so—the late Dr. Webb, who was a Fellow, and a few more, including my friend on my left, Dean Bernard. There have been a few, but the great majority have remained.

517. Am I right in thinking that the papers set for Fellowship resemble the highest papers set for the very best undergraduates?—When you say the very best undergraduates, do you mean here or in any other University?

518. In your University.—Well, they are certainly more advanced in mathematics and physics. Of classics I am not so qualified to speak, but I think they chiefly differ in classics in that they cover a very much wider field; a man is expected to know classical literature very thoroughly for Fellowship.

519. But if he has been studying the developments of classical literature, would he have any opportunity, in the examination, of showing his knowledge? Has he, for instance, the opportunity of putting in a dissertation showing that he has done original work?—No, there is no opportunity of that kind afforded him.

520. Do you not think it might be desirable, at the present time, to give young men an opportunity of putting in original work, which possibly might not be perfect, but which, notwithstanding, would show that they had the power of advancing their subjects?—That might possibly be a great improvement. The only difficulty I see about it would be the difficulty of making sure that it was their own work. When you allow men to send in theses, and things of that kind, it is not always very easy to be certain that the work was really written by the man himself, and that he did not get somebody else to write it for him.

521. I asked the question because in the English Universities that system is growing, and tending to oust examinations.—Well, I am not at all opposed to that; I think that is a thing that ought to be considered.

522. And do you not sometimes desire, if your statutes would permit of it, to elect to your corporation men who have not qualified by examination at all—men whom you might want for the service of the college, or perhaps distinguished professors whom you might be glad to associate with yourselves by making them Fellows?—That, no doubt, seems desirable, but there are great difficulties in the way. You see the difficulty would be in reference to the standing of these

men as Fellows; it would be no advantage to him to take an eminent professor and make him a Fellow, because you could not, without injustice to the other Fellows, put him anywhere except in such a position as would make him junior to the whole body of Fellows.

523. Of course, from my point of view, it would seem quite natural that the last elected Fellow should be at the bottom of the list.—Yes, but if he is perhaps twenty years older than the last elected Fellow, with many years scientific reputation behind him, it would not be any advantage to him to be made a Fellow and be at the bottom of the list, whereas if you were to put him at the top it would be doing an injustice to all the other men. That is one difficulty, but I am afraid there are a great many other difficulties in the way of what you suggest.

524. Sir T. RALEIGH.—We have the idea at Oxford, I think, that professors rather enjoy being Junior Fellows?—I fancy the Oxford system is quite different. Of course in the Royal University a Fellow merely means a man who gets a certain fixed income; it is always the same. If that were the case here the difficulty would not then arise.

525. Dr. JACKSON.—I think I noticed in your evidence given this morning that you regarded the obtaining a place on the Governing Body principally as a prize.—Oh, no; I did not say that; I said that I thought it was desirable that men who got Fellowships should have something to look forward to in the way of a good income; whether they are on the Governing Body or not is another question. They might be Senior Fellows without being on the Governing Body.

526. That is what I was going to ask you about.—In my scheme I do not put all the Senior Fellows on the Governing Body.

527. LORD CHIEF BARON.—Five only, I think?—Yes.

528. Dr. JACKSON.—I was wondering whether the prizes which, according to your scheme, should be retained for the Seniors could not be separated from responsibility. It seems to me that in a great society like yours it must sometimes happen that you want, for the great administrative posts, someone who is no more than a Junior Fellow?—Well, you see, in the case of the most troublesome offices there would be great difficulties supposing a Junior Fellow was eligible—enormous difficulties would arise in this way: If you appointed a Junior Fellow, say, bursar, he must give his whole time to it, he could not possibly do anything else, and if he was bursar for five years he would be quite unfit to return to professorial work; you must either make him bursar for life or else put him into a position which would unfit him for doing anything at the end of the five years; he could not go back to being a professor; the subjects belonging to his professorship, if he had been a professor, would have progressed in the meanwhile, and he would not have been able to keep pace with that progress, and he would therefore be quite unfit to be a professor.

529. I quite recognise that: but do I gather from your remarks that the office of bursar is a terminal office held for a few years only?—One year.

530. But is he not generally re-elected? Yes, generally speaking he holds the office for four or five years.

531. I should have thought that you might find it desirable, when you had got a good bursar, to keep him for a much longer period. Now, I should like to ask you a question about the responsibility of the Junior Fellows. Am I right in gathering that the Junior Fellows have no share in the government of the college?—Not at present; they have no share in it now.

532. Your proposal is that they should be represented on the Governing Body?—Certainly. Perhaps I am wrong in saying that they have no share, because they have representatives on the Council, and the Council is a very important part of the Governing Body.

533. CHAIRMAN.—They elect four, do they not, to the Council?—They elect four to the Council. The Council has as much power as regards studies as the Board has, and has one power more than the Board, viz., the power to nominate to a Professorship; and although the Board has the power to refuse to agree to the Council's nomination, it is like the power of the King to veto an Act of Parliament, and is in practice never exercised.

534. Dr. JACKSON.—When you legislate—when you apply for a King's Letter—by whom is the application made?—By the Provost and Senior Fellows.

DUBLIN.
Oct. 17, 1906.
Francis A. Tarleton, Esq., LL.D., sc.D., Senior Fellow of Trinity College, Dublin.
Bursar: and The Very Rev. John H. Bernard, D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity.

535. The Junior Fellows have no share in that application?—No, I think not officially; they might express their opinion, but they have no share officially.

536. Do you not think it would be good for the corporate life of the college if, in a matter so important as legislation, the Junior Fellows took part?—Well, I think the Junior Fellows should always be consulted.

537. But do you not think (it is a matter of sentiment, perhaps, but sentiment is sometimes a good thing) that there would be something to be gained by making the Junior Fellows take part in an application for legislation?—I have proposed in my scheme that two representative Junior Fellows should be put on the Governing Body.

538. But I am suggesting something very much more radical.—I do not quite understand what you mean, do you mean that the whole of the Junior Fellows should be on the Governing Body.

539. No; I am thinking, of course, of another college, which has historically a close attachment to yours—Trinity College, Cambridge—where we have an executive body composed partly of *ex-officio* members, partly of members elected, to do the weekly business of the house, but where also every Fellow has a share in every application for new legislation, and I must say that I think that this has its advantages in bringing the Juniors into harmony with the whole society, and making it one.

540. CHAIRMAN.—Are you right there, Dr. Tarleton? The reservation of the power of making laws seems to be "*Cum assensu et consensu eorundem Praepositi, Sociorum, et Scholarum*,"* but the distinction between Senior and Junior Fellows was subsequent?—You mean under the Charter.

541. Under the Charter the King's Letter is issued, but I mean to say, that I cannot conceive that the distinction between Senior and Junior Fellows can overcome that?—I can only speak as a general rule, the Junior Fellows would take very little interest in a King's Letter, which generally refers to matters which have been quite arranged beforehand, and on which the Board makes an application. If they want a King's Letter in general the Board makes an application. When the last King's letter of any importance was applied for, the Junior Fellows were consulted, and the Junior Fellows expressed their feeling.

542. Dr. JACKSON.—Informally?—Informally, yes; I never heard any suggestion before that they had any legal right.

543. CHAIRMAN.—Is not that distinction between Senior and Junior Fellows much later than the time of Queen Elizabeth, or rather Charles I.?—Well, I think in all the documents the Provost and Senior Fellows are spoken of as the representatives of the College.

544. Dr. BUTCHER.—"Scholars" includes the Junior Fellows as well as the actual scholars.

545. Dr. JACKSON.—I think that by tradition the scholars have been regarded as not yet of age. I believe that that is the theory.—I am not sufficiently learned in the law to tell you what the law is; I can only tell you the practice in general with respect to an application for a King's Letter. A King's Letter overriding the Charter might, and probably would, require the consent of the Junior Fellows as well as that of the Senior.

546. One other matter I should like to ask you a question about. I see in your scheme for an enlarged Board, you speak of two professors elected by those professors who are not Fellows. Those representative professors also would, I presume, according to your wording, be professors who are not Fellows?—Oh, certainly.

547. Would you not find a certain disadvantage in introducing into the inner corporation persons who were not Fellows—that is to say, not members of the society in the strict sense?—I do not see that there would be any disadvantage. I cannot see it.

548. Then I will ask about a detail. You say that "any member of the Board, except the Provost, who is absent from a meeting of the Board, shall pay the sum of £2 to a substitute."† Do you think that a substitute can advantageously take the place of somebody else on what is presumably important business? I am asking the question because we used to have a system of substitution at Trinity College, Cambridge, and I used to think then that nothing was so absurd as for one man to begin a discussion, another to continue it, and a third to vote upon it, and yet I have seen that done.—Well, I think it would be better that the man himself should do it, but at the same time

I think it is necessary to have some provision of that sort, in order to ensure punctual attendance. It is the rule at present, on the Board of Trinity College, that if a Senior Fellow is not present at a meeting of the Board, he has to pay a substitute. The substitute is the senior of the Junior Fellows; the Provost calls him to the Board and the Senior Fellow who is absent pays him. It is a great method of ensuring regular attendance, and I think it is very important to have some such provision, because, although, of course, some men are extremely conscientious and scrupulous about their duties, and never fail to attend unless they are physically incapable of doing so, yet, there are other men who are not constituted in that way, and who would just stay away whenever they fancied doing so, and if they had to pay a substitute it would have a very stimulating effect in preventing them from staying away unless for sufficient reasons.

549. Mr. BUTCHER.—Do you contemplate keeping the Council—the Academic Council—if you have your reconstituted Governing Body?—Yes, I have contemplated it; I do not propose to do away with the Academic Council.

550. And have you thought of reconstituting, or reorganising in some way, the Faculties through Boards of Studies; have you considered that question?—I cannot say that I have given very much consideration to it myself, but I have heard it brought forward by others, and I do not see any objection to it, so far as I am concerned. If the professors in the various schools thought it desirable, I do not see any objection to it whatever, but I think you must have one central Governing Body that has the control of the finances.

551. Dr. DOUGLAS HYDE.—I see you do not mention anything about the Senate at all. The Senate has the power of vetoing degrees; is that all?—That is all, and of course, if there is new legislation in anything affecting degrees, the consent of the Senate must always be obtained.

552. If it is proposed, for instance, to give a degree in a new subject?—There must always be the consent of the Senate.

553. Do you think the powers of the Senate ought to be enlarged in any way?—Well, I do not think there is much advantage in giving larger powers to the Senate, so far as I am able to judge.

554. Does the Senate ever veto degrees in practice?—I think once or twice it has threatened to veto a degree, and the degree has consequently been withdrawn.

555. Just one other question. Why do you think that by extending the subjects of examination for the Fellowship you would make it a less severe mental strain upon the person going in for it?—I do not think it will make a less mental strain, but, I think, that by increasing the number of Fellowships you will lessen the mental strain.

556. Then, what was the idea of enlarging the number of subjects?—To make more men fit for professorships, because you see at present there are a great number of professorships, some highly scientific—for instance, the Professorship of Chemistry—that a Fellow is hardly ever qualified to take.

557. Dr. COFFEY.—Have you thought of the probable options of candidates in coming forward for Fellowships in those subjects you have put down here—in how many subjects might they come forward?—I could not answer that; the thing is, to a certain extent, tentative, and might have to be altered in its details, if it were found not to work well, as regards the number of the subjects and the weight assigned to each; it would be easy to alter those details if once the main provision was adopted.

558. Would candidates be influenced by the number of marks assigned to subjects?—I think so. It is very much more difficult to score in mathematics and classics than in any other subjects—at least, that is our experience.

559. Would such a scheme of marks, as you have suggested here, obtain for you Fellows of distinction in biological science and in chemistry?—I think so. Of course a man might gain great distinction in chemistry alone, but I do not think such a man ought to become a Fellow. The type of man I should like to see would be a man of magnificent attainments in, say, chemistry, and who knew also a great deal about physics, and something of mathematics, so that he might be able to score something in all those subjects—taking very high marks in chemistry, some in physics, and some in mathematics. Such a man would have a very good chance of becoming a Fellow.

* *Chartae et Statuta Collegii Sacrosanctae et Individuae Trinitatis Reginae Elizabethae Juxta Dublin.* (Dublinii: Sumptibus Academicis excudebat M. H. Gill, 1844), Vol. I, page 15.

† Appendix to First Report (Cd. 3176), 1906, page 67.

That was my idea, and similarly in modern languages. I should like a man who took up modern languages to know also something about classics, although he might not be able to get very high marks in the latter.

560. You think on that system you would have a fair proportion of scientific men in those experimental and natural sciences among your Fellows?—I think so.

(Dr. Tarleton withdrew.)

561. CHAIRMAN.—Mr. Dean, you have been good enough to furnish us with a statement, which is to be found, I think, at page 42 of the book* before you. In that statement you go over several subjects of great interest, and in the first, or rather in the second, of your paragraphs you deal with what you consider the essential conditions of reform, and you state them thus:—“(1) That the Board in future shall not be appointed on grounds of seniority alone, but that it shall be an *elective* body. (2) That it shall be *representative* of the various faculties. (3) That, while retaining the ultimate control and apportionment of the revenues, it shall be assisted in its duties by syndicates of the several faculties, whose decisions in regard to their respective departments shall be subject to veto, but not to amendment, by the Board. (4) That the post of Registrar be held by a paid official, not a member of the Board.” Now, taking the last condition first, I suppose you think the post of Registrar is not one which requires a very highly educated person to fill with ability?—(Dean Bernard).—No; my view was that the business of the Registrar could be better done by a clerk at £200 a year than it can be done at present by a highly educated man, with no business training. The Registrar is responsible for the immense mass of correspondence which is incidental to a great College like this, and he has also to keep the minutes; and it is not a good plan, in my opinion, to appoint a man well advanced in life to such a position as that unless he has had previous experience to fit him for the work—experience in keeping minutes and in conducting a large correspondence.

562. You would keep a permanent secretary?—A permanent secretary, yes.

563. Then, I do not quite understand why you suggest that the recommendations of the syndicates of the various faculties should not be subject to amendment: you seem to put the Board rather in the position of the House of Lords on a money Bill?—That is a matter of detail, which perhaps I ought to have gone into more fully; but my idea was that if these syndicates were appointed without some such provision as that, what would happen would be this—that a recommendation sent up by the syndicate would possibly be considered by the central body with imperfect data and materials, and amended in a more or less unsatisfactory way; and I hold that such recommendations should be sent back to the syndicate from which they emanated; and that such syndicate should be asked to amend them.

564. You would not trust the central body to do that?—Well, our experience is that a central body is not altogether satisfactory in a matter of that sort. But, of course, after all, that is a matter merely of detail.

565. Yes, but I was rather struck with the condition you wished to impose upon the central body?—What I should wish to bring out is that it is essential that the central body should have the power of giving its approval in regard to these matters.

566. Do you think it would be advisable to have separate Boards of Studies or one Board of Studies?—All that I wish for is this—that before anything is done finally, the persons who are presumably experts in the particular matter in question should be consulted, and their decision not overruled without some good reason for so overruling it.

567. It would not be enough to make it a condition precedent that the Governing Body should have consulted the Board of Studies?—Well, if you reformed the Governing Body I think it might be sufficient.

568. Then you propose to reform the Governing Body?—I do.

569. Do you propose that it should be entirely *elective*?—Not necessarily; I think there might be some *ex officio* representatives upon it; but what I wish to see altered is the present system by which a man succeeds to the Body simply because he lived longer than his colleagues. I could amplify my reasons for that if you wished.

570. No, I think it is hardly in dispute. My question is directed rather to ascertaining from you in what way you would propose to reform the Governing Body, and on that point I should be glad to hear what you have to say?—I think the distinction between Senior and Junior Fellows is one which is hardly worth retaining in the future.

571. It is not a real distinction?—Not a real distinction at all. I should like to see a Governing Body which should be elected by the members of the Corporation.

572. LORD CHIEF BARON.—The Fellows, you mean, do you not?—I should have said the Fellows. In fact, what I desire to see at Trinity College, Dublin, is the same kind of government, in many of its details, as that which I understand prevails at Trinity College, Cambridge, to which Professor Jackson referred just now.

573. You would abolish mere seniority?—I think the principle of succession by seniority is beginning to work badly. It worked pretty well many years ago, but then the conditions were quite different, and the succession was much more rapid.

574. Dr. JACKSON.—Was it not in consequence of fewer men being in Orders that the change came about?—Largely. All the Fellows except two or three had to be in Holy Orders in old times, and there were many valuable livings in the gift or patronage of the College, which enabled these Fellows to retire early in life. During the last forty years only four Fellows have taken Holy Orders.

575. CHAIRMAN.—You would abolish that system of seniority for that reason?—Yes; and another reason why it seems to me undesirable to continue the system by which a body of men, who gain their position as the Senior Fellows do, are entrusted with the control of all the departments of University life is the specialisation of studies. The increasing specialisation of studies and the growth of professional schools has made it more and more difficult for any single body of men, no matter how capable or impartial, to control all the departments of University life. It is essential that if these various departments are to be carried on with due efficiency, the power over these departments should be entrusted to syndicates, which may be presumed to have special knowledge to fit them for that work.

576. Have you made up your mind what number the Governing Body should consist of?—I have not come to any final conclusion about that. I thought that was rather a matter of detail; but my impression is that it should be about nine.

577. The whole of them elected except the Provost?—The whole of them elected except the Provost.

578. The Provost you would make an *ex-officio* member?—Certainly.

579. And he would be Chairman?—He would be Chairman.

580. Then with regard to election to Fellowships, you have made some suggestions. You say that there should be—“(1) A superior age limit for election to Fellowship; (2) an age limit for retirement therefrom; (3) election on the result of published work, without examination; (4) election of Professors as such to Fellowships; (5) appointment of readers for a limited period”; and you say that those proposals have your sympathy, and you concur with them. Are not the Readerships very much analogous to the Provisional Fellowships, which Dr. Tarleton spoke of?—Yes; but I do not agree with Dr. Tarleton's view, that the present Fellowship system ought to be continued in the form we see it now. I admit the great advantages of the system, whereby men are elected upon the results of examinations only, and, especially in a country like Ireland, subject as it is to such strong political and religious feeling, it is a great thing that everybody should see that these elections are thoroughly impartial. You secure that by this system of examination, and there is this further advantage about the present system of electing to Fellowships—that as a man cannot be expected to win his Fellowship because of efficiency in a single subject, he is obliged to take up some kindred line of study in addition to his main subject, and thus becomes a man of more general culture. The old Trinity tradition is that a man should be an all-round man, and that has proved in the past very beneficial in enabling the life of the Society to be widened to some extent, and in enabling men to take interest in the work of their colleagues.

King's
Lecturer in
Divinity.

581. But is there not also a great disadvantage in keeping men upon tenter-hooks for five years?—Yes, and I think the disadvantages outweigh the advantages. The course is so long, and the competition so keen, that men rarely succeed until the third or fourth attempt, although there have been cases of success at the first or second trial; but I should think the average period would be three or four years.

582. We have been told that the average number of attempts made by successful candidates for Fellowship was five?—I should not have thought it was so high, but at any rate, many men do not now get their Fellowship until they have reached thirty years of age, and their freshness has gone before they enter upon their life's work. And then there is this further disadvantage—that they are elected for life, and that, if they live long enough, they will succeed as of right to a seat on the Board, without any regard to their services to the college or to the reputation gained by them. The consequence of that is, human nature being what it is, that a certain number of men are content to treat their Fellowship as a prize rather than as a profession.

583. What do you say to this scheme? Supposing you first made all men who had obtained a certain eminence in Moderatorships, and had obtained a certain number of marks, eligible for Fellowships—supposing you made it a *sine qua non* that they should first have attained that line, and that, as between them, the choice should be determined by their merits, as ascertained by dissertations prepared for the purpose, or dissertations published in any learned journal, would such a scheme as that work?—Such a scheme would be not dissimilar to the one I have myself thought out; it only differs from it in detail. What I have thought has been this—that the present studentships might be utilised as provisional Fellowships, with this difference: the student at present gets £100 a year for five years, and no duties; I would give him £150 a year and put certain duties upon him, either in the way of teaching, or in the way of research, or in the way of assisting our Professors; and I would watch him during those five years to see if he was a good teacher, and to see how he got on generally; and out of the students so elected I would choose one every year—I think one would be quite enough each year—who would be elected by the Governing Body on the reports which they received from the various Syndicates or Faculties as to, first, the need that they had for an additional teacher, or an additional investigator, in that particular department, and, secondly, on their report as to the proficiency of the young man.

584. On his merits generally?—On his merits generally. One year it might be desirable to elect a classical scholar, another year a biologist, another year a philosopher; and before the Board determined what they would do, they ought to get reports from the different Faculties, which would lay before them the needs of the several schools, and also the reputation in which the existing students were held by those competent to judge.

585. Can a man obtain a studentship in any subject—for instance, if he is a pure chemist, or a pure biologist, can he obtain one?—No.

586. Therefore a man may be of the utmost eminence in a particular line, and yet not be eligible to become a Fellow?—That is the weak spot, if that system of mine stood alone, but I would also give the Board power, instead of electing one of the new scholars, these young men, to elect a professor.

587. With a Fellowship attached?—Yes.

588. Then you would have Professor-Fellowships?—I would not make any distinction once a man was elected.

589. Would there not be this difficulty: supposing you elected a man because he was a professor, and he ceased to be a professor, he would still remain a Fellow?—He would not be elected unless he was a Life Professor, or a man whose services would be retained.

590. Supposing he is a Life Professor, but resigns his professorship, must he resign his Fellowship also?—That I have not thought about. I think if he resigned his professorship he should resign his Fellowship, too.

591. That would make the Fellowship a condition of the professorship?—Yes, possibly; I see there is a difficulty there of which I had not thought.

592. Then would you propose to elect any Fellows as Research Fellows?—Oh, yes, that would come under what I say about the tutorial system. I do not think the present plan is at all a good one, by which every Fellow succeeds as of right to the office of tutor, and has to deliver lectures, whether such lectures are good or not.

593. At the present time the whole of the tutorial work is done by tutors?—Yes, and I would let much of the tutorial work be done by the provisional Fellows.

594. You have made some observations upon the question of women undergraduates, and you have said that the provisions for the admission of women to undergraduate lectures are, in your opinion, unsatisfactory. Would you like to add anything on that subject?—This is a subject which has come a good deal under my notice as Warden of the principal Women's College, and as having been connected with Women's Colleges for twenty-five years. For many years a considerable agitation went on upon this subject of the provision by Trinity College for women undergraduates, and some of those who took a chief part in it were closely connected with Alexandra College, but it was never contemplated by them that when women were admitted to Trinity College they would be admitted exactly on the same terms as men, sitting on the same benches as the men undergraduates, that there should be no age limit, that girls of sixteen and seventeen should be walking about the courts, and that there should be no residential privileges of a suitable kind provided for them. There is now a very competent lady Registrar, who gives the girls advice as to what lectures to attend, and who to some extent is responsible for them; but there is no hostel or residence, there is no social life provided for them of the kind which the men undergraduates enjoy, and many persons—myself for one—think it extremely undesirable that girls of sixteen and seventeen should be permitted to go to a men's college and sit with them side by side on the same benches as they do here. I certainly would not allow my own daughter to do it. Another consequence of admitting women is this: Alexandra College has taken a prominent part in the opening of Dublin University to women, and we rejoice that they should possess that privilege, and we have done our best to persuade our own girls to enter. We now find that when they do so it is to our direct disadvantage; they leave us at sixteen or seventeen, instead of remaining until twenty, and so we not only lose the prestige of having them, but we suffer because we lose their fees. What we had hoped, and had often contemplated, was that certain lecturers at the Alexandra College should be recognised as lecturers by Trinity College, and that, in the case of freshmen, students' pass lectures at the Alexandra College should count for Trinity College. We were told some time ago that certain lecturers at Alexandra College would be recognised, but that we must pay for these ourselves, which did not seem to me to be a concession that Alexandra College was likely to benefit by.

595. The Provost told us yesterday that he thought there would be great difficulty in recognising any teachers outside the college?—I admit the difficulty, but there is a further matter in connection with that which is perhaps worth mentioning. When women were admitted to Trinity in the first instance, a Syllabus of Regulations was issued by the authority of the Board, and one of those regulations was that if there was a class of women, eight in number, who desired to be lectured to outside Trinity College, the Board would provide a lecturer provided they got the consent of the Tutors' Committee, or of some other committee, I am not certain which it was. Well, of course, the Council of Alexandra College thought that was very satisfactory, and we made application accordingly for our eight girls, but we were told that the committee would not give its consent. That matter has never been taken up; the regulation has always been a dead letter, and I do not think, in fact, that it was practicable. I quite see the difficulty that the Board had in carrying that out, but we at Alexandra College feel that there ought to be some recognition of the work we have done in aid of the higher education of women for the past forty years, and that it is a very poor return, after that forty years of work, that we should ourselves not only suffer financially very serious loss, but should also lose the prestige of continuing the education of these girls when they leave school.

596. Your proposal would be to recognise the provision by Alexandra College of certain teachers?—Yes, only of certain teachers.

597. That is the substance of the reform you would wish, I suppose?—That is the substance of it.

598. I suppose with regard to the care of the girls who do attend Trinity College, you are satisfied with the existing arrangements?—Well, I am not, but they are not quite easy to alter, and there is room, of course, for difference of opinion. I do not think that women should be admitted to a University like this without any restrictions, and without any questions being asked. I think it would be very desirable that there should be an age limit; I think also it is very desirable that it should be insisted upon that they should live either with their parents or in a recognised hostel. I think that to allow them to live in lodgings, with their brothers, or with others, as the case may be, in Dublin, is very unsatisfactory.

599. But subject to those conditions you would be satisfied that women should be admitted?—Oh, yes, and I rejoice that women are admitted to University privileges. Of course when I speak of lecturers for women being provided, I mean that the fees of those lecturers should be paid by Trinity College. Obviously it is not at all a reasonable bargain if Trinity College say, "We will take sixteen guineas a year, but you at Alexandra College may, if you like, lecture at your own charges."

600. But supposing that they did not take the sixteen guineas?—Oh, we should only, of course, ask for a small fraction of the fees paid by the students.

601. Sir ARTHUR RÜCKER.—Do you mean that Trinity College should have no share in the teaching of the students?—No, I say that we at Alexandra College would be perfectly willing to undertake the supervision of lectures in certain subjects—those subjects probably which the majority of girls desire; we think it more satisfactory that those lectures should be delivered at Alexandra College than here in Trinity College rooms; but if we did that we should expect that Trinity College should refund to Alexandra College a suitable portion of the fees which they received from women undergraduates.

602. You think that they should return to you what they themselves would have expended if they had given those lectures?—Yes.

603. CHAIRMAN.—The next head you deal with in your paper is in regard to Ordinary Examinations. You speak in the first place of the examinations being too numerous, and not sufficiently strict, and you object to a curious kind of system which appears to exist called "*post-mortem* examinations," which I have never heard of before in that sense.

604. LORD CHIEF BARON.—I think it is supplemental examinations?—Worse than that. The number of examinations is, I venture to think, too large, and I should hope that in future, attendances upon at least one or two courses of lectures would be required of all students. That would enable us to dispense with one or two examinations. The number of examinations is too large, also, not only in the interests of the students, but also in the interests of the Fellows; a very large amount of their time is taken up in conducting these examinations—a most wearying and difficult task—and the examiners devote themselves to their work with the greatest possible impartiality and care, but it takes a great deal out of them, and takes up time which might be more usefully employed. The marks would be better if there were fewer examinations and a higher standard set; I think you should insist upon at least forty per cent, in any subject.

605. CHAIRMAN.—Have you any idea what is the standard now?—I have not myself taken part in these Term Examinations for some time, but in my time it was about thirty per cent.

606. That certainly does seem little?—There are also cases which happen often, in which a candidate has failed in some important subject—passed in the others, but failed in an important subject—and whereas in the old days he thereby lost the examination, very often now representations are made to the authorities as to the great hardship of this young man losing the whole year because he has failed in one subject, and accordingly a special examination is provided for him, say, a month or six weeks later. Well, I need not say that that tends to lower the whole standard, because if that system continues it will get to be known that a man can get through his examination even though he has failed in an important subject.

607. LORD CHIEF BARON.—That is quite new, is it not? It was not so in my time?—Nor in my time either. The system is defended, I should say, on this ground—that cases of great hardship will arise if the rigid letter of the law is insisted upon, and the tutors form the habit of representing to the authorities the great hardship that will result if the man is ploughed. My answer to that is, that you must always have hard cases in any system that may be instituted.

608. CHAIRMAN.—I suppose the tendency is for each tutor to try in this way to assist his own pupils?—The tutor will go to the Senior lecturer and say, "Well, it is very hard, you have let such and such a man through; you have given him a *post-mortem*, and you ought to have given this other one a *post-mortem*." I think the system would be better if there were shorter courses, not so great a variety of subjects, and a very much higher standard insisted upon.

609. With reference to "Celtic Languages," I think you are in favour of the extension of teaching in that subject?—I have really said, I think, in that paragraph all that I want to say about that subject; I think it is desirable that greater facility should be given than is now the case in an Irish University for the study of Irish Literature and the Irish Language.

610. The only remaining head of your paper is "Recent Proposals and Reforms." That is a large subject, and we should like to hear what you have to say about it?—I think I have gone over all the ground, with the exception of paragraph 4, about the scheme that has recently been put forward by a certain number of Fellows and professors for widening the constitution of Trinity College by providing two or three seats on the Governing Body for Roman Catholics, as such.

611. That you object to?—I object to that for many reasons. In the first place, I think that proposal has already been rejected by the Roman Catholic authorities, who are the only people entitled to speak on behalf of the Roman Catholic Church, and then, I think also that there is a legal objection. I am not a lawyer, but it seems to be inconsistent with the Act of Parliament. Thirdly, I would lay stress upon this—that although the temporary character of the proposal has been insisted upon by those who brought it forward, it seems to me to require a very small acquaintance with public affairs to know that privileges of that kind, after twenty-five years, could not be withdrawn. You may withdraw a penalty, but not a privilege.

612. LORD CHIEF BARON.—I have only one question to ask you, and that is in reference to the Governing Body. There are certain offices usually held by the Senior Fellows. I want to ask you whether there are any of those offices—such, for instance, as that of Bursar or Senior Lecturer—which you think ought to be held by a member of the new Governing Body?—The Bursar ought to be a member of the new Governing Body.

613. And what about the Senior Lecturer?—I think he ought also, but I am not altogether in favour of the continuance of the office of Senior Lecturer in its present form.

DUBLIN

Oct. 17, 1906.

The Very Rev. John H. Bernard, D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity.

After a short adjournment.

614. Sir THOMAS RALEIGH.—Just one or two questions on the subject of women's education. You have spoken of the Alexandra College, and there are other places where women are receiving University education?—There are, but I do not know much about them. There is St. Mary's College, in, I think, Merriion-square, which is chiefly under the Roman Catholics, and there is also a college in Belfast, of the Presbyterians.

615. The number of your University students ap-

pears to be so small that I wondered whether there was any possibility of combination between the different places devoted to women's education?—I do not think it would be very easy; I think there would be difficulties about it. Belfast is too far away to admit of any co-operation, and I think there would other difficulties in connection with the question of possible co-operation between Alexandra College, which is exclusively denominational in one direction, and St. Mary's College, which is denominational in another.

DUBLIN.

Oct. 17, 1906.

The Very Rev.
John H.
Bernard, D.D.,
D.C.L., Dean of
St. Patrick's,
Archbishop
King's
Lecturer in
Divinity.

616. But if the teachers of women students were to be recognised, they must be recognised under some general rules, I suppose?—Clearly, I think.

617. And what you would have is the recognition of the Institution?—We do not ask that. I think the Council of Alexandra College felt that there would be considerable difficulty in granting a recognition of the Institution as such, because it would bring in questions of affiliation, and so on, and all that was asked was that certain teachers should be recognised.

618. That could be only done under a general rule by which women lecturers possessing certain qualifications and actually engaged in teaching should be recognised?—Yes.

619. Sir ARTHUR RÜCKER.—May I interpose here that at the University of London the rule is that the teacher can only be recognised at a public teaching institution, an institution which is not carried on for the pecuniary benefit of the proprietors. Do you not think that is a very desirable thing?—Yes, very desirable; I had not thought of that.

620. In your proposals as regards the Fellowships you suggested that the Professors might possibly be elected; at the same time, possibly, one of the Students might be elected, and you might have Professor and Student competing for the one appointment, or practically competing for it?—They would not go up for an examination in common, but both would, of course, be candidates.

621. Do you think that would be a desirable state of things—would it not be awkward to have a Professor possibly superseded by one of his students being elected over his head?—I thought it would rather work out in this way—that it would be a generally understood thing that all the students were applicants for Fellowship every year, and that the Board might elect any one of them that it pleased, or the Board might elect none of them. I did not contemplate a formal candidature on the part of the students, but I do not think there would be any need of formal application, because it would be very well known.

622. That would be rather my point—that in a relatively small Corporation like this it would be rather a blow to a Professor to have a student elected over his head in his own subject: would not that tend to diminish his authority with the students?—In his own subject, yes, it might; that is a matter which would have to be considered by the electing body, I should think.

623. Do you think that one a year is sufficient?—Yes, I think if you had more than one a year you might get into financial difficulties.

624. CHAIRMAN.—You do not think it would be better to have certain Professorships attached to Fellowships?—I have not thought about the relative advantages of that alternative, and perhaps I ought not to answer hastily.

625. That certain Professorships should be principal ones, to occupy the whole time of the Professor, and that it might be advisable to associate those with Fellowships?—Yes; that might get over the difficulty.

626. Sir ARTHUR RÜCKER.—To come to another point, you expressed your desire that all candidates for degrees should have attended one or two Courses of Lectures. Do many of what I may call your external candidates for degrees come from a distance?—I could not tell you the exact proportions, but a much smaller number come from England, for example, than used to when I was an undergraduate.

627. But in Ireland?—A considerable number come from the country.

628. Mr. BUTCHER.—The returns show that forty per cent. come from County Dublin, and twenty per cent. from Ulster.

629. Sir ARTHUR RÜCKER.—Then in the case of a man from the country, you would bring him up for three months?—Yes; I think the system by which a man is able to get a degree without attending any lectures, and by the result of an examination alone, is not desirable.

630. I am not now defending either course; but taking the ordinary arguments in favour of external degrees, that would practically diminish the opportunities for getting a degree of poor students, who cannot come up to Trinity for any length of time?—No doubt we should lose a few, but the value of the degree would be increased all round.

631. And you are prepared to face the consequences of that?—I personally am. I have, of course, no right at all to speak for the Fellows in this matter.

632. It is your opinion, I suppose, that if Trinity College is to be continued as an independent University, it should be undenominational?—That its constitution should be practically as it is now, yes.

633. But would you say, as it is now, that you would be prepared to admit schools of other denominations?—Certainly.

634. You would?—Certainly.

635. Do you think that arrangement would be satisfactory to them unless there were on the Governing Body of the College persons who, though not necessarily put on as representatives of the denominations, belonged to them?—I do not think it would ever be satisfactory to the Roman Catholics. They have never desired or asked for a scheme of that sort. I know that at one time a certain section of the Presbyterians desired closer alliance—I know that as a matter of fact—but the majority of the Presbyterians thought they were sufficiently provided for in Belfast.

636. I understand you do not approve of the plan put forward by the Junior Fellows?—I rather gather that from what you have put forward this morning—but do you see any way of getting over the transitional period from the state of things which exists at the present time, when the members of the College are chiefly members of the Episcopal Church?—No. With regard to the Divinity Schools, I do not think that is ever likely to get beyond the region of theory. In the case of the Roman Catholics, I am pretty sure it would not; and in the case of the Presbyterians, I do not think it is likely that there would be a Divinity College in Dublin, much as I should like to see it, because they seem to have sufficient provision in Belfast, and also in Derry, and the majority do not want it. So that I think that this proposition, made with the utmost sincerity by the authorities of Trinity College, is not likely to be accepted by anybody, except, possibly, the Methodists.

637. Dr. JACKSON.—With regard to what has been said about the difficulties arising from the choice of Professors to be Fellows, would it not be possible to combine what I may call the Oxford method, by which Professorships are attached to Fellowships in particular colleges, and the Cambridge method, by which each college is empowered and encouraged to elect one or more Professors to Fellowships; and, further, might it not be possible for the electing Board in one case to announce that they have elected So-and-So, Professor, to be a Fellow; and in the other case to announce that on such a date they would proceed to the election of a Student to be a Fellow? Would not that meet altogether the suggested possibility that there might be a rivalry between the Professor and the Student?—Yes; I think that some such method might get over the difficulty.

638. Might I ask you, under your Student scheme, which is like one that I have been thinking of for a very long time for my own University, what would the qualification be? He would, of course, undergo an examination?—Students are elected, of course, on the results of the examinations at present.

639. Oh, yes, I see.—A "student" with us means a person who has got the most distinguished degree in mathematics and some kindred subject, speaking roughly, or in classics and so on.

640. Then, practically, the studentship is given by examination, and these probationers would be merely Students chosen in that way?—Yes. I can put the thing more shortly: the students, two of whom are elected every year, are the most distinguished of the graduates in honours.

641. I see. And if you were to make this a part of a scheme of reform, would you be content to give these studentships simply on performance, or would you require as a condition that the man should declare for academic work of a probationary sort?—Yes. At present the student receives £100 a year, which is merely a prize; he can take that away with him to the Bar or abroad. I would give him £150, but I would not allow him to go away; I would require him to remain and pursue research, either under a member of his faculty or otherwise.

642. Possibly with some limitation of amount, in order that he might not be narrowing himself?—Certainly.

643. I think that is all I want to ask you on that point. As regards your scheme for a Governing Body, I recognise that there is an institution which is called almost indifferently "Trinity College" and "The University of Dublin." Might it not be desirable to have two substantial Governing Bodies, the one for

the University aspect, the other for the College aspect. Is there not a rather obvious distinction between the work of the University and the work of the College, and if you were reforming your Governing Body would it not be desirable to make two Governing Bodies, one to have the Collegiate functions, the other the strictly University functions?—If a further College were to be introduced into the University, I recognise that a Governing Body for the University as distinct from the College would be necessary, but if Trinity College is to be left in its present condition, as a single College in the University of Dublin, I do not think anything practical would be gained by establishing a separate Board—a separate Governing Body. We have at present the Board and the Council—the Board of Trinity College, and the University Council—and although the University Council has discharged certain useful functions in the past, we have found the dual machinery extremely cumbersome.

644. CHAIRMAN.—The Scotch University, which is somewhat in the same position, I think, has only one system of government—not a dual system?—I think so.

645. Dr. JACKSON.—What I was thinking of is that the Professors are, strictly speaking, outside the College, and I value exceedingly the corporate individuality of a College, and should like to see the Professors represented without their being intruded upon the Collegiate Society.—Yes.

646. Mr. BUTCHER.—I think there is only one point upon which I should like to ask you a question. It is on the question of making residence compulsory for graduation, and I notice that you say no student should be permitted to take a Degree who has not attended at least one full Course of Lectures. Would you go further, and say that in no case shall the passing of examinations be taken as a substitute for residence and attendance at Lectures?—I do not think that in any case the passing of examinations can compensate for the loss of the advantages which are gained by attendance upon Lectures, but I am afraid it would not be practicable to require more than one term of Lectures from a great number of our men. I think a great number of our men could not afford to come up from the North of Ireland—men such as Sir Arthur Rücker asked me about.

647. Into residence?—Into residence.

648. I notice that in all twenty to twenty-two (it varies in different years) took their Degrees without residence. That is something like 12 per cent, which is considerable, though in actual numbers not so important. On the other hand, of course, to establish that number in the College would be a very great gain, if it were feasible?—I should like to establish the principle first, and the establishment of it would not involve any violent reform, because the number who at present take their Degree without having previously attended any Lectures is so small. The change would not be violent, if what I propose were introduced.

649. Dr. DOUGLAS HYDE.—The first thing I wish to notice in what you have said is with reference to the Catechetical Lectures and the College Chapel. You say that you think the College Chapel might be placed in the hands of the Regius Professor of Divinity. Might I ask who appoints the Regius Professor of Divinity; is it the Council?—All the Divinity Professors are appointed by the Board; the Council has no voice whatever in the Divinity School.

650. What control has the Provost over the Chapel?—He is the immediate ordinary; that is to say, he has the order of the services under his control, and although that has worked very well, because we have had up to very recently a clergyman as Provost, and at present we have a Provost who is a staunch member of the Church, yet there is nothing in the least inherent in the position of Provost which would make him suitable for that particular duty.

651. CHAIRMAN.—I do not think we need go into the question of the Divinity School?—No; I think to pursue that would be to touch upon a distinct question.

652. Dr. DOUGLAS HYDE.—On the question of women graduates, is there any age limit at present for women undergraduates?—No, I think not.

653. Are there any rooms set apart in Trinity for them?—Oh, yes; I think there are rooms near the gate—a reading room, cloakroom, and waiting room.

654. Is the provision made sufficient to satisfy their wants, in the way of a kind of Club where they can meet together and enjoy the advantages of College life

in the way in which we do?—No, I do not think so, and I do not think it is at all desirable to have anything of that sort within the walls of a men's College.

655. You would wish that an age limit should be established?—Yes.

656. What age limit?—Eighteen.

657. When a lady gets one of these prizes that Sir John Nutting gave in the Intermediate, would she, if under eighteen years of age, be deprived of the privilege of taking it up?—Yes; but I think it is extremely undesirable to encourage Middle Grade Exhibitioners, whether men or women. I think Trinity College has made a great mistake in attempting to attract boys who were Middle Grade Exhibitioners.

658. You would not allow ladies to enter?—Yes.

659. But Sir John Nutting's prizes would always go to boys?—The whole matter might be raised.

660. The girls who come here mostly qualify for teaching, do they not, later on?—I think so.

661. About eighty per cent. probably?—A large proportion.

662. In the case of a girl who goes through the Courses, and gets a Pass Degree, is that sufficient preparation, do you consider, to qualify her for teaching when she goes out?—I think that would not give her all the necessary preparation for teaching; it would not give her detailed instruction in all the subjects she would have to teach if she were a governess, but I do not think that could be expected.

663. Do you think she would be better taught in the Alexandra College, and that she would get more Lectures there than here fitted to qualify her for being a teacher later on?—That is rather difficult to answer. I think if we had a free hand at Alexandra College we could make arrangements which would be better for them.

664. Would you like any further provision to be made for their residence inside the College or not?—I should like a hostel to be established in the neighbourhood of Trinity College, somewhere in the suburbs, where the women students could reside, and it would seem to me the most natural thing in the world that the authorities of Alexandra College should be asked to supervise that. We have suggested that, and pressed it upon the Board before, but they have not fallen in with it.

665. Do you think the Alexandra College itself would be a proper hostel for them?—Yes; we have a Residence house at Alexandra College, but it is not large enough to accommodate, in addition to our students, all the students of this College.

666. Supposing, then, that you had such a hostel established in some suburb, what control would you give to the Alexandra College over that hostel?—The supreme control would of course be in the University, if the hostel were established by the University. Perhaps I should distinguish. I cannot say who should have the control of such a hostel until I know who pays for it, and who takes the financial risk. We are perfectly willing to take a great deal of financial risk if we are given some control. I think we would probably be able to work the thing without losing money over it.

667. LORD CHIEF BARON.—By "we" you mean Alexandra College?—Yes.

668. Dr. DOUGLAS HYDE.—Then about lectures in the Alexandra College—there are at least two of the Lecturers in the School Trinity men; does Trinity College accept their lectures as a test?—Yes; the last correspondence that passed between the Board of Trinity College and the Alexandra College authorities on that subject was concluded by a letter from Trinity College, in which it was said that those lectures would be recognised, but that Alexandra College would have to pay. In other words, Trinity College was willing to recognise lectures given by another institution, for which that other institution paid, and thereby Trinity College would be saved the cost of providing lectures of its own. We pay our Lecturers now to lecture to our own students, but it does not seem a reasonable proposition to ask us to take in a number of other students of another institution, and lecture them free of charge.

669. Mr. BUTCHER.—And they still would have to pay their whole tutorial fees to Trinity College?—Yes.

670. Dr. JACKSON.—They would not get very much in return for their fees?—No.

DUBLIN.

St. Patrick's,
Archbishop
King's
Lecturer in
Divinity.

671. Dr. DOUGLAS HYDE.—In Newnham and Girton I understand that only ladies who are going in for honours are allowed to reside in the hostel?—I could not answer that; I do not know.

672. I am asking you whether you would think that girls going in for Pass degrees, and also those going in for honours, should be together in the same hostel?—Yes, I do.

673. Dr. JACKSON.—Newnham and Girton I think are mainly honours Colleges, but at the same time I do not think that there is a strict rule such as is suggested.

674. Dr. DOUGLAS HYDE.—Yet Miss Clough once answered, when she was asked why she did not allow pass students to reside with her, that "She did not want to see the place turned into a bear garden." That was the rather forcible way she put it. Does Trinity College exercise any supervision over non-resident students—I mean amongst the boys?—No; they are supposed to come to College Chapel on Sunday mornings if they reside within a certain distance, and are members of the Church of Ireland.

675. The attendance at service is abrogated now?—Oh, is that so? I thought that applied only to the week-day services.

676. The students who come to Trinity College and who do not get rooms lead a city life, not a University life at all?—I would not put it so strongly as that, because many a young man living outside gets a good deal of College life; he attends the meetings of the Debating Societies, joins in the work of the Clubs, plays cricket and football, and so on.

677. But would you think it a good plan if hostels for boys were provided?—Yes; I have always been anxious that that should be done with regard to the Divinity students, with whom I have been concerned very much for many years. I think it is absolutely important to have some kind of hostel where they can live and be under some kind of common discipline.

678. Do you happen to know if the University has made any attempt at that?—I know that the College discouraged the proposal as regards the Divinity students.

679. Would you like to see this provision extended to other students also?—I should not object to this provision—that the men should live in licensed lodgings; I think it is very undesirable that men should live exactly where they like.

680. The next point you come to, I think, is the Irish Professorship, but before going to that I would ask why you think shorter courses and a higher standard would be desirable. I have always thought that one great drawback of examinations in Trinity was that they allowed so much scope for cramming, and if we had shorter courses it would lead to still more cramming and memorising, would it not?—That is not my experience of examinations. I think if you can get a standard of 80 per cent. on any course, if it is only spelling and simple arithmetic, you have exacted a pretty good test; it is the standard, and not the course, that matters for exact knowledge. I think you would discourage cramming far more if you shortened the course and raised the standard than by lengthening the course and relaxing the standard.

681. You would not wish to confine the course too much, I suppose?—I do not want to confine it too much, but there are too many subjects now.

682. I would so far agree, but I would not shorten the course in Classics, I think?—I should have said diminish the number of subjects.

Ah; that is different. I agree with you there entirely.

683. Dr. JACKSON.—Could you tell us what subjects the ordinary undergraduate passman takes in his time?—There have been a good many changes lately, but if I go wrong perhaps I may be corrected by Mr. Kelleher, who is more familiar with this matter now than I am. They take Classics, Latin—

684. Is this an account of one examination at the end of each term, or are the subjects mixed in the examination at the end of each term?—Our examinations are held, curiously enough, in the beginning of the term, on the result of the instruction given in the last term, and they include Languages, Science (which embraces Mathematics), Mechanics, Hydrostatics, Astronomy in the later years; they also include as a rule some book on Logic, Psychology, or Ethics, some History, and always some English Composition. I have mixed the subjects a good deal, because some of the subjects I have mentioned should be taken as alternatives, but there is a very wide range, and I

think I am right in saying that Astronomy is now required from all students. The Astronomy is not Physical or Mathematical, but what I may call Tutorial Astronomy.

685. Dr. DOUGLAS HYDE.—The next thing you touch upon is the question of the establishment of a Moderatorship in Irish, and the entire separation of the Professorship of Irish from the Divinity School. The Professorship of Irish is an adjunct to the Divinity School, is it not?—That question has been often debated, and I am not sure of the rights of it. It was generally accepted twenty years ago that it was an adjunct of the Divinity School, but that was denied, and in consequence of that we have removed all mention of it from the Divinity School Syllabus, and put the recommendation about Irish into another page of the Calendar. But I think the separation might be more complete than it is; the courses ought not, I think, to touch upon theological subjects at all.

686. All the valuable prizes, such as they are, in the Irish School are given, are they not, by the Irish Society, which is a society founded in the year 1818 with the intention of giving Scriptural education to Irish Roman Catholics through the medium of their own language. I notice they give all the prizes?—Well, I do not think they give the Bedell Scholarships or the Kyle Prizes. The Kyle Prize was given as a bequest.

687. I took this extract from one of the recent Reports dealing with the question. This is a Report of the Irish Society, and it says: "We desire again to state our thankful approbation of the foundation of a Professorship in the University for the cultivation of the Irish Language, and in further aid of the same object we approve of the allocation of £1,000 as a commencement to the establishment of Exhibitions for young men studying the Irish Language." It is out of that £1,000, is it not, that the Bedell Scholarship is paid?—I think not; I am pretty certain it is not, because we have put it into the endowments that specially belong to the Divinity School. I would not like to make any confident statement about it, but my impression is that those prizes are not now given by the Irish Society.

688. Up to a recent date they were?—The passage you quoted seemed to indicate that they had only been recently established, but they have been established for very many years.

689. I saw the Secretary of the Irish Society the day before yesterday, and he told me he was drawing the cheques for them, so it looks as if my impression is correct?—Yes, it does, certainly. I think, perhaps, that question ought to be addressed to some official of the College.

690. I was only desirous for information, because so few people seem to know anything about it. Do you happen to know whether anything has been done for Irish History at all in the University?—Yes; some Irish books have been put into the History Course, and it has been pointed out that the Professor is very anxious that Irish History should be properly taught, but there has been a difficulty in getting books.

691. Did you notice a statement in which the Professor said that he was the first man inside this College who ever gave a lecture on Irish History?—I noticed that.

692. Do you not think that is a state of things which ought not to continue if this University is to continue to call itself a National University?—Of course I do not know what a "National University" means—it is a phrase I have always avoided—but I do think that it is desirable that the principal University in Ireland should teach Irish History.

693. I tore out of the Calendar this morning the Moderatorship Course in History and Political Science, and I find the General Outline of Ancient Greek and Roman History; the General Outline of Mediaeval and Modern European History; Special Periods of Ancient and Modern History, and so on. Amongst the books prescribed are the *Memoirs of Sully*; *Vast's Louis XIV.*; *Ranke's History of England*; *Gardiner's Thirty Years' War*; *Perkins' Richelieu*; *Bain's Charles XII.*; *Sargent's "Colbert"*; *Hassall's Mazarin*; the *Memoirs of Cardinal de Retz*; the *Memoirs of Saint-Simon*; *Coxe's Memoirs of the Duke of Marlborough*; *Lavisse's "Histoire de France"*; *Bain's Scandinavia*; *Ramond's History of Russia*, and about as many more with which I will not fatigue the Commission; but the only mention of Irish History is this (and I think it is very suggestive):—"Parts of *Gardiner's History of Eng-*

land relating to Foreign and Irish Affairs." Irish and foreign affairs are bracketed?—I do not quite gather what your question is.

694. You said there was Irish History taught in the curriculum, and what I have read from is the curriculum of Moderatorships, and there is there no trace of it?—If you will refer to the Honours Course in the Freshman Years you will see that books on Irish History are prescribed there; they are not in the Moderatorship Course, as you say, but they are prescribed in the Honours Course in the Freshman Years and in the Sophister Years. On page 72 of the Appendix the Professor of History has this statement on the subject: "In every one of the recently instituted Honour Courses I included as much Irish History as was possible in the circumstances. But it is not easy to find good text-books. Anyone who has even attempted to study the history of Ireland speedily becomes aware that the greater portion thereof lies in the Record Offices of the United Kingdom, France, and Spain."*

695. Would you not think that Irish History deserves a place amongst that immense mass of heterogeneous reading which I read to you just now?—As I have said, it is prescribed in the Freshman Years; in the Moderatorship Course, as in the case of other Honour Courses, you are supposed to have read books of previous years as well as those specially prescribed in the Course.

696. What, then, is being done for the Irish Language in the University outside of what the Professor of Irish does—and I think his text-book is chiefly the Scriptures, is it not?—I am not sure what his text-books are now; I know that was the case some time ago. The Professor of Celtic gives occasional lectures—that is, Dr. Atkinson.

697. Is there any possible way of finding out how many attended those lectures?—The Senior Lecturer would give you that.

698. I might have asked Dr. Traill yesterday, but he was so busy with the larger questions that I did not like to go into this. I notice that Dr. Salmon said before the Robertson Commission: "It must be honestly confessed that it is only as a dead language that we have cultivated Irish."† That is in the third volume of the Evidence before that Commission?—That would look as if there were no teaching of Modern Irish at all, but as a matter of fact men are being taught to speak Irish by the Professor of Irish.

699. Does he teach Ancient Irish?—He does not; the two departments are kept distinct.

700. How often does he lecture? I do not know, but my impression is that it is very seldom—not more than one or two courses in the year?—Oh, yes; there are more than that, but I do not think the number who go is very large.

701. Is not the present Professor of Irish an officer of the Society that was founded in 1818—the Irish Society?—He tells me he is not; I asked him the question. I know it is a point often raised, but I do not know the answer to it.

702. I think it is true of every Professor who ever filled that Chair—O'Mahony, De Vere Coneys, Foley, and Goodman?—He is not appointed by the Irish Society, but by the Board of Trustees.

703. Two of those Trustees out of three are the Trustees of the Irish Society?—But there are a number of *ex-officio* members, the Provost and two others.

704. Do you know that Lord Ardilaun, Lord Plunket, and Dr. Salmon himself were with the men who made the appointment?—I do not remember distinctly, but my recollection is that the Trustees were about six in number, and that two were representatives of the Irish Society, and two more were *ex-officio* members. If I am not mistaken the Board of Trustees was constituted in a way something like that.

705. Dr. Salmon himself was a member?—As Provost.

706. As Provost, yes; but also as a member of the Irish Society?—It was not in that capacity he acted, but in his capacity as Provost.

707. They had the two Trustees of the Irish Society and a vice-chairman of it, and a Bishop. However, I waive that point; I only want to bring out the fact that no real study of Irish and Celtic Literature *per se* has been attempted; it was only an adjunct to the Irish Society, and remains the same to this day?—I should not agree in that interpretation of the facts; I think there is a real, but some-

what inadequate, study of Modern Irish; it is real as far as it goes, and many men are now learning to speak Irish.

708. It would be very interesting to get the Charter under which this Chair was established. With regard to the great collection of Irish manuscripts which are in the Library, you have studied them very closely, especially those of the ancient Irish that are written in Latin: are there facilities for making use of these manuscripts in the Library?—Yes. We have taken means to do so. A catalogue was provided at the expense of the University, a very elaborate catalogue.

709. The catalogue—I have seen it—is shockingly bad. It was drawn up by somebody who did not know the smallest rudiments of Irish. The letters S and R are confused, and every name was very badly printed?—I cannot say about that, I am not an Irish scholar.

710. CHAIRMAN.—The object, I may point out, of this enquiry is to get facts from the witness and not to put forward views of your own.

711. Dr. DOUGLAS HYDE.—I was only asking the witness's views on Irish education, and referring to the style of the catalogue of Irish manuscripts in the College Library. Has anything been done to facilitate the exchange and loan of manuscripts and rare books, as is frequently done by German Universities?—I don't think they are prepared to exchange such rare and private books. They can only be lent under strict conditions, under a bond. We do not lend books as they do, for instance, at Cambridge.

712. Dr. JACKSON.—At Cambridge we lend valuable books under a bond on condition that they are deposited in some public library to our satisfaction; and we sometimes send such books to places abroad through the Foreign Office.—Well, that is practically what we do. I did not know the restrictions were so exact in Cambridge.

713. We allow members of the University to borrow ordinary books.—Yes, I understood that.

714. Dr. DOUGLAS HYDE.—Supposing someone in Cork wished to use an Irish manuscript which was in Trinity College, could he borrow it under a bond?—Certainly. A short time ago we had a case in which the present Provost of King's College, Cambridge, borrowed a manuscript under bond, and we would give the same freedom to any scholar or student.

715. Dr. JACKSON.—The book to be deposited in a library?—Yes.

716. Dr. DOUGLAS HYDE.—I may say that in our Irish School of Learning, under Dr. Kuno Meyer and Professor Strachan, we have had every facility in Trinity College. We have been well treated, and every facility has been given to our students.

717. Dr. COFFEY.—I notice that you say in your statement that the number of University examinations is too great. Do you mean the term examinations also?—I mean the examinations which students have to pass in order to get through the academic year.

718. One month in each of the three terms is taken up with examinations, is it not?—I think there is far too much time taken up.

719. You say the number of examinations should be reduced?—Yes, it would give time for a larger amount of work. At present the Junior Freshmen have four examinations, at Hilary, Trinity, Michaelmas, and the Supplemental examination. We might have a lesser number.

720. The number of examinations should be cut down, and the time added to the lecturing period?—If the number were reduced the time for studies would be greater.

721. Does your suggestion of obligatory attendance at one course of lectures refer to one term's lectures? Is it not a small amount of teaching in the whole undergraduate course?—It is very small, no doubt, but it is better than nothing. Some go without any.

722. With respect to the election of Professors as such to Fellowships, you mean those who are altogether devoted to a subject?—Yes, the principal Professors.

723. Supposing the Irish Professorship separated from the Divinity School, would you have that Professor eligible for election as Fellow?—The Irish Professorship at present is not at all of that importance. It is not like Greek or Mathematics. There is not such a number of students. The number of those who attend the lectures in Irish is not comparable with the number who attend the lectures in other subjects.

DUBLIN.

Oct. 17, 1906.

The Very Rev.
John H.
Bernard, D.D.,
D.C.L., Dean of
St. Patrick's,
Archbishop
King's
Lecturer in
Divinity.

724. You have a great treasury of books and manuscripts relating to ancient Ireland. Does it not seem desirable that there should be one Fellow who should be in charge of that subject and of instruction in Irish?—There is a difficulty in making a restricted Professorship of that kind a Fellowship. It might not be easy afterwards to get a man fully qualified. At present we have an excellent Professor, an Irish scholar, but would as good a one follow?

725. Would it conduce to the dignity and status of Irish in the College if the Professor of Irish were a Fellow?—I think it would.

726. Mr. KELLEHER.—I wish to ask you one or two questions about the relationship between Alexandra College and the Dublin University. Your statement is that as things stand, the pioneer of higher education for women in Ireland is being injured by the determination of Trinity College to reserve all the tutorial fees of women undergraduates for the tutors. Does that imply a claim to some of the tutors' fees? In so far as I can make out, the action of Trinity College itself was the inspiration of that claim. They saw that the Alexandra College was the pioneer in Ireland of Education for Women. The result of the movement there and in Trinity College was that the University degrees were thrown open to women. Does it seem an inevitable consequence of this movement that Trinity College is under a debt of gratitude to the pioneers of this movement. Is it not the pioneers who are under a debt of gratitude, not those who have granted the terms?—There is no legal claim whatever to the erection of Alexandra College to a place as a College of the University. Nor is there a moral claim. It was never understood, never hinted by anybody in Trinity College, when the movement was being pursued and pressed. If Alexandra College were to come in the case would be affected in more ways than one. But it was never intended that a result of the movement for the admission of women to degrees should be that Alexandra College should be deprived of its best students. The action of the Senate, in opening the degrees to women, by means of a King's Letter, was taken on that understanding. It was distinctly stated in support of the proposal, and I took some part in the matter myself, that it was to be hoped that when the Letter was got, Alexandra College would not be less utilised.

727. You supported it on that condition?—I spoke at the Senate which considered the subject, and I voted for the King's Letter, which was agreed to by the members of the Board who were present.

728. I understand that Alexandra College and other Colleges were led to believe that the degrees would be thrown open to them in the same way as the degrees of the Royal University. It does not seem to follow that Alexandra College should be treated differently from the other Colleges?—Except that the majority of the students were expected to come to Alexandra College.

729. Would not the admission of Alexandra College to Dublin University raise the question of religious atmosphere and of special privileges to one denomination and that kind of thing?—All that was asked was what had previously been offered. They had agitated now for three years, and Trinity College could not carry out its own conditions.

730. Does the fact that Alexandra College was the pioneer of the movement establish a right to any special facilities?—It does establish a moral claim for an institution which had been in existence before even Girton and Newnham. It certainly has a moral claim to every facility for its women-students. But there is another difficulty at present. It is this. The financial interests of Alexandra College are opposed to the financial interests of Trinity College. We want our girls to get a University degree, and, personally, as a Trinity man, I want them to come into Trinity and get a degree here. But if the present system goes on, Alexandra College, of which I am the Warden, will be hard hit by the removal of its best and most promising students. Whatever we do in the way of a change there will be a direct conflict of interest. It might not be for the financial interest of Trinity College to force Alexandra College into the position of recommending their girls to stay away, which they might be obliged to do.

731. If you give special advantages to Alexandra College and not to other Colleges, would that not raise an outcry on the part of every one of the schools?—No, I do not think there would be any claim except from St. Mary's. Most of these other places are schools, not colleges. Alexandra is a college and not a school. I would like, if possible, if there is an opportunity that some of the members of the Commission would go and see Alexandra College. Its Authorities would be greatly gratified, and the Commissioners would see the nature of the provision and equipment for women students.

732. I suppose you will grant that it is not a matter of simplicity for Trinity College to recognise Alexandra College for degrees. There would be difficulties with other institutions, and the discussions about atmospheres which one hears?—I cannot say. None of these objections has been put forward. It seems to me that they are reasons discovered after the fact.

733. The Board represent one body of the College, and the tutors represent, to some extent, the opinion of the younger men, and this question has been considered by the tutors differently. I only wish to make the point that it is not a matter of the greatest simplicity?—I have never suggested it was a simple matter. It is really very complicated. It might have been different if a proper method had been adopted at the beginning. That opportunity has now been lost. It would have been easy to make an arrangement that would have been beneficial to both parties.

734. Would not a vested interest have been established, and would it not have been another difficulty in the settlement of the University question?—I do not think so. Affiliation was not asked for.

735. Are girls admitted without inquiry to membership of Trinity College?—They are admitted without an age limit or testimonials, so far as I know.

736. I thought there was a special provision?—No, I cannot say there is. Girls are admitted exactly in the same way as the men.

737. I think there is some special arrangement, that inquiry is made by the tutors?—I have no knowledge of it. We have no knowledge of it in Alexandra College.

738. In paragraph four in your statement, you are opposed to the scheme by certain Fellows for the widening of the constitution of Trinity College so as to make it a national institution, and you give objections to that scheme. You say it is inconsistent with Fawcett's Act.* That would not be an insuperable objection?—I did not assume that to be the question. What I do say is, that once conceded, such privileges can never be recalled.

739. Is this not a matter in which certain privileges are automatically recalled?—I don't see that.

740. There is a representation of 25 per cent. to be on that body. Out of the twelve representatives three are to be appointed. One of these is to be elected by the graduates, I think, after a time. Does that not seem to be a privilege granted to the graduates after twenty-five years' time, to elect one of these three members of the Governing Body. In that case you have privileges conceded, and if they cannot be withdrawn you are left in a horrible dilemma?—I think the whole scheme is a horrible dilemma. It is quite unworkable. It is too complicated. Then these privileges could not be withdrawn. I don't think the bearings of such a scheme have been duly considered. They appear to mean to transfer the election automatically of these people from one body to another. When it came to the point there would be an uproar in the Roman Catholic papers in Ireland about the iniquity of making such a change.

741. Your opposition is based on the assumption that the change would not smooth away the difficulties that exist in this country?—I don't assume it would clear away the difficulties.

742. The object, of course, is to remove the difficulties that exist?—No doubt it is.

743. If it was accepted in a friendly way as a solution and these people came into Trinity College to work for the common good, do you not think that no further trouble would arise after twenty-five years?—Enormous trouble must necessarily arise out of a

* (36 Vict., cap. 21), University of Dublin Tests Act, 1873.

scheme so complicated. It has already been stated by Father Delany that one quarter of the representation would not be a sufficient concession to the Roman Catholic representatives. Then difficulties would arise as to the nature and extent of the concessions. Further, those who promote the scheme seem to be blind to the sources from which Trinity College is fed. Let us remember that eighty per cent. of the undergraduates of Trinity College are Church of Ireland members. They represent the Church that has stood for all that has formed around Trinity College. Are we to alienate their sympathy in the hope of conciliating those who are hostile to it? It is the most foolish of proposals.

744. There is no guarantee that the concession would satisfy the Roman Catholic authorities. But suppose the Roman Catholic Bishops accepted this scheme for the widening of Trinity College. Would your objections then hold good against the scheme, against the whole of it?—I never like to answer hypothetical questions. It has been already repudiated by the Roman Catholic Authorities.

745. We have no official knowledge of that?—

746. LORD CHIEF BARON.—Oh, yes, we have?—Yes, you have.

MR. KELLEHER.—We have had general statements signed by people as individuals, those that have been published, but they have no authority to speak for the Roman Catholics as a body.

CHAIRMAN.—Don't you think you have done enough to persuade the Dean he is wrong. He has given us his views, and has given them very fully. I suggest that you confine the examination to eliciting the mind of the witness rather than giving evidence of your own.

LORD CHIEF BARON.—This scheme was published most irregularly. Even if the Catholic Bishops knew this scheme in outline they did so because it was published in that way. They could not have it before them when they sent in their paper. It is a hopeless thing for us to discuss what satisfaction this thing will give or whether it would be accepted by the Roman Catholic Bishops or not.

MR. KELLEHER.—I wanted to find out what the attitude of Dean Bernard would be if the Roman Catholic Bishops accepted this scheme.

CHAIRMAN.—That question is too hypothetical to be of any practical value. When we have had the Bishops' views the Dean will come back if necessary and submit himself for further examination. I don't wish to stop you, Mr. Kelleher, but I think you carry hypothetical questions too far for the attainment of a useful purpose.

MR. KELLEHER.—The only thing I wanted to do was to get the Dean's opinion upon the scheme which has been put forward as a probable solution of the University Education question in Ireland. I was anxious to discover his reasons for objecting to it. I wanted to see if we might arrive at the difficulties of such a solution.

CHAIRMAN.—You may go on with your examination.

747. MR. KELLEHER.—You suggest that a Roman Catholic University, which you say would be a states-

manlike solution of this question, would differ, to a considerable extent, from Trinity College?—It probably would.

748. Do you mean that it would be available for the Professions rather than be a home of learning such as Trinity?—Rather the professional side. I think I told you that.

CHAIRMAN.—Really, there is not much to be gained by merely repeating a question already answered.

749. MR. KELLEHER.—I wanted to ask whether the wealthy and clever men would, in the Dean's opinion, go to Trinity College or attend the Catholic College?—Some representatives of the Roman Catholics would come here as in the past and they would always be very welcome, and their situation is one we should like to consider. The bulk of them, I do not think, would come here. They would, as they do now, go to some other institution.

750. The wealthy and clever men, many of them, will go to this second University. Would that not be an undesirable result from the point of view of the social life of the country?—They would go wherever they wished, I, for one, would not impose any restriction. People would do whatever they thought best with their sons. I would not bring any pressure; it they like to come here well and good. If they chose to go to the new University well and good.

751. Those clever and wealthy men would be attracted away from this College and would be apart from its traditions. Would that not mean eventually a general degradation of social life in Ireland as compared with other countries. Would not the country be stronger if we had one institution for all?—I don't object to competition. The new institution would attract a good many young men who now get no University education at all. That would be a much better thing for our social life.

752. Suppose there was a College in Dublin for Catholics, or a second University, would not that lead to a terrible amount of friction and be injurious to Trinity College?—There would be a certain amount of competition with Trinity College for pupils. But that has already begun.

753. If this College or University were established men who have always come to Trinity College would be prevented from coming?—I don't think they would.

754. One reason given would be that there was as good an institution within a few miles of the city?—Even with that possibility I do not believe we would lose anybody. We must make up our minds to face competition.

755. Suppose you had a deliberate boycott?—We are already under the ban of the Roman Catholic Hierarchy.

756. The ban under the new situation would be more severe. The ban has a great effect?—I agree it would be more difficult for sons of Roman Catholic parents to come to Trinity College if they had a new University, say in Stephen's-green. But we must be prepared to face that. We must look to the benefit to the whole country not to the interests of Trinity College alone.

The witness withdrew.

EDWARD P. CULVERWELL, Esq., M.A., Junior Fellow of Trinity College, Dublin; Professor of Education; Registrar, School of Education; representing the Signatories to the Joint Statements, II. and III., printed on pages 23-24 of the Appendix to the First Report (Cd. 3176), 1906, called in and examined.

757. CHAIRMAN.—You have been kind enough to furnish us with a statement, which is printed in our Appendix, page 44*?—Yes.

758. Will you be good enough to divide your observations under the several heads of your statement?—I was not aware that it was upon that statement I was to be examined; I understood I was appearing as a representative only.

759. It is upon the Joint Statement,† at page 24, submitted by twelve Junior Fellows, one retired Junior Fellow, and eight Professors in the College, that you wish to speak now?—I do appear as representative of the signatories to that statement, but I am also the representative of the signatories to Statement II.,‡ and I wish to speak first on it.

760. You are one of the signatories to the statement, which is headed, a "Scheme for Widening the Constitution of Trinity College, Dublin"?—I am; it is Statement III.†

* Appendix to First Report (Cd. 3176), 1906, page 44.

† Ibidem, pages 23-24.

‡ Ibidem, page 23.

** Page 434.

761. We have heard a good deal of evidence on the subject already?—Well, I have prepared a statement, which I intended to read, but if I come to any matters which you have heard already, perhaps it would be better to stop me, if you think you have heard enough already upon it.

762. You have prepared a written statement, which you propose to read?—I have; but I am quite in your hands; I will read only such portions of it as you wish to hear.

763. Perhaps you had better read it?—Very well. I should say, before I begin, that I received yesterday morning from your Secretary, Mr. Daly, a copy of the Statement of a Committee of Irish Laymen,** on which he said the Commissioners might desire to question me. If so, I think I had better be examined on it when I deal with Statement III.,† because the protest I now represent deals with "proposals which have been made," i.e., in July when the Protest was signed,

DUBLIN.

Oct. 17, 1906.

The Very Rev. John H. Bernard, D.D., D.C.L., Dean of St. Patrick's, Archbishop King's Lecturer in Divinity.

Edward P. Culverwell, Esq., M.A., Junior Fellow of Trinity College, Dublin; Professor of Education; Registrar, School of Education.

DUBLIN.

Oct. 17, 1906.

Edward P. Culverwell, Esq., M.A., Junior Fellow of Trinity College, Dublin; Professor of Education; Registrar, School of Education.

and the statement of the Catholic laymen does not make a proposal, nor, if its conditions be termed a proposal, are they among those which had been made in July. Now, you have already heard two witnesses from Trinity College, Dublin; one, as I understand, representing Fellows, and another, representing Professors, who object to a second college; and it might, perhaps, be considered unnecessary for a third witness to appear. But it is evident that we who signed Statement II.* are in a somewhat different position, as nearly all of us have fully committed ourselves to Statement III.† and it might perhaps be expected that we should take a more favourable view of the proposal to admit a second college than the remainder of the staff, which certainly contains among its members a proportion who do not support Statement III.‡; and perhaps the fact that we in our protest against a second college omitted all reasons might also suggest the same conclusion. It appears, therefore, all the more necessary that we should be heard separately, so that it may be quite clear that whatever other differences there may be between us and some of our other colleagues (I say "some," for it is well known that the general approval of Statement III.† was not confined to its signatories) it is well that it should be made quite clear that, in regard to the proposal to which we object, we are no less absolutely convinced of its impracticability, and no less absolutely determined to prevent it by every legitimate means, than our colleagues are. Why, then, did we not sign the protest in the form in which they signed it? I cannot, of course, undertake to give individual reasons, but I think I may say that many of us were actuated by a desire to avoid anything which could give rise to a hostile feeling, or tend to perpetuate old differences. We felt that our scheme was an entirely new departure—that, in making the proposals we did, we practically admitted that the proposals made before might have been made in a more acceptable form; and, therefore, we did not wish to keep on reminding those with whom we wished to establish amicable relations, of the past differences between them and us, nor to enter into an argumentative discussion, such as is attached to our protest in Statement I.§ And, in particular, explanations might have been required, had we adopted the paragraph referring to Fawcett's Act, at the very moment that we were apparently violating it. Yet I may say that I think we are simply trying to secure the object Fawcett's Act failed to secure—to carry out its spirit, as far as it is possible to do so. Had we been compelled to enter into such a discussion, it is, of course, impossible to say exactly what form it would have taken; but as there is no difference between us and our colleagues in the strength of our opposition to the "proposals which have been made to," etc., so I think there is but little difference in our reasons. Of course I do not know what has been urged by the representatives of Statement I,§ who have just been heard, and, therefore, I cannot adopt it as expressing our views; but I think I am perfectly safe in saying that those whom I represent adopt without reservation the objections put forward by Mr. Gwynn in his admirable statement. And I would ask your particular attention to this, because even prejudice itself could scarcely believe that those of us who have signed Statement III.† are actuated by a desire to exclude Catholics from the benefits of the University. This point comes more naturally under Statement III.† and I will not discuss it further. I allude to it now solely to show that our objections are based on the fact, that anxious though we are to extend University education to Catholics, we believe the proposals which have been made would be unworkable; that they would not effect a reasonable solution of the University question in Ireland; and that, if forced upon us, we, who have proved that we earnestly desire to work with our Catholic fellow-countrymen on harmonious terms, could not, and should not, feel that the proposed college would offer us an opportunity of doing so with any prospect of success. We believe the result would be disastrous to the education of Catholic and Protestant alike; and that you would have injured, perhaps would have ruined, an institution which is doing work of the highest character for a large number of Protestants, and a smaller, but still an appreciable, number of Catholics, without gaining any compensating advantage.

Summarising, then, Mr. Gwynn's objections, I should say that as Irishmen, we considered that the pro-

posals in question would be generally injurious, because we believe that they would tend to create active hostility in the most formative years of life, and that as working members of the Trinity College staff we should contemplate them with dismay. For the only condition which would make a second college tolerable would be that, given reasonable security for faith and morals, there would on all other matters be a readiness to discuss calmly any points of difference which might arise, and also that a full measure of influence would be secured for the laity. Even the most sanguine of those who may have entertained any such hope must now feel that it has been rudely shaken. I do not wish to press the point as to the reception the scheme in Statement III.† met with in certain quarters. I feel that it is quite possible that it arose in part from an absolute misunderstanding of our position, and I do sincerely hope that it may be due to misapprehension, and that the merits of our proposal may be discussed in a reasonable spirit. If that happy consummation should be reached—if the absolute *bona fides* of our proposal be recognised—then the position will be entirely changed; but until that phase is reached, is it possible to ask us to associate with ourselves, as a college in Dublin University, an institution to be established at the suggestion of a Hierarchy which does not even discuss the merits of the question with their own laity? Before I deal further with this point, I desire to acknowledge in the most unreserved way the courteous tone of the Roman Catholic Hierarchy in the statement of their Standing Committee, and in especial the way they have spoken of our treatment of the Catholic students who come to us. But moderate and self-restrained as its language is, the claim it advances goes far beyond anything which can be admitted. As the guardians of faith and morals, we are all ready to acknowledge that they have, according to the accepted principles of the Roman Church, a definite right to speak on faith and morals. But in this pronouncement they go far beyond that. Ignoring the laity, they yet claim to be their mouthpiece—or rather they assume, as a matter too obvious for argument, that they are their mouthpiece—and what renders the assumption so remarkable is that the Catholic laity are not called into consultation at all—they are simply ignored. It is, therefore, quite plain that there can be no effective security by which the Governing Body of the proposed college can be secured against pressure from the Hierarchy. If not officially represented, outside pressure may be quite as effective as direction from inside. This will hardly be seriously contested, if in granting the college against which we protest, Parliament should take into consideration the need for coming to terms with the Hierarchy; and on what other grounds could they impose on us a second college? For all the evidence tends to show that a second college would decrease our efficiency. In the first place, I do not suppose that any advocate of the second college scheme anticipates that it would at first be possible to put the government of the University on any other basis than that of the hateful system of religious balance, so unsparingly condemned by the late Royal Commission, and by public opinion in Ireland generally. Such a system must evidently decrease efficiency. But now comes the question: is the college to be autonomous, or is it to be a college such as the Lord Chief Baron contemplated, which would work along with the present college, with common University professors, and in which a large portion of the education would be in common? If the latter, it is evident that a serious difficulty would arise with regard to the professors in reference to that part of the course which was common to the two colleges. The Report of the late Royal Commission justifies us in the apprehension that serious difficulties must arise with regard to the relations between the two colleges. I was going to refer to a statement in the Appendix to the third volume of the Report of the former Commission, but perhaps I need not do so.

764. CHAIRMAN.—We have been referred to the whole of that Report, and have read it?—Yes. I was going to refer to the part which deals with the experience of Wales. This is the passage** :—"The experience of the Welsh University shows that the federal system is workable, where the constituent colleges are homogeneous in character and united by a strong underlying unity of sentiment, and where their number prevents the line of cleavage in University policy becoming one of college against college. These conditions are fulfilled in Wales: none of them

* Appendix to First Report (Cd. 3176), 1906, page 23.

† Ibidem, pages 23-24.

‡ Ibidem, pages 22-23.

** Royal Commission on University Education in Ireland: Appendix to Third Report (Cd. 1229), 1902, p. 586.

would be present in an Irish undenominational University." (Nor, therefore, in Dublin University.) "If, however, one of the three Welsh colleges were withdrawn, I doubt if it would be possible to prevent the line of cleavage becoming one of college against college. If this be so, where the colleges exactly resemble each other in every respect, and differ only in that they supply the needs of different districts, how would it be possible to avoid it, if Roman Catholic teachers and students were concentrated in one college of collegiate group and Protestant teachers and students in another?"* Again, from a slightly different point of view, Professor Gonner, of University College, Liverpool (now the University of Liverpool), speaks of the practical difficulties of harmonious co-operation. "The next point," he says, "is as follows, and it is rather more serious; that you get opinion crystallised in the colleges before the various teachers of a subject have an opportunity of meeting, consequently you find three bodies of men"—(in our case two)—"meeting with opinions formed already, opinions which they have formed by discussions in the various centres, and I am sure, as the Commission will recognise, that it is very much more difficult then to obtain a harmonious agreement than if the various members were in constant contact from the commencement. Another practical difficulty is the difficulty which sometimes occurs from Professors in different centres taking different views of their subjects, and not being able to harmonise them by friendly contact. I can speak quite freely about that, because, as it happens, I have never had the slightest difficulty with my colleagues at Manchester. But I have seen difficulties of that kind, which, of course, do not add to the efficiency of the University. The third difficulty is, I think, a very serious one—that the teaching really follows the examination, and that the examination does not grow out of the teaching—that you are approximating in the Victoria University to an examining University. In our case, I think, the approximation is as little as possible. Our connection with Manchester has been very close, and we have tried to prevent the examination, as it were, dominating the teaching too much. But if you attempt a federal scheme in which the colleges are a considerable distance apart geographically, you are almost sure to have a very close approximation to an examining University, and the teaching merely adapting itself to the requirements of the examiners. These, I think, are the main difficulties which we have found. I think they are, on the whole, very substantial. The one I feel the strongest, I ought to say, is the last—that is the very serious difficulty that you do not have, as it were, automatic and natural development of examinations from the teaching courses which I think is desirable in the very highest education."† Nor can it be answered that as these difficulties arise from separation in locality they will not arise in Dublin, for the *raison d'être* of the separation into two different colleges is the assumption that the point of view is so different that it would be impossible to work together in one college. Nor is there, I think, any witness who has had experience of the so-called federal universities who has not testified that if a college is capable of independent existence, it is "cribbed, cabined, and confined" by its associations with others in a federal University.

The objection of expense will be best dealt with under Statement III.; but there is another point which cannot be too clearly put before the Commission, viz., the entire disparity between our position and that of Oxford and Cambridge. There, the addition of one college to many will introduce but minor modifications—the effect would be altogether negligible, in comparison with the revolution which would necessarily result if a second college were placed beside Trinity College in Dublin University. I am not here referring to the kind of objection Dr. Reichel deals with, nor to the powerful arguments adduced by Mr. Gwynn. What I want to point out is that there is really no existing analogy for what is proposed. If I might illustrate my point by an example from another phase of life, I would say that those who argue that, because Oxford and Cambridge get on very well with many colleges, therefore we ought to be ready to accept one other college in Dublin University, are really no more reasonable than he who should argue that because the wives in a harem accept the

advent of a new one without protest, therefore the wife of an English gentleman ought in like manner be ready to let him turn Mormon. The fact is that there is no parity whatever between Dublin and the other Universities. Oxford and Cambridge, on the one hand, and Dublin on the other, are all unities. They have all developed organically, but they have developed along different lines, and you cannot reason from one to the other. Of course I do not argue that, because Dublin is unlike the other Universities, therefore you cannot put a second University into it. That would be to take my point unfairly. All I say is that the analogy of Oxford and Cambridge gives you no help. You must discuss the question *ab initio*. You must not let your minds be misled by a false analogy into thinking that to be feasible which is in reality impracticable. For indeed the union between Trinity College and Dublin University has grown so close in the long course of history that even the analogy of the husband and wife hardly meets the case. They may be divorced: they may even marry again. But separate Trinity College and the University of Dublin, and you may indeed retain the names, but that is all. The reality, that which we now know by the title of Trinity College, Dublin, or of Dublin University, will have ceased to exist, and can never be reconstructed.

Now, let me for a moment suppose that all these difficulties were got over, that the two colleges got on extremely well together, that the courses were recognised as equally good, and that the degrees of those who attended the new college carried equal weight with those obtained from Trinity College. And here let me parenthetically point out that if they did not, the whole scheme would fail; and a new claim would be made to secure "equality." Now, observe what will almost certainly happen. The college is to be free of tests—it is to be a residential college; it is to be open to Protestants, who are to be eligible for all its prizes. Evidently, therefore, Protestants would go there, for it may be taken for granted that there will be certain differences. One set of needs will be better met in one college than in the other, and thus one group of Protestants will incline more to the new than to the old college. For instance, they certainly would if its fees were lower than ours; or, what would come to the same thing, if the rate of personal expenditure averaged less; and in one respect—the great supply of celibate teachers—Roman Catholic education must always be cheaper than ours. Or, again, if it developed along lines less professional than ours, lines more in touch with productive agencies than ours, Protestants would certainly avail themselves of it. Even at present, it is stated that about ten per cent. of the students at the University College in Stephen's Green are Protestants. In such a case, what would be the position of the college in regard to mixed education? Bishop O'Dwyer tells us that the students in his proposed Roman Catholic College in the Royal University would be "overwhelmingly Catholic," and that, therefore, the question of mixed education would not arise. But what if they were not overwhelmingly Catholic, as is especially likely in a college in Dublin University? Surely we should expect a larger proportion of Protestants than in an Agricultural College; yet the Bishops made a very remarkable pronouncement on such colleges only last Wednesday. I find the following in the *Irish Times*:—

"Maynooth, Wednesday, October 10th.

"The Roman Catholic Archbishops and Bishops met again to-day in Maynooth College. His Eminence Cardinal Logue presided. The following resolution was unanimously adopted:—

"As it has come to our knowledge that mixed residential colleges have been established by the Department of Agriculture and Technical Instruction, we have to direct the attention of the faithful to the following declaration of the Bishops published on the 16th of May, 1899:—

"We desire to impress upon the local bodies concerned the primary importance in the establishment and direction of Technical Schools and Colleges of avoiding anything to which Catholics would object on religious grounds, whether in the teaching or in other departments of such schools and colleges.

Professor of
Education;
Registrar,
School of
Education.

"It has been the duty of the Bishops to repeatedly warn their people against the institution of mixed residence for Catholics and Protestants. The principle already so successfully maintained for many years in the working of training colleges in Great Britain, and applied within recent times with the best results in the case of similar institutions in Ireland, should be followed in this also if residential institutions are to be set up.

"In addition to this, a Decree of the last Synod of Maynooth, which has been already sanctioned by the Holy See, enacts as follows:—

"Since it appears to us that interest in technical subjects and in agriculture is highly useful, and indeed necessary for our people, we consider it permissible for Catholic youth to frequent schools attended by non-Catholics where this instruction, as distinct from a general training or education, is given. We, however, distinctly forbid Catholics to reside with non-Catholics in such schools, unless on special grounds the Bishop of the place judge otherwise in particular cases."

It would seem to follow as a necessary corollary, as well from Bishop O'Dwyer's declaration as from the pronouncement published on Thursday, that if a fair number of Protestants went to the second college, the Bishops would be bound to endeavour to empty it of Catholics; and then the whole University question would be raised again. Thus the success of the colleges would almost ensure their failure. Disastrous as such a result would be to the country generally, it would affect us to a much closer degree. University work cannot be carried on in an atmosphere of strife and recrimination; and in such schemes as have been proposed there can be no finality, no security for the absence of party strife. Whatever scheme the Commission may see its way to recommend, or the Government to support, we think that we are entitled to insist that Trinity College shall not be called on to take into partnership any denominational college. And as representing that section of Trinity College opinion which is the most anxious to meet Catholic claims, I am here to say that to this form of the claim we will offer the most strenuous opposition.

765. CHAIRMAN.—This was the paper upon the first statement. Have you prepared one on the second? —No, I have not. I am simply prepared to speak upon it as you may question me.

766. I did not ask you any question upon the first statement, but I wish to ask one or two on the second statement. Your scheme is a scheme of mixed education, is it not?—It is.

767. The Roman Catholic Hierarchy have pronounced upon this scheme, have they not?—They have in one sense, and in another sense they have not. They have denounced it under certain conditions, but not under other conditions.

768. I would refer you to the conclusion of the document they published in Dublin on the 5th July, 1906. You will find it at page 82 of the Report.* There they say: "The Standing Committee of the Catholic Bishops feel that they are safe in stating that the Catholics of Ireland would be prepared to accept any of the following solutions:— (1) A University for Catholics; (2) a new College in the University of Dublin; (3) a new College in the Royal University; but that on no account would they accept any scheme of mixed education in Trinity College, Dublin." Having regard to that statement, is there any probability, looking at that attitude of the Hierarchy, that a scheme like yours would work?—With regard to that, it appears to me there are two questions that have to be considered. In the first place, I take it, this statement was prepared by the Bishops before they were aware at all of the nature of the scheme we would put forward. I don't know what would be their views on the question if it were discussed by them. I wish to point out that the words "in Trinity College," as used when the Bishop's document was drawn up have no relation whatever to the Trinity College with its new Governing Body under the scheme that we have outlined. No doubt the name is the same, but the proposal we have outlined is an absolutely revolutionary one, and would, as Mr. Gray says in his evidence, not only modify but destroy the constitution of Trinity College.

769. Can there be any doubt that what the Hierarchy object to is mixed education?

LORD CHIEF BARON.—Didn't you publish this scheme in one of the papers?—Yes, that was after it was sent in to the Commission, and only after this document of the Bishops had been sent in. We published it for the reason that in the same way opinions had been published about the change in the Governing Body. It certainly was not published before the other.

770. CHAIRMAN.—Meeting in solemn conclave, it must be taken that the Catholic Hierarchy object to any form of mixed education, even in the Agricultural Colleges. Is it not the case that your scheme, or any scheme, cannot possibly succeed without the approval of the Roman Catholic Hierarchy of Ireland?—Do you mean that it is not worth while to discuss and go into a scheme which, so far as we are aware, has not been examined and on which no pronouncement has been made by the Catholic Bishops? I should have thought it worth while to seriously consider whether this or any other serious scheme has any possible chance, and I don't think the time of the Commission would be lost in doing so.

771. I don't say it might not be worth while to consider it. But is it likely to succeed? Secondly, this scheme is one of mixed education, and any scheme of mixed education does not receive their approval?—I cannot agree; I think some kind of mixed education must be contemplated by them. In the Bishops' Statement, page 82, we read: "It is quite a different thing when we come to speak of Dublin University. Students of different religions and of various social and political views may fraternise with advantage in the same University." Therefore they certainly do not object to mixed education completely. That is mixed education. They don't mean to insist that the students must be separated altogether.

772. LORD CHIEF BARON.—They certainly don't. You are quite right in that?—Yes, mixed education has never been unreservedly condemned, and I should certainly hope that after such a scheme as ours has been considered by the Bishops as a body—a scheme supported by a very powerful and representative body like ours—the result would be a very different document from their statement* (p. 82) drawn up before they knew what we were prepared to offer. For Statement III.† is not to be regarded as the mere act of those whose names are attached to it. It differs in an important respect from all the subsequent statements sent to the Commission, inasmuch as it was not due to the action of a number of gentlemen who united together because they happened to be of the same opinion. It is in a sense the act of the staff of the University, because it arose in the first place from a meeting of the whole staff, summoned by the Provost, on July 4th, to consider the question of the attitude the University should take in regard to this Commission; and at that meeting the following resolution was passed without any dissentient voice at all:—"That a committee be appointed to draw up a statement of what Trinity College is prepared to accept, and to offer to make it acceptable to their Roman Catholic fellow-countrymen, and that they report to an adjourned meeting, to be held on the 18th inst, to meet at 11 o'clock." The committee, after a very practical discussion, was appointed to represent, as far as possible, all shades of opinion in the College. There was not one proposed on the committee who was not elected, there was no desire to exclude any member of the staff. Anyone who thought he could give valuable assistance was placed upon it. That committee met from day to day, and the first question was how they were to find out what would be acceptable to our Roman Catholic fellow-countrymen. That was a question which gave us a great deal to think about. It was quite evident that it would have been useless, I think really useless, to have gone to the Hierarchy, considering the history of the past. We could not leave out of sight the past history of this question and the part taken by the Bishops on it. And there was the history of the offers made by the Board of Trinity College of a chapel and so on. I confess I think that if those offers had been made in a different way it would have been more reasonable to ask the Hierarchy to accept them. I think the Hierarchy would naturally consider that to come into Trinity College and to put up a Roman Catholic Chapel there would be to come into hostile ground, and I do not think that it was to be expected that they should do so without any security against hostile treatment. If they were to be asked to enter that hostile ground, as it might be

* Appendix to First Report (Cd. 3176), 1906, page 82.

† Appendix to First Report (Cd. 3176), 1906, pages 23-24.

considered, I think they ought to be assured that there would be some power there which would be in a position to see that their fair demands were met. It was in considering the matter from that point of view that I was led long ago to think that the answer to the problem was that a certain measure of security should be given by representation of Catholic interests, by some device such as the plan now put forward for the representation of their interests on the Governing Body. Now, I think if we could have approached any Roman Catholic body, putting the past altogether behind us, we might have had a chance of success, but with the history of the question behind us it was absolutely useless to expect to come to an agreement with the Roman Catholic Hierarchy, or even to come to such preliminary ground as to be able even to understand each other at all. I think there was that in the past history which rendered it far from certain that if we approached them we should even have been able to convince them we were really doing so from the earnest wish not to shelve the question, but to help in solving the question. Therefore we said to ourselves, we must go to the Catholic laity. They are a force which is increasing in importance every day. The Lord Chief Baron, I am sure, will agree with me in recognising the immensely increased weight which the Roman Catholic laity has in Ireland now. I remember the time—I am old enough, and I am sure he remembers it—when the members of the professions among Roman Catholics were very few, only one or two perhaps in a place like Merriion-square, and very few in influential positions such as so many now occupy. We thought we should deal with the laity, the Roman Catholic laity, and deal with members of that laity who were known not to be careless of their obligations to their Church, Catholics who were known to have proved their loyalty to their religion. On these lines we felt that something could be done, and that, with the *bona-fides* of Trinity College and of influential and reputable Roman Catholics, men of the professional and commercial class, it was quite possible to make headway. I hope the Commission will not consider that it is absolutely impossible that with the position defined in this way, the Roman Catholic Hierarchy will be ready to discuss the question, whether it is possible to accept the scheme, provided effective safeguards for faith and morals are included in it.

773. CHAIRMAN.—This scheme has been published some time, some weeks. Has the Hierarchy shown any sign or inclination of approval?—It would seem to me quite unreasonable to expect that they would.

774. In point of fact, they have not?—In point of fact, no.

775. If we go back to the time of the Queen's Colleges when they were established, the laity were quite willing to send their sons to them?—Since that time an immense change has taken place in Ireland.

776. Is there actually anything to show that the power of the laity as against the Hierarchy has increased?—I should not like to adopt the words "the laity against the Hierarchy." I think I would say the laity with the Hierarchy. I think the power of the laity with the Hierarchy is very different from the power the laity had before.

777. So lately as Fawcett's Act,* when all the offices of Trinity College were thrown open, many of the laity would have been glad to fill these offices?—I think that seems to point exactly to the reasons why a scheme such as we have drawn up might succeed. Fawcett's Act was passed in—

778. LORD CHIEF BARON.—In 1873!—Yes, Fawcett's Act passed in 1873. Immediately after the passing of Fawcett's Act the whole of Dublin University and Trinity College was officered by exactly the same people and the teaching was exactly the same.

779. CHAIRMAN.—It continued for a time. Were not the Roman Catholic laity inclined to send their sons to Trinity?—I think the laity were always inclined to send their sons to Trinity.

780. Has not the real obstacle come from the Hierarchy. Is not the position of the Hierarchy now precisely in accordance with that taken up since the foundation of the Queen's Colleges?—A good deal has happened since that. It is understood that they have extended their permission to students to go to Trinity College. It is not forbidden. It is a place, they say, to go to with care. It is not prohibited. The numbers of Catholic students who have been coming here have been increasing very steadily. The number last year was not far from double what it was some time ago. I should be very sorry to think

that this Commission would assume that it is impossible that an arrangement might be come to with the Bishops, at least until the Bishops have been heard at the Commission and the question is asked them where our scheme is deficient, and if so, where the deficiency is, so that we might see if we could amend it, and I don't think it should be assumed that they oppose it until it is shown that the laity are not strongly in favour of it. It would seem to me to be premature altogether. This document has never been officially discussed by the Bishops. I am quite sure they have never had a meeting upon it. Certainly, not only has there been no meeting, but they have never made a pronouncement upon it. It is quite open for them to do so. One construction only should not be put upon their silence. It is quite open to the other construction. It is quite possible for them to meet and make a pronouncement and say "We cannot accept this." They have not met and said so.

781. MR. KELLEHER.—With reference to the scheme which you have submitted and which you have referred to here, I would like to bring under your notice some objections offered to the scheme by one of the witnesses whose evidence is contained in these papers—a statement from Dean Bernard containing objections to the proposed scheme. Dean Bernard gives as his objections to the scheme that has been proposed, that it is inconsistent with Fawcett's Act, and that it is absurd to suppose that the privileges of the character suggested, when once conceded, can ever be recalled. Have you anything to say in answer to these objections. They are matters which you have already considered, and I would like to have here from you your statements on the subject?—As to the suggestion that it is inconsistent with Fawcett's Act, I think that in one particular it is perhaps inconsistent with Fawcett's Act, inasmuch as the appointment of the dual professors, I take it, practically involves the question of a test, but it seems to me with regard to the dual professors, that it is the one point of University life in which it is impossible that Fawcett's Act* can really apply. Observe,—you may take from anywhere in the world a professor of mathematics. You ask simply how much he knows. You do not ask him what the bent of his opinions is when you put him down to teach mathematics. You can take him from one end of the world and put him into a position at the other end in any University. But it is entirely different when you go to such subjects as ethics, philosophy, and perhaps history. It is perfectly obvious that you could not take a professor who has been brought up in the Buddhist philosophy and put him down to teach philosophy here. Philosophy is so closely connected with life that it is impossible that it should not touch either directly or indirectly on another matter also most closely connected with life, and that is religion. And, therefore, practically, Fawcett's Act is necessarily violated in reference to philosophy, because, whether you have an explicit test or not on taking office, you must have an implicit test in reference to philosophy, and I should point out that in that, the only portion of our scheme in which Fawcett's Act* is technically violated, Dean Bernard himself gives up his objection. He says, that it would be "quite consistent with the spirit of Fawcett's Act, although, perhaps, inconsistent with its letter," "to appoint Roman Catholic professors of history and philosophy whose lectures Roman Catholic students might have no scruple in attending." Therefore, so far, Dean Bernard's objection has no force whatever. As to the rest, there is nothing whatever in the scheme which violates Fawcett's Act, because it is an essential condition of the scheme that no test whatever shall be applied for qualification on the governing body, and there is no suggestion whatever that it shall be applied to any professor, except the dual professors. Therefore, I would say, that Fawcett's Act is practically not violated, that in fact we are only carrying out Fawcett's Act. I would like to point out that the Act is not effective yet, because, still every existing member of the Board was there as an Episcopalian under a test. It has not yet been worked off. All the members of the Board are denominational in that sense.

782. LORD CHIEF BARON.—Let me interpose for a moment. Is not the essence of this scheme that people are to be selected and put on the governing body, being Catholics?—So far as the essence of the scheme goes, I think there is not a technical violation. It is not a technical violation, because there is no test implied. There is absolutely no test proposed as a

qualification for membership of the Governing Body or any office. But, I say it is not a practical violation either, because the object of Fawcett's Act, as I take it, was this—that Dublin University should become free to Catholics and others. Now, Fawcett's Act did not change the University at once. It was hoped that in the course of a long time it would change the University, and that was the intention of Fawcett's Act, but it has become evident that the intention of Fawcett's Act cannot be carried out by a gradual process of organic change. And Catholic representation on the Governing Body is, therefore, entirely with a view to give immediate effect to what Fawcett's Act was designed to do, to secure that a real and effective guarantee should be given to that part of Fawcett's Act which says, that the University is to be a place of *religion and learning*. We feel that, so far as Roman Catholics were concerned, if the University was to be a place of religion and learning, it was to be a place in which there would be a security that the religious faith of Catholics would not be interfered with, and that, until the Catholics got in in sufficient numbers, as under our scheme we hoped they soon would, on the governing body, it was necessary, in order to carry out the principle of Fawcett's Act, that a certain number of people should be put on as, if you like, Roman Catholic. But we do not think at all that that is a violation of the spirit of Fawcett's Act. It was a temporary expedient.

783. Mr. KELLEHER.—But, as to the objection that this privilege of electing twenty-five per cent. of the governing body for twenty-five years cannot be withdrawn at the end of twenty-five years?—It would seem to me quite clear that the privilege could be withdrawn, although it is quite possible that it might be wiser, instead of naming a definite twenty-five years, to let one be withdrawn after twenty years, and so on, reducing the number gradually. But, if you consider the effect of the scheme, it would be that within quite a short time, there would be a much larger representation than twenty-five per cent. If the Cecilia-street Medical School were brought in, there would be, at once, a large number of Roman Catholic professors brought in, and they would have a representation on the Governing body. And, if the scheme worked at all, and if a large number of Roman Catholic students came in, it is perfectly clear that the present staff would not be able to supply instructors, and, therefore it would be necessary to seek instructors from outside, and it would seem to me perfectly natural, and in fact, inevitable, that they should be sought in large measure from those who are doing the existing work in Ireland among Roman Catholics. That, therefore, would bring in a large Roman Catholic University representation; and the scheme of the moderators would do the same. Therefore, it would seem to me quite clear that, if this scheme were accepted, in a very short time the whole character of Trinity College would be changed, both in regard to the students and in regard to the professoriat, and that representation of Roman Catholics on the Governing body would be recognised as ample, and that any need for the retention of the twenty-five per cent. would seem to be non-existent, and that it would disappear entirely.*

784. Dr. JACKSON.—Might I ask one question. I fail to understand what the size of the Governing Body would be—I do not mean the electoral bodies, but the Governing Body elected by them. Would you give me an opinion as to what its size would be?—Well, we had a complicated scheme here. We had proposed here that the Governing Body would be twenty members, with the Provost, but that proposal we only put forward in a tentative way, not as a thing essential to the scheme.

785. I had failed to understand whether this Governing Body would be 100 or eight or nine, and I was anxious to be clear upon it.—The larger body was merely for the purpose of electing these.

786. Mr. KELLEHER.—An objection made in Dean Bernard's statement is that there is no guarantee that this scheme would satisfy the Roman Catholic Ecclesiastical Authorities. And, he adds, "With the Bishops it is necessary to reckon." I would like to hear what you have to say on that matter?—Continuing what I was saying before, it appears to me that it is quite true that some

time ago, at the time the Queen's Colleges were founded, the only body that had to be reckoned with in regard to the higher education of Catholics was the Roman Catholic Hierarchy. That the position has now changed I think is clear to anyone who has an intimate acquaintance with Ireland. I do not say that the change has been effective as yet; I do not for a moment say that there is at present any force of opinion in Ireland which would make a scheme an immediate success if the Roman Catholic Hierarchy were resolved on opposing it, but I do believe that there is such an amount of loyal Roman Catholic opinion amongst the University-going classes in Ireland that the Roman Catholic Hierarchy are likely to feel that it is impossible to neglect their views. And I am convinced that, if Parliament were to proceed to legislate on this question without taking account of the views of the University-going classes of Irish Roman Catholic laymen, they would be reckoning without their host altogether. And, therefore I still have hopes—very sincere hopes—that it will be found, after their own laymen have been heard on it, that the scheme which we have put forward is one which the Roman Catholic Ecclesiastics may see that, all things considered, it is wise for them to support—I do not say in all its details. We have not put this forward as a cast-iron scheme. We are ready to hear and meet as far as possible any objections that may be made; anything that shows that faith and morals are not secure under this scheme. And, when it is seen that the scheme would offer a much more effective education to Roman Catholics than, I think, any other scheme that can be put forward, when it is seen that this scheme would actually, if carried out, so transform Trinity College and the University of Dublin that it could no longer be looked upon as a Protestant place of learning, that it would be national in the sense that it would represent every phase of national thought; for instance, if a new Governing Body were to be formed under the scheme here, it is perfectly evident that the whole question of the relation of the University to Irish studies and languages would be changed altogether. That was a matter that we did not think it necessary to put forward here in detail, because we conceived that that was a matter for the Governing Body. And I would like it to be most clearly understood that, in putting forward this scheme, we recognised to the full that if it were taken advantage of, it meant that Trinity College was to be no longer either Protestant or Unionist; that Trinity College was to be a place which would represent all shades of thought in Ireland. I do not at all agree with the suggestion that the union of the youth in a single college of this kind would lead to anything colourless in religion or in politics or in thought. Youth is not colourless. It is old age perhaps that is colourless. But youth is vivid and real, and the contrasts bring out their qualities, as they cannot be brought out when all those of one way of thinking are housed in one institution together. I think if this scheme be carried out, the result would be, not to reduce the sentiments, the religious sentiments, of any youth who was attending it. We have plenty of evidence. I have got a letter from Oxford here, and the same evidence was given in the old Commission, showing that, although doubtless there may be cases in which a person who is colourless may become careless or Agnostic, or something like that—such cases may happen occasionally—the usual result is to make Catholic students study the doctrines of their own Church more. The result with youth always is that contrast intensifies the perception of their own side. In youth, too, when perhaps you do not see other people's side as strongly as in old age, you feel their human side far more than at any other time. And most men will agree that the friendships formed in college are the most lasting friendships in life. They are the only friendships which in the adult mind will stand any strain—the strain of politics, the strain of difference in religion. The friendships of college can stand any strain; anyone, I am sure, can recall instances of that to themselves. And I don't think it is possible to consider that this mixture of youth will lead to any colourless feeling, but we should go on all together, respecting each other. And for the Protestant the point is an essential one. I have only spoken hitherto of the Roman Catholic point of view; but I would now like to speak of the Protestant point of view.

* Note by witness—I desire to point out that there is a fallacy in the question. It could not be a question of *withdrawing* a privilege, for the privilege ceases automatically. Its cessation would only be avoided by positive legislation extending it, so that the real argument is much stronger than in my answer.—E. P. C.

It is impossible that the Protestant can look forward with any other feelings but those of the gravest apprehension to a separation of the University-going classes in Ireland into two distinct camps. Everyone will, I think, admit that we are a valuable element in the country. Everyone will also admit that the trend of affairs, whatever political party be in power, is to delegate authority more and more to the bulk of the people. And under these circumstances I can see no hope, or very little, for the well-being of the country as a place where Protestants and Roman Catholics are to work in harmony unless the education of the best young men of the country is carried on in common. What have we to look for otherwise? We are separated into two different camps by history and traditions, and the only way in which we can hope to have a really secure footing in our native country is if, by contact in some shape or other, the two opposite forms of thought can learn to respect each other, and harmonise with each other, and to work with each other. And, therefore, some such scheme as this, which I believe would work harmoniously, seems to me the most important thing that statesmen could do. And I would ask of the Commission that they should at all events take every step to secure expressions of opinion which may tend towards showing its practicability, so that at all events by no loss of patience or inquiry will it be possible that a scheme which perhaps would have succeeded shall be put out of court.

787. CHAIRMAN.—I can assure you, at any rate, that we intend to do our best.

788. LORD CHIEF BARON.—I entirely re-echo what you say as to the anxiety to bring together the two classes of youth, the Protestant youth and the Roman Catholic youth. And, supposing the idea of an alteration in Trinity College is not possible in consequence of the opposition of the Hierarchy, would not it be right to consider the next scheme by which these two classes of youth may be brought together? If you have the two separate colleges, with University classes (probably the Honour classes in the great majority of subjects being University classes), the youth brought together in that way, then beginning to know each other, will join in their games together, the University students of both colleges will have their boat against some other University, either in England or on the Continent. In that way would not you hope that they would so approach one another that ultimately we would have them going all together? That is one of my reasons for wishing so very much that, if they cannot be brought up together in the one school, that they shall be brought together in the same University?—(*Witness*).—Might I say now what indeed I meant to say before—to assure you how grateful I and all those whom I represent were to your lordship for the kind way you spoke of Trinity College at the recent Royal Commission. I would like now to explain how it seems to me that the solution to which we have put our names offers a guarantee for harmonious co-operation which the two-college scheme does not. And it is this. You will observe that under our scheme the entire institution must proceed on its way usefully or the entire institution must fail. If the new college is a success—the single college that we propose, with its joint Governing Body—it will be a success for all its students. If for want of harmony or from conflict it fails, all the students are equally damaged. The community of interests is secured, as it seems to me, under our scheme, but it is not secured under the other scheme. It would appear to me to be analogous to this. Supposing there is a proposal to put up a railway line here (*indicating*). There is a line here already existing between these two points. The proposal is made to put up another line between these two points. If this be made by what I may call a competing company, the result will be that the interests of the shareholders in this company and in the other company will both be imperilled. The interests of the population, no doubt, may be served, but that is another point. But if these were to be under a single management, with no separation of interests, it is then quite clear that neither the shareholders of this can suffer by any failure nor those in this. That is a rough illustration which I daresay would prove fallacious in some particulars, but I put it to explain my point. The difficulty that we feel with reference to the second

college is this. If a second college be granted in answer to the claim which is now made by the Hierarchy, and with the relations of, I must say, distrust—not unnatural distrust, I do not want to emphasise it, which does exist; they suggest in their statement, and I cannot blame them for doing so, that the advances which were made were due to our fear that a worse thing would happen to us; I do not think that they can be blamed for doing so. We have never met each other; our history, the history of the relations between Trinity College and the Roman Catholic Hierarchy has not been one of friendship, it has been one of dealing at arm's length; and we fear, and I think we cannot help fearing, that, if a second college is put up, we cannot hope that, dealing at arm's length, as I believe we should be, as we have always done in the past, it would be possible to work the two harmoniously. It is out of the question to say that the interests of the two colleges would be the same. It is perfectly clear that they would not. The interests of each college would be to show that it was doing better work than the other. This was given in the statement here, and I need not repeat it. I think Bishop O'Dwyer himself stated something of the kind. And therefore it seems to me that in giving a second college here, which has not been strongly pressed for by them, you would have no guarantee or security whatever that the working would be harmonious. How would you manage with the University, in the first place? The University will, I take it, have to be done on the half-and-half principle, will it not? I cannot see any other. It seems to me that it would be recognised as a question too often of college against college, and that, with the warning that we have in Wales, it is too much to hope that, where the interests are not identical, two colleges started under such inauspicious circumstances would get on harmoniously together.

789. CHAIRMAN.—That is very much the view you have already presented in your written paper, I think?—Yes.

790. LORD CHIEF BARON.—I think you are speaking now more of the pecuniary interests?—No.

791. Do you think that the interests of Trinity College would be more injured by the competition of a second college affiliated to the University of Dublin than it would be by some college affiliated to the Royal University—that is, as recommended by the Robertson Commission?—Do you mean the pecuniary interests or the educational?

792. Take them separately, because I think in part you were referring to the pecuniary interest necessarily incident to competition. But take them separately?—I would like to say that the financial interests have not been in my mind up to the present. As regards the educational interests, it would seem to me that the educational interests of Trinity College would be much more injured by a college inside Trinity College.

793. CHAIRMAN.—A college within the University of Dublin?—Yes. The work of those who felt that they could not work in a single college with us would be much more injurious to us from an educational point of view than would be a college in the Royal. I am specially excluding such a college as is adumbrated in the recent statement of the Committee of Catholic Laymen; a college that will fulfil those conditions, I take it, is a college that would work with us a great deal more than the other, but which would have no advantages as compared with our solution, because we should always have distrust and uneasiness if the second college did not get on harmoniously with us. We should be diverted from our academic work into what I may call the political work of adjusting matters with the second college; and with a second college in the Royal University we would be quite free from that. And I think, therefore, that the college in the Royal University, educationally, would be a very much better solution for Trinity College. As to the financial question, it seems to me difficult to give an expression of opinion on that unless one knew, for instance, what the financial arrangements would be; but I think, until there were some further particulars, I could hardly venture an opinion on the financial aspect.

794. That would depend on the number of students that the college might draw off?—On the fees, on the style of education, and so many circumstances.

The Witness withdrew.

The Commission adjourned until the following morning.

THIRD DAY.

THURSDAY, OCTOBER 18TH, 1906.

AT 10.30 O'CLOCK, A.M.,

At Trinity College, Dublin.

Present:—The Right Hon. Sir EDWARD FRY, P.C., D.C.L., LL.D., F.R.S., F.B.A. (Chairman); The Right Hon. C. PAILES, P.C., LL.D., Lord Chief Baron of the Exchequer in Ireland; Sir THOMAS RALEIGH, M.A., D.C.L., K.C.S.I.; Sir ARTHUR RÜCKER, M.A., D.SC., LL.D., F.R.S.; HENRY JACKSON, Esq., D.LITT., LL.D.; S. H. BUTCHER, Esq., M.A., LL.D., D.LITT., M.P.; DOUGLAS HYDE, Esq., LL.D.; DENIS J. COFFEY, Esq., M.A., M.B., F.R.U.I.; S. B. KELLEHER, Esq., M.A., F.T.C.D.; and J. D. DALY, Esq., M.A., Secretary.

JOHN JOLY, Esq., M.A., Sc.D., F.R.S., Professor of Geology and Mineralogy in the University of Dublin; representing the signatories to Joint Statements IV., V., VI., printed on pages 25-35 of the Appendix to the First Report (Cd. 3176), 1906; called in and examined.

DUBLIN.

Oct. 18, 1906.

John Joly, Esq., M.A., Sc.D., F.R.S., Professor of Geology and Mineralogy in the University of Dublin.

796. CHAIRMAN.—You come before us, I understand, in support of what we call "Statement IV.," that is the Statement submitted by Members of the Professoriate of the University of Dublin*?—Yes.

797. And in that you discuss what I may call grievances, and then you conclude with suggestions of remedies?—Yes.

798. I will take you to that part at once, if you will allow me. You propose the election to a principal professorship to carry with it membership of the Corporation of the College—in other words, the principal Chairs to be embodied in the Corporation?—Yes.

799. Would it not be desirable, if that were carried into effect, to divide the Professorial Fellowships from the others?—I think that what we had in view was a system which should, as far as possible, abolish the existing distinctions between Professors and Fellows. I think that anything which militated against abolishing these distinctions would not work as well and as smoothly as a system in which the Professors and the Fellows held their positions in the College as members of the Corporation upon quite equal terms.

800. Would you make all Professors Fellows?—No; it is not proposed to embody all the Chairs in the Corporation. There are certain Professors in Trinity College and the University of Dublin who may be called whole-time Professors, that is, they give their entire time to their duties, they have no other occupation, and they receive no other salary except in connection with their Chairs. These Chairs are comparatively few in number; at the present time there are only eleven. Of course, it might be a variable quantity in a small way, but at the present time there are only eleven. But there are a considerable number of Chairs which come under quite a different designation, Chairs which are held by professional gentlemen, who come in and lecture once or perhaps twice a week. One gentleman lives even in London and only comes over for a few lectures in the year.

801. Your scheme would apply only to what you call the whole-time Professors?—Yes.

802. I think we have a list of some of the principal Professors—Mathematics, Natural Philosophy, Experimental Philosophy, Chemistry, Geology and Mineralogy which, I believe, is your Chair?—Yes.

803. Botany, Biology, Pathology, Greek, Latin, French and German, Philosophy, Political Science—are those the principal Professorships?—Some of those are already held by Fellows, there is no need to make any alteration in their case; they have been for a long time held by Fellows. We Professors occupy the Chairs which are of comparatively recent foundation, which have never been held by Fellows, and are not now held by Fellows, for I suppose it is found that the Fellows entering into their Fellowships by examination which are, on the one hand, Mathematical, and on the other, Classical, are not suitable to fill those positions.

804. It has been suggested to us that considerable difficulty would arise with regard to the precedence of these Fellows. In the first place, would you give a Fellowship to a Professor as such? As I understand, at any rate, the occupant of the Chair would become a Fellow?—Yes, according to Scheme V.†

805. He would be a Fellow, according to your scheme, only during the tenure of his Professorship—he would not be a Fellow for life?—May I say that we had in view when we drafted that report of the Professors a certain scheme which will be considered later.

806. I will come to the question of the tenure presently. It is obvious that the tenure of a Professor is not necessarily co-extensive with life. I want to know whether you propose that each Professor-Fellowship should be held only during the occupation of the Chair?—I think that that is intended.

807. Would it not be necessary to make a separate class or category of such Fellowships, so that they should not interfere with the precedence and order of the other Fellowships?—I think I will have to say a few words in explanation, because I think, perhaps, we have not made ourselves sufficiently clear. In asking to be made members of the Corporation we do not ask that the existing Professors should be made Fellows. I do not think that we Professors would at all wish for that. It would be conferring upon us an honour which we never really deserved, and I do not think we wish for it; we therefore ask merely to be given membership of the Corporation *qua* Professors.

808. That means a vote on the Senate, does it?—No. It means that we would have a claim to advise the Governing Body, and in that way our opinions on matters of Science and as specialists would enter into the consideration of the Governing Body.

809. At the present time the Corporation consists of the Provost, Fellows, and Scholars, does it not?—That is so.

810. And you would add to that another class of members of the Corporation?—That is so.

811. Namely, Professors?—That is so.

812. Passing from that, your next proposition is "the several faculties of the University—Arts, Science, Divinity, Law, Medicine and Engineering—to be organised and embodied as established parts of the constitution of the College and University with certain rights to advise the Central Governing Body on matters of expenditure, of curriculum, and of development. We think that these organised Faculties should replace the existing Academic Council." That is very analogous to what in some other Universities we call Boards of Studies, is it not?—Yes.

813. You require that the Governing Body should not act in respect of any of the Faculties without previous consultation with the Board of Studies?—That is so.

814. That is the general outline?—That is the idea.

* Appendix to First Report (Cd. 3176), 1903, page 25.

† Ibidem, page 27 *et seq.*

815. You then say, "The tenure of the principal Chairs to be made *ad vitam aut culpam*." I suppose that means *ad mortem*?—It means dependent on good behaviour.

816. You say, "The tenure of the principal Chairs to be made *ad vitam aut culpam* after a probationary period of three or five years, the interests of the University to be protected by powers of dismissal vested in the Board and Faculties (subject to right of appeal to the Visitors), should neglect of duties, etc., be proved against a Professor." Ought not that to be extended so as to include not only neglect of duties, which, I suppose, is "*culpa*," but also becoming incapacitated from performing his duties?—I think so.

817. According to the scheme, if I rightly understand it, you propose that the dismissal shall require the consent both of the Board and of the Faculties. Now, I suggest whether it would not be better to give the power of dismissal to the Board, after considering the opinion of Faculties, of the Boards of Studies. I think that is the position in the University of London?—Yes, I think that would probably prove a satisfactory arrangement.

818. Which would not require the absolute consent of the Boards of Studies, but would give them an opportunity of being heard before anything was done?—Subject to right of appeal.

819. Subject to right of appeal to the Visitors?—Yes.

820. With regard to the adjustment of existing salaries, which is your next point, I do not think that is a question which can be profitably discussed. The next proposition is also a financial one: "Pensions of reasonable amount to be attached to the principal Chairs." That is obviously a desirable thing, but it is a thing which, like many other good things, has to be paid for. Would not the sum which you indicate as being likely to be required, that is to say, £8 10s. per annum per centum, be a very heavy charge on the College?—Of course, it would depend on the amount of the pension. We do not specify what we consider a just pension. But I may say that in one of the petitions to the Board, which we have referred to in the beginning of the Memorandum, we suggested what we thought would be a modest pension, and the total cost was calculated by Dr. Howell, who is an expert, taking into account all the conditions of the problem, such as the number of the existing principal Chairs, the Chairs that we are speaking about, the age at election, and the proposed age of retirement. Taking all these particulars into account, I have before me a calculation which gives the entire cost.

821. Allowing a retiring pension of how much?—Allowing a retiring pension of £350 per annum.

822. At sixty-five years of age?—At sixty-five years of age.

823. Or compulsory retirement?—Or compulsory retirement.

824. What is the total amount per annum?—The total amount for each professor for the pension is an annual premium of £29·7.

825. Practically £30?—Practically £30, paid into an insurance fund, as it were, from the date of the appointment of the professor.

826. To find the total annual charge that would have to be multiplied by the number of professors?—Yes.

827. Has that been worked out?—It has not been worked out, but the whole of the data are before me. It would not come to a large amount. There are eleven Chairs, so it would be a matter of about £330 a year paid into an insurance fund.

828. If the finances of the Corporation allowed of it it would obviously be a very great advantage, I should think. I should like to go back to the question of the tenure of the office. At the present time, as I understand it, it is entirely at the will of the Board?—We are re-elected every five or seven years.

829. Beyond that there is no certainty?—We have no legal claim, no.

830. Do you think that that in any way influences the number of applicants and the character of the applicants for University Chairs?—I do think it influences them.

831. Prejudicially?—Yes. There are specific cases in which gentlemen have refused to apply for Chairs on that ground.

831A. You propose in addition to this pension that there shall be a provision for illness?—Yes, for early retirement through illness or infirmity.

832. Has the cost of that been calculated?—That has been calculated, and is in addition to what I have already stated.

833. What does that amount to?—For a pension of £200 it would mean an annual premium of about £20.

834. Per Professor?—Yes.

CHAIRMAN.—That is £700 a year. Do you calculate that this sick pay, to use a club expression, should continue for an indefinite length of time or only for a certain period?

LORD CHIEF BARON.—It would commence with incapacity.

CHAIRMAN.—Oh, it is a retiring allowance in the event of a Professor being incapacitated through illness?

LORD CHIEF BARON.—Yes.

835. CHAIRMAN.—It is not an allowance during illness and temporary incapacity?—No. Perhaps it would save trouble if I said that there is a calculation here by Dr. Howell, to the effect that the total premium required would be £62 per annum per Professor. That would include everything that we suggest.

836. That comes to about £700 a year?—Yes.

837. LORD CHIEF BARON.—With regard to the tenure of office; as I understand, at present you hold office merely at the will of the Governing Body or for a fixed period for which you are appointed?—Yes.

838. The question of re-appointment rests entirely with them?—Yes.

839. Of course, you are of opinion that in the interests of the College it would be very advisable that Professors should be appointed for some period of time, irrespective of the will of the Governing Body?—Yes, I think so.

840. And have an assured tenure?—Yes.

841. Have you known, in your experience, instances in which a gentleman who would have been a very valuable addition to the College has refused a Professorship on account of the uncertainty of tenure?—I can name at least one case, and I know of other cases on hearsay.

842. I can, myself, say, in reference to some temporary quasi-judicial offices that have been created within modern times, that there have been cases of most experienced gentlemen refusing to abandon their profession for the purpose of accepting positions with such a tenure as that. What would you say to this tenure; I am reading from the Report of the Robertson Commission, p. 41.* The Professors "would be appointed by the Governing Body, subject to the approval of the Crown." I pass over that, for I do not suggest that in the case of Trinity College. "Each of these officers would hold under King's Letter. They would hold office for life or for a term of years, or until grave moral misconduct, proved to the satisfaction of the Visitors." That is involved in *ad vitam aut culpam*?—Yes.

843. Would you approve of a tenure of that description?—As I understand it, it comes to much the same as we are asking for.

CHAIRMAN.—Except that it does not provide for incapacity; it does not deal with questions of retirement or incapacity.

844. LORD CHIEF BARON.—But it is a fixed term—for life would be out of the question in the case of a Professor—but it would be a term of years calculated according to the age of the Professor?—Yes.

845. Then he would have a certainty of tenure unless grave moral misconduct was proved to the satisfaction of the Visitors. Would that, and the right to retire in the event of incapacity, satisfy your body of Professors?—I think I may say it would. I think it is what they had in mind when they drafted this Statement.† Of course it would be understood that a pension would be received in such a case on retirement.

846. Of course?—Then it comes to the same as we have before us.

847. "No Professor should be deprived of office"—this is in relation to the grave moral misconduct—"except with the concurrence of all the Visitors." Of course that would give you greater certainty of tenure?—Yes.

DUBLIN.

Professor of
Geology and
Mineralogy in
the University
of Dublin.

* Final Report of Royal Commission on University Education in Ireland (Cd. 1483), 1903, page 41.

† Appendix to First Report (Cd. 3176), 1906, pages 25-27.

DUBLIN.

Oct. 18, 1906.

John Joly,
Esq., M.A.,
Sc.D., F.R.S.,
Professor of
Geology and
Mineralogy in
the University
of Dublin.

848. "The duty of choosing books for use in the College so far as not prescribed in the course of studies settled by the authorities already specified, should be with each Professor in regard to his own class, subject only to the disciplinary powers of the Visitors." Would you approve of that?—I understand that that is the choice of books for the curriculum; that the Professor alone is to act as judge in choosing the books for the curriculum?

849. Subject to the disciplinary powers of the Visitors. It would give you more control over your own courses?—That is, I understand, how it is in the Universities of Germany; but I confess that I think it is advisable to have the supervision of the Faculties in cases of that kind.

850. Your proposal rather tends to give it to the Board subject to the advice of the Faculties?—In the present case the Council considers the question. The Council and the Board have to do with the consideration of matters connected with the curriculum. I do not think it would be advisable to give the Professors the absolute right, except subject to veto in some respect.

851. What is proposed here is subject to the disciplinary powers of the Visitors. Would you prefer the disciplinary powers of the Governing Body?—I would prefer that there was an expert body like the Faculty.

852. Then in regard to the expression "grave moral misconduct." Do you attach any importance to this. This being in the nature of a Christian College, would you consider that it was within the right and duty of a Professor to teach anything contrary to Christian doctrine?—No. I do not think a Professor should ever go out of his way, and leave the subjects which are committed to his charge, to make any attack or cast any aspersion upon the credibility of the Holy Scriptures. But I think that a Professor should be unhampered in his lectures, so long as he confines himself to the facts and the received theories of science.

853. Undoubtedly. But you do not think that a Professor ought to teach anything contrary to Christianity?—No; nothing in the nature of an attack upon Christianity.

854. You do not consider any of the facts of science are contrary to the doctrine of Christianity, do you?—That is a very difficult question to answer.

855. I want to be very clear upon this question, because it is a matter about which the Bishops of the Catholic Church are very particular. I would like to refer you to the terms upon which the Professors in the Queen's Colleges hold office. They are mentioned on p. 41 of the Robertson Report. Every Professor on entering into office signs the following declaration: "I, A. B., do hereby promise to the President and Council of Queen's College, that I will faithfully, and to the best of my ability, discharge the duties of Professor of . . . in said College, and I further promise and engage that in lecturing and examining, and in the performance of all other duties connected with my Chair, I will carefully abstain from teaching or advancing any doctrine or making any statement derogatory to the truths of revealed religion or injurious or disrespectful to the religious convictions of any portion of my class or audience." Would you have any objection to signing a declaration of that nature?—Not the slightest objection, certainly not, subject to what I have already stated. Some people imply by Christianity a wider scope of belief than others.

856. I mean Christianity in its wider sense?—It is a hard question to answer in its wider sense.

857. I did not at all intend to ask you about your own personal beliefs; you understood that?—Yes.

I did not at all intend that; I intended to confine my question to the view you took of the duties of a Professor.

858. CHAIRMAN.—Does it not strike you that "grave moral misconduct" is rather too narrow; might it not rather be "misconduct of a very serious description affecting the Professor's duty," which might not be grave moral misconduct. Supposing a man behaves with eccentricities of character, which make his class ridiculous; that would be a grave offence as a Professor, but it would not be a grave moral offence. Do you not think the term ought to be rather wider?—I think there is great difficulty in framing any brief definitions which will cover all possible cases that may arise.

859. I should be rather inclined to leave it as misconduct or incapacity. Ought you not to cover the idea also of incompetence? Do you not think the Governing Body ought to have power to dismiss a man, even if he has been appointed for life, in case of proved incompetence? One has known such cases to arise. Would you not agree to that?—Oh, yes.

LORD CHIEF BARON.—It is grave moral misconduct in the Robertson Report; I do not think incompetence comes in.

CHAIRMAN.—No; merely grave moral misconduct, which seems to me to exclude incompetence, which I think ought to be included; it also excludes certain grave offences as a Professor, which are not grave moral offences.

LORD CHIEF BARON.—I quite agree with that.

860. Sir T. RALEIGH.—Can you tell me how many whole-time Professors there are in Trinity College?—At the present time there are eleven; that is, gentlemen who give their entire time to their duties connected with the University. I don't mean to say they might not occasionally examine in an external University if called upon to do so; some of them might have an Examinership.

861. But they devote substantially the whole of their time?—Yes.

862. Dr. COFFEY.—That is, Professors who are not Fellows?—Yes.

863. Sir T. RALEIGH.—You propose that these eleven should be brought into the Governing Body?—I propose that they should have a right of electing to the Governing Body, and of sitting upon it in case they were elected. That is in Document V.

864. That they should be represented?—That they should join with the Fellows in electing members of the Governing Body, so that they could make their influence felt on the Governing Body.

865. How many do you propose they should elect?—That refers to the wider scheme of reform, which has been suggested?

866. Yes?—After full consideration it was thought better to deal with the Professors and Fellows as one body, and let them elect six members among themselves to the Governing Body, not defining any particular number to be elected from the Professors *qua* Professors, or any particular number from the Fellows, but leaving it to themselves and their common sense to decide who were the best men to go on the Governing Body.

867. Sir ARTHUR RÜCKER.—Supposing there are two classes of Professors and Fellows capable of electing to the Governing Body, do you attach any importance to giving the title of "Fellow" to all alike?—I do not. But I may just explain that in the future, according to the scheme of reform, it was proposed that there should be no difference between a Fellow and a Professor. They would both occasionally be appointed on published work. At the present time there is a sharp distinction between the modes of appointment. A Fellow is appointed on examination; a Professor on published work; but if, in future, Fellows were occasionally appointed on published work there would no longer be any meaning in making one a Professor and another a Fellow.

868. You mean there would be no substantial difference?—No.

869. A Fellow, who has been through the whole course, gets a retiring pension of £1,100 a year?—Yes.

870. You propose that Professors shall have a retiring pension of £350. Do you mean that they should be on the same financial basis also?—No; I have made myself badly understood again. The £350 is only to apply to the existing members of the Professoriate. It is in the nature of a personal appeal.

871. CHAIRMAN.—Only to the existing members?—Only to the existing members. It was not to indicate what the future pension should be. The future pension that would apply to Fellows and Fellow-Professors under the scheme of reform has not been defined or considered. It would probably be advisable to make it larger in amount; but we existing Professors would not benefit by it.

872. Sir ARTHUR RÜCKER.—This is merely a temporary arrangement that you are proposing now?—Yes. The £350 is a temporary arrangement applying to the men who hold particular Chairs.

873. You do contemplate in the future the pooling of the financial arrangements between the professors

and the Fellows?—Yes, that there should be no distinction.

874. CHAIRMAN.—I thought the scheme was a permanent one. The difficulty arises, does it not, that those who have already taken office upon terms without pension are asking to have a pension paid to them?—That applies to the existing professors. They are asking for something they have no legal claim to, only a moral, and, as we consider, just claim. But we took office, of course, without any promise of pension.

875. Sir ARTHUR RÜCKLE.—I do not pretend to have thought the matter out, but do you think it an essential part of your scheme that there should be this financial unity between the two classes?—I do; I think it an important thing that there should be no distinction. The present differentiation between the two reacts in a very unfavourable way in the University.

876. Under the temporary scheme, as we now understand it to be, you say the Professors have no claim to this?—No legal claim.

877. I believe that in some other cases a system has been introduced under which the professors are asked to submit to a reduction in their salaries to the extent of about one-half of the actuarial value of the pension?—Yes.

878. I understood you to say that in your case the premiums would be about £60?—Yes.

879. Supposing the Professors were asked to submit to a reduction of £30 on their salaries, while the College provided the other £30, do you think that would be a fair arrangement?—I think it would be better than the existing arrangement, but considering that some Chairs are so badly paid it would be difficult for some of the Professors to agree to such a reduction.

880. It would have to depend on the Chair, no doubt?—Yes. I meant to point out that we suggest that the pension should be of like value in each case, because we do not consider that a gentleman who was receiving a large income was thereby entitled to a large pension. He is really in a better position to pay an insurance than a gentleman receiving a small income. Besides a great many of the larger incomes are in a great measure derived from fees of students, and this variable part would not enter into the calculation as to pension.

881. You said you thought the financial arrangements ought to be the same in both cases. As regards the two classes of Professors and Fellows, do you think any distinction ought to be made or is desirable between their duties and powers in respect of College matters and University matters?—No. I think there is great difficulty in this mixture of College and University in defining what is University and what is College.

882. Take, for instance, the question of residences. Are the Professors interested in the arrangements for residence in the same way as Fellows are?—At the present time questions connected with residence, as I understand, are the duties of certain Fellows only, and do not concern the other Fellows. For instance, a great many of the Fellow-Professors—the Professor of Greek, for example, or the Professor of Mathematics—do not concern themselves with the residence of the students any more than we Professors attached to the schools.

883. Do you think that should be arranged among the Governing Body themselves or among the Corporation?—I think it would be better to leave that question to the Governing Body.

884. Dr. JACKSON.—I am anxious to make out exactly how much is of the essence of your scheme. It seems to me that at present there are two Corporations; there is the Corporation consisting of the Provost, Fellows, and Scholars, and there is the Corporation consisting of the Provost, Fellows, and Professors, and I should like to ask your opinion on the scheme, which I will very briefly sketch. Suppose a new Governing Body, partly *ex-officio*, partly elected.—I think that is your scheme also, is it not—or, at any rate, a new Governing Body with elected members?—Our scheme does not provide for official members of the Governing Body except the Provost; but two would be co-opted.

885. I need not mention *ex-officio* members. You suggest a Governing Body of elected members?—Yes.

886. You assume also Boards of Studies?—Yes.

887. Who would be the advisers of the Governing Body?—Yes.

888. There is, at present, I think, an Academic Council?—Yes.

889. What sort of duties does the Academic Council perform?—Their duties are confined to questions of the curriculum; the books to be studied, and the duties assigned to particular Chairs might, I think, come before them, although I am not sure that that would not be more within the jurisdiction of the Board. As a member of the Council the duties which have come before me have invariably been connected with the actual subjects of study.

890. At the same time it is clear from your statement that it is a very important body, exercising exceedingly important functions?—Most important.

891. Those functions might be added to. There are other questions affecting the well-being of the Provost, Fellows, and Professors, which could be undertaken by that body?—Yes, I think so, with great advantage.

892. What I want to suggest is that the Academic Council might be so strengthened as that it should be a Governing Body of the Provost, Fellows, and Professors, and that at the same time certain matters of the House, certain domestic matters, might perfectly well be performed by the Provost, Fellows, and Scholars—the other Corporation—without loss to the Provost, Fellows and Professors?—It is difficult to express an opinion upon so weighty a matter on the spur of the moment, because I have not considered the details of such a scheme. But I may just make this remark, that I think the institution of something like the Faculties that we suggest would have distinct advantages over a body such as the existing Council.

893. Excuse me, I was assuming the Faculties as well?—I beg your pardon.

894. What I am asking you is whether a division between the functions of the Provost, Fellows and Professors, and the functions of the Provost, Fellows, and Scholars—who are practically negligible—is possible?—I think so.

895. I am assuming Boards of Studies as a matter of course.—*Prima facie*, and without entering into it fully, as I could not at the moment, it seems to me that such an arrangement would be possible and feasible.

896. Might I go a step further. Under such a scheme, I was thinking that the College might have a power of electing to Fellowships persons who were Professors on the score of their being Professors; would you see any objection to that?—I would have to give very careful consideration to such a weighty matter. But I confess I think a difficulty might arise if the choice of who was to be made a Fellow was not a matter in which a considerable number of the experts on the College staff could join. I mean that it would be to a large extent a matter of expert opinion whether or not a particular Professor was really of sufficient distinction or had won sufficient distinction for his University to entitle him to any honours that might be going. Therefore I am disposed to think that it should not be decided by any small number of people, but that it is a matter which should either come into existence of itself, as we suggest in the appointment of Professors, or that it should be in the hands of the Central Governing Body or a body of considerable influence.

897. I am assuming that if the College had to choose they would take the best possible advice that they could get. You will see why I am suggesting this. At present, on the examination system, certain subjects only are represented amongst the Fellows, and I should have thought it desirable that the Professors and Fellows should have an opportunity of associating with themselves distinguished representatives of other studies. I am supposing also that in the long run they would take to themselves as Fellows, all or nearly all those Professors who are doing full academic work and are not taking a small part of academic work in addition to professional duties. That would be an advantage, would it not?—I think it would be an advantage to elect the principal Professors into the position of Fellowships in the future, as I have said, but I am not perfectly clear yet—you must excuse me; do you suggest that the question of the election of Professors into Fellowships should be a matter referable to, or

of Dublin.

rest in the decision of, the existing Fellows or the future Fellows, who had joined the University by a Fellowship system as distinct from a Professorial system; who had joined the College by the examination system and not by a system based upon distinctions? What I am driving at is this. As I understand, you would in such a case put the discrimination as to the distinctions of a man perhaps of considerable originality into the hands of men who have not been elected on the score of originality. I do not know whether I have made myself clear?

898. I quite take your point. You see, I hold on the one part, that a Collegiate Society is a close Corporation, and that with them must rest the adoption of anyone from without; on the other part I hope that in the future this particular Corporation will not be filled simply by competitive examination, but that it will have power to elect distinguished men from without, in order to add to the great distinction which it already possesses. I suppose that, if the Fellows had this power of choosing from all the world, including their own Professors, they would be able to get sufficient expert advice to help them to make their choice. Probably they would take advice from the Professorial body. But if the integrity of the Collegiate Society is to be maintained, and I think it should be, I do not think that any external power ought to be able to force any outsider upon them. The scheme I am putting before you is far more radical than what you suggest.—I think I follow clearly. As I understand, our scheme proposes that Professors should at the time of their election, at the time they are chosen from the external world to come in and teach in the University,—that they should there and then become Fellows, it being assumed that they would not be chosen to occupy the important positions of the Chairs without being men of great distinction.

899. That is not my suggestion.—No; that is mine.

900. I beg your pardon.—I was just contrasting them. You, I think, take the view that you should have a body of Fellows elected for great distinction or for great success at examinations who have then acquired the power to elect into their ranks men who shall occupy Chairs in the University. If you are going to elect Fellows on distinctions who afterwards may or may not take Chairs in the University, what moral distinction is there between those men and the men who are elected to Chairs upon distinctions? I mean, why should not the Professor of Botany be elected as Fellow-Professor of Botany, as much as a Professor of Latin be elected as a Fellow-Professor.

901. I am supposing that Professorial-Fellows would be, on the one part, Fellows who became Professors, and, on the other part, Professors who became Fellows.—Yes.

902. Then I think your objection rests upon the assumption that one man is going to be in the future in a better financial position than the other. I myself am supposing that they might be on equal terms.—I really was not thinking of financial matters.

903. Generally, are you not taking it for granted that the Fellow of the House who has become a Professor as at present, would continue to be in a better position than the Professor who becomes a Fellow of the House? I am contemplating a system so far revised as that the two should be in the future on an equal footing.—I do not think there is really very much difference, so far, between what you suggest and what is in our scheme. We do propose that they should be on an exactly equal footing from the first.

904. CHAIRMAN.—That is in your next Statement*? —Yes. I was going to say, if it was a question of electing to the Chair of Botany, a gentleman would be chosen for the Chair of Botany who was a man of admitted distinction. Upon the occasion of his choice for the Chair of Botany, and along with the act of his election to the Chair of Botany, he becomes a Fellow of Trinity College, Dublin.

905. Dr. JACKSON.—Is that part of your scheme?—That is part of the scheme in Statement V.

906. There are really two schemes then, and hitherto we have been talking about the temporary one?—I am afraid so; I did not make myself clear. The Professor's Statement only applies to the existing men, and does not apply to the future necessarily.

Mr. BUTCHER.—I do not know whether it would be convenient not to follow up the question of the re-

lations of the Professors and the Fellows which arises on Statement V.?

CHAIRMAN.—I think it would be better to defer that until Mr. Gwynn is here.

907. Mr. BUTCHER.—I think, if I understand you rightly, that you would only allow whole time professors to be represented on the Governing Body?—That is so.

908. The others are to be outside, and have no part or lot in the administration of the College?—No.

909. Except on the Boards of Studies?—Yes.

910. The Faculties or Boards of Studies?—Yes, and as such they would impress their views and opinions upon the members of the Governing Body.

911. To go back to the pension scheme. do you propose in this scheme to allow a claim for pension for less than, say, ten years' service, or some particular time?—There was to be, in our scheme, a minimum period of service.

912. I do not see anything mentioned there. You say, in the case of the retiring allowance, "graduated according to the number of years of service"; there is no mention of a minimum period of service?—It was certainly intended, and there was such a period in our Statement to the Board.

913. You approve in principle of such a minimum? —Most certainly.

914. I notice as regards the pension, you say "that full pension be entered on at the age of sixty-five. That it be optional on the part of the Professor to retire at this age, or, subject to the approval of the Board and the Faculties, to continue in office till the age of seventy, when retirement is compulsory, unless by special decrees of Board and Faculties." Have you deliberately thought that the option to remain until seventy should be given to the Professor?—It is given subject to the approval of the Board and Faculties.

915. Yes, but one would rather suggest that the retirement should take place at sixty-five unless the Governing Body should determine otherwise?—I think that would be the better way of putting it. But I think we intended it more in this way, that a Professor who might feel tired and worn out at sixty-five would then have the option of retiring and getting his pension.

916. Would you not be inclined to give him the option in any case?—Yes, I think so.

917. The danger is, as I suppose you would recognise, that a Professor may be inclined to stay on until seventy when a great many men are not fit for their work, and if it is put in this optional form it may become a little invidious for the Board and Faculties to refuse it?—I think it might be better to put it the other way. I do not think we intended that there should be any prescriptive right at all.

918. Dr. DOUGLAS HYDE.—I understand that the present Corporation consists of the Provost, Fellows, and Scholars, and you would add eleven Professors?—Yes, that is so.

919. And what, then, would you have in common with the Scholars, for instance? As you both belong to the Corporation there must be some point upon which you meet?—The Scholars, of course, occupy a different position from the Fellows at the present time. There is in a sense not much in common between the Fellows and the Scholars, except that they are members of the Corporation.

920. What privilege as members of the Corporation have Scholars?—I do not know. They have no power of attaining a Senior Fellowship or anything of that kind. I am not aware that they possess any special powers that are not merely formal.

921. By adding Professors to the Corporation you would confer upon them something much more than is conferred upon the Scholars. In what way would you differentiate?—With great diffidence, I really do not think the position of the Scholars enters into the question very much. They are young men appointed for a period of time on a comparatively small distinction compared with the distinction of Fellowships or Professorships.

Dr. JACKSON.—I used the phrase "the Provost, Fellows, and Scholars," because it seemed a convenient one, and I believe it is the legal description. I have always supposed that it meant that the Provost and the Fellows were the grown men of the family, and that the Scholars were the sons who have not yet attained their majority; they are formally a part of the family—the College is always a family—but they

* Appendix to First Report (Cd. 3176), 1906, pages 27 *et seq.*

have not yet come of age, and therefore we ignore them. I think that is the right way to put it. But if the Professors were put upon the foundation it would be a new grade.

CHAIRMAN.—And you are anxious to find out what that grade gives them.

Dr. DOUGLAS HYDE.—Yes.

922. CHAIRMAN.—What would it give them? It would not make them members of the Council or of the Senate or of the Board; what would it do?—It would give them the right of sitting on the Governing Body, according to Scheme V.*

923. Then you must alter the Constitution to that extent?—That is so.

924. Dr. DOUGLAS HYDE.—Does not the Fellowship carry with it some emolument—£36 a year, or something like that?—Yes.

925. So that the Professors would be that much to the good?—It is not suggested that existing Professors who join the Corporation as by way of a temporary expedient until the new system, as defined in Statement V. comes into force, should reap any material advantage.

926. CHAIRMAN.—After all, this is only an interim scheme?—That is all.

927. Dr. DOUGLAS HYDE.—In regard to the tenure *ad vitam aut culpam*, would it be a fair question to ask whether any of the Faculties think the Board has treated any Professor in a way that the Faculties would not like to see him treated; in other words, do you think that you require really some such barrier between you and arbitrary conduct on the part of the Board or Governing Body?—I think we do, against injudicious acts on the part of the Board.

928. Does the Board or the Council ever practically interfere with the curriculum of studies that the Professor wants to give his class?—I do not know of any case.

929. In practice the Professors are really free to dictate what books they like to their classes for study?

—So far as recommending a text-book to a particular class of students is concerned, one can do that, but all the text-books on the examination courses have to go before the Council and be approved by the Council.

930. In other words, the Faculty submits the books, and the Council approves of them?—The Professors submit the books; we have no faculties at present; we have no organised faculties.

931. Does the Council ever interfere with the right of the Professors?—I think the Council invariably takes the view of the Professors as to what should be suitable books for the examinations—in nearly all cases, at any rate.

932. Dr. COFFEY.—Would the addition to the Corporation give you rooms in the College?—I do not think that that was contemplated, in fact, there are no material interests contemplated by the temporary scheme we are now considering—except the question of pension.

933. Would it automatically have that effect as a matter of fact?—I do not think it would follow. We did not look to it, and I do not think such a thing necessarily follows.

934. Am I right in supposing that the reason you suggest special financial arrangements in the way of pension for the present body of Professors is that it would be difficult to place them in the rotation of the Fellowship system if the present body of Professors were co-opted at once among the Fellows?—I think so. It would be very difficult to do so. (*To the Chairman*)—Here is one document which, perhaps, I might be allowed to show you. We do not wish it to be printed in the Blue-book as savouring too much of advertisement. It is simply a statement of the published work done by the Professoriate.

CHAIRMAN.—I hesitate to accept any paper which we cannot use publicly. It might influence one's mind, and we ought to be able to justify our decision. Therefore I do not think we can take it.

DUBLIN.

Oct. 18, 1906.

John Joly, Esq., M.A., Sc.D., F.R.S., Professor of Geology and Mineralogy in the University of Dublin.

EDWARD J. GWYNN, Esq., M.A., Junior Fellow of Trinity College, Dublin, called in and examined (with Professor JOLY); representing the signatories to the Joint Statement V., printed on page 27 of the Appendix to First Report (Cd. 3176), 1906.

935. CHAIRMAN.—Mr. Gwynn, you are associated with Professor Joly in connection with Statement V.—“Statement submitted by Seven Junior Fellows, one retired Junior Fellow, and thirteen Professors” *?—(*Mr. Gwynn*)—Yes.

936. And you have come, with Professor Joly, to support that Statement?—Yes.

937. You deal separately with the different bodies and the reforms which you propose to introduce into them, and you take, in the first instance, the Senate?—(*Professor Joly*)—Yes.

938. You say: “The constitution of the Senate shall remain as at present; and it shall occupy the same relations to the new Board as it does to the existing Board, save so far as herein expressly stated. The Senate shall elect one representative from among the Fellows to sit upon the Board. The Board shall annually report to the Senate as to the academic work and progress of the year, and present an audited financial statement. In the event of the Senate desiring to approach the Governing Body of the College, or to express their views on matters of University policy, it may, on a requisition signed by not less than thirty members, be summoned by the Chancellor, or in his absence by the Vice-Chancellor.” In the first place, by “may,” I suppose you mean “must”? You would not leave it to the option of the Chancellor?—I think it was intended that it should be optional to the Chancellor to decide as to whether or not good cause had been shown.

939. Even after it was signed by thirty members? It is not an important point, but I should be inclined to make it compulsory?—Yes.

940. At the present moment it is not possible for any number of members of the Senate to require the Senate to be convened for any purpose?—It has no self-convening power.

941. This self-convening power only applies, as I understand, to matters of University policy. Should it not be wider? Should there not be a general power in a certain number of members of the Senate to require that it should be convened?—You would enlarge that paragraph so that it would be more than

merely “approach the Governing Body or express their views on matters of University policy”?

942. I would suggest that whenever thirty members of the Senate desire that the Senate should be called together it should be obligatory on the officials to call them together?—(*Mr. Gwynn*)—There is this point: we were anxious not to open the door too widely for political debates and such matters as that.

I quite conceive that the Senate ought only to discuss matters within its competence.

LORD CHIEF BARON.—That is the reason for putting in “matters of University policy.”

CHAIRMAN.—I think it is rather too narrow.

943. LORD CHIEF BARON.—But the Senate is a very large body, and it would be inconvenient to call them together without adequate cause. (*Mr. Gwynn*)—That was our feeling.

944. CHAIRMAN.—You are satisfied to leave it to the Chancellor even on matters of University policy?—It was not my impression that it should be left optional. I do not remember the point being discussed but I think our intention was rather that it should be “must,” not “may.” (*Professor Joly*)—We considered the difficulty of enlarging the duties of so large a body as the Senate is; it would be difficult.

945. It seems a very reasonable suggestion. I suppose the Senate is practically a body which takes very little action in any matter?—At the present time I am afraid not.

946. The next heading is “The Board.” That is a very important matter indeed. You propose that:—“The government of the College shall be by Provost and Board, the Faculties having such powers as are herein defined.” “Faculties” is another expression for Boards of Studies; they are practically the same thing?—Practically the same thing.

947. Then you propose:—“The Board shall consist of ten, inclusive of the Provost. The members of the Board shall receive no remuneration as such. The Fellows shall select, from among themselves, six representatives to sit upon the Board. The Senate shall elect one member of the Board from among the Fellows. The Bursar and Senior Lecturer shall be ex-

Edward J. Gwynn, Esq., M.A., Junior Fellow of Trinity College, Dublin, and Professor Joly.

* Appendix to First Report (Cd. 3176), 1906, page 27 *et seq*

DUBLIN.

Dublin,
and Professor
Joly.

officio members of the Board, and shall be additional to those elected from among the Fellows. The Provost shall be Chairman, or in his absence the Vice-Provost, who shall be one of the seven elected members of the Board." I do not understand that last sentence. How is the Vice-Provost to be elected if he is *ex-officio*?—He shall be one of the seven elected members of the Board, but he is not elected as Vice-Provost.

948. You choose the Vice-Provost from the elected members of the Board?—Yes.

949. When they are elected you have to choose a man to be Vice-Provost?—That would be in the power of the elected members.

950. Do you think it desirable to give the power of electing one member to the Senate?—I think we did. We considered that question and thought they should have some power in the matter. They have to elect from the staff, from the Fellows.

951. Then you set forth the period of election:—"Every elected member of the Board shall hold office for a period terminating in three years from the date of election. A retiring member is eligible for re-election. Of the members elected by the Fellows, two shall retire annually in rotation. The powers and duties of the Board, and the rules and regulations appertaining to it, shall remain as at present, save as modified by what is herein expressly stated. The Bursar and Senior Lecturer shall be appointed by the Board, and the tenure of office shall be as at present."—There is a distinction. The Bursar and Senior Lecturer are appointed by the Board, and they may choose to appoint either two of the already elected members, when there would have to be another election in the College, or they could choose any of the Fellows who were not already elected and put two of them on the Board as Bursar and Senior Lecturer. In fact, it is a power of co-option.

952. You say, "These posts shall be held by Fellows not occupying Chairs, who may be exempt from teaching duties." I am not sure that I understand that?—It is contemplated that in future the Fellows and principal Professors shall be one body, and we considered that posts demanding so much time and attention as the Bursarship and the position of Senior Lecturer could not be held by men who had duties to discharge in connection with their Chairs.

953. Do you mean that election to these posts shall exempt them from teaching duties?—No, but that the posts should not be assigned to Professors who had already serious duties in connection with their Chairs.

954. That I understand, but the posts shall be held "by Fellows not occupying Chairs, who may be exempt from teaching duties"?—That is, the Fellow who is elected.

955. That he shall be exempted?—May be exempted, for the teaching duties might be trivial or small, and then it would not necessarily involve that he should give them up altogether.

956. It is to give the Board power to exempt him?—Yes.

957. Then "the Board shall appoint to such Chairs and Lectureships as are not held by Fellows, after consultation with the Faculty most concerned." Then you propose:—"The posts of Registrar and Auditor (internal) may be discharged by a paid official not a Fellow, whose status shall be such as to secure the faithful discharge of the confidential duties assigned to him. He shall attend *ex-officio* the meetings of the Board, but shall not vote." I suppose the Registrar and Auditor are separate officers?—At the present moment they are separate officers.

958. You intend that that shall be, of course?—It is proposed that they should be. I do not think it is specified that they should *necessarily* be separate. They could be held at the present time by the same person.

959. You rather seem to suggest that they should be held together:—"The posts . . . may be discharged by a paid official." Surely the Auditor ought to be an independent person?—This is the internal Auditor (Mr. Gwynn). We have an external and an internal Auditor.

960. Will you explain what their duties are?—This is an instance where the Fellows are not informed. We are so ignorant of the financial business of the College that I am very much in the dark as to the duties of the internal Auditor. We know that he exists; he may have a reason for existing.

961. My notion would be that the Auditor, whether internal or external, ought to be a person independent of the Registrar, who would be a sort of Head Secretary and arrange the business. That is the idea of a Registrar, is it not?

Dr. JACKSON.—It is probably a slackness of expression.

962. CHAIRMAN.—That is what I wish to find out?—(Professor Joly).—It was intended to combine them in one official, and we were given to understand that the duties discharged by the present internal Auditor are comparatively light.

963. I should have thought that the proper thing was that the Registrar should be the man of business, to keep the accounts, get out the formal correspondence, and so forth, and that there should be an independent Auditor, who probably ought to be a certificated accountant, who should be entirely independent of the Registrar of the College?—(Mr. Gwynn.)—There is at present an external Auditor, and it is not obvious to me why we require both an external and an internal Auditor. But, as I say, I am not sufficiently instructed in the affairs of the College to say.

964. Do you not think the lines I suggest would be the better ones?—I certainly do not see the necessity for two Auditors.

965. LORD CHIEF BARON.—Who is the external Auditor now; is he one of the Senior Fellows?—No.

Sir T. RALEIGH.—In an Oxford College we have an external and an internal auditor. The external Auditor is an accountant from London; he is quite independent. He walks into the College, gives his opinion, and tells us if anything is wrong. The object of the internal Auditor is that we should have present at the College meetings a person who has been through the accounts. Suppose there is an adjustment between two different classes of Fellows, the internal Auditor would immediately be able to explain that, and for that reason it is found desirable to appoint a Fellow who gets that minute acquaintance with the accounts which you can only get by going through them with the professional Auditor.

CHAIRMAN.—The Bursar would not be able to do that? He keeps the accounts, does he not?—I should think the Bursar would be the person.

Mr. BUTCHER.—He does it in some Oxford Colleges. In an Oxford College with which I was connected there was not, I think, an internal Auditor; the Bursar did the duties which you describe. I suppose there is some variation in the different Colleges.

Dr. JACKSON.—At Trinity, Cambridge, we have found it worth while to appoint assessors from amongst the Fellows in order that there might be Fellows who were properly following the finance of the College. I think that an internal Auditor might be useful in that way.

CHAIRMAN.—It is obvious that the external Auditor should be independent of the Registrar. Would it not be desirable that the appointment of the internal Auditor should be given to the Board?

966. Dr. JACKSON.—I think that the appointment should be given to the Board; it might very well be a Junior Fellow who showed an aptitude for finance.—(Mr. Gwynn).—We have a paid accountant in the service of the College.

967. CHAIRMAN.—Does your proposal amount to giving more importance to the paid accountant?—No; we do not propose to displace the existing paid accountant; he is required for keeping the College accounts, and he gives his whole time.

968. The Registrar would be another paid officer, over the accountant?—In connection with the Board; he is the Registrar of the Board.

969. Mr. KELLEHER.—This proposal is meant not to define the duties of the Auditor, but to save cost of administration, is it not? Is not that the idea of combining the two offices—purposes of economy?—(Professor Joly).—I think it comes to this—that owing to the fact that we have a paid accountant here the duties of the internal Auditor have become comparatively small.

LORD CHIEF BARON.—If they were discharged by a Junior Fellow it would involve a slight increase of expense to the College.

CHAIRMAN.—It ought to be separate from the Registrarship.

LORD CHIEF BARON.—I agree; but would not the suggestion of Dr. Jackson that a Junior Fellow might be internal Auditor get rid of the difficulty?

Dr. JACKSON.—My experience is that there is generally found somebody in College who is glad to have

an opportunity of studying the College finance; he does it for a couple of years, and then somebody else goes on.

970. CHAIRMAN.—Would you like to say anything further in explanation? You have stated very clearly what your views are on the form of the Board?—(Mr. Gwynn).—I should like to say that if our scheme is somewhat vague in its financial bearings, it is simply for the reason that neither Junior Fellows nor Professors have been in a position to understand the way in which College affairs are transacted.

971. This paper was prepared before the publication of the accounts, was it not?—Yes.

972. Have you considered those accounts, and whether they demand any change in your suggestions?—I cannot say that I have considered them from that point of view. They state figures; they do not explain the system sufficiently. (Professor Joly).—I should like to say a word with reference to paragraph six. It says:—"The members of the Board shall receive no remuneration as such." We think that is an important point. If you have an elected Board, and if you pay an elected Board, in the first place there would be a danger of very considerable canvassing in competition for the posts, and, in the second place, it might possibly act as an inducement to men who were not doing the work of the College *con amore*, but who would like a lucrative post, to come forward. We think, therefore, it would be better that the Board should not be paid, that they should do their duties in the way that we do our duties in connection with many of our Dublin institutions—the Royal Dublin Society, for instance. Our duties there are very heavy indeed, but we are very glad to discharge those duties from patriotism to the Society and a desire to see it prosperous.

973. Then, your next head is "The Faculties and Standing Committees," and you propose:—"The Faculties of the University shall, for the time being, consist of Arts, Science, Divinity, Law, Medicine, and Engineering." Of course, Divinity stands for some purposes in a different position from the others?—Yes.

974. You propose that all Fellows and Professors, and such other Lecturers as are responsible for the courses delivered in the Departments of a Faculty, are members of the said Faculty. Does that discriminate between two classes of Lecturers?—We had considerable difficulty in defining who exactly was to sit on the Faculties, and this definition is meant to include any gentleman who delivers a course of lectures and is responsible for a course delivered.

975. LORD CHIEF BARON.—It would include Readers?—No, not as proposed, except they held the position of assistants in some of the schools.

976. CHAIRMAN.—In a general way I suppose everybody except the Professors is more or less attached to a Chair—subordinate to a Professor, is he not?—Yes, more or less subordinate.

977. Are any of them actually responsible for the courses of lectures?—No, except in some cases of Assistant Lecturers, not necessarily Professors. We thought Lecturers were not of the standing of Professors, at least they do not hold Chairs, but they are responsible for courses of lectures.

978. Is there nobody over them?—There is nobody over them immediately. I might cite the case of our lecturer in Mechanical Engineering. That gentleman, of course, lectures; he is responsible for his courses of lectures; I presume, therefore, that he would sit on the Faculty according to this definition.

979. The definition, you think, is adequate to meet that?—To meet that difficulty, I think so.

980. You propose that "The Board shall define the Faculty or Faculties to which each Fellow, Professor, or other Lecturer shall be assigned. However, in the case of the existing Faculty of Divinity not more than two persons may be nominated by the Bishops of the Irish Church, upon the invitation of the Faculty, who may vote with the Faculty in recommendations for the election of Professors and Lecturers of the School of Divinity. An analogous provision, if deemed advisable, may be adopted in the case of other Faculties." That, I suppose, is introduced rather in regard to the Divinity School, for the purpose of meeting any arrangement we may recommend with regard to the Divinity School? You would not confine it to the particular kind of arrangement there suggested, would you?—I think some other suitable arrangement might be suggested. This

was suggested with the idea of meeting the wishes of the Irish Church that they should have some voice in the matter of the election of Professors.

981. The "two persons" is not of the essence?—No.

982. I suppose, in the last sentence, "an analogous provision" perhaps refers to the Faculty of Law, and the relations of the King's Inns to the Faculty of Law?—That would be a case, but it might also be Engineering—in fact, any of the Faculties where it might be desirable to get any expert opinion from outside when you were appointing; it might be a gentleman of distinction living in the city who might be willing to help us in making the appointment. (Mr. Gwynn).—In regard to the appointment to the Chair of Divinity, our feeling was that the matter should be so arranged that College opinion would be preponderant, that external opinion should not be allowed to preponderate in the election to the Chair.

983. That is the essential point?—Yes, that is the meaning of "not more than two."

984. Then you proceed to deal with the duties of the Faculties. These Faculties are equivalent to what are sometimes called Boards of Studies, are they not?—(Professor Joly).—They are equivalent. "They shall report to the Board on the merits of candidates for election to Fellowship, Professorship, or Lecture-ship."

984A. You propose that no election shall take place except upon consideration of that report, I suppose?—That is so.

985. Then "They shall report to the Board on the expenditure required for up-keep, instrumental equipment, structural alterations or additions to laboratories, museums, &c., and upon the merits of such outlays; on the possibilities of extension, development, or co-operation of Departments; and, from time to time, on any detail of administration with which the Board should be acquainted." Would there not be this difficulty, that each Faculty would report in favour of expenditure on its own subject-matter?—Each Faculty would undoubtedly report on its own basis.

LORD CHIEF BARON.—It would be checked by the Board; they would have the applications from all the Faculties, and the sums of money demanded by all being probably a little more than could be devoted, the Board would decide.

986. CHAIRMAN.—They would be in the position of the Treasury. "They shall report to the Board on the desirability of new courses of study; on changes in existing courses, and act generally as advisory bodies in touch with the details of administration." That seems very reasonable. "A paid Secretary shall be attached to each Faculty, who shall be selected from the members of the Faculty, and who shall have power to vote." Is that necessary?—It was contemplated that the payment would be a very small sum. I think there is some indication of what it would be in the rough estimates of expenses. For instance, we put "Secretaries of Faculties, five at £30 each." The idea was that there would be a great deal of secretarial duties arising, possibly writing draft reports, and expenditure of time, and that just as we give small sums to the Registrar of a school some small emolument should be given here.

987. You do not think you could rely on the patriotism to which you referred?—I think we could.

Mr. BUTCHER.—In Scotland it has been found necessary to have paid Secretaries; it is quite a small thing, £30 or £40 a year, but it has been found necessary because the amount of correspondence and secretarial work is often very great.

Dr. JACKSON.—Would it not generally be held by a member of the Board?

Mr. BUTCHER.—It always is held by a member of the Faculty in the cases to which I refer.

988. Dr. JACKSON.—The phrase seems to contemplate the bringing in of an outsider, but it may be only a matter of wording. (Mr. Gwynn).—That is not intended.

LORD CHIEF BARON.—The junior of the Faculty for the time being might conduct the correspondence; he would not find it a very serious labour, I think; it would be only for a short period.

989. CHAIRMAN.—You proceed to observe: "Each Faculty shall elect, from among its members, a Standing Committee to assist the Faculty in dealing with matters of detail." I should think the better way

DUBLIN.

Oct. 18, 1906.

Edward J. Gwynn, Esq., M.A., Junior Fellow of Trinity College, Dublin, and Professor Joly.

College,
Dublin; and
Professor Joly.

would be to give a general power to the Faculties to appoint Committees, would it not?—(*Professor Joly*).—One Committee for all the Faculties?

990. No, each Faculty—not to limit them to one Standing Committee, but give them a general power to appoint Committees?—Yes.

990A. To which Committee they could delegate a portion of their powers?—Yes.

991. Then you observe: "It will be seen that the Faculties possess important influence in the election to the Fellowships, Professorships, and Lectureships filled according to the procedure laid down. On this matter the judgment of a Faculty is the best in the University. The Faculties cannot enforce courses of study, &c., although they can suggest them; because questions of relationship and proportionality arise which are best known to the Board. It must be borne in mind that upon this last-mentioned body the Faculties will be largely represented." Is there any observation you would like to make upon that part of your scheme before I proceed?—Nothing, except to draw attention to the fact that the Faculties would take the place of the existing Council.

992. You propose that the Faculties should operate separately rather than form one Board?—We propose that the Faculties should each consider their own business and that the Board should act as a central body or authority.

993. Then you come to the very important question of the Fellows. "Election to Fellowship shall be (a) on the published work and credentials of the candidate, or (b) on the results of an examination, the date and scope of which shall be announced by the Board at least one year in advance." Would it not be desirable to have some condition precedent to the consideration of the merits of the work? What was passing through my mind was this. Would it not be desirable to confine the possibility of Fellowships to men who had reached a certain grade in honour schools? It has been suggested that if men are elected on published work and credentials it might be said there was unfairness in the election or doubt might be cast on the authenticity of the work. But suppose you required that candidates for Fellowships who asked to be elected on their published work or their representations should previously have reached a certain standard in some honours school or other. What do you think of that?—Personally I would not like it so much as what we have here suggested. I may say I have never been able to accept the view that election on published work is any more open to invidious criticism than election according to examination. In fact I would be inclined to put it the other way. I would say that if the results of the examination were published, along with every question and every answer, then and only then would the outsider have the same assurance of fairness as he would have on published work.*

993A. You would not desire to make any condition in regard to previous position in schools?—I do not think we thought it desirable.

Dr. JACKSON.—A practical difficulty might arise in the case of a man who had actually broken down in health at the time, or, worse still, in the case of a man whose health had been damaged at the time, but who had not so far broken down that he was unable to offer himself; and there are cases of men whose forte has been in original work and not in Undergraduate competitions.

Mr. BUTCHER.—That is quite my experience.

Sir THOMAS RALEIGH.—There have been such cases at Oxford. Cardinal Newman and Matthew Arnold would have been excluded from Fellowships if a First Class had been required.

LORD CHIEF BARON.—There is the case of Sir Robert Ball.

994. CHAIRMAN.—In some case, I think the condition has been added to the introduction of theses that the persons presenting the theses shall be examined upon them. What do you think of that?—I can now only express a personal view, but I think it is a good arrangement.

CHAIRMAN.—I think that applies to the Doctorate of London.

Sir ARTHUR RÜCKER.—Yes.

CHAIRMAN.—With power to remit?

Sir ARTHUR RÜCKER.—Yes. But if there is the slightest doubt as to the authenticity of the work it gives an opportunity to test it.

995. CHAIRMAN.—I recollect the case of a thesis

presented by a lady; it was more or less the composition, not of herself, but somebody else; she stated it to be so, but it gave rise to a great deal of difficulty. But you think that that would not be an objectionable provision?—I think if you examined the candidate on matters connected with the thesis you would, to a certain extent, get over the danger of the thesis not being authentic work.

996. Sir ARTHUR RÜCKER.—You would leave it to the examiners to do so if they thought it necessary?—Yes.

997. CHAIRMAN.—You proceed to state: "The examination for Fellowship shall not be open to candidates over twenty-seven years of age, unless the candidate holds a Readership, when the age may be extended to thirty." That, I suppose, you think is very desirable in order to prevent men going on for an undue period trying for Fellowships?—(*Mr. Gwynn*).—There is a great deal of feeling on that point.

998. LORD CHIEF BARON.—In favour of the proposal?—In favour, yes.

999. So that a man's life shall not be spoiled waiting for a Fellowship. If a man waits until he is thirty or thirty-three for a Fellowship and then fails in the end his life is spoiled?—Yes. If you will examine the figures of the last ten years you will find that the age has been rising.

1000. CHAIRMAN.—The average number of attempts made by successful Fellows I believe is five. Is not that a serious evil?—I think so certainly.

1001. The way you propose to check that is by an age limit?—That is the only check. (*Professor Joly*).—It is also partly met by the subjects being announced one year in advance. I may say that I have heard distinguished candidates for Fellowships here who were ultimately successful state that after the first two or three years' work they did not think they were progressing in the acquisition of knowledge.

1002. But progressing in the art of acquiring a certain amount of knowledge to be ejected at a given date—(*Mr. Gwynn*).—One gets to know the examiner's peculiarities very well.

1003. Then you observe: "The existing competition between candidates answering in quite different subjects is obviously objectionable. The evil can only be removed by previous announcement of subjects to which the examination will be confined. The suggested changes must be considered along with the institution of Readerships." Are not the subjects for Fellowships very much too much confined at present?—Yes, certainly; in fact, we have come lately to something like an *impasse*. To take a single instance, when we made French an alternative subject to Greek we found ourselves without sufficient expert teaching in that subject, and at present there is no provision for securing that tutorial teachers in Arts shall know anything about French. As a matter of fact, some teaching is being given by men who have no paper qualification on the subject at all.

1004. Taking some of the branches of science, I rather gather from what we have already heard, that a man, however eminent he might be in Chemistry or Biology, could never obtain a Fellowship by virtue of his knowledge of those sciences?—(*Professor Joly*).—That is so at present. I think this is an important clause. It is stated here, "The suggested changes must be considered along with the institution of Readerships." I would like to say that at present it is urged in favour of the examination system that thereby you secure men—our own men—who have worked their way up through the Arts courses; they have taken a Moderatorship; they have taken Studentships, and they read for Fellowships. There is no doubt whatever that it is a desirable thing that we should have a certain number of our Fellows who have been, as it were, members of the College from the first. We get Fellows who are fond of their University, and devoted to it, and who feel that it is their home. I think a certain number of gentlemen of that class most desirable. I am mentioning my own personal opinion. But when we get Readerships, if we do get them, I am in hopes there will be another way to the Fellowships, without going through that examination mill, which will yet afford to us our own men, because a Reader will be appointed on his Moderatorship; he will have three years before him in which to distinguish himself, and show what sort of man he is, and he may compete for a Fellowship on the same method, the method of election on distinctions. So we

* NOTE ADDED BY WITNESS (*Professor Joly*). I have never known or heard of a case in which the fairness of an election to any of the chairs has been questioned. The elections in these cases is almost invariably on published work and credentials.

are in hopes that in the future it will work out that we will get our own men, who have worked their way up in that manner

1005. If I follow you rightly there will be a certain number of Fellows elected from the Moderators?—As Readers.

1006. But ultimately they get from Moderatorships to Fellowships?—Yes. You will notice that there is a special privilege extended to holders of Readerships, namely, that they may compete until they are thirty years of age.

1007. Your next two paragraphs deal with the mode of election under (a) and (b), respectively; (a) is to be elected after consultation with the Faculty, and (b) on the examinations?—Yes.

1008. Then you go on to propose that "Fellowships shall be for a period of three years, at the end of which time the Fellow may be re-elected. If re-elected, the tenure shall be *ad vitam aut culpam*. (The Fellow before re-election is known as a 'Provisional Fellow' in what follows)." Then you propose that a Fellowship shall be attached to each Principal Chair. That is what you have explained to us already—the eleven Chairs which occupy the men's whole time?—Yes.

1009. Then would you propose that they should hold these Fellowships during the term of the Professorship only?—They would presumably remain Professors all their days until they retire.

1010. Suppose a Professor to become culpable; does the Fellowship then expire with the Professorship?—Oh, he is a Life Fellow.

1011. Therefore, in the case of the *culpa* of the Professor, he would lose the Professorship and retain the Fellowship?—Oh, no; that is not intended, I think.

1012. I want to know whether the election to Fellowship is for life?—Not independently of the Chair.

1013. He only holds it as long as he holds the Chair?—Yes; he is a Professor-Fellow.

1014. And as such he only holds the Fellowship while he is a Professor. It is obvious, of course, that the Fellow is elected for life?—Yes.

1015. While the Professor is for life or "*ad culpam*," or until death or "*culpam*," as I should put it?—It was intended, I think, that the Fellowship should also be "*ad vitam aut culpam*."

1016. Then there is a difference in that respect?—(Mr. Gwynn).—Section 17 sets out that the Fellow, when re-elected, shall hold "*ad vitam aut culpam*," and that applies to all the Fellows.

1017. We were discussing, while you were out of the room, Mr. Gwynn, the question of incompetence; a man may become incompetent to carry on a Professorship, but may be competent to hold a Fellowship and receive the usual emoluments. Do you propose that his emoluments should cease when his incompetence as a Professor is ascertained? I mean it is obvious, is it not, that the Life Fellow and the Professor-Fellow stand on a different footing?—We contemplated that they should stand upon the same footing, as for instance, the Professor of Mathematics or the Professor of Greek. A Fellow, for instance, first becomes a Fellow, and then later on is elected to the Chair of Greek. I presume that if for some serious offence the gentleman who had the Chair of Mathematics was considered undeserving of the Professorship he could not hold the Fellowship.

1018. But supposing he resigned the Fellowship, would he resign the Professorship too? I mean is that your scheme, or that a Professor resigning his Chair should retain his Fellowship?—I do not know that the question of resigning has been considered.

1019. Then I will ask this other question: In the case of a Professor becoming incompetent without fault, does he remain a Fellow?—I take it he is on the retired list of Fellows. I do not know whether we ought to call our retired Fellows "Fellows" or "Ex-Fellows." It seems to me merely a question of nomenclature.

1020. LORD CHIEF BARON.—He has ceased to perform active duties, and has become entitled to a pension?—Quite so.

1021. Mr. BUTCHER.—Is your new Fellow not to be a working Fellow in the same sense as a Professor? Is he not to have, once he becomes a Life Fellow, normal duties, and, assuming he has such duties, and neglects them, could his Fellowship be made void?—It was not intended that he should discharge tutorial duties.

1022. Then he would simply hold an idle Fellowship—a Prize Fellowship?—Certainly; yes.

1023. CHAIRMAN.—You hold, really, that the Fellowship shall determine with the Professorship?—I think in the case of a Professorship to which a Fellowship is attached, that really is an Honorary Fellowship. Let us suppose a Professor of History is elected, and is thereupon given a Fellowship; his stipend is paid to him really for the Chair of History, and he merely has the title of Fellow. As I understand, it is really an honorary title; it places him in the body of Fellows, and makes him eligible for certain offices, but the Fellowship does not itself carry with it any emolument.

1024. But it carries with it certain powers?—(Professor Joly):—Certain privileges.

1025. Dr. JACKSON.—It carries the £40 Irish, does it not?—(Mr. Gwynn):—That is not a point which we have considered.

1026. LORD CHIEF BARON.—You do not contemplate a man being unable to teach his class as a Professor and continuing a Fellow; it would disarrange your own scheme?—(Professor Joly):—I think the wording of paragraph 18 is sufficiently clear—that the Fellowship is attached to the Chair.

1027. If the substance of the matter is once known, it is very easy to decide upon a form of words which will express the meaning, and I think it is very easy to ascertain that your Fellowships will cease with the cessation of the Professorship.

1028. Dr. JACKSON.—At the same time, it appears to me that great hardships might arise in certain cases, and that when these questions of detail come up, it might be desirable to make some provision for such a person to have a pension, or possibly a Fellowship. Still, that is a detail which we need not now consider.

1029. LORD CHIEF BARON.—At the re-election of a Fellow there would not be anything in the nature of an examination, I suppose?—No.

1030. CHAIRMAN.—The re-election would always involve a consultation of the Faculty, I suppose?—Yes; No. 20 defines that.

1031. "In making an appointment *ad vitam aut culpam*, whether in the case of Fellowship, Professorship, or Lectureship, the Board shall confer with the Faculty most concerned." That applies to re-appointments, of course, as well; would it not be better to say "appointments or re-appointments"? That would make it quite clear?—Yes.

1032. Then you propose that:—"There shall be, as a general rule, an annual election to Fellowship according to method (b)"—that is the examinational system?—Yes.

1033. "However, the Board shall have power to suspend one or more elections if in their opinion advisable in the interests of the University. More than one Fellow may be elected annually if necessity arises." Then you give some statements with regard to the number of Fellows, which I think I need not read. Then you say:—"At the age of sixty-five a Fellow may be retired by the Board, subject to the approval of the Faculty concerned, or he may voluntarily retire." That applies to all Fellows?—All Fellows alike, yes.

1034. "At the age of seventy retirement shall be compulsory, unless it be deemed by the Board that it is desirable the Fellow should continue in office. Upon retirement a Fellow shall receive a pension, the amount of which shall be graduated according to his years of service, a certain minimum period of office being required to entitle the Fellow to full pension. In the event of illness necessitating retirement at an age before sixty-five, and after the tenure has become life-long, a pension which is graduated according to his years of service shall be paid to the Fellow. In the estimate of service the probationary period shall be included. There shall not be less than five Tutor-Fellows who shall act as Tutors and perform no other duties, save lecturing not more than twice daily during Term and examining. A Provisional Fellow shall not act as Tutor." That, I understand, is with the view of separating what may be called the parental duties from the others?—Yes.

1035. I pause there because that is the end of that paragraph. Would you like to say anything further on that part of the scheme?—I would like to observe that the list of Chairs in paragraph 19 is really given for explanation only. In the first place, as I have already said, it is not intended to include existing occupants of chairs in this scheme—I mean to say it is not intended that they should all get rights to

DEBATE

Oct. 18, 1906

Edward J. Gwynn, Esq., M.A., Junior Fellow of Trinity College, Dublin; and Professor Joly.

DUBLIN.

Oct. 18, 1906.

Edward J. Gwynn, Esq., M.A., Junior Fellow of Trinity College, Dublin; and Professor Joly.

become Fellows; and another remark is that that list of Chairs of course might not be a permanent list; it might be extended in the future. For instance, the Chair of Modern History might become a whole-time Chair.

1036. Would it not be desirable to define the number of Fellowships which have been given to Chairs, and then to elect to those from time to time? What I rather mean is that supposing the number of Chairs to be enlarged, the number of Fellowships should not be enlarged with them. It seems to me it would perhaps constitute a motive for not creating new Chairs if they always carried Fellowships with them?—Well, I am of opinion that every Professor should devote his whole time to the College, and to the government of it, and he ought to have a right to a pension, and he ought to have, in fact, all the privileges of Fellowship; and, holding those views, it is difficult for me to draw a distinction between one subject and another, and say which should have those privileges and which not.

1037. How would it do to treat them like Bishopricks in the House of Lords, where only a certain number of seats are available, and where, on a vacancy occurring, it goes to the Senior outside Bishop?—I have not considered that point.

1038. But you see the difficulty in requiring that every whole-time Professorship shall carry a Fellowship?—(Mr. Gwynn):—It is not easy to say how the University will grow, and we would not like to recommend a system which would fix it for all time, and leave no power of development.

1039. LORD CHIEF BARON.—I think the creation of future Chairs is a matter of certainty, and with the development of Science which is going on at the present time, who can say what may be the limit in the possible number of Chairs?—Yes; what I mean is that I should not like now to determine the relative importance of the Tutorial body and of the Professorial body; the latter in the past has greatly grown in importance, and I should not like to do anything to prevent its growth in the future.

1040. CHAIRMAN.—You would like to give power to the Governing Body to enlarge the number of Chairs which would have Fellowships attached to them?—I think so.

1041. But I still want to go back to my point: Would you still wish to have every new Professorship, from the mere fact of its creation, carrying with it a Fellowship, or should not the number of Professor Fellowships in the first instance be defined?—Of course I feel that there is a difficulty about that; in the case of certain Professorships I know that the duties are relatively unimportant. It may require great learning, for instance, to be a Professor of Arabic, and yet the part he plays in the life of the College is necessarily less than that played by, say, the Professor of Anatomy. The Professor of Arabic might occupy a whole-time Chair, and yet it might be difficult to weigh his relative importance as compared with the Professor of Anatomy.

1042. LORD CHIEF BARON.—I would like to have your opinion upon this. It appears to me, looking into the history of this University, that almost from its commencement it has been most closely tied up by King's Letters; you could not appoint a new Fellow without a King's Letter, for instance. Do you not think that there ought to be certain powers given to the University, so that it should not be so strictly bound up?—Yes, I feel that very much.

1043. It is a very serious thing to be constantly under the necessity of applying for a King's Letter?—(Professor Joly):—In the University of Liverpool, I understand, the Council has the power of framing Statutes for the consideration of the Court.

1044. CHAIRMAN.—They are only subordinate Statutes?—They are only subordinate Statutes, but still, the Council has the power of framing them.

1045. Yes, but they have to be laid on the Table of the House, and are subject, I think, to appeal to the Privy Council?—But in that case a King's Letter is not required.

1046. I conceive that it might be very desirable to give a Board of this kind power to make subordinate Statutes, and with an appeal to the Privy Council?—(Mr. Gwynn):—As the Lord Chief Baron suggests, we have been unable to take any steps in the direction of reform without invoking the power of the King's Letter, and under the political circumstances that exist in this country it is quite intelligible that the

Board should sometimes have hesitated to resort to this course.

Dr. JACKSON.—Will it not be necessary at some time to get a re-codification of the existing Statutes?

LORD CHIEF BARON.—Undoubtedly.

Dr. JACKSON.—As I understand, the College is governed by ancient Statutes and supplemental King's Letters, and I do not myself see how one can get a clear view of the institution until the legislation has been brought up to date.

LORD CHIEF BARON.—It is a most complicated Code.

1047. CHAIRMAN.—I will now return to your paper, and take up the paragraph relating to Readers. You propose here that:—"Each year the Board shall, after consultation with the Examiners, elect not more than four Readers on the results of the Moderatorship Examinations, and also having regard to the previous career of the candidates. The subjects upon which these elections shall be made shall depend mainly upon the requirements of the University at the time, and in part upon special merit shown by the candidate. The tenure of office of a Reader shall be three years; and the salary attached thereto shall be £150 per annum, along with rooms and commons." Now, you propose there that the elections shall be not only upon the results of the Moderatorship examinations, but also having regard to the previous career of the candidates. I suppose you mean previous success in examinations, and not merely such an opinion of his career as may be given by his tutor?—(Professor Joly):—No, I think it would be mainly in regard to his success in examinations, but a young man might have distinguished himself in some way as a writer, or in research, or something of that kind; and I think that any circumstances which show that the particular candidate is a deserving case ought to be taken into consideration.

1048. Then you say: "At the conclusion of the three years, the Readership shall become vacant, but in case of special merit, or where it is deemed desirable to encourage the holder to go on to Fellowship, the tenure of office may be renewed by the Board upon the recommendation of the Faculty concerned, and an increase of stipend given, if good reason arises." Then you provide for the duties, which "shall consist in teaching in Arts or in acting as Assistant to any of the Chairs." Why do you confine it to Arts—why not extend it to Science?—It is so intended; he may be attached as an assistant to any of the Chairs that may require such assistance, and that may be a Chair of Science.

1049. But why do you confine the teaching to "teaching in Arts," while you leave him free to act as Assistant to any of the Chairs?—As an Assistant he would have to perform certain teaching duties; for instance, the teaching of the steam engine in the School of Engineering is discharged by an Assistant, and subsidiary subjects that require special personal teaching are often handed over to competent Assistants.

1050. These Readerships are similar, are they not, in a good many ways to Junior Fellowships?—Except that being a Reader does not in itself give any claim to become a Fellow.

LORD CHIEF BARON.—In reference to the word "Arts," it is a word, I think, which is often used in Trinity College so as to include Science. In the Honours Course in Arts, the first thing I see is "Mathematics."

1051. CHAIRMAN.—Is there any further observation you would like to make upon that head?—I would just like to remark that we have nothing of the kind at present in Trinity College, except one prize, the Fitzgerald Memorial Prize, which gives a young man £50 for a year, and entails that he should do a certain amount of teaching and a certain amount of research work during the time he holds the Prize. Otherwise there is nothing of the kind in the College at present, because in the case of the University Student who gains £100 for five years under the present system, there are no duties attached to it; he need not engage in any research work or teaching; he can go away—and very often does—and pursue his studies at the Bar, or in Medicine, or whatever else he may be intending to devote his life work to, and the money is simply a money prize. The suggestion here is that Studentships should merge into Readerships, and that a still larger sum should be expended by the College in encouraging post-graduate work, because that is what it comes to.

1052. Sir A. W. RÜCKER.—There is one point which I am not quite clear about. You have suggested, firstly, that there should be a Fellowship to which election is to be made by examination every year; and, secondly, that the subject of that Fellowship should be declared by the Board?—(Mr. Gwynn)—Yea.

1053. I realise the great difficulty in recognising the value of men engaged in different subjects, but when the Board has to decide that a Fellowship is to be given in a certain year for Physics, we will say, and not for Classics, would not the Faculty interested in Physics and the Faculty interested in Classics try to influence the decision of the Board in that year?—Well, they will have to consider two things—one, the qualifications of the different candidates, and the other the necessities of the University. I mean to say, if the Board feel that they will shortly want additional teaching in, let us say, Modern Languages or Experimental Science, then they will hold a Fellowship examination in one of those subjects.

1054. But that does seem to take away the advantage of the present system, whereby if a man can get to the top of his fellow students, he will get a Fellowship?—But I still think the other consideration will come in also, and if the Board felt that they had an exceptionally good man in a particular subject, they would be likely to offer a Fellowship in his subject rather than lose him.

1055. Then the Board will have to decide without having before them, as it were, the formal evidence of his goodness, whereas now they have that evidence before them?—Well, they will, of course, have the evidence of the examinations he has been through—Moderatorships and so on. By the time a man has worked through his examinations here, the College has pretty well made up its mind as to his ability. The Fellowship Examination does not often upset the verdict of the Moderatorship examination. (Professor Joly)—You see the Readership gives a man the opportunity of distinguishing himself in other ways besides merely examination work, as an Assistant to the Chairs, and by work in the Laboratories.

1056. Still, a Fellowship is a great prize, and it is necessary to be careful in framing the conditions for securing it?—Well, that is only one road to a Fellowship.

1057. One other point. You are going to have these different Faculties, and the only nexus between the various Faculties is the Board?—Yes.

1058. I have had some experience in that direction, and my experience has been that when reference is made to Faculties, they all report on different lines, and you get all sorts of reports which do not agree one with the other. Ought you not to have some system by which all the Faculties could meet in common—or their Chairmen at all events?—(Mr. Gwynn)—Yes, I can imagine that that might be very useful.

1059. You would not have any objection to a provision of that sort?—No, certainly not.

1060. Dr. JACKSON.—In the first place I want to ask you this: What does the Senate do at the present time?—At present the Senate can only meet when a Grace is sent down by the Board, and they can only discuss that Grace.

1061. What sort of matters require the approval of the Senate?—The ordinary business of the Senate is the approval of degrees. That is practically formal. There exists a power by which the Senate can refuse degrees, and as a matter of fact the Senate can block the whole business of the University by refusing to pass degrees, but that is never done.

1062. Then, really it is degrees only with which the Senate is concerned?—Not only that; besides degrees there are certain matters—constitutional matters—upon which the Board consults the Senate; for instance, when we admitted women to degrees, a Grace was sent down, and the question was formally debated in the Senate as to whether it should or should not be done.

1063. Was that on some special legal ground, or was it on the general ground that the question was one of interest to the whole University and all its members, and that, therefore, it was desirable to get the assent of a larger body than the Board?—It was on the latter ground, and I have never been able to discover the cases in which the Senate must be consulted.

1064. LORD CHIEF BARON.—I can give you, perhaps, a rough idea upon that. The Senate is a University body, and in dealing with the University the Senate is obliged to be called in; while the Board represent the

College only. I think that is the explanation?—(Professor Joly)—The Corporation of the University consists, as I understand, of the Chancellor and the Professors and Masters.

1065. Is the University as distinct from the College body?—Yes.

1066. Sir T. RALEIGH.—Has the Senate any power really—I mean, supposing the Senate had reported strongly against the admission of women to degrees, would not the Board still have been perfectly free to apply for a King's Letter admitting them?—(Mr. Gwynn)—If the Senate had refused to give their assent, I do not know whether the Board could have overridden the Senate or not.

CHAIRMAN.—Does it not depend upon this—that the Statute of Charles I. required the assent and consent, apparently, to an application for a King's Letter, of the Provost, Fellows, and Scholars, and that there is no other way of consulting the Scholars except by means of the Senate?

LORD CHIEF BARON.—I am afraid that is not so. This clause refers, I think, to the College and not to the University: as to the nature of the latter there is a difficult question upon which Lord Chancellor Napier and Mr. Baron Fitzgerald gave different opinions. But I think you will find that that is the necessity of the Senate being called in in matters such as Mr. Gwynn referred to, that they are University matters.

Dr. JACKSON.—My Lord Chief Baron, am I right in thinking that the Members of the Senate who have their names on the Board are not meant by the term "Scholars"?

LORD CHIEF BARON.—Certainly not; the Scholars are a body—it used to be seventy in my time, with emoluments of about £70 a year each. Scholarships used to be obtained in the Junior Sophister's year, or, in the case of some clever students, a little earlier, but they are not the persons referred to by Dr. Jackson.

1067. CHAIRMAN.—Perhaps I may refer you to the second volume of the Statutes, page 304,* where you will find the Letters Patent creating the Senate and giving its powers?—(Professor Joly)—Is it not something like Convocation at Oxford?

Sir T. RALEIGH.—Convocation has real power.

1068. LORD CHIEF BARON.—Is not this a Senate only in name, and is it not the fact that it has no power except to confer or veto degrees?—(Mr. Gwynn)—It can say No; it has that power.

1069. That is all?—And I take it they could have refused to admit women, and they could refuse addresses, and such things as that.

1070. But they have no power in reality to do anything for the real benefit of the University?—No, none.

Dr. JACKSON.—All that has been said in the last five minutes goes to show that the Corporation called Trinity College is distinct from the Corporation called the University; and it seems to me, from my possibly sentimental point of view, rather a pity that the Board should be expected to report about purely Collegiate matters to the Senate which represents the other Corporation.

LORD CHIEF BARON.—I do not think it is bound to do so.

1071. Dr. JACKSON.—No, but I am speaking to paragraph three:—"The Board shall annually report to the Senate as to the academic work and progress of the year, and present an audited financial statement." I should like to see the Academic Council so far strengthened that reports should be made to it about the purely academic work. But I do not understand the relation of the Academic Council to the Senate?—At present there is no relation whatever, I think, except that the Senate elects four representatives to the Academic Council.

1072. I should have thought that the Academic Council could be so strengthened that it should be the proper administrative body of the Senate, and that Academic matters should be reported to it; but I confess that I should be sorry to see the Collegiate family report about its purely domestic matters to the Senate or to the Academic Council. Do you not value the College Society as opposed to the degree-giving University?—The two things are so entirely fused with us that I can never think of them apart.

1073. And yet I must repeat something that I have already said—that already, outside the Society of Trinity College, there are Professors who are not members of what I should call the Collegiate family. —(Professor Joly)—Yes, there are University Professors, but the position of those University Pro-

fessors is very extraordinary in this University, as far as I understand it. There are only three or four of them, and I understand that the University Professors are elected by the Board.

1074. Yes, and I should like to see the Academic Council so far strengthened that it should have the election of the University Professors. However, I am indicating a different policy, because I am anxious to know what you, who have thought out most carefully a scheme, would have to say to a rival method. —(Mr. Gwynn):—A rival method of electing certain Professors?

1075. No, I mean a rival system as regards the whole constitution.—(Professor Joly):—I think it would be very desirable if you would kindly tell Mr. Gwynn what you suggested, because I do not think he was here at the time you stated it before.

1076. Very well. I am suggesting that purely academic business can be separated from purely Collegiate business. It has occurred to me that you might have an Elective Council in Trinity College, and that you might also have a strengthened Academic Council in the University; that the strengthened Academic Council should deal with the purely academic things, and that the Elective Council of Trinity College should deal with the matters which concern the College rather than the University; and I suggested also that the College might have a certain power of electing to Fellowships Professors, or other persons whom they wanted for the service of the House.—You suggest that both bodies should be elected?

1077. Yes, and that in fact the two purposes of the existing Governing Body should be completely dissociated. As I understand, the Board at present exists for two purposes; on the one part, to secure proper pensions to those who have served the College, and on the other part to govern the College and the University too. Now, it seems to me that those two purposes ought to be dissociated, and I should have thought that when you had dissociated them, when you had made the Governing Body elective, there was something to be gained by separating the Collegiate Governing Body from the Academic Governing Body, and the more so because I realise the great advantage of leaving these Governing Bodies unpaid.—(Mr. Gwynn):—Well, I do not know that I am quite clear as to what functions would be exercised by the one Council and what by the other; for instance, whether the management of, let us say, the Medical School, would be the affair of such an Academic Council or of such a Collegiate Council.

1078. I should have thought that according to the scheme I am thinking of (perhaps you would call it a wildly radical one), it would be the affair of the Academic Council.—With us the relations of the Medical and of the Arts Schools are so very close, and so mixed up, that I can hardly see how it would work if the same students were being looked after by one body *qua* Professional students, and by quite a different body *qua* Art students.

1079. But I should have thought that the Arts Students also would come under the Academic Council.—But I mean the Arts students are also, practically all of them, Professional students, and it appears to me that they would be under two different controls.

1080. Are you assuming that the Students would necessarily be looked after by the College? I am assuming, myself, that the teaching of the Arts students would be done by tutors in College, but I am assuming also that the Academic Council would settle what the curriculum was to be, and would choose Examiners, and do all that concerned the regulation of them, though not the teaching.—The professional teaching, for instance?

1081. The professional teaching I should have thought would be done by the Professors, who are already, many of them, under the University and not under the College.—Still, they have to work with the Collegiate teachers, and it is all a matter of the closest adjustment—I mean they interlace in all sorts of ways. I do not see what was gained, and I should have thought that it would introduce unnecessary complications.

1082. I am a little prejudiced by seeing elsewhere the Collegiate system helping the University system—the University planning the courses of studies, and providing Professorial lectures, the College taking

care of those students for whom the Professorial teaching is too high, or not sufficiently definite?—It strikes me rather as if such a double Council would perpetuate and accentuate just what I want to remove—the competition between the interests of the Arts School and the Professional Schools: because the Arts School, roughly, I think, corresponds to, and come under, your Collegiate Council, whereas the Professional Schools would come under the Academic Council. Now, there has been of late years a state of things in which the two interests are pulling different ways, and we have had a good deal of trouble in making them work smoothly together, and in so far as they do work smoothly together it is just because they are under the same government; and I think that our scheme would meet the case by bringing them closer together; whereas, if you had these two bodies, they might pull opposite ways, and the students would suffer. But, of course, I can hardly venture to criticise your conception without understanding it more fully.

1083. Perhaps I have raised rather a large question, and I do not think I ought to go on further with that topic; unless you want to say something more, I do not wish to take up any more time upon that particular matter.—No, I should not care to speak upon it without knowing something more about it.

1084. In paragraph nine you propose that: "The Bursar and Senior Lecturer shall be appointed by the Board, and the tenure of office shall be as at present." May I ask what the tenure of office of the Bursar is at present?—Annual.

1085. I suppose he is generally re-elected?—Usually for several years.

1086. When you say "several years," do you mean four or five years?—There is no fixed period.

1087. He might go on for twenty years?—Oh, yes; Dr. Carson was Bursar for, I cannot say exactly how long, but something like that period.

1088. I only wanted to know whether, if you got a good Bursar, and he cared to retain the post, you would keep him for a long time.—It would be a great advantage to do so.

1089. I thought so, but something I heard caused me to think that of late the office of Bursar had been held only for four or five years, and I wondered whether there was any tradition that the office ought to circulate.—I believe you would find that Dr. Carson held it for a much longer term than that.

1090. There is one matter which is not quite clear to my mind in this very carefully thought-out scheme. Have you any notion what you would do with the funds now devoted to the payment of the Senior Fellows? I am not thinking, of course, of the near future; I am thinking of a distant future when all vested interests shall have been satisfied.—Well, of course the question would arise as to whether you would find you would get the same class of men to accept a Fellowship if they were paid as Junior Fellows are at present paid, and then retired at an income much lower than the Senior Fellows get. Of course, at present, part of the financial inducement to gain Fellowship is the provision it offers for one's old age; so it would be simply a question of what you would get in the market for a given sum as to whether you would or would not have to raise the payment of a Fellow in the future during his earlier years on account of reducing their payment in the later years. And then, again, you would certainly have to pay some of your Chairs very much better than at present; the payment of the History Chair at present is simply ridiculous, and you would find a good many other striking examples.

1091. Then, would you, if you should have an elected Council in the near future, be prepared to keep the Senior Fellowships at their present value, as a way of discharging the vested interests of the existing Society? It seems to me that every Fellow has got a vested interest to become Senior Fellow in the course of time, and you are contemplating the establishment of an elected Council.—Yes.

1092. Which would remove from the Board their executive power. Is it your scheme that for the satisfaction of those vested interests, those who are now in the Society should become in due course Senior Fellows so far as emoluments are concerned, although they would not have the duties to perform?—I think the proposal in our scheme is that annuities might be paid to the existing Junior Fellows as a financial equivalent.

1093. Oh, yes, I was forgetting that. But do you think there is anything to be said for an alternative scheme such as I have suggested?—I do not quite know at what period the existing Junior Fellows would come into these incomes.

1094. I am suggesting that although governmental power would have passed from the Seniors, there might still be Seniors having the existing emoluments?—Well, I suppose that is a question of what would pay the College best.

1095. That would be one possibility for settling the obviously great difficulty of satisfying the vested interests of the existing Society.—It would be one way, yes.

1096. In paragraph fifteen you say:—"Election to Fellowship shall be (a) on the published work and credentials of the candidate." I should like to ask Professor Joly whether he does not think that the words "or unpublished" might justly be introduced. It seems to me that the introduction of those words would make it possible to include dissertation work and experimental work, such as a young man under twenty-seven might have done, and yet not actually published.—(Professor Joly)—Well, I think that theoretically what you suggest would be a perfectly just amendment, but I think we have to consider the question upon other grounds besides that of the fairness of your mode of election, and I think that the fact that the work has to be published does afford a guarantee to the outside public which would not be given under your plan.

1097. CHAIRMAN.—Would it not be very hard to say that a man who had written something which he had been unable to get any body to publish should be excluded?

1098. Dr. JACKSON.—I am speaking upon this matter from my own experience, and again and again I have confidently recommended a man whose work was not ready for publication. I should have thought it cruel to oblige him to go out into the world with work that was not complete, although it was ample justification for his election to a post. I myself once strongly recommended a man for election to a Fellowship. I knew that he was contemplating publication. I pointed out to him that there was something coming which would presently oblige him to re-write everything he had written: but nevertheless of the excellence of his work as a proof of originality and power I had no doubt whatever. I hope that any regulation of this sort will not be made too stringent.—Personally, I should be strongly in favour of what you say.

1099. I should have thought that Trinity College was strong enough to set at defiance outside talk.—Yes; we ought to be.

1100. I should like to ask a question which does not quite directly arise upon No. 15, but I think that it was suggested to me by some remark made in connection with that section. Who are the Electors to Fellowships—are they necessarily Fellows of the College?—Yes. The idea is that the Board should elect to Fellowship in the future, but on the recommendation of the Faculty.

LORD CHIEF BARON.—I think Professor Jackson is asking who at present elect to Fellowships.

Dr. JACKSON.—I want to know who makes the election—whether it is the whole body?

1101. LORD CHIEF BARON.—At present the Board elect?—I misunderstood the question.

1102. Dr. JACKSON.—I am afraid I have not been clear. Under the existing constitution, who elect?—The Board.

1103. And do they alone take part in the examination?

LORD CHIEF BARON.—Oh, no, others take part in the examination.

1104. Dr. JACKSON.—The Examiners are appointed by the Board, to advise the Board?—(Mr. Gwynn).—They are appointed to examine the candidates, and they return marks; I am not aware that they advise the Board.

LORD CHIEF BARON.—Each returns his own marks, and does not know the marks of the others.

1105. Dr. JACKSON.—Then the thing is settled mechanically on the marks?—Not necessarily.

LORD CHIEF BARON.—There has been one example to the contrary, and as far as I know only one; but Mr. Kelleher will, no doubt, tell you.

Mr. KELLEHER.—The custom is to elect on the marks, but each Member of the Board takes an oath on the day of election to elect the man whom he thinks best fitted to be a Fellow.

1106. Dr. JACKSON.—Do they ever, in the examination or in the election itself, call in the assistance of complete outsiders?—I do not think it has ever been done so far as I can remember.

1107. Do you think it would be desirable to have the power of calling in assistance from outside?—I do; I hold that very strongly—that we ought to have some external Examiners, whether we elect to Fellowships in future by examination as at present, by question and answer, or by examination of a man's published work, in either case I think it is very important that we should have external opinions to help our own.

1108. CHAIRMAN.—You would make it obligatory?—I do not know whether I should go as far as that.

1109. Dr. JACKSON.—I should be very sorry to see it made obligatory, and exceedingly glad to see it made permissive. I may, perhaps, mention again that Trinity College, Cambridge, makes very great use of this method.—That is, of course, only a private opinion of my own; I do not think it has been discussed upon the Committee, or, at any rate, if it has been discussed nothing has been settled.

1110. I rather gather that the trend of opinion of you who have thought out this paper is towards attaching a Fellowship to each of the Principal Chairs, rather than that the Governing Body, whatever it may be, should have the power of picking and choosing particular Principal Professors to have Fellowships?—Yes.

1111. One understands the advantage of a strict rule of that kind, of course. I should like now to return for a moment to the question of the Professor Fellows who cease to hold their Professorships, and consequently lose their Fellowships. Do you think that it would be possible to have some system whereby Professor Fellows who lose their Fellowships should have a pension?—We certainly contemplated that any Professor Fellow who lost his Fellowship either through illness or from seniority would have that pension.

1112. He would have some sort of compensation?—Certainly.

1113. It seems to me that that would be desirable; because there is always the danger of the Professor Fellow holding on to his Professorship when he is unfit for it, if he knows that everything will be taken from him if he resigns. You might have a man staying on after he was long past work, if your regulation is made too stringent.—We certainly intended that all Fellows should have a retiring allowance provided.

1114. In regard to the Readerships, which term, I observe, is to be substituted for the existing title "Studentships," might I ask whether there is any great advantage in the word "Readership," as opposed to the word "Studentship"?—(Professor Joly)—No, I do not think there is any advantage, except that the continuance of the term "Studentship" would, perhaps, mislead those of us who have traditional knowledge of the place, and it would be better for the outside public to have a new term.

1115. You do not think there might be some harm in the use of the word "Readership," which elsewhere suggests the duty of giving lectures, whilst it might be that these men would not be doing much teaching, but would be chiefly engaged in research?—In Section 25 we have provided that they should give some teaching.

1116. You give them some teaching?—Yes.

1117. However, that is quite a small matter. I hope that you will keep the power of limiting the amount of teaching work which such men have to do, in their own interests, in order that they may have an opportunity of proper development.—(Mr. Gwynn)—That was a point that we considered, and which we were thoroughly agreed upon.

1118. In paragraph twenty-four you say: "Each year the Board shall, after consultation with the Examiners, elect not more than four Readers on the results of the Moderatorship Examinations, and also having regard to the previous career of the candidates." It is not quite clear to me whether you would or would not allow the Professors who superintended the men's work in the laboratories, for instance, to give evidence; you would not exclude that, would you?—Oh, no; I think that is what is meant. There is such a thing as "College opinion" about a man, and we want to consult that.

1119. As regards the phrase in paragraph twenty-five, "The remainder would be available for teaching

Edward J. Gwynn, Esq., M.A., Junior Fellow of Trinity College, Dublin; and Professor Joly.

in Arts," surely the teachers in Arts must also be in some sort attached to the Chairs—or is the Arts Faculty different from the others in respect of attachment to Chairs?—I think the difference really is that the Readers would be under the Senior Lecturer, or else under the special Professors.

1120. These, then, would be people who are giving the teaching for ordinary Pass examinations, and would not be connected either with the Professor of Greek, or the Professor of Latin, or the Professor of Botany, and so on?—They might be giving what we call Pass Lectures, or else they might, according to their subjects, act as assistants to this and that Professor.

1121. I was not quite clear that I understood the paragraph that begins: "In answer to the objection." This is at the end of the paragraph under the head of "Readers":—"In answer to the objection that the institution of Readers would weaken public confidence in the teaching of the University," and so on. How should it weaken public confidence?—(Professor Joly).—Well, we thought that it might be said that the work that had hitherto been discharged by men of the well-known ability and status of our Fellows was going to be handed over, say from motives of economy, or from other motives, to another and inferior body.

1122. My own feeling is that the teaching of young men is very often of the greatest possible value, and helpful to an institution. I hope I have not taken up too much time in going into these matters of detail, but I have experience with regard to these matters, and my interest in them is so great, that I have ventured to deal with them rather fully.

CHAIRMAN.—We are very glad that you should give the Commission the benefit of your large experience.

1123. Mr. BUTCHER.—I have only a few questions to ask, as the ground has already been so well covered. I would like to go back to the point about the Fellowships and the Professorships. The proposal in the Statement is that the Professors should *ipso facto* be made Fellows, and upon that I would like to ask this: Are there not some strong reasons for retaining two distinct classes of Fellows—ordinary Fellows and Professors, to put it briefly. This in particular: you want, do you not, to keep up—to maintain—a system by which there shall be vacancies for Fellowships at regular intervals—in fact I think you say at least one a year?—(Mr. Gwynn).—That is so.

1124. So that there shall be some recognised academic career always open, through the system of Fellowships, to your best men?—Yes.

1125. Now, would not the regular vacancies which would occur in your Fellowships owing to some of them being held by Professors disturb that system very much?—(Professor Joly).—I think not. It would work out, I think, in this way. There would be the existing annual election to Fellowship continued in the future, which would normally be done by examination, but there would be power to interrupt that if requisite in the case of there being brilliant men amongst the Readers whom it might be thought desirable to appoint in another way, say by mixture of examination and theses. In addition to that, there would be the vacancies in Professorships.

1126. They occur, of course, at irregular intervals?—At irregular intervals, and we are proposing they should be filled according to method (a). They might occur at any moment, and they would be filled, as at present, by advertisement, or by invitations addressed to distinguished men.

1127. Then method (a) is not the normal method?—No; the normal method is the annual method.

1128. You have a break there in the annual method owing to the irregular vacancies created in the Professoriate?—But there is no break; they go on, as at present, to maintain the normal number of Fellows.

1129. Would you explain a little more, because I do not quite see, if you have a limited number of Fellowships, how you can have your regular annual vacancies combining with the irregular vacancies occurring owing to the retirement of Professors?—(Mr. Gwynn).—We should not have an exactly defined number of Fellows; it varies at present quite considerably, and sometimes we may have four or five more than we have at the present moment.

1130. LORD CHIEF BARON.—The number has been reduced lately?—It has, by death simply. When I became a Fellow, I think there were four more Junior Fellows than there are at present.

1131. Mr. BUTCHER.—Still, you contemplate a system which would keep up a well-defined flow of vacancies for admitting new men to Fellowships?—Yes, that would be provided for by the retirement system.

1132. The two processes do not interfere with each other—they go on parallel?—You may have two Fellowships in one year, and in another year perhaps three. That is, there is always the yearly election, and there may be one or two more if certain Chairs fall vacant.

1133. You seem to contemplate really two distinct and alternative methods of election—either on published work or on the results of examination; and the question I would like to put to you is: do you think any Fellowships ought to be awarded simply on the results of examinations?—That is a point which has been greatly debated even in our Committee. There are certain advantages in the examination plan. In this country people have more confidence in the results of examinations—I mean in their fairness—than in election. That seems to be so; it is irrational, as I think, but it is so. At all events it is an argument that weighs with many people. Then a consideration of quite a different kind comes in—that the method of election upon published work is open to the objection that it is inadvisable to drive a man too soon into publication, because a man must have some amount of erudition in Classical studies before he can write anything for publication.

1134. I recognise that, but would it not be safer to say that such examination alone should not be the test for Fellowship—that there need not be published work but, as has already been suggested, unpublished dissertations, which would certainly supplement the very unsatisfactory examination test?—I think you would reach the same end really—I mean you would test the same qualities—by altering the style and method of the examination. I do think our examination is too mechanical in its nature, but I think that might be met by giving wider questions, the replies to which would really be like small dissertations.

1135. I only suggest that it might not be wise to draw that sharp distinction between two methods exclusive of one another—two alternatives—but that it would be better to allow a combination of the two, and have a little more freedom in that way. I am quite aware that in Ireland anything that cannot be reduced to mathematical certainty does give rise to the suspicion of jobbery, and especially of some religious preference; but is it really the case that this method of publishing the marks down to single marks and half marks inspires public confidence? I should have thought it might rather have done away with all public confidence—the infallibility of the Examiner which is presupposed in that extremely rigid system of marking?—I believe, as a matter of fact, the public regards the Examiner as a kind of machine, into which if you put the questions the right results must come out.

1136. About the payment of Fellows—that is a difficult question. Certainly to those who are familiar with England the general scale of salaries to Fellows—even Junior as well as Senior Fellows—looks high for Ireland. Do you think there may be something to be said in favour of a somewhat higher scale or standard of payment in Ireland on this ground—that if the motive for getting a Fellowship here is not a pretty strong one, the exodus to England will go on, or increase, in the case of men who have attained some proficiency in learning?—Well, even with the prize as valuable as it is, the competition is surprisingly small, certainly of late years, and I find that pupils of my own are going in for the Indian Civil Service for instance, whom I should like to see competing for Fellowships, and who, I think, could compete with very reasonable chance of success. Take the parallel case of the English Church; in spite of the great wealth of England it is a fact, I believe, that the average income of clergymen is even lower in England than in Ireland. There are a great many clergymen in England whose rectory costs more than their stipend. This is largely because there are in England so many men who have private means and can thus afford to spend their lives at unpaid or ill-paid work. Well, in Ireland that is not so; you could not find men to do work on such terms, and I daresay something of the same sort would apply in the academic world.

1137. It is the case, I suppose, in Ireland that most of the products of Irish education are simply

for export—for the use of England or of the Empire?—I am sorry to say that we produce mainly for export.

1138. And it may be to some extent a valid reason for maintaining prizes a little above the ordinary level of academic prizes in England, that it is desirable that you should retain in Ireland this nucleus of distinguished men?—Really, that is a kind of question as to which I should prefer somebody else being the judge.

1139. I have one other question, and that is on a very small matter, viz., to ask you whether you have considered this point. Ought there to be on the Governing Body any outsiders of distinction? I fancy that in all the newer Universities in Ireland there are representatives who are not academic representatives, but who are eminent in civic affairs or otherwise. There may be some reasons against that in Ireland,

but it has been considered, I suppose?—Yes, we allow the Senate to elect one member of the Governing Body.

1140. What I rather wished to know was whether you preferred to have a purely academic Governing Body, without any outsiders at all?—That is the consensus of our Committee, although personally I think there is a great deal to be said for some outside help.

1141. It has often proved valuable in other bodies, but in Ireland there may be some particular reason against it. Was it discussed by you at all?—Yes, we did discuss the question. (*Professor Joly*).—At the time the question was discussed, there was a unanimous feeling that the elections to the Governing Body should be left with the men whose lives were bound up with the University.

DUBLIN,
Oct. 18, 1906.

Edward J. Gwynn, Esq.,
M.A., Junior
Fellow of
Trinity College, Dublin;
and Professor
Joly.

After a short adjournment,

1142. Dr. DOUGLAS HYDE.—I would like to ask you with what object you recommended that one representative of the Senate should sit on the new Board?—Well, the Senate of the University is an important body, and we thought it right that it should have a representative, to be elected from among the Fellows.

1143. I take it that the Senate does not interest itself much at present in the matters which the new Board would have to deal with—I believe it does not meet very often?—Not very often.

1144. When the Senate does meet, do many of its members turn up?—Not unless there is something of remarkable interest to come before it. When there is, I have known as many as a hundred members to attend.

1145. How is the Senate formed—what is the qualification for membership?—The Senate consists of all Graduates holding the degree of M.A., who register their names by the payment of a certain fee.

1146. I am an M.A., but I am not on the Senate?—You have to register your name, and pay a small fee, I believe £4 10s.

1147. Is it limited to people resident in Dublin?—I think not.

1148. About how many Graduates does it consist of?—I should say between 400 and 500.

1149. Dr. JACKSON.—Any man who holds certain degrees in the University is entitled to register his name as a member of the Senate?—(*Mr. Gwynn*).—Yes.

1150. On payment of a certain fee?—Yes; I am not certain whether you keep your name on the Senate by a payment once for all, or whether it is an annual payment.

1151. Under our regulations at Cambridge, you can do it in alternative ways, either by a payment once for all, or by an annual payment.—Yes, I think there is a similar regulation with us.

(*The Chairman read a passage from the second volume of the University Statutes,* page 138, as to the fees payable for registration on the Senate, either by an annual payment of £2, or by a single payment.*)

1152. Dr. DOUGLAS HYDE.—With regard to the Fellowship Examination, you suggest that the "date and scope of the examination shall be announced by the Board at least one year in advance"?—Yes.

1153. I suppose the object of that is to prevent undue grinding or cramming?—Yes; I am not sure whether a year is sufficient time, or whether it would not be better to say two years. A year may be too short a period.

1154. Then, discussing the question among yourselves, did you take into consideration the desirability or the undesirability of having set courses in the various subjects included in the examination, or that the examination should be so conducted as to test a man's general knowledge of the subjects, without having any set courses at all, so as to get rid of that intense grinding which causes such an undue amount of labour?—Well, in Classics there is no set course.

1155. But in other subjects there is?—Yes, in Philosophy we do set a course, but it does not include everything a candidate is expected to know. It is only given as a sort of fingerpost to indicate what line the examination will take.

1156. The examination in Classics includes the entire subject of the Classics, but in other subjects you

have set courses, Hebrew for instance?—Yes; I think it might probably be better not to have them.

1157. But you have not fully considered that?—No.

1158. With regard to the "Readers," we have had it from Dr. Traill that the fifteen or sixteen Junior Fellows who are Tutors, and, in fact, all the Junior Fellows, were very hard set, examining, and grinding, and instructing their pupils, that they had more than they could well do—don't you think that the "Readers" would be so hard worked that they would not have much time to devote to original research?—(*Professor Joly*).—I do not think so. Of course, on the question as to the Junior Fellows, and how hard they are worked, I am not competent to answer, but I think it would be quite competent for the "Readers" that their duties should be so distributed among them as not to overwork them. (*Mr. Gwynn*).—One of the disadvantages of the present system is that in order to make an income a man must be a Tutor.

1159. How often does a Tutor Fellow lecture?—It depends on the position he holds—the minimum is two hours a day, but most of us have to deliver three lectures a day.

1160. Practically, I believe they have to give three lectures a day?—Yes.

1161. Dr. JACKSON.—When you speak of three lectures a day, would the majority be "pass lectures," and the other a higher lecture, involving more labour?—That would depend upon circumstances; but I would remark that a "pass lecture" does not always mean a lecture involving only a small amount of preparation and labour.

1162. Dr. DOUGLAS HYDE.—When a "Professor Fellow" loses his Chair he would cease to hold his Fellowship?—Yes.

1163. But an ordinary Fellow holds his Fellowship for life?—Yes; we propose that Fellowship shall be for a period of three years, at the end of which time he may be re-elected.

1164. And if re-elected that the tenure shall be *ad vitam aut culpam*?—Yes.

1165. The ordinary Fellows and the Professor-Fellows would be in a different position?—Yes.†

1166. There is a difficulty about these Professor-Fellows. You say, "A Fellowship shall be attached to each Principal Chair. By a Principal Chair is understood one which claims from the occupant his entire time, and the income from which constitutes his sole professional income"; and further on you say, "The Chairs at present in existence, which conform to the above definition, and which are not already held by Fellows, are English Literature, Romance Languages, Anatomy, Botany, Geology, Engineering, Physiology, Chemistry, Applied Chemistry, Political Economy and Zoology"—that is eleven Chairs; but in the course of time I think various other Professorships will be quite as important as any of the eleven?—Yes; the list is not necessarily permanent. The Chief Baron was discussing whether it would not be desirable to limit the number to eleven.

1167. LORD CHIEF BARON.—I would give you perfect liberty in that respect, for the purpose of enabling you to accommodate yourselves to altered conditions.—That is my view.

1168. Dr. DOUGLAS HYDE.—For example, take the subject of Irish. It is probable that in a few years you will have a Chair of Irish Archaeology and Literature, which would be a very important subject, and ought to carry with it a Fellowship?—Certainly.

* *Chartae et Statuta Collegii Sacrosanctae et Individuae Trinitatis Reginae Elizabethae juxta Dublin.* Vol. II. (Dublin: G. Weldon, 1898).

† *Note by Witness.*—There is here an evident inconsistency. It was the intention of the framers of the scheme that all Fellows should be on the same footing in regard to retirement, but they did not sufficiently consider the status of "Professor-Fellows" who had surrendered their Professorships by reason of age, illness, or from other causes. Cf. qq. 1008 to 1026. E. J. G.

DUBLIN.

Oct. 18, 1906.

Edward J. Gwynn, Esq., M.A., Junior Fellow of Trinity College, Dublin; and Professor Joly.

It is an important subject, and would take a man's whole time. There is nothing in our proposed scheme to prevent that.

1169. In the case of a Professor-Fellow, would his income go up periodically?—(*Professor Joly*).—No; but I think it is contemplated to secure pensions to them. That should be done whether they were Fellows or not.

1170. The incomes of the ordinary Fellows increase year by year—I thought it would be the same thing with the Professor-Fellows?—No; their incomes under the new scheme would remain as at present, and they would get no extra emoluments from the fact that they were called Fellows. The monetary position of the Professor-Fellow would remain as it is, except that he would be entitled to a pension.

1171. Dr. Coffey.—I observe that in paragraph 15 of your scheme you say, "Election to Fellowships shall be (a) on the published work and credentials of the candidate, or (b) on the results of an examination, the date and scope of which shall be announced by the Board at least one year in advance"?—Yes.

1172. Of course the provision in the next paragraph as to a limit of age for candidates applies only to those who come under mode (b)?—Yes.

1173. It does not apply to candidates under section (a)?—No.

1174. What is your opinion as to the type of candidates who would come forward under section (a)—do you not think they would chiefly be men whose educational standing was already established, such as Professors in other places?—Yes; quite so.

1175. Candidates under section (b), as a rule, would be as at present, chiefly men who were proficient in Classics and Mathematics, and from the College?—Yes, for the most part, probably so.

1176. But those under section (a) would include men of exceptional ability in other subjects?—Yes.

1177. Do you not think that the institution of the "Readerships" would have the effect of inducing the men who obtained those positions to devote their attention to those two subjects of Classics and Mathematics, to the exclusion of other subjects, with the view of afterwards going on for Fellowships?—I think not. You will always find men who will devote themselves to the study of the other subjects, according to the particular bent of their minds.

1178. You think, then, that the tendency of a particular student to take up a particular subject would safeguard you from the possibility involved in the establishment of the Readerships that they might come to be regarded and sought for as preparatory to the Fellowship examination?—I think so, if the student finds that by taking a Readership he will have a prospect of getting a paid assistantcy. And the promise of that is not inconsiderable. There are a great many assistantcies in the College, a very considerable number. There is also a prospect of passing into other institutions where our honours are recognised. I don't think that the fact that the general trend of the Fellowship examinations is towards Classics and Mathematics would stop a man from pursuing the subject of Science as a Reader.

1179. Might not the value of such provision be that it would inevitably make men direct their attention to the Fellowship examinations?—I do not think they all will. They will get £150 a year whether they go up for Fellowship or not. The student can be a Reader and work in a professional school. There is nothing to stop him.

1180. Would there not be a difficulty unless Readerships were allocated to subjects once and for all?—The Readerships are given on the results of the Readership Examination. That practically means every branch of University work, Classics, Mathematics, Experimental Science, History, Literature, and other subjects. We have brilliant men in every one of these subjects occasionally.

1181. Have you considered the influence that Readerships in Science might have when it would be a case of electing a Fellow under Mode (a)? An outsider of distinction might be opposed by a young Reader in the College. How would that work?—If the election was an open one—that is, if outsiders were invited to compete, the best man would, it is to be hoped, be elected. I see no difficulty.

1182. On what plan would the Readership be awarded? On this plan would there be so many in Classical subjects, and so on?—Well, it would be partly on what was wanted at the time and partly on

the character of the men. We must use our judgment, and see whether there were three or four young men suitable. We would use our judgment on those who come out at the top, those who would be the most desirable of the year. We are not necessarily compelled to take four.

1183. You see no difficulties when taken in conjunction with the arrangement that there are to be two modes of appointment of Fellows?—I don't see any difficulties.

1184. With regard to the Faculties of the University, Science, Divinity, Law, and so on, does not the creation of the Faculty presuppose the division of the subjects which would constitute the work of that Faculty?—I don't think that has been a point of any very great difficulty. We often have men acting in two Faculties. I think it is not a material point.

1185. That is not my point. Take the case of a Professor of Botany. He may belong to two Faculties, Science and Medicine, but it is the subject, not the man, that is recognised. Is it the fact that you have not got a complete Professional system in Arts?—I don't quite understand the drift of that.

1186. Is it a fact you have not got all the subjects which ordinarily constitute the Faculty of Arts?—I think we have them all. I have heard no suggestion we had not.

1187. Take the case of Philosophy. You have a Chair of Moral Philosophy, but not the other branches of the subject?—(*Mr. Gwynn*).—The subjects are really combined. Our present Professor of Moral Philosophy lectures, I believe, mainly on Metaphysics proper.

1188. The Faculty is not organised upon the subjects but upon the organisation of the Fellows. One man may teach two or three or more subjects. Is not that the case in Trinity College at present?—They must do so.

1189. Is it desirable in connection with these reforms that the Faculty must be reorganised on subjects?—I don't quite understand the question.

1190. Is it desirable in connection with the reorganisation of Fellowships that the Professorships should also be reorganised so that there may be a complete group of Professors in the subjects of Philosophy, Divinity, Classics, Mathematics, Science, and so on?—Instead of such a single system, we have a double system, the Tutorial working side by side with the Professorial. Our feeling was that we get better results under a double system.

1191. We could be greatly helped, I think, if we had a statement on the tutorial system?—Mr. Kelleher, who is concerned in that system officially, is qualified to explain that to the Commission.

1192. I should like to have that. It would assist me very much to have that, a statement of the exact system of instruction covered by the body of tutors at present?—Do you wish me to make a statement now?

1193. Oh, no; I think it would be better to have a statement sent in. I wish to have a written statement?—It will take some time to prepare it.*

1194. It will do any time during the sittings of the Commission?—Perhaps you would explain what information you want.

1195. I want to see how the courses which comprise the instruction in the Faculty of Arts are conducted. Of course there are other subjects, but I take the subjects of Classics, Mathematics, and other elements of the Faculty of Arts—how they are taught. By whom they are taught and lectured upon, and their relation to the B.A. degree?—In the Faculty of Arts?

1196. They might cover all the ground?—You require a tabulated statement of the teaching in Arts?—Yes.

1197. I mean an account of the way in which the tutorial system affects the whole collegiate system of instruction. You may adopt whatever would be the most simple manner of doing that.

1198. CHAIRMAN.—Do you wish to add anything, Mr. Gwynn?—May I return to the subject of the election of Fellows? I think the provisions made in our Statement really cover the difficulties you have suggested. You will find that method (a), mentioned in Section 15, is not confined to Fellows elected to fill Chairs. The intention is that the annual election should, as a general rule, be made on the result of an examination (method (b)); but that the Board should have power to substitute method (a) at their discretion. Opinions differ as to whether we should rely

Note by Secretary.—Mr. Gwynn subsequently furnished the Statement on this subject printed on page 352 of this Appendix.

on examinations or published work; and in view of that difference of opinion in the University, we thought it best to arrange that elections to Fellowship should be made partly by one method, partly by the other.

1199. Dr. COFFEY.—The whole question is the relation of the Readership system in relation to the Fellowship?—What I have just said bears on that. You asked whether a Reader, being a young man, would not be under a great disadvantage as compared with a candidate who held a Professorship in another University. But such a person would compete for a Fellowship only if it were attached to a Chair. In other elections under the (a) plan, you must consider what would be the value of a Fellowship to one who entered at the bottom of the scale.

1200. Does not that refer to the question of the financial system of the Fellowships?—I cannot discuss the point completely without some more definite information on the financial question.

1201. Dr. JACKSON.—I want to be quite clear. I understood that there was to be an election, an examination in the ordinary course; but that a man would be at liberty to rise to the position also by dissertation work?—It is expressly provided that the election should sometimes depend on published work.

1202. Don't you think it might be desirable to develop this examination, and to recognise dissertation work as an exceedingly useful supplement to the examination?—Personally, I agree.

1203. I am glad to find that you agree with me on the value of that extension.—I suggested that it could be done without an express regulation, but simply by altering the character of the examinations.

1204. Mr. KELLEHER.—I have one question on the schemes a and b. I suppose the methods in a would be expected to give us as a Fellow a man who had been educated practically anywhere. b would be to utilise our own men?—I think roughly that would probably be the effect. The a method is to get the same sort of people as you get at present by election to the Chairs. Our Chairs are filled not only by Trinity men but by men from other institutions.

1205. In the a scheme there is nothing stated as to the qualification of the men who had graduated here?—At present a Fellow could be a graduate of Oxford or Cambridge instead of Dublin. We do not confine the Fellowships to graduates of Dublin. As a matter of fact, we have very few graduates of Oxford or Cambridge. Very few have ever stood for our Fellowship examinations.

1206. What was the reason, do you suppose, why they did not come?—I suppose the inducements are not sufficient.

1207. I think it ought to be your desire as much as possible to keep your Fellowships amongst your own men?—There is no provision here, for or against that.

Dr. JACKSON.—Is it your desire, may I ask?

1208. Mr. KELLEHER.—I wish to know if it is our desire?—We are not committed on that point.

1209. That is, both b and a are open?—There is nothing in our scheme here to prevent any future action on your lines by allowing candidates who are graduates of other Universities than Dublin to stand for Fellowships.

The CHAIRMAN.—We will now take the other gentlemen.

Mr. Gwynn withdrew.

W. E. THRIFT, Esq., M.A., F.T.C.D., Erasmus Smith's Professor of Natural and Experimental Philosophy, and Registrar of Engineering School; H. H. DIXON, Esq., D.Sc., Professor of Botany, and Director of the Botanical Gardens; and E. T. WHITTAKER, Esq., M.A., Hon. Sc.D., F.R.S., Royal Astronomer of Ireland, and Andrews Professor of Astronomy, called in and examined, with Professor JOLY; representing the signatories to Joint Statement VI., printed at page 31 of the Appendix to First Report (Cd. 3176), 1906.

1210. The CHAIRMAN.—You have dealt in your principal statement* with research work, and the endowment of research and post graduate study. We find there a good many questions of detail?—(Professor Joly.)—We thought it best to deal with these questions of detail in that form.

1211. Although we wish to get all the information possible to guide us in propounding a scheme to Parliament, it is obvious we cannot go into all the details of the schemes we have to adopt or consider. They must be worked out through the Governing Body, or by an Executive Commission to be afterwards appointed. Whilst, therefore, we invite you to say anything that you think will be useful, we ask you to keep as closely as possible to the general lines, and not give us a number of details?—(Professor Joly.)—I think I quite understand that, and we will endeavour to save your time. I think it might be profitable to say something about the present financial position of scientific research in the University. I do not know whether it would meet your wishes that a general statement might be made.

1212. It is obvious that we cannot adjust the financial arrangements of the University?—(Professor Joly.)—My reason for suggesting this is that there has been an important scientific movement which has recently taken place in the University, and we would like to lay before the Commission some idea of what we are doing and as to how we stand. It is only within the last few years that the idea of students carrying out research work has become recognised in the College. Practical work in the Physical Laboratory was initiated by the late Professor Fitzgerald. We were greatly hampered for want of space, and we went before the public, and we also asked our graduates to help us. The Chancellor of the University took the matter up, as referred to here in this statement, and we ultimately made a fair amount of progress. At the present moment we have succeeded in collecting a considerable amount of money, and have built the Physical Laboratory, which Mr. Thrift has under his control. A School of Botany, which will be under the control of Professor Dixon, will also be built.

1213. That is in addition to the Botanical Gardens?—It will be here in the College Park. It is among the buildings which we owe to Lord Iveagh's generosity. He gave us a large sum of money for building, provided that the public subscribed a sum for up-keep and maintenance. The Committee began its labours

upon the scheme a number of years ago, and it reported at first that what would be required was £70,000 as capital expenditure for buildings and £5,000 a year for the up-keep. The Board considered that the estimate was excessive and hopeless, and the matter fell into abeyance, and nothing was done until the Chancellor of the University came forward in 1901 and offered a handsome subscription for the support of the movement. Accordingly, a second report was drawn up. In that we adopted a more modest attitude, and asked for £34,000 for buildings, and £2,730 for up-keep. Then, afterwards, in 1903, Lord Iveagh undertook the whole of the cost of the buildings if we could get the £2,730 as yearly up-keep, that is to say, the equivalent capital sum. We accordingly started a fund which was largely supported within the College, and we were greatly helped by members of the Board and Fellows and Professors, and that movement has now taken successful shape in giving us two fine laboratories. We still want the difference between the fund which we have collected and what we asked for. I find there is still required in all a capital of just £17,000; and an income just about £2,000. I think it is well to have that statement on record in connection with this Commission. If you wish, sir, you will please accept it. It does not appear to me to present financial arrangements that could be effected from the College funds. I was unacquainted with the finances of the College until I saw this document (referring to the Appendix to the First Report of the Commission), so that my opinion on the matter would not be of much value.

1214. I suppose this question of accommodation is really a question of finances, a question of money?—Of course, it is all finance.

1215. And the same applies to endowment and research?—The same may be said in that case.

1216. What relation has the question of the Fellowship to the part of our enquiry referring to the endowment of research?—It has nothing whatever to do with endowment of research. They are appointed by examination.

1217. But I understand that those who have been examined and elected are allowed to devote themselves to research. I think in some cases we have been told that where Fellows have exhibited a desire for research work, either literary or scientific, they are released from the duties that would otherwise fall upon

DUBLIN.

Oct. 18, 1906.

W. E. Thrift,
Esq., M.A.,
F.T.C.D.;
H. Dixon,
Esq., D.Sc.
E. T. Whitaker,
Esq.,
M.A., Sc.D.,
F.R.S.; and
Professor Joly.

them?—Oh, yes, in the case of some distinguished men, such as Professor Fitzgerald. He was a Fellow.

1218. Was he released from the ordinary tutorial duties?—Oh, yes.

1219. The duties of the Chair were almost as great an impediment as the tutorial duties?—We are all very much in want of assistance. In my own case, I have never had an assistant to help me. I have had to try and do research work as well as I could along with my other duties.

1220. There is really, roughly speaking, no provision for post graduate research?—There is no provision for post graduate research except one prize, the Fitzgerald Memorial Scholarship. Of course, I speak roughly.

1221. Do you provide that with the present funds?—It was instituted by a fund collected after the death of Professor Fitzgerald. (*Prof. Thrift*).—Perhaps I may add, with reference to the question of the treatment of Fellows, that I believe occasions have arisen when Fellows desiring to carry on researches have received special treatment. For instance, I think that Professor Bury was at one time relieved of his tutorial work in order that he might pursue his studies in history.

1222. CHAIRMAN.—But that was an exceptional case. There is no settled provision in the constitution of the University?—It was exceptional.

1223. Mr. Thrift, would you like to make a statement?—(*Prof. Thrift*).—I would like to make several remarks, but I don't want to interrupt what Dr. Joly is saying. (*Prof. Joly*).—I have finished. (*Prof. Thrift*).—There is one remark on what you were just now saying about the Fellowship question, and its bearing upon research. There is a close connection between the mode of election to Fellowship and this question. Fellowship is now awarded entirely by examination, and in this examination, as it at present exists, Experimental Physics is of relatively small importance, practical work and research work not counting at all. It is not to be expected that Fellows thus elected will often have either the training for research or the interest in it that comes from actual work. Without interest in it or training for it, the Fellows are not likely after their election to undertake physical research. The interests of Mathematical Fellows are likely to be centred in Mathematics.

1224. That points to the widening of the basis on which Fellows are elected?—I think that if Fellows were elected occasionally with scientific interests and training, and if only a moderate amount of teaching work were required of them, they would be most likely to carry on researches—their interest in the work would lead them to carry on research work after they had been elected as Fellows.

1225. No doubt that is the essence of the scheme laid before us by the Fellows?—That is the scheme of which Dr. Joly has been speaking. (*Prof. Joly*).—Mr. Thrift was one of those concerned in drawing it up.

1226. If that scheme were carried into effect it would realise your wishes?—(*Prof. Thrift*).—I think it would; and that it would have a very valuable effect upon the whole of the organization. The assistance they would give would permit the present staff also to devote such time to original work as would probably lead to results of value.

1227. It would induce men to come up who might be inclined to devote their lives to research?—There is a point I wish to make with respect to the endowment of research. I think the success of a school of research is very largely dependent upon two things. If you want men to stay in the University for post-graduate study, you must do one of two things. You must either endow the school sufficiently for it to be able to offer valuable prizes to induce men to stay, or you must be able to give men the hope of securing openings for life by the execution of successful work in the school. In Ireland there are very few openings of the kind, and it is not likely that Irishmen will secure many appointments in England, where there is so much competition.

1228. I think you secure everything?—Well, yes, they do secure some; but it is not to be expected that they should secure them as a matter of course. In this connection I wish to refer to page 119 of the Appendix to First Report, viz., the Statement XXXIV., signed by Professor Magennis and Mr. Kettle, on behalf of the Catholic Undergraduates Association. I feel compelled to say that I do not consider that the policy of the Department in Ireland has been one cal-

culated to encourage our school. These signatories make a statement of the case which calls for remark. They say: "Though it has long been the settled policy of Dublin Castle (with which Dublin University has always been closely allied) in the distribution of its patronage and the filling of public appointments in Ireland to favour the graduates of Dublin University, yet when the demand arose for teachers, inspectors, and instructors in Physics, Chemistry, and Applied Science the Department was obliged to import its 'experts' from England and Scotland." I should like to say upon this that as a matter of fact, when the demand for these inspectors arose and such men were wanted, it only came to our notice casually. Messrs. Jackson and Cotter, my assistants, two highly qualified men (Sir Arthur Rücker probably knows Mr. Cotter's edition of "Preston's Heat"), both applied; they sent in applications, and tried to get these inspectorships, and neither of them succeeded. I think it is necessary to point that out in this connection. It should not be assumed because they were not appointed that they did not try to get the positions, or that we were not able to produce men who might have been put into these positions.

1229. They failed. Was it an examination?—No; there was no examination. It was a question of selection—I suppose of influence. We have had some men who have been appointed inspectors and instructors. We have had some men who have been appointed to certain positions under the Department, as inspectors, instructors, or otherwise, but we could have supplied more, and we were very seldom asked for men; indeed I only remember one such case, an emergency case, when we were asked to send a man to teach Physics in a Technical School at a couple of days' notice. On the general question of research, I should like to say that at present researches, of a more or less elementary kind, are carried on by candidates for Moderatorship and by the Fitzgerald Scholar under the guidance of the Professor and staff. Indeed, in this connection I may mention, to show the inadequacy of our endowment for research, that our only Research Scholarship in Experimental Physics is so inadequate that it has hitherto been only once accepted by the man to whom it was offered.

1230. Sir ARTHUR RÜCKER.—How much do you get in that way in the year?—I think that this year it is £50, and it was only £35 before that.

1231. LORD CHIEF BARON.—You cannot expect much for that?—No; but there was nothing of the kind before it was founded. I should like also to refer to a remark of the Chairman's about the work falling on the head of the school being often more severe than ordinary tutorial work. A very great amount of routine work falls on the present staff of the laboratory. I think we are in a somewhat different position from other University laboratories in this respect. The students of the various professional schools come to us for their instruction in physics, medical students come for lectures and practical work in physics, engineering students come for lectures and practical work in physics, the theory of the steam engine and electrical engineering, in addition, of course, to the students in arts of the four years' course in arts.

1232. Sir ARTHUR RÜCKER.—Can you give us some details on that point? Does that apply to electrical engineering?—The whole of the electrical engineering teaching and work is not carried on in the Physical Laboratory. We have external lecturers in addition. I give the lectures on the theory of electricity in this connection, and the corresponding practical work in electricity is looked after by my assistants and myself. An electrical engineer, Mr. Tatlow, is our lecturer on the practice of electrical engineering, and the students do further practical work with him. Mr. Sheardown, the electrical engineer of the D.U. Tramways Company, also gives lectures on electrical traction. Then I should like to say that I think there is a great difference between the position of my assistants and that of similar men in England. Their pay is small, and their routine work heavy. Assistants in England often accept such positions for a time at a salary of a similar kind, for the sake of getting a laboratory in which they may work in their spare time. They would have a good deal of spare time, and they would hope by successful work to secure good appointments comparatively soon. Similarly, I think, my assistants should either have less work or more pay, if research by them is to be encouraged. The work of routine thrown upon them at present makes it impossible to expect it now from them, or even from myself. Some

little work is done, but connected work is really out of the question. If they were paid more, their vacations might be free. Now the vacations are taken up with work to increase their incomes; with grinding, for instance, which is a deplorable thing. Their incomes should be larger, so that this grinding at least might be made unnecessary. We should reduce the work of routine and give them spare time to attempt original work. These are a few of the things which I think would lead to more original work. One other point. Research is also possible in engineering, mechanical and electrical engineering; but it can only be done properly where there is proper plant and equipment. Further plant and, perhaps, additional accommodation would be required. This work of research would be done mainly by the lecturers themselves. They might get assistance from advanced students and graduates but in the main it would be in charge of the lecturers. I think an essential condition of all research work, of all extended research, is the establishment of a research fund in the charge of a committee of experts to whom application might be made for the money required for the carrying out of any special branch or subject of research for which money is required. (*Prof. Joly.*)—That is in the Report—the necessity of finding funds.

1233. CHAIRMAN.—It is a difficulty we must grapple with?—(*Prof. Thrift.*)—With reference to the encouragement of research the institution of such a thing as a readership was probably brought before your notice.

1234. That was before us. You are agreeable to that scheme. Mr. Dixon, you are Professor of Botany in Trinity College, and you are also, I understand, Director of the Botanical Gardens. There has been a proposal to separate the Botanical Gardens from the University because they involve considerable outlay. A suggestion has been made that that would be desirable. Do you approve of that suggestion?—(*Mr. Dixon.*)—I would be opposed to it. My own opinion is that the gardens are one of the best things we have. The Botanical Gardens are most useful for the purposes of research. There is no other place in fact where we can do much of the research work of our Department.

1235. Research is carried on in these Gardens?—Yes, and the material is obtained for the work carried on here in our present small laboratory, and if the change was made it would present a great obstacle to the development of the school.

1236. Have you lectures in connection with the Gardens?—Yes, we take out classes there. In the gardens we prepare and obtain a supply of material both for research and teaching. We usually take out a class of fair size, and in order to keep the attention of the students we have several demonstrators to assist. Suppose you had a class of over twenty, they would not all be able to be near enough to the lecturer or demonstrator to follow him closely, and their attention would be distracted. I am afraid I must say that the work in the laboratory depends very much on the work in the gardens, and we are trying to extend the work in the College.

1237. There is a proposal to use some part of the park as Botanical gardens?—No; the building is to be in the park.

1238. Where are the gardens; are they the Glasnevin Gardens?—Oh, no, our Botanical Gardens are at Ballsbridge. The others are the Botanical Gardens, and are at Glasnevin. Ours are very small—about six acres. With regard to the work of research, very much may be expected from the new Botanical Laboratory. I was sent here by the members of the Biological staff to represent their views on research work. They feel the want of time, which, as Mr. Thrift says, hampers us in every department. The number of the staff is small, and the amount of routine duty is considerable; also we suffer from the want of accommodation and of equipment. These bring about a loss of energy and time which, under better conditions, might be spent on research. The present equipment of the Botanical Department is of a most meagre description. Then the rooms are too small. No school is complete without special apparatus for research. We often buy the apparatus for ourselves, but most of the apparatus the students require to use in class. There is another thing which hampers research and especially limits research in Biology. That is the general spirit of the place. That is alluded to in our Statement. I think the Fellowship system is entirely responsible for the

limited sympathy which research gets in the University.

1239. The scheme contemplates a wider basis for Fellowship, and you would hope that the spirit would be more favourable under it?—I wish to point out that my colleagues who have drawn up this research Report, signed the scheme of reform (Document V.*) under the conviction that it would greatly improve the position of research. Research involves better teaching, and so far as research influences teaching, it would have a good effect on our College as a teaching institution. It would make the University and the College more useful to the country. Of course, in reference to the proposed change in the mode of election to the Fellowship, it will secure the election of persons of distinction in investigation to the Governing Body, and if it does this it will greatly improve the spirit of the place. All these changes, especially the readerships scheme, would enable various persons to pursue independent research, which of course is a most stimulating thing in the school. We think there ought to be some endowment in addition to these readerships. Readerships will act advantageously as endowments to students carrying on independent research, and they will also give assistance to the staff in investigation and relieve them of some of the routine work. As to the further endowments for research scholarships and prizes these would relieve enthusiastic and able students from the necessity of coaching and enable them to turn their energies to the more fruitful field of research. While thus holding that these suggested reforms would encourage research the Heads of the Biological Departments believe that the introduction of representatives of an external body on the Board, as proposed in Document III.,† and the institution of religious supervision of scientific teaching and speculation would be disastrous innovations so far as research is concerned, and would tend to stifle the spirit of independent inquiry. There is also a point some of us feel very strongly upon, and that is in the higher degrees and the honour degrees, research should be an essential qualification. Formal examination should be in a more subordinate position.

1240. You approve of the suggestion that the examination should be supplemented by some dissertation or by some published or unpublished work?—I think it would be a great help in deciding upon the qualifications for Higher or Honour Degrees. There might also be some system by which the Heads of Departments should present to the Board of Faculties an account of the work carried out in each Department during the year with special reference to research. This would lead to the Governing Body taking more interest in the work carried out by the Departments.

1241. CHAIRMAN (*to Mr. Whittaker.*)—You are Professor of Astronomy in Trinity College and Astronomer Royal for Ireland, and as such you are engaged in the Observatory. In your case there is a similar proposal to separate you from the University?—(*Mr. Whittaker.*)—At present the connection with the College consists chiefly in the application of College funds to the maintenance of the Observatory; of course, there is the Professorship of Astronomy, and it involves lectures, but these lectures are open to everyone without charge, and the College has scarcely any privilege of an exclusive character in connection with the Astronomer Royal or the Observatory. To a certain extent it is in the position of a Trustee or administrator; but it supplies a contribution from the College funds to make up the deficiency in the income of Provost Andrews' bequest.

1242. That is the point, to what extent does the College help you out of its funds?—The original bequest was £3,000 for building and £250 a year for maintenance. I do not know what the bequest now produces; that was 120 years ago, when the Chair was established by the will of Provost Andrews. So far as I can understand from the published statement in this book, the bequest is not giving at present more than £250 a year, and the rest is made up by the College.

1243. How much is that for the College?—The total cost of the Observatory is about £940, or, roughly speaking, about £1,000 a year. Not much more than a quarter comes from the bequest, and the remainder comes from the College.

1244. Do you do examination work?—To a small extent.

DUBLIN.

Esq., M.A.,
F.R.C.D.;
H. Dixon,
Esq., D.Sc.;
E. T. Whittaker, Esq.,
M.A., Sc.D.,
F.R.S.; and
Professor Joly.

* Appendix to First Report (Cd. 3176), page 27.

† Ibidem, page 23.

DUBLIN:

Oct. 18, 1906.

W. E. Thrift,
Esq., M.A.,
F.T.O.D.;
H. Dixon,
Esq., D.Sc.;
E. T. Whittaker,
Esq.,
M.A., Sc.D.,
F.R.S., and
Professor Joly.

1245. Astronomy is one of the subjects in which examinations are held?—Yes, but the examinations in which I take part are for special prizes. Of course, it is not surprising that the suggestion should be made that the Observatory should become purely a Government institution; perhaps some of the facts brought forward in the memorandum point to that direction. The research work in the Observatory is really National work. It is often undertaken at the request of the Directors of the official "Nautical Almanac," and other Government officials.

1246. Is any payment made for that?—No payment is made. Of course, it must not be said that the connection between the College and the Observatory is not a good thing for both. It brings me into contact with the brilliant young men in the College, and it enables me to influence their studies to a certain extent.

1247. I suppose your assistants are drawn from the College?—The present assistant is not, but some of his predecessors were.

1248. Are the lectures largely attended?—I was only appointed this year, and entered upon my duties in June, and I have not had a chance to lecture yet. The lectures of my predecessor were, I believe, well attended.

1249. Mr. KELLEHER.—He gave ordinary tutorial lectures in Hilary Term?—There are Professorial lectures in Hilary Term.

1250. CHAIRMAN.—Would you like to touch upon the general subject as the other three gentlemen have done?—I am quite in agreement with them. If you wish to encourage research you must have a fund for equipment and also for upkeep. I agree also with the suggestions as to the Fellowships and the Readerships for young men, for some reward of research is absolutely necessary. I don't know whether you would wish to question me in regard to the question of the grant to Ireland as compared with Scotland. Do you require any details about that?

1251. LORD CHIEF BARON.—I think it would be as well. We are not treated as well as they are in Scotland?—It is certainly inequitable.

1252. CHAIRMAN.—Another Irish grievance?—The Astronomer Royal of Scotland receives a stipend from the Government as Astronomer Royal, and also from the University of Edinburgh. In Ireland there is only a stipend as Professor of the University. In Scotland the stipend is £400 a year from the University and £400 a year from the Government. The Government also provides £300 a year for an assistant. There are also Government payments for the support of the Observatory instruments, chemicals, &c., about £860, making up a total from the Government of £1,560 a year, while only £400 comes from the University.

1253. In your case there is nothing by the Government?—The University pays, roughly speaking, £1,000 a year, of which only one-fourth comes from the bequest, and the rest from the general funds. The Government give nothing.

1254. Dr. JACKSON.—It all comes from the funds of the University?—All except one-fourth. The £1,000 a year represents the whole expenses of the Observatory and the Professorship.

1255. LORD CHIEF BARON.—We take it that the work done is similar to that done by the Astronomer Royal in Scotland?—Quite the same.

1256. If Ireland was treated as well as Scotland, you would get a Government grant of £2,000?—We should get £1,560.

1257. Sir ARTHUR RÜCKER.—Is it your view, Mr. Thrift, that the University should develop the studies in engineering by some arrangement with the Department of Agriculture and Technical Education, who are building a new laboratory? Could there be an arrangement by which you could recognise that effort to develop engineering work?—(Prof. Thrift):—It should be developed here. We find that it is advantageous to the students to take the Arts course as well as the Engineering degree; many of the appointments our men get really depend upon this. Another difficulty would be the difference of place. Here our students go practically from one room to another. It would be different if they had even to go a mile away.

1258. The two courses run concurrently?—Yes; students go directly from an Arts lecture to an Engineering lecture. It would be impossible to fit in the courses as we do if the places where the lectures were

given were separated. Then, I think, such a proposal would lead to students drifting away from our civil engineering course and turning to mechanical engineering.

1259. Would you give a Doctorate to men from other Universities?—I think the men would have to take the *ad eundem* degree. We give a Doctorate of Science for a thesis or for original work in science, but I think only to our own graduates or those who have taken the *ad eundem* B.A. Degree.

1260. Have you had applications from London and Durham and so on?—I cannot say. We may have had applications.

1261. Dr. JACKSON.—Mr. Whittaker, I think you agree that the dissertations are the best way of selecting promising young men?—(Mr. Whittaker.)—Yes.

1262. In the election of Fellows, would you say that the work should be published, or should unpublished work, not yet ready for the Press, be admitted? If it were incomplete, might it be a satisfactory test of a man's promise and originality?—(Mr. Whittaker.)—In the Departments I am acquainted with, I should say it would. (Prof. Thrift.)—In connection with what was said about men coming to us to take post-graduate courses with a view to a Science degree, I should like to add that we have occasionally men taking post-graduate courses, even though they are not doing it for the sake of a degree from us. For instance, I believe last year a student from America was working with Dr. Young at a special subject. (Mr. Whittaker.)—And we have one now at the Observatory. I think we ought to induce men to come here and engage in research in the prospect of being rewarded with a degree. (Professor Joly.)—I think that occurs in almost every department occasionally. Last year we had three men, and it has been increasing for the last two or three years. (Mr. Dixon.)—In the school of Anatomy and Biology the same thing occurs.

1263. Mr. BUTCHER.—On the point mentioned by Sir Arthur Rücker about the Royal College of Science, would it not be possible to supplement the deficiency as regards laboratories by some method of co-ordination between that place and Trinity College?—I am afraid it would be very difficult. We could not very well increase the work of our students. They are generally at lectures from 9 in the morning to 3 or 4 in the afternoon. We could not put additional work upon them.

1264. I do not propose to put additional work upon them, but to enlarge their opportunities of using an apparatus, which we know is expensive and not easily obtained. Could there not be some method of interchanging these facilities, to give them more option, more choice?—I think it has been considered, and that more option would not be good with regard to the course leading up to the B.A.I. degree. Our course, broadly speaking, consists of subjects which every engineer will require, and a civil engineer must take the full course. We allow a little choice in the third year to those who are specially aiming at electrical engineering, allowing them to substitute some electrical work for a special portion of the civil engineer's work; but if the student wishes for a diploma in electrical engineering, he must take an additional fourth year's course. Such option, as you suggest, would apply, I think, to such post-graduate work as this, and some extension in this respect might be possible.

1265. This opens out again the question of the endowment of research?—I think it does. I think the general engineer's training will be fairly well provided for, now that we have this new building, except as regards geology. There was a lamentable deficiency before it was built.

1266. Mr. BUTCHER.—Are there no other branches of Applied Science in which the equipment is deficient here?—We have only a small laboratory for Mechanical Engineering. Engineering students have to spend some time there, and they learn there something about tools and the testing of materials. But if they are going into special subjects more deeply, they should take the general course first and devote themselves to the special subjects later. And I agree that, if they were doing that, as regards special facilities for the special subjects, such co-ordination might be possible.

1267. Sir ARTHUR RÜCKER.—In drawing up the course in Engineering, is the advice of the heads of the profession taken at all?—I am not of very long standing in my position; I have only been five years in the post, and the course has been modified since I came to a very considerable extent; but the main

course is as it was then. Dr. Joly might be able to tell you better than I. (*Prof. Joly*).—I am myself a civil engineer. I passed through the school a very considerable time ago, and since my time there have been considerable changes made, not, I think, on outside advice. But the fact that we have turned out so many distinguished engineers is evidence that our course is a good one. Mr. Bindon Stoney and Mr. Maurice Fitzmaurice, of London, who occupies one of the most important posts in the United Kingdom, for instance. Our course differs largely from what it is in Cambridge. It is not connected directly with the Mechanical Engineering, as Cambridge is. It is Civil Engineering, with a certain small mixture of Mechanical engineering.

1268. It is commonly said that a Professor of Engineering loses touch with the realities of his profession. Is that your experience?—(*Professor Thrift*).—I often hear from men who have gone abroad, and been most successful at their profession, and I do not think it is so in our case. For instance, last year we sent two men to the Soudan, and we since had excellent reports about them; and they wrote themselves saying how useful they found what they had learned in the school.

1269. Do not suppose for a moment that I was thinking of casting any reflection on the teaching, which, I am sure, is excellent; but, on the general principle, do you think it advisable that the men who are the heads of the engineering profession should be brought into organic touch with the Professors of the University, as happens in the case of the Medical School?—Yes, I think that an excellent idea.

1270. That, in addition to those that are put on the Faculties, you should bring in distinguished engineers to give excellent advice?—I think that would be an important modification. Their advice on the course would be of great value.

1271. You would not object?—Oh, no. I give my own opinion. (*Professor Joly*).—I do not think that any of us would object. (*Professor Thrift*).—I think it is extremely probable that Mr. Bindon Stoney was consulted in the drawing up of the course—that both the Stoneys were.

1272. I merely wanted to know what plans are in your mind to keep up the excellence which has been already attained?—May I add one thing. I don't know whether you have the details as to this endowment that is to be given in connection with the new buildings, the Physical Department and the Botanical Department. As to the Physical Department, these do not at all provide for the endowment of research and the obtaining of additional teaching assistance. They are entirely earmarked for purchase of materials, the payment of artisans, and power, and so on.

1273. CHAIRMAN.—Equipment and maintenance?—Yes. One other point. I think that in the consideration of this matter we have to remember that in Ireland, as a whole, interest in research is of comparatively recent growth. Fitzgerald was crying out about it for a long time before he could

make any impression. (*Professor Joly*).—There is a matter which I think I should draw the attention of the Commissioners to. In that Memorandum, No. 34, page 119, the statement is made that Trinity College has done nothing to establish a School of Agriculture. We have actually established one. It has only been a year established, but we have already a Professor of Agriculture and a School of Agriculture.

1274. Dr. COFFEY.—Is it not rather late in the day to establish that now, considering that you have been deriving so large an income from Irish land for hundreds of years?—I think it should have been done before. (*Professor Thrift*).—It has been in the air for ten years.

1275. Mr. BUTCHER.—Under what faculty would that come?—(*Professor Joly*).—I think under the Faculty of Science.

1276. CHAIRMAN.—And the Professor of Applied Chemistry gives lectures on Agricultural Chemistry?—(*Professor Thrift*).—Yes. (*Professor Joly*).—As to the Botanical Gardens, may I offer a remark. I have some claim to speak, because I was associated with Professor Dixon in research in Botany some years ago. I think it would be a calamity if our gardens were taken from us. They were of the greatest value at that time, and we could not have got on without them. And in Bonn the greatest exponent of Botany, Professor Strasburger, has a fine garden maintained for his use, and elsewhere in Germany their value is fully appreciated, as well as in Oxford and Cambridge. It would be a great misfortune if we lost them. (*Mr. Dixon*).—I think it would be disastrous to cut off one of our limbs when we have very few to lose. It would curtail our Botanical research instead of making it more effective than at present.

CHAIRMAN.—I mentioned it because it has been brought up by a very eminent person, and I thought it was only fair to you to hear what you had to say upon it.

The Witnesses withdrew.

(Note subsequently submitted by Professor Henry H. Dixon in supplement to his evidence.)

BOTANIC GARDENS.

When asked how I regarded the proposal that the Botanic Gardens should be separated from Trinity College, I pointed out that their loss would be most injurious to the teaching of Botanical Science in Trinity College and would cripple the School of Botany so far as research is concerned. In this connection I think the Commissioners should know that while the average annual cost of the Gardens for the last four years was about £1,090, recent arrangements will lead to a reduction of this expense by about £300 per annum.

HENRY H. DIXON.

October 19th, 1906.

The Commission adjourned until the following morning.

Professor Joly.

FOURTH DAY.

FRIDAY, OCTOBER 19TH, 1906,

AT 10.30 O'CLOCK A.M.,

At Trinity College, Dublin.

Present:—The Right Hon. Sir EDWARD FRY, P.C., D.C.L., LL.D., F.R.S., F.B.A. (Chairman); The Right Hon. C. PALLES, P.C., LL.D., Lord Chief Baron of the Exchequer in Ireland; Sir THOMAS RALEIGH, M.A., D.C.L., K.C.S.I.; Sir ARTHUR RÜCKER, M.A., D.S.C., LL.D., F.R.S.; HENRY JACKSON, Esq., D.LITT., LL.D.; S. H. BUTCHER, Esq., M.A., LL.D., D.LITT., M.P.; DOUGLAS HYDE, Esq., LL.D.; DENIS J. COFFEY, Esq., M.A., M.B., F.R.U.I.; S. B. KELLEHER, Esq., M.A., F.T.C.D.;

and J. D. DALY, Esq., M.A., Secretary.

Rev. JOHN MACDERMOTT, M.A., D.D., representative of the Higher Education Committee of the General Assembly of the Presbyterian Church in Ireland, called in and examined.

DUBLIN.
Oct. 19, 1906.
Rev. John
MacDermott,
M.A., D.D.

1277. CHAIRMAN.—You have come before us to-day, I think, as the representative of the Committee on higher education of the General Assembly of the Presbyterian Church in Ireland?—Yes.

1278. You are yourself, I believe, a Doctor of Divinity?—Yes.

1279. And you are a Convener of that Committee?—Yes.

1280. Do you wish to address any general observations to us upon the general question raised by your statement? Your statement objects to the existence of the Divinity School in Trinity College, and to the Protestant Episcopal services in the Chapel, I think?—Quite so. I have one or two memoranda here, which, if you would be good enough to allow me, I would like to read.

1281. We shall be glad to hear you?—In the first place, with regard to the Divinity School, and in the second place, in regard to the other modes of settling University education in this country, if Trinity College is not what we call nationalized.

1282. Our authority does not extend to the consideration in detail of any other scheme. We are only interested in it to this extent, that we might say, if we thought fit, that we considered some one scheme better than dealing with Trinity College, but we have no authority to go into any other solution than one with regard to Trinity College or the University of Dublin?—Perhaps you would be good enough to hear the first page or so, and then, if you think it is not within your purview, there can be nothing more said about it.

1283. Certainly?—Then, I am anxious to submit a few of the chief resolutions that have been passed by the General Assembly from time to time on this subject. I thought that there was, perhaps, a misunderstanding as to this statement's representing only a portion of the Church, or only the deliverances of a year or two, and I had printed yesterday in a rough way, the leading resolutions, they would not occupy a very long time.

1284. Perhaps in the first place you will read the statement you have prepared on the subject of the Divinity School?—The reason why Presbyterians and others criticise and oppose the presence of a Divinity School in Dublin University is, that while the University proclaims its openness to students of all denominations and invites and prepares for all in quite a liberal way, here within the University and in close connection with it is the school which is nevertheless in vital union with the Protestant Episcopal Church, and therefore, sectarian. It is, as it were, a fortified stronghold of denominationalism within un-denominational territory. The truth of this statement may be proved from the rule in the Trinity Calendar that no student can gain the testimonium of the Divinity School unless he is in the communion of the Protestant Episcopal Church, and indeed, there is no other training institution for the clergy of that Church in Ireland except this Divinity School

And the theological books published by the professors and lecturers of the School are frankly Anglican and occasionally controversial. Accordingly, the late Dr. Salmon, himself a shining light of the School and at the same time Provost and Head of the Governing Body of the whole College, must have been wide of the mark when he said that the only pretext for denying the complete openness of Trinity College is that "We have a chapel and that we allow theological students the use of class-rooms." The contention that Trinity College cannot afford to lose its Divinity students is a serious matter, but outsiders may, without offence, express an opinion. Nobody will deny that the Divinity School ought to pass under the control of the Episcopal Synod—that is, if it passes at all from the University—fully and unreservedly it ought to pass, but the disruption that is supposed likely to ensue must be considered fully. Divinity is, on the whole, a post graduate study. Divinity students will take their Arts Course as before in Trinity, and for three or four years will enjoy all the association with their comrades in the College which they were accustomed to enjoy. The dislocation so far is slight. It is true that the new Theological College would be outside the walls of Trinity, but when students begin to attend the new College they have been in the University for three or four years and have probably acquired all the touch they need (many of them have not been resident at all in the strict sense). And, as regards societies and academical events generally, the extra-mural world is never far away. As to financial arrangements, Mr. Gladstone and Lord Belmore gave much study to the subject and their ideas are still available. It would seem right that moneys gifted to the Divinity School in past days should go with the School. If Trinity has a faculty the less, she has also the less expense. But, at any rate, there is no insuperable difficulty apparent. As to the necessary association of theology with other groups of studies in a well-equipped university, frankly we do not accept it for a moment. It suited the mediæval mind that it should be so, and to-day, as in the mediæval period, it would be a vastly convenient custom. But it simply cannot be as it used to be. The Mediæval Church was one, and filled many offices, not only ecclesiastical, but lay. She was physician, lawyer, teacher, statesman, diplomatist, and so on to an extent utterly impossible in Protestant, or indeed, in any circles to-day. The Church has been broken up, and the various sections are not likely to unite, and yet they are strong enough to endure. How can a subject on which the students are in a violent state of disagreement be taught profitably in a University? As a matter of fact the loss does not seem to be so great. Some of the new theological halls of Great Britain without State endowment and University prestige have done work as influential and enduring as that of the oldest foundations in the Empire. The able men who founded the Queen's University and Colleges in Ireland

dispensed with theological faculties and it may be assumed that they did not consider themselves disloyal to sound University ideals; they were rather recognising the changed conditions of modern life, and trying to draw the different religious sections on to a common ground. Not that Sir Robert Peel, and those associated with him, were heedless as to the question of proper safeguards for the faith and morals of the students. They made provision. It is true there were no endowments offered; but that is only a political objection when we remember that colleges both theological and lay are constantly receiving private subscriptions, and if the ecclesiastical bodies neglect a field which, while it may not be large, cannot but be interesting and important, they have themselves chiefly to blame. As a matter of fact, large bodies of students in older Universities are not in residence in the older sense of that word, and in regard to the Queen's University in Ireland it does not appear that the students were more "godless" than those in other seats of learning. There is another matter of an inner and more domestic kind, and our apology for dealing with it must be the fact that Trinity College, Dublin, claims to be undenominational. So long as it was a preserve of the Established Church and in close alliance with that body little difficulty was likely to arise, but now that the Governing Body of Trinity College is theoretically without denomination and may become alien, the government of the Divinity School is rightly felt to be in an "anomalous condition." The Synod and the Board do not appear to see eye to eye. It seemed to be a natural corollary to Mr. Fawcett's Act* that the Divinity School should be severed from the University of Dublin and Trinity College. It was for the convenience of all the parties interested that a dual control that might prove unworkable under the new constitution should come to an end. It seems to be an entirely impregnable position that the School of Anglican Divinity could not be any longer in an institution that was offering itself freely to all creeds without any disability and the consideration that their theological students would be coming under the control of absolute outsiders was a natural and just anxiety to Irish Episcopalians. Lord Belmore proposed a separation in his Bill introduced in the House of Lords in 1879, and although the continued housing of the School within the grounds of Trinity College was objectionable, the Bill contained the main lines of a settlement. In his speech on the Irish University Bill of 1873, Mr. Gladstone stated, that after the arrangement come to in 1869 (presumably in regard to Maynooth College and the Presbyterian College and the disestablishment of the Irish Church), the removal of the Divinity School followed "naturally and of necessity." The offers by the Board of Trinity College of sites for Divinity Schools and Chapels to the Roman Catholic and Presbyterian Churches and the replies given to those offers are printed in pages 101 and 102 of the Blue Book† (Appendix to First Report).

1285. I suppose the Resolutions of the Assembly to which you wish to call our attention relate to the Divinity School?—They do, chiefly.

1286. Would you read them now?—Of course, there are a number of resolutions appended to the Report on Higher Education that is submitted to our Assembly from year to year, and some of those have no bearing on this particular subject.

1287. Perhaps you would read those which have a bearing on the subject of the Divinity School?—Yes. This matter came up in the years 1872-3 in connection with Mr. Gladstone's Bill, and the Resolutions of 1872 are:—(1). That the principle of united and non-sectarian education should be carried out in the University as well as in the Elementary and Intermediate departments. (2). That the fundamental principles of the Queen's Colleges and Queen's University should be maintained in their integrity, in accordance with the resolutions of the Assembly of 1866. (3). That Trinity College should be opened up, so that its secular advantages may be made available for all her Majesty's subjects, without reference to creed or sect; and that the University of Dublin should be preserved as one of the Universities of the land, subject to such rules as will remove all religious disabilities from its Fellowships, Scholarships, and other honours and advantages."

1288. That is, the secular advantages. It leaves out the theological advantages?—There is no express mention of the Divinity School in the resolution.

1289. But that rather puts the other view, does it not, that the secular advantages should be open, leaving the theological?—Quite so. That was passed before the Bill was introduced. Then in 1873: "We approve of the proposal in the Bill to separate the theological faculty from the University of Dublin and from Trinity College. We believe that Trinity College should be opened, so that its secular advantages may be made available for all her Majesty's subjects, without reference to creed or sect, subject to such regulations as will remove all religious disabilities from its fellowships, scholarships, and other honours. The Committee disapprove of the proposal in the Bill to leave Trinity College such a large proportion of its revenues, and are of opinion that provision should be made therefrom for the more liberal support and encouragement of nonsectarian education in connection with the Queen's Colleges." Those are the Resolutions bearing on Trinity College for the year 1873. Then the interest in the question lapsed a good deal when Mr. Gladstone's Bill was rejected, and the Report from year to year was sometimes very brief. There was a revived interest in the year 1899, and this Resolution was then passed:—"That we adhere to the principle of non-sectarian public education as best adapted to the circumstances of this country, and are strongly of opinion that no solution of the question of University Education in Ireland will be satisfactory or final that does not include the complete nationalization of Dublin University."

1290. May I ask what is meant by "nationalization" there?—In this Statement that has been forwarded there were three things referred to; in the first place, the removal of the divinity school—

1291. I mean, is that included in the word "nationalization"?—Yes. Then there was a paragraph in regard to the Chapel services.

1292. I am aware of what you are putting forward now?—There is nothing further in the way of definition here. I was simply referring to the Statement. Then in the year 1900 there were two Resolutions:—"That the Assembly offer the most strenuous opposition to Mr. Balfour's Sectarian University project; and, if need be, shall notify members of Parliament again to this effect. That the nationalization of Trinity College, Dublin, be urged as the true solution of the University Question in Ireland." Then in 1901:—"That the Assembly adhere to the principle of non-sectarian public education as best adapted to the circumstances of this country; that they are strongly opposed to the establishment and endowment out of the public funds of a Roman Catholic University or Roman Catholic College; and that they are firmly convinced that no solution of the question of University Education in Ireland will be satisfactory or final that does not include the complete nationalization of Dublin University." Then in the following year there were a number of Resolutions. I will read only that which bears on the University of Dublin. There was a Resolution against "the establishment and endowment at the public expense of any denominational University or College, as injurious to the educational interests of the country, and as practically involving, in a very objectionable form, a State endowment of religion, in contravention of the spirit and policy of the Irish Church Act of 1869, under which, in the interests of religious equality, two Protestant Churches were disendowed, and the Maynooth grant and the grant to the General Assembly's College, Belfast, were withdrawn, regard being had to invested interests." And then:—"That the Assembly renew their protest against the exclusion of Trinity College, Dublin, from the scope of the inquiry by the Royal Commission."

1293. I do not think that is relevant?—That was addressed to the late Commission, was it not?—Yes.

1294. All that is before us, because Lord Robertson's Report contained these resolutions in the Appendix. Still, if you wish to go on, I do not wish to stop you?—I do not know that these resolutions were ever submitted to that Commission.

1295. If my memory be not at fault, I have read that sentence with regard to the objection before; but I may be wrong?—That is my impression at present. I was looking over the Presbyterian portions of the Report of the Royal Commission, and I know I had some difficulty in digging these out in the different Reports of succeeding years. However, in regard to that matter, I speak subject to correction. But I do not find in the volumes of the former Report any

Rev. John
MacDermott,
M.A., D.D.

authorised statement from the General Assembly of the Presbyterian Church, except the long report that was submitted by Dr. Robinson, who was then Convener of the Committee on Higher Education. The following is the resolution passed in 1902:—

"That the Assembly renew their protest against the exclusion of Trinity College, Dublin, from the scope of the inquiry by the Royal Commission, because such exclusion is a virtual prejudging of the case in favour of the establishment and endowment at the public expense of a Roman Catholic University or College, and because no settlement of the question can be satisfactory or final which does not include the nationalization of the University of Dublin, but leaves it and Trinity College as practically the monopoly of one religious denomination."

I need not read any further extracts from the resolutions of that year; that is the one bearing on Trinity College. Then there are some resolutions passed in the following year, in 1903, in which it is declared that "no settlement of the question could be satisfactory or final that left out of consideration what should be the National University of Ireland." Then, in 1904, there is a long correspondence in regard to the offer of the Trinity Board about sites for chapels and Divinity Schools for other denominations.

1296. That ended in your not accepting the offer, I think?—We could not accept the proposal.

1297. At any rate, you did not?—Perhaps I ought to read the paragraph bearing on that?

1298. If you please?—"That in regard to the permission offered by the Board to the members of the Presbyterian Church to establish a Divinity School and Chapel inside Trinity College, which, it may be noted, does not include any proposal for incorporation, the Committee regret that they cannot recommend the acceptance by the General Assembly of this offer. The Presbyterian Church is in possession of sufficient equipment for ministerial training in her Theological Colleges in Belfast and Londonderry, and to found an additional college in Dublin might well be a needless as well as a difficult and expensive undertaking. Further, it is the opinion of the Committee that the equal treatment which the Board has in view would be attained most satisfactorily not by inviting the other Churches to establish new, unnecessary, and antagonistic Schools of Theology within Trinity College but by removing the Theological School already in existence there, and in this way vindicating the non-sectarian character of the College. Further, it seems to the Committee that if such a policy, which is in line with a great deal of the later history of Trinity College, were carried out, the religious oversight of the students ought to be entrusted to Deans of Residence appointed by the different Churches." That is the particular portion of the reply sent to the Board of Trinity College bearing on this point. That was the action of the Committee, and at the next Assembly it was agreed "that the Report be received and adopted." The Committee have power to carry on from year to year on the general lines of the policy of the Church.

1299. Therefore the General Assembly adopted the action of the Committee?—Quite so. Then in 1905 there is a repetition of the resolutions, the last being:—"That Dublin University cannot become a truly national institution so long as it confers special privileges on members of one denomination." Then, in 1906, there is a resolution to the same effect.

1300. That is the resolution which is practically the foundation of the statement which you have laid before us?—Quite so.

1301. Does that conclude all you wish to say to us on the subject of the Divinity School?—Yes.

1302. Then, I think we had better ask you a few questions on that before we proceed to the more general question. I should like to ask you how things of this description stand in Scotland in the Scotch Universities?—I am not very conversant with Scotland, but I believe the old University system includes within the Universities Faculties of Theology.

1303. With professors and with teachers?—Yes.

1304. And with chapels?—I do not know about the chapels.

1305. I was within a College Chapel within a few weeks listening with great edification to a Presbyterian service. Surely, I am right.

Sir THOMAS RALEIGH.—They have not all got chapels.

CHAIRMAN.—Some of them have—Aberdeen, for instance; St. Andrews, I believe; Glasgow, I do not know.

Mr. BUTCHER.—Glasgow also. They have all, except Edinburgh.

1306. CHAIRMAN.—Edinburgh have no chapel, but they use St. Giles' Church as a quasi-University Church on occasion?—There is an establishment of religion in Scotland.

1307. Do you object to that system for Scotland?—Do I object to it personally?

1308. Has your Church in Ireland objected to it?—We have not made any declaration on that subject within recent years. At the present moment I do not remember any declaration in regard to the Scottish establishment. But, of course, there is a great deal of private feeling in regard to the ultimate settlement of this question, both in England and in Scotland.

1309. The principles you have submitted to us, I suppose, would lead to the same objection to the Scottish Universities as to the University of Dublin?—I think there is a great difference in the conditions. I myself would be perfectly satisfied—though this is only the opinion of one—to have the faculties of Theology outside the Universities.

1310. There is a passage in the document put before us by the Synod of the Episcopal Church in Ireland to which I should like to call your attention. They say: "In our judgment, the high culture and the open air of a University are better for our teachers than the close atmosphere of a Theological College." Is there not a great deal of truth in that?—I must say, looking at it as fairly as I can, that I do not think, in the case of a separation between the Divinity School in Dublin and the University, there could be any serious deprivation in that way, for this reason, that the students would continue to go as before in their undergraduate years through the University of Dublin. I take it that that would be so. They would take their undergraduate courses, and take their Arts degree in the University; they would be there three or four years. I know that in other cases, as at Edinburgh, where I studied myself for a session, there seems to be no difficulty whatever in the students who want to take their Theological classes outside the University mixing with their fellow-students, or going back to the old haunts, in point of fact—the debating societies, and so forth.

1311. But in general principle you would agree with the view that a University atmosphere was healthier than that of a Theological College?—I can hardly say that I would go so far as that, because I have seen cases myself where it made no difference. We have it in Belfast College, which is not far from the Queen's College, where a great many of the Divinity students have been trained; and I do not know of any great difference of atmosphere. Of course, they give themselves chiefly to their Theological studies, but they can go back very pleasantly to meet old graduates. I have done it myself.

1312. That depends on the proximity of the two institutions, does it not?—They are quite near.

1313. But the association to which you refer depends on the proximity of the two institutions, does it not?—I cannot say that it does. If a student has spent three or four years in the University of Dublin, or even in Queen's College, Belfast, I think he has attachment enough to draw him back even a mile or more. I am giving you my own opinion just as it occurs.

1314. Oh, I am not expressing my opinion; I am merely asking for yours?—That is my opinion. I think that after three or four years in a University the atmosphere of the outside Theological School would really be good enough for all practical purposes; I do not see any difficulty about it.

1315. Now, in the address you have been good enough to read to us you spoke of the fact that in some cases Theological Faculties had been dispensed with in Universities. Are you aware that there is a counter-current to that in certain Universities in England, where Theological Faculties have been restored, so to speak, or introduced afresh into the Universities?—I know that in regard to the Welsh University, I remember reading in the evidence given before the former Commission that the University offered to confer a degree in Theology; that is, they would choose the books and hold an examination, and anybody who

chose to make up the books could come and take a degree.

1316. That is, Universities and Colleges which started without a Theological Faculty have introduced one. I think it was quite open to anybody who chose to make up the course. I mean, originally they had no Theological Faculty, had they?—I think not. As regards London, I am not sure of the facts of the case, but I do not think that in Scotland there is any great tendency in that direction.

1317. But in Scotland the Universities have Faculties?—I rather think the tendency is the other way.

1318. Then with regard to Victoria University?—You mean with regard to Theological Colleges?

1319. No, not Theological Colleges, but the introduction of a Theological Faculty into a University which originally had none?—The Victoria University in England?

1320. Victoria University in Manchester?—I do not know whether they have a Theological Faculty.

1321. Does not that show that in some countries, at any rate, there is a tendency to introduce Theological Faculties rather than to dispense with them?—They are making many experiments in these new Universities in various ways; they have almost all the Faculties that are possible, I fancy.

1322. You say that in your judgment the division of the Theological School from the College is a corollary of Fawcett's Act. Fawcett's Act expressly excepted lecturers and professors of Theology from the operation of the Act. Why is not that as important and integral a part of the Act as the other; and if that is so, why is it a corollary that you should abolish that which the Act provides for?—I think that is rather in the direction of following the Irish Church Act.

1323. You are aware that Fawcett's Act expressly excepted professors of Theology?—I am aware of that, but I think the general drift of it would seem to be in that direction, no matter what express reservations are made for the time, because there was a Bill introduced by Lord Belmore separating—

1324. That was a different thing. Your argument is that Fawcett's Act carries with it as a corollary the separation of the school and the college. What I ask is why that is so, when the Act itself provides for its retention?—I do not know whether I would be justified in saying that the Act carried itself in the main spirit of it a little beyond the expressed reservations that might be for the time and some five or six years afterwards.

1325. You pick out the important and leave the rest?—I do not build on that so much as on disestablishment and the general course of events in Ireland. In regard to the matter of these Faculties being added on to the new Universities, we in Ireland, I think, got on to a different line when the Queen's Colleges and the Queen's University were established. I do not know whether there is any likelihood, so far as they are concerned, that faculties of Theology would be coming in when the colleges were started without faculties of Theology. I do not know whether I make myself clear.

1326. I quite follow what you said. Now, I want to ask you one or two questions about the College at Galway. If I am not mistaken, some arrangement has been made there by which a member of your Church—I think the minister of the Presbyterian Church in Galway—is allowed to exercise a certain, both social and religious, influence over the Presbyterian students in that college. Is not that so?—He is the Dean of Residences.

1327. Yes. He has a sort of paternal influence over the Presbyterian students of that college, has he not?—I hope he has. Of course, that is a part of the original scheme, and, so far as I know, he carries out the duties of the Dean.

1328. That is the intention, at any rate?—That is the intention, and he attends to the duties.

1329. Is not that a very admirable arrangement, and might not something of the sort be introduced into Trinity College?—I think so. One of our Assembly resolutions that has been repeated in various years, and, as far as general agreement with it is concerned, might have been repeated in any year, so far as I remember, is that the system of Deans of Residence ought to be carried out thoroughly.

1330. Would it not be a very beneficial thing to introduce into Trinity College?—I think so.

1331. Would it not very much diminish your ob-

jection?—I think it would go in the place of the Divinity School, from some points of view; I think it would be a protection to the students, and give confidence to the parents who sent their sons there.

1332. And diminish your objection to the continuance of the Divinity School?—I do not think it interferes with that question.

1333. Supposing that, in addition to having a Dean of Residence, you have the right to use the chapel from time to time for Presbyterian services, as two denominations do in some parts of Switzerland—after the service of one body is concluded, let the other begin?—Personally, I have no objection to that. I think there ought to be some process of nationalizing, as you might say—

1334. For myself, I do not wish to use the word "nationalise"?—I have no strong feeling on behalf of the word itself, but simply the idea. We think that there should be a fair opening for any student of any creed, without there being symbols of one particular Church staring him in the face.

1335. Some members of your community have become members of Trinity College, and have for years past; is not that so?—That is so.

1336. And have you found any ill results accrue therefrom?—I am sorry to say I have known a good many Trinity men who began by being Presbyterians and ended by becoming members of the Disestablished Church.

1337. Do you find that in other places besides Trinity College?—It may be in other places that are similarly circumstanced, and is to some extent, but I do not know the facts of the case so well. I have one or two testimonies from men who have studied in Trinity College, and who naturally have a great liking for the place, yet they think it is a one-sided place for a Presbyterian.

1338. I called your attention to the fact that the Fawcett Act expressly retained the Divinity School as an integral part of the College by excepting the Professors and teachers of Divinity from the operation of the Act. Was not that in accordance with the resolutions of 1872-3 which you read, and which expressed the desire that the secular benefits of Trinity should be open to all, but was silent as to the theological benefits?—I think it was a step in the right direction, but I do not think it was a last step.

1339. That is not quite the question I ventured to put to you?—I beg your pardon if I have misunderstood or misinterpreted it.

1340. I asked whether it was not in accordance with the resolutions which you passed?—With the resolutions passed by the General Assembly.

1341. Yes?—They were new to it, and I imagine, remembering that the next year they were prepared to be rid of the Divinity School altogether from Dublin University, that they were feeling their way.

1342. At this time, we may take it, the General Assembly had not that strong objection to the Divinity School which they now express?—I rather think they had not considered it. There first appeared to be the desirable object of having the tests abolished, but they were quite prepared the next year to go beyond that to the extent of the exclusion of the Divinity School from the University of Dublin. That is the following year.

1343. Supposing that as soon as Fawcett's Act had passed you had flooded Trinity College with your Presbyterian students; they could have taken scholarships got on to the Governing Body, and so on; would not the danger which you fear from the atmosphere of Trinity College being Episcopal be greatly diminished?—I have never considered that, because, of course we are largely in the North members of the Presbyterian Church; then there was, in the meantime, the establishment of the Queen's University, which was quite open and free, and a great many of the young Presbyterians naturally went there—I mean Queen's College, Belfast, one of the Colleges of the Queen's University. In that way it was hardly possible for one to say what we might have done or would have done. There would still have been the objection to the Divinity School. There would have been this objection, that we were sending our young men at the impressionable time of life where there was another denomination, to which we did not want them to go over, at its greatest strength.

1344. What strikes me is that in 1872 you were very anxious for the abolition of tests, but since tests were abolished you use the University of Dublin scarcely

any more than you did before. That is what I do not quite see. If you had no interest in Trinity College, if you were so far North that you had no great interest in it, why did you trouble yourselves about it; and when you got what you desired, why is it you did not use it? I am putting it bluntly. I am only asking for information; I am not expressing any opinion about it; I am merely putting to you the difficulty which occurs to my own mind?—Your suggestion is that after the tests were abolished there ought to have been more use made of Trinity College by Presbyterians.

1345. You have read a Resolution expressing your great desire for the abolition of tests?—I have read one Resolution which deals, in a general way, with the question of tests. That is in 1872; the following year there is another Resolution, which deals with the question of the Divinity School, and suggests that the Divinity School should be removed. Of course, Trinity College has a great prestige, and anything that opened out Trinity College fully to every denomination in the country would be a great boon; therefore I fancy the Assembly looked at the matter in this way: "Here is the first step to be taken towards a really National University," and the next year they took the next step. I do not know anything nearer the facts of the case as I know them than that.

1346. LORD CHIEF BARON.—Has your attention been directed to the Recital in Fawcett's Act?—No.

1347. Do you know that Fawcett's Act was a Bill brought in practically by people representing the University itself—the University of Dublin and Trinity College; it was not a Government Bill?—I remember reading a little of the debate—not the debate on Fawcett's own Act, but on Mr. Gladstone's Bill.

1348. Gladstone's Bill was perfectly different, and had been thrown out long before Mr. Fawcett brought in his Bill?—But Mr. Fawcett took part in the discussions on Mr. Gladstone's Bill.

1349. I am asking nothing about Mr. Gladstone's Bill. The question I want to ask is one arising on Mr. Fawcett's Bill. As I understand, Mr. Fawcett's Bill was a Bill brought in, not by the Government, but by some gentlemen practically representing Trinity College, and by that Bill they purported to give up certain of the so-called rights that existed before?—In regard to that, I remember reading one or two articles by Trinity College men in regard to the alterations which took place under the Fawcett's Act, and I am quite aware that they were sympathetic. I do not know so far as my reading goes, that I should say they did the thing, but they were helpful in the doing of it. I suppose that would be correct.

1350. I will read you now the Recital—that is, the object that Parliament had in view: "Whereas it is expedient that the benefits of Trinity College and the University of Dublin, and of the schools in the said University as places of religion and learning should be rendered freely accessible to the nation;" Do you suggest it was intended by that Act to abolish the Theological Faculty in Trinity College?—I do not suggest that. But in regard to the question of who it was who brought about the change, as far as my reading goes, which is not very extensive, I think there was an entire agreement between the Trinity College authorities and Mr. Fawcett. I think that is Provost Salmon's statement. Then, I think the Act must have been passed through without any very active opposition on the part of the Government of the day; otherwise it could not have been passed.

1351. But, taking into consideration that recital and the definition of the word "office," which excludes every place in the theological faculty, is it not clear that there is a declaration on the part of Parliament that the University of Dublin and Trinity College were to continue as places of religion as well as of learning?—I do not want to quibble in regard to the word "religion," but I think they would not cease to be places of religion if each denomination had a well-established system of deans of residence a representative, or more than one representative, of each denomination who looked after the students carefully.

1352. SIR THOMAS RALEIGH.—Your main principle appears to be that the State is not to take a side as between contending religious bodies in this country?—Is not to take a side as between the different religious bodies?

1353. Yes?—Well, I agree in that statement. I think the State, in a country where there is a keen division on religious matters, ought, if I might say so, to put down its University, and on non-sectarian

principles allow any denomination to look after its own students, as I have said, by deans of residence. I think the State should have a strong hand in the matter. I would be more disposed to give myself up to a State institution than to an institution which represented the predominating influence of any Church, for that matter.

1354. You suggest that the State should show its impartiality by turning out from the University all schools of divinity?—There is only one school of divinity.

1355. And that one you would turn out?—And Ireland has been on a different system for, I suppose, 50 or 60 years, so that we are accustomed to that. In other countries it is different; they have been under different auspices.

1356. Suppose the matter were turned round, and the State said—"We prefer to show our impartiality by recognising the schools of theology of the different religious denominations on fairly equal terms; we will not interfere with their internal affairs, but we are prepared to recognise them as schools of theology in the University, and we are prepared to make arrangements under which their courses of study will lead to a degree in divinity." Do you see any objection in principle to securing impartiality in a positive and not merely in a negative way?—I think it would lead in this country to three universities, and they would all in the end be sectarian or nearly all. You would have one in Trinity College; then one would be asked for by another denomination, and practically the attendance gathering in that University would belong very much to that particular church. I should not care to see in Trinity College three theological schools representing the three largest communions in Ireland; it might lead to antagonism.

1357. But in some points it might lead to greater co-operation and harmony, because these schools would have much in common—the whole field of church history, for instance; they would study in the same subjects?—On that side it seems to me to be a thing that can be fairly considered, although I do not know that we as a Church have considered it, whether there might not be a University giving a divinity degree, although having no divinity faculty. A correspondent of mine, a Trinity man, who quite sympathised with our statement, says something might be done, but I cannot think of any other way in which it could be done than by the University, apart from a divinity faculty, sketching out a course that would be, as you suggest, common to the different denominations. Hebrew, for instance, would be sure to be in it and Church history. I do not know how far beyond that they could go.

1358. I think you have by charter the right to give degrees in divinity to your own students—the Presbyterians have?—The theological faculties?

1359. Yes?—They have had for some years.

1360. The right which you have you would not deny to the Divinity School here if it were put outside the University, I suppose?—Certainly not.

1361. Do you not think the University has a direct interest in maintaining the standard of these degrees, whether in the Anglican school or in the Presbyterian school?—As far as the University is concerned or the colleges that are represented in Belfast by the Queen's College, they have no connection whatever that I know of with divinity degrees—I mean the Royal University; they have no divinity degree that I am aware of.

1362. They have not at present, but I am merely asking you whether it is not a subject in which a national university may legitimately take an interest?—I should hardly put it in that way. As I think I mentioned in regard to the University in Wales, it should do it as a university and not as a theological hall or as an association of theological halls. That is the point of view from which I should be disposed to approach it.

1363. Do you know anything of the German universities in which they have Protestant and Roman Catholic theologians side by side?—No; I do not personally know anything of them; I have read that it is so, sometimes.

1364. SIR ARTHUR RÜCKER.—When you say that the University should do it, and not a collection of theological halls, do you mean that the University without any consultation with the heads of the different theo-

logical colleges should draw up a scheme of education or of examination in theology? How is the separation between the University and the theological halls to be established?—I ought to say it is not a thing that I am recommending, but that I have read with interest that there is this suggestion on the part of a University. I have not considered how they would set about choosing their books, but I daresay they would enter into consultation with the heads of the different denominations, so as to make up a feasible or workable arrangement. But I should not care to see faculties of theology as such brought into it.

1365. By "faculties" do you mean the teachers?—I mean teachers in the different theological schools in the country. I would approach it, as my correspondent was saying, from the point of view of testing work done. Hebrew is generally included in a theological course, and Church history, and New Testament Greek, I suppose. It should be just to test work done of an academic character.

1366. If the University is not to approach the teachers of this particular subject, who is competent to draw up such a course?—I think there ought to be some consultation with the competent men in the different denominations.

1367. Should these "competent men" therefore be brought into any organic relation with the University? Ought they not to have some position in the University?—I have not considered it very much, but I think not. It would be practically like realising a theological faculty in the University when there was none. I have not thought of it in the way of detail, but it struck me as a thing that might be worked successfully, and when my acquaintance wrote to me on these lines I thought there was something feasible in it. He wished that the Divinity School should be removed; he is an old student of Trinity, and a warm supporter of Trinity in general, though he thought that as a Presbyterian he was out of it. But he said it would be for work done—that there ought not to be, in his opinion, any Divinity School in the University, but that the University as such might test theological knowledge as it tests other kinds of knowledge.

1368. Words are used in different Universities in such different senses. I quite understand your view that the actual teaching of theology should not be undertaken by the University itself; that is what you mean when you say there should not be a school. Is there, therefore, because the University does not itself teach, any objection to the University in consultation with the teachers having an examination in divinity which shall lead to a divinity degree?—I suppose that if the University entered into consultation, as it probably would under these circumstances, with all the denominations in the country it would be a fair thing.

1369. May I say that that scheme is actually realised at the present moment in the University of London. We have there a number of perfectly separate denominational colleges; we recognise the teachers in them; and with their aid we draw up a scheme on which an examination is held. Would such a scheme as that be practicable in Ireland, do you think—speaking now for your own Church and the Anglican Church?—I cannot say; but I do not see any reason why it should not have a fair trial.

1370. You do not?—I do not.

1371. Assuming some such arrangement made, assuming your difficulties got over with regard to the present constitution of Trinity College, and assuming that your own body and the Disestablished Church of Ireland could work together on some such scheme, do you think that such advantages would be largely availed of by Presbyterians?—I could not really say. I think it would strike a great many members of our Church as a fair thing, and a good mode of judging knowledge—a competent body at the head to test work done.

1372. Do you think more Presbyterians would go to the University of Dublin than at present?—I have not any doubt that if the Divinity School were removed, and if the place were open to all denominations, Trinity College would be no loser by it. I am not speaking in any of these matters in any spirit of hostility to Trinity College.

1373. I think that is clear all through?—From my point of view, as a Northern man, and as an old Queen's University man, it would require a great deal of energy and attention on the part of the old Queen's

College there to keep as far in the way of progress as we would like the College to keep. I think it would tend to defeat the fears of people interested in boys.

1374. You do not think there would spring up between Trinity and Belfast an active rivalry of a hostile character?—I do not think there would be any rivalry but what was generous and fair.

1375. Putting it in a more crude way—you really think the advantages to the Presbyterian body would be worth the amount of change that would be necessary to bring your view into practice?—We are a small body, and I am not suggesting that any great change of this sort would be made on our account simply; but I think it would be an inducement to the people of Ireland generally to go to the University. Such prestige and traditions are always valuable.

1376. Dr. JACKSON.—I understand that your objections to the existing system would be mitigated if there were to be deans of residence representing the different denominations; is that so?—Quite so.

1377. Might I ask if your objection would be still further diminished if they were to be allowed to associate with themselves a tutor or teacher to assist them in their management of the students committed to their charge?—We have not considered that with regard to the colleges where we have deans of residence. We have not considered any possible expansion.

1378. I suppose that the dean of residence would superintend, and also afford a certain amount of teaching?—I think he ought to. In point of fact, I think deans of residence, or catechists—there are two in Trinity College—have classes for their students, and they prepare very carefully for them, and have sometimes an examination, and prizes at the end of the session. I see nothing but what is good in all that. It is doing their work as thoroughly as they can do it.

1379. Would your objection be still further mitigated if all tests were to be withdrawn from the existing divinity faculty?—I do not think that would make much difference.

1380. I will put it in another way. If the Testimonium were obtainable apart from tests?—I do not see that it would make much difference unless there was a pretty radical change in regard to the school altogether—the removal of it, in point of fact. There would be a transition period; I really do not know where it would lead to in the end. But at the present time, I understand, students who belong to another denomination can go through the divinity school, and they receive some kind of certificate. They do not receive the ordinary Testimonium that a Church of Ireland student would receive who complied with the regulations.

CHAIRMAN.—What he can receive if he chooses to proceed to it is a degree in divinity. He may receive a degree in divinity without any tests, but he cannot receive a Testimonium.

Mr. BUTCHER.—That is so.

1381. Dr. JACKSON.—I did not understand that he could get a degree.—All I was trying to say was that there is a Testimonium given at the close of a two years' course in theology to the students who have been through. It is not a question of degrees.

1382. CHAIRMAN.—Both are given. Degrees are given and a testimonium is given?—The testimonium is a thing which is given, and shows that a student has done the work of the classes. He may not proceed to B.D. at all, I understand.

1383. The testimonium is the document accepted by the Protestant Church of Ireland?—Quite so. The testimonium is what the student takes with him in order to be admitted to Orders.

Mr. BUTCHER.—To be ordained.

1384. Dr. JACKSON.—I had completely misunderstood the meaning of the word "testimonium." You do not think that there could be any changes in the faculty which would make it accessible to your students?—I think it would be very liable to be misunderstood by the large bodies outside. I think, if Trinity College were in a position to say, "Well, we know that you think that these outward symbols and this Divinity School have a certain effect, no matter whether anyone wishes them to have that effect or not, and in order to meet that and to have this College open to all classes we put it aside."—I think if they did that it would be a guarantee, a declaration of earnestness and good faith on the matter, and they would reap a large result in course of time. But as to doing it, as it

were hit by bit, or modifying it in some degree, I do not think that would bulk impressively before the outside public, and I take it that it is the outside public that has to be less or more brought in, because those who are in favour of Trinity College make no difficulty about it, of course.

1385. Do you not think there would be some loss to Theology and to the University if the Theological studies were to be completely withdrawn?—In regard to Theological study, I know a little of the Scottish Theological Halls, and I do not think there was any loss when the Free Church set up Theological Halls for herself apart from the University, which they did about sixty years ago, after the Disruption. I think those outside Theological Halls have done as sound Theological work as has been done for the last thirty or forty years in any College, whether under the shadow of a University or not. I think that is admitted.

1386. Then you desire to separate Theological studies from other studies, and other studies from Theological studies?—I express no fixed opinion on that point. What I am looking at is that when you have a great deal of difference of opinion about these matters, I have a very strong feeling that the State might advantageously say:—"Here is an institution for all the studies on which you are agreed," leaving the Churches largely to direct their own studies, under the circumstances of division that we have to face.

1387. Surely in Theological studies there are a great number of departments in which persons of all denominations can join together and help one another? Is not that so?—I dare say that is so. There is common ground, I am sure, among Theological students, but they do not seem to be very ready to come together in the same place.

1388. Did not members of various denominations combine to help one another in the Revision of the Bible?—Quite so.

1389. And with the best results?—No doubt. I think there were criticisms about it, but I think it was good, as far as I was able to give any attention to it.

1390. And of late years in matters of Theological study, I have noticed in England that Roman Catholics and Protestants help one another.—I think there is a common ground when men are in their own studies, when they are left to the freedom of their own will; but it would be a different thing trying to fix on any State institution, I think. I am sure there is a great deal of common ground. I have read books of men who were largely apart in any public institution, who quite admitted that. I do not know whether I am making myself clear.

1391. Perfectly; I think I quite understand. We were told by a witness the other day a fact which I chanced to know—I think a question of mine brought it out—that at the University of Cambridge Roman Catholic students of Theology have offered themselves for our Theological Tripos. Does that surprise you?—Well, it does, I must confess. I cannot say, as a sort of spiritual overseer, that I would care for it. It may be that we are so far behind in this country that we do not apprehend it.

1392. Mr. BUTCHER.—I think your general principle is that you think it unwise that within an undenominational University there should be a denominational Theological Class or Faculty; is not that the general principle?—I think so. There ought not to be one denomination, at any rate, marked out from other denominations.

1393. I thought it was a little more, because I rather gathered your view to be that which seems to be expressed in the letter addressed by the Assembly of the Presbyterian Church in 1904—the letter which you have already read, in which these words are used:—"By removing the Theological School already in existence there, and in this way vindicating the non-sectarian character of the College;" and the general argument seemed to apply equally to one, two, or three denominational schools in an undenominational University; do they not?—Quite so. Of course, there would be a greater fairness if it were possible that the people were all there.

1394. But that hardship is removed so far as the offer to remove it can be availed of?—We do not care for the offer very much.

1395. I understand, and, in fact, you gave one answer which seemed in itself rather decisive, namely, that it was a needless and expensive undertaking, and, what is more, that the Presbyterian Church was al-

ready in possession of sufficient equipment for ministerial training?—Yes.

1396. But the theoretical objection to it seems to be what I have stated?—Well, you will notice in the same answer that there is the opinion expressed that the removal of the Theological School from Trinity College would complete the process of opening out all that was going on; and in this country, where you have one University that was established on the footing of no Theological Faculties and otherwise entire openness to all denominations, and another University that was at one time strictly denominational and has been opening out gradually, the natural consequence seemed to us to be that the solution of the question ought to be the removal of this Divinity School also, and to allow the Churches to look after the training of their own students, and have these places open to all denominations.

1397. I think you said you studied at the University of Edinburgh?—Excuse me—not the University, but the Free Church College in Edinburgh.

1398. Perhaps, in that case, you can tell the Commission a little more on the point on which the Chairman has already put some questions. Do you know Edinburgh best—it is the same for all the Scottish Universities?—It is the only University or College I knew anything about.

1399. They are all the same in this respect. What is the Theological Faculty; how is it constituted in the Scottish Universities?—Inside the University?

1400. In the University?—I was not attending the Theological Faculty inside the University of Edinburgh; I was attending the Theological College which had been established by the band of Churchmen who went out from the Established Church.

1401. The Free Church Divinity Hall?—Yes.

1402. The Universities of Scotland are strictly undenominational, are they not?—Apart from Theological Faculties being there.

1403. In all other respects, and all their other offices are open to all comers of all denominations?—I think so. I made inquiry in regard to Glasgow, and there there was a great openness considering that the bulk of the people are of one way of thinking ecclesiastically.

1403a. In fact, there is no restriction?—I was told there was no restriction at all, except that the Theological Faculty was still there.

1404. Is it not the case that there is, first of all, a Theological Faculty, but not only so, but that the Professors of the Faculty are limited to members of one Church?—That I could not say; I suppose they are limited to the Established Church of Scotland.

1405. To the Established Church of Scotland. I do not know of any exception. Of course, there is the largest free trade in all the other faculties, as far as I know, but there is still the Theological Faculty, and that I have no doubt makes a difficulty, though not a great deal is said about it, in regard to the other denominations through the country who cannot find themselves free to avail themselves of these Theological Faculties.

1406. CHAIRMAN.—Do you think they exclude students from the Universities?—Not from the Universities, I hope, but from the Theological Faculties within the Universities.

Sir THOMAS RALEIGH.—From the Degrees?

Mr. BUTCHER.—Oh, no.

CHAIRMAN.—The Theological Degrees?

Mr. BUTCHER.—Certainly not. The Theological Degrees of the University of Edinburgh are open to members of all the Churches, not only to Presbyterians, but to anybody who goes through the necessary examinations connected with the Theological Course. In that respect they are entirely analogous, except that there is more teaching required, to the Theological Degrees in the University of Dublin. The actual Faculties of Theology are limited—not on the part of the students who attend, but on the part of the teachers who hold the Chairs—to the Established Church of Scotland. The classes are open to students of all the Churches without any inquiry as to their faith, and the Degrees are open to all alike.

CHAIRMAN.—And are, in fact, I suppose, taken by persons of various denominations?

1407. Mr. BUTCHER.—Oh, yes, by persons of various denominations—some from England, some from America, some from other parts of the world. They are entirely open in that respect. That brings me to this point in connection with Trinity College, Dublin. In Trinity College, Dublin, as, indeed, in many other Universities, including the Scottish Universities, there is a distinction, is there not, between the

Divinity School as a School of Scientific Theology and the Divinity School as a place of preparation for the Orders of a particular Church?—I hardly know. I know that books I have read written by Professors of the Divinity School here, were books, at any rate, of Anglican Theology. Of course, that might not be to say they were not thoroughly scientific.

1408. I only mean that it fills a double function; on the one hand, it examines for and to some extent teaches for Theological Degrees which are open to all; and, on the other hand, it trains students for the Orders of a particular Church?—Yes. I should think—I am not able to say quite positively—that the courses were very much the same.

1409. Very likely?—It seemed to me that the textbooks were very much the same for the Testimonium, which is the natural course towards Orders, and for the B.D., which would be more of a public matter, which all men could take.

1410. All I meant to ask on that point is this:—Does not the theory which is put forward in your Statement, and which is identical with the theory of the Assembly of the Presbyterian Church in Ireland, require that you should eject from the University both the Theological Faculty in that first sense, and also the Divinity School as a place of preparation for the Orders of the Church—that both alike ought to go?—I think if one went, it is hard to see how the other would stay. I should say they would both go if one went.

1411. What Universities are there in the world—in England, or on the Continent—in which there is no Theological Faculty?—I really could not give you any information upon that point, because I have not read extensively in regard to the University question.

1412. I think the Royal University of Dublin is one, and so also until lately were the newer Universities of England, but Manchester is no longer so—I do not know about Liverpool. I think probably Birmingham, Sheffield, and Leeds have not, but so far as I am aware Liverpool has one?—And the others you have mentioned have no Theological Faculty?

1413. They have not; but what I was going to ask was this: Is this theory which you have put forward really modelled on what I think you said it was—on the example of the Queen's Colleges of Ireland?—I should like to make a couple of observations with regard to that matter. We are not considering a case where, perhaps, the bulk of the population of a country are largely agreed—practically unanimous, or all but unanimous. It may be convenient for them, and it has been the rule in the past, when the Church was one, that Theology was taught along with the other sciences which were taught. But that is not the state of the case in Great Britain or in Ireland. I think there is gradually a separation coming between the Church and these institutions of the State, and I do not know that anything has taken place recently that would be like putting down one Theological Faculty like the various Theological Faculties in those new foundations which you have been referring to. In regard to Ireland we have been going the other way—that is my point—that we have been going towards entire separation between the University and the Theological Faculty.

1414. I mean in regard to the elimination of Theology from a University course; is there anything in that direction anywhere except in the Queen's Colleges?—There is no other except the Queen's Colleges and the Royal University in Ireland; they are the only two, and that has been the rule from the foundation, I think.

1415. Or outside Ireland—is there any such tendency anywhere else?—Well, I do not know about America, but I understand that there the tendency is all in the direction of the different Churches having their own Theological Halls.

1416. I think, as to America, that is true. Now, have the Queen's Colleges been so marked a success that one ought to take them as the type for future University development?—Well, as long as the Queen's University existed, I think it could be proved abundantly that it was a great success.

1417. I am not asking what it was, but the principle. I mean, of the Queen's Colleges as they now are?—Of course there is no denying that with regard to the Queen's University of Ireland a great deal of the work that it carried on was injured

greatly by the overthrow in 1879. There was the disuse of the old rule that there should be residence—a change that it was a great pity was ever brought in—and then there was the uncertainty; there were various changes made that tended to send the young men from the Queen's University—I mean from the Royal. There was a sense of confusion and uncertainty. I have heard from a great many men—at least a considerable number—who were themselves students of the old Queen's University, that the state of uncertainty as to the Royal University was such that they would not send their sons to their own Alma Mater at all.

1418. I quite understand that, but my point now is this—and in this I think I take your meaning rightly—that you still do look upon the Queen's Colleges in this particular respect, the exclusion of Theology from any recognition within the College, as a proper type of academic training?—Quite so.

1419. And also I understand that your view is that if a Theological Degree is to be conferred by a University it should be conferred by examination alone, quite apart from teaching that has been given in the University?—Yes.

1420. In fact the Royal University is in this respect the model upon which you would go—examination alone apart from teaching?—Oh no, I would not go on examination alone—quite the opposite to that for the purposes of a University.

1421. But I understood that a Theological Degree, if it is to be conferred, is to be done by examination alone?—Certainly, but as to the conferring of it—I speak under correction, but I think what I said was that it struck me as a feasible thing that something might be made of that system.

1422. In any case you would prefer it to the present plan of having a Theological Faculty?—Oh, yes.

1423. DR. DOUGLAS HYDE.—Do you not think that the case of the General Assembly would be made infinitely stronger if it were, let me say, less academical in its character—if the grievance were proved to be a real grievance acting on individuals, and not, as it may appear, merely of a supposititious nature. Now, supposing the Divinity School were taken out of Trinity College, and the teaching of Divinity, and the Chapel went, do you think that more of your Presbyterian students would frequent Trinity College?—I daresay a few more would. I could not give you an opinion that would be of any solid value; it would depend upon the other University very largely—what state of prosperity it was in. But I am sure that Trinity College, so far as the Presbyterians were concerned, would gain to some extent—that is my idea, you know—in this way, that there are parents in Dublin and about Dublin, and perhaps a good deal farther north than Dublin, who would say to themselves, "There is a full, even chance in Dublin University now—in Trinity College." They would say that to themselves.

1424. And you think that more Presbyterian students would attend Trinity College then?—I believe so, but it is not a matter in which the Presbyterians would bulk very largely; they are not a very numerous body.

1425. CHAIRMAN.—Then really there is very little practical interest in the question?—We have an interest in our own members; we would like to get all we can, as we think it would help towards a solution of the whole question.

1426. LORD CHIEF BARON.—But do you not think Trinity College would lose half its members if that were done. Have you ever considered how many of its students ultimately take Orders?—I do not see how it could affect the attendance in Trinity College, except as regards the Divinity School, because they must go through Trinity College to do that in any case.

1427. They would go to Oxford if they could not get a degree in Dublin?—What is to prevent them from going to Oxford at the present time?

1428. There is no reason why they should, as long as they can get what they want at Trinity College; but it would be a great loss to Dublin if they were compelled to go to Oxford owing to that being no longer possible.

1429. DR. DOUGLAS HYDE.—The practical point I was coming to was this: You seem to think that supposing the Divinity School were removed from Trinity College, the students who would frequent it

DUBLIN.

would have first to put in their three or four years in Trinity College?—Quite so.

1430. The evidence laid before us has been that the Divinity students as a rule are not, as a class, very well off in this world's goods; do you think it at all likely that they would put in three or four years in Trinity College, paying the comparatively large fees there, and afterwards attend the Divinity School, thus losing a number of additional years, and also a large sum of money?—I do not see why they should not come to the College as before, supposing they are living in Ireland, with Dublin as their headquarters; I do not see why they should not still come because the Divinity School happened to be across the street, and go through the Arts course as before. I cannot gather that the fees would be any greater, or any less, than before. If they met them before, they would probably be able to meet them still.

1431. Would not that impose two additional years at least upon every Divinity student before he could become a clergyman?—I do not think so; he would take his Arts Degree in four years, or perhaps sooner. That he does now, and then he goes and takes two years in the Divinity School. I do not see any difficulty in his taking four years here, as before, and then two years at the Divinity School across the street.

1432. You mean he would take the two courses concurrently?—No, I do not mean take them concurrently, but I hardly think he has been doing that hitherto.

1433. LORD CHIEF BARON.—Oh, yes, he has?—I read a paper by Professor Mahaffy not long ago, and he said that Divinity was a post-graduate study. The Arts Course is the chief course during the Arts Sessions I should say.

1434. DR. DOUGLAS HYDE.—In practice, if I am not mistaken, nearly every student in the Divinity School joins it after the second year, and under your proposed system you would be imposing two years' additional study upon them.

1435. CHAIRMAN.—Do not the studies overlap for two years?—That may be, but I do not think there would be any serious difficulty about it.

1436. LORD CHIEF BARON.—The words of the Regulation are these, at page 184 of the Calendar:—"The Divinity School is open to all students who have passed the Michaelmas (Final) Examination of the Senior Freshman year, and who have obtained satisfactory marks in Greek and Latin." That is at the end of the second year?—But in a broad way the Arts Course takes up the time of the student to the larger extent, does it not? I would understand it in that way—that he would be occupied with Arts studies chiefly until he had had his degree, and then that he would be occupied in Divinity studies chiefly. I am familiar with something like it in Belfast, where a Theological student takes a Class in the Queen's College, and perhaps he may take a Class in what we might call our Divinity School—he might take that, attending chiefly at the Queen's College.

1437. DR. DOUGLAS HYDE.—Attendance in the Divinity School here counts as part of the Arts Course?—I did not understand that.

1438. That is so. After the second year, if a student attends the Divinity School at Trinity College, he is exempted from a certain part of the Arts Course, so that all the Divinity students practically do it. So that I would point out that you would be damaging to a certain extent all students who go in for Divinity by cutting them off from that and making them attend, probably in a separate College, for two years additional after taking their Arts Course here?—But those two years they would be putting in under the old system also, inside the University; they would be taking a two-years' Divinity Course here. I gather from the Calendar that two years are required for a Divinity Course here.

1439. What happens in Magee College: do many Magee College students go into Magee after having taken Honours in Queen's College, Belfast, or do they study concomitantly in both Colleges?—They have an Arts Course in Magee College as well as a Theological Course, and what will be done is something like this—that a student begins there, and he may finish there, but if he takes his Arts Course somewhere else he may go there for Divinity.

1440. And would the general feeling of the Presbyterian body be that if the College Chapel and the Divinity School were taken out of Trinity College, it would be better for the student to go to Trinity College, and get the prestige of it, and then go to a College in Belfast for Divinity?—You are speaking about the Arts Course?

1441. Yes?—I think it is in this way; I am not in a position to express an opinion upon the value of the two Degrees in their merits, but undoubtedly the Trinity College degree, or the Dublin University degree, has a great vogue, and if the change I suggest were made, some of them would probably take advantage of it, and they could then do so without any hindrance as far as one can see.

1442. You seem to speak feelingly; as an old Queen's College man would you like to see Presbyterian students leaving your Alma Mater in large numbers, and going to Dublin instead?—Perhaps I may put it in this way: if a Presbyterian student comes to Dublin, to Trinity College, I would a great deal rather he came without a Divinity School than with. My reason for that is simply this—that I think there would be a better chance of his continuing in his own faith. I am not blaming anybody at all, because I believe there has been no effort to withdraw men, but I look at the natural influence of the place upon a young and impressionable man.

1443. Supposing that a Presbyterian entered Trinity College to-morrow, unless he was told, how would he know that there was a Divinity School there at all? He might pass through the squares and corridors, and never know that there was such a school?—He could hardly help coming to know. For instance, one gentleman wrote to me—an old Trinity man—and he said, "There is a matter you should look to; some of our boys come up from the North, or from a good way outside Dublin, and they are put in charge of a tutor who is perhaps a member of the Disestablished Church." Of course it must be that, these being in a large majority, the chances are in that direction, and the student gets accustomed to regard the tutor as his guide and friend, and then he knows, perhaps, that he is officiating in the Chapel in the morning, or that he is taking a part in the service, the daily or weekly service, and this gentleman pointed out to me that it was more likely the student would be drawn to a service conducted by a man he was in the habit of meeting constantly in the College than that he would attend some congregation of an outside Church, where the service would be conducted by a stranger to him.

1444. CHAIRMAN.—Does not that show that what you object to is not a Divinity School, but the fact that the greater proportion of the tutors are members of the Disestablished Church?—Well, that would make no difference if it were not for the services being held inside the College; it would not matter then who was his tutor for Mathematics and Classics at all.

1445. DR. DOUGLAS HYDE.—Are you aware that only four of the Fellows are in Holy Orders?—I do not know about that, but that was the point which my friend put to me, and he has known Trinity College for a long time, and was a student there for three or four years.

1446. Just upon the point of Deans of Residence; do you think their teaching ought to be made compulsory for students, as well as attendance at Chapel and the Catechetical Lectures?—Compulsory on the part of the College?

1447. Yes?—Certainly; I think it should be made a rule—it ought to be; it would be good for the students to come under the influence of a wise friend who would help and guide them. I see no reason why that should not be so.

1448. Would not that be the very negation of what you term "nationalising" Trinity College—to make the students attend Chapel and the Catechetical Lectures?—It is a very different thing, having a Divinity School once removed from the University, and having proper oversight of the students there.

1449. I understood from the Provost that it is no longer compulsory on Church of Ireland boys to attend Catechetical Lectures, and would you wish it for Presbyterian boys?—Is it the case that a student can come in here, and go anywhere he likes?

DR. CORREY.—He need not attend Chapel on week days, I think.

DR. DOUGLAS HYDE.—On Sundays it is, perhaps, compulsory, but certainly not on week days.

1450. Mr. KELLEHER.—No one who is not a member of the Church of Ireland is compelled to attend Chapel on Sundays; and nobody who is a member is compelled to attend Chapel if over twenty-one years of age, or if he has a note from his parents or guardians. And as regards Catechetical Lectures, again there is no compulsion?—Then it seems that the spirit of the age is going even a little further than even the Presbyterian Church wishes it to go. For myself, I rather deplore that; I think young men ought to be looked after by their Church.

1451. Dr. COFFEY.—I gather that your conception of the training of a Divinity student is something like this—that he should first go to a University for the Arts Course, and then take the Divinity Course afterwards in a College separated from the University?—Quite so.

1452. Do you not think that the effect of the working out of that system upon the general body of University-going Presbyterians will be to send them to some places where a Presbyterian atmosphere can be created—that is, where there would be such a number of such students as to make a claim upon the staff of the College for the recognition of individual Presbyterians for selection to the Professorial staff?—I hardly gather your meaning, I am afraid.

1453. Suppose there were a College in which the teaching staff was mainly made up of members of the Episcopalian Protestant Church, would you advise your Presbyterian students to go to that University College?—Well, I have seen no difficulty in the Queen's College, Belfast, with Episcopalian Professors, or Roman Catholic Professors. I have seen no difficulty in that way, and if the Declaration is signed which every Professor must sign, that he is not to interfere with Revealed Religion in the first place, and that he is not to say anything that would be critical in regard to one particular Christian denomination, I do not see that we could ask anything beyond that. Of course it might be that where the Presbyterians were a large number—I mean the students—that there might be a large number of Presbyterian Professors, but they would be held under the same restrictions entirely, and I cannot see that we could run after the rise and fall of numbers either among the Professors or among the students. I would have the place made free from anything that could tend to create an "atmosphere," but as to the atmosphere created among the students themselves, I do not see that there could be any interference. But I cannot see that any "atmosphere" would be created by, say, ten or twelve Episcopals out of the total staff of such a College as this, if they had signed the Statutes of the College.

1454. But is it not the fact that in the Belfast College the great majority of the staff are members of the Presbyterian Church?—I do not believe it is; I believe that at this moment although the majority of the students are Presbyterian, the majority of the staff is not Presbyterian, and I think—I am not fresh on it, but I think it has hardly ever been the case that the majority of the Professors were Presbyterian. I think you may take that from me as substantially the fact.

1455. Has the President of the College always been a Presbyterian?—The President has been.

1456. And in the Faculty of Arts have the Professors upon the staff been mainly Presbyterians?—Well, I remember one I studied under was a Rector, who afterwards became a Bishop of the Disestablished Church; that was the Latin Professor in my time. The Professor of English Literature was, so far as I know, a Protestant Episcopalian. I am not quite sure as to that, but I am quite sure as to the Latin Professor, who afterwards became Bishop of Meath; and it has been calculated by some of our people who have given attention to that particular subject, that really at hardly any time has the majority of the Professors of the staff been Presbyterian.

1457. If the Divinity School were to be outside the walls of Trinity College, would the fact that such a large number of the staff of Queen's College, Belfast, are Presbyterians, and such a large number of the staff of Trinity College at present Episcopals, be a determining factor as to the choice of the College to which you would send your Presbyterian students?—I do not think it would to any large extent; if the status of the place were undenominational, I think there would be a good deal of liberty taken.

1458. Mr. KELLEHER.—You spoke of taking the

Divinity School across the street, and you said that the students might come here for their Arts Course just the same. Are you under the impression that there is in Trinity College a separate block of buildings in which Divinity Lectures are given, and which is set apart altogether for the Divinity School?—Well, I do not know, but I take it that there must be a suite of rooms that is used by the Lecturers and Professors in the course of their lectures and examinations.

1459. Would you be surprised to hear that many of the Divinity Lectures are delivered in the Dining Hall?—If it is a good roomy place I think there would be no harm in that.

1460. And that the rest of the Divinity Lectures are delivered in portions of the Engineering School? What I really wish to convey to you is that there is at Trinity College no Divinity School in the sense of a separate block of buildings?—Quite so.

1461. The question arose because Dr. Hyde suggested that it might be possible for students to come in here and never be aware of the existence of a Divinity School, and I thought you might be under the impression that we had a separate building for the Divinity School which would strike the eye of the ordinary observer?—Well, I think if you transferred it across the street in the way that I suggest, you would have to give it a local habitation and a name.

1462. Then when you suggest that we should transfer it across the street, you do not mean that we should transfer the Dining Hall across the street?—Of course you could not really carry any of the buildings intact across the street, but if you gave money to the representative body of the Synod to put up buildings which would be generally regarded as the Divinity School, of course there might be some other meetings held there, just as there are meetings held now in our Theological Hall, where we have in the large Hall meetings of various sorts.

1463. When you suggest that we should take the Divinity School across the street, and permit the students to come here for their Arts Course, how would that make a difference?—In what respect?

1464. Because the same Divinity students would still come to Trinity College for their Arts?—That is my difficulty—that I hardly see how there would be any difficulty. Of course there is an overlapping between the two Courses, it seems, and we have been accustomed to that in Belfast, the overlapping classes that were Divinity Classes being taken before the Arts were concluded, and *vice versa*. I do not see any great difficulty there; I think that could easily be arranged.

1465. But what would be the advantage if you took Divinity students across the street for their lectures, and sent them back immediately into the College—how would you alter the position of the College—because the Divinity Lectures are given at present in rooms not occupied at the moment, but which are not set apart for Divinity alone?—The difference would be that they would come in as Arts students only to Trinity College.

1466. But what is the real difference between that and what is done now, except that they now come in as Arts students, and are permitted to attend the Divinity lectures free. That is the only difference. I was only anxious to remove from your mind any impression that there are separate buildings here for the use of Divinity students?—Well, that is a thing which of course I did not know, but I think you will admit that it hardly goes to my main point, which is that the Divinity School should be separate from the University.

1467. You suggested that some of the students who come in here may be put under the charge of a tutor who may be a member of the Disestablished Church. If it were in the power of the pupil, upon entering, to select his own tutor, and if there were in the College (as there are in fact at the present time) three Presbyterian tutors, do you not think that that particular difficulty would be got over?—It would be an improvement, and I daresay something like that is done, although I have known Presbyterian students who were under an Episcopalian tutor; there is no doubt about that.

1468. But that would be because of the choice of the pupil himself. There is at least one Presbyterian student who is under me, and he selected me himself, and it was quite open to him to select another tutor

if he had chosen to do so; he might have selected any of the Presbyterian tutors?—Yes.

1469. So that this point of yours, that students may be put under the charge of a tutor, who may be a member of the Disestablished Church, really arises from a misapprehension?—Nevertheless it has occurred, and to my knowledge; but it was some time ago. It was a Trinity man, as I think I stated, who wrote to me in connection with this matter, and he mentioned that. It may have been more the case in his time than it is now, but then it might also be more the case at some future time than it is now, and that is what he said had been overlooked—that there was an influence created through personal contact during the week, and he thought that a young man would find it unsatisfactory to him; he would find it easier to stay in College and attend the services conducted by the people he had got to know during the week, rather than to go out to a congregational service conducted by a minister to whom he had never spoken.

1470. Your friend seems not to have understood that the pupil has the right to choose his own tutor, or that there are three Presbyterian tutors on the staff at present; so that his objection scarcely holds?—I do not know how many students a tutor may have, but I see in the Blue Book,* near the beginning, that there were, I think the year before last, thirty-three Presbyterian entrants. Well, supposing there in the height of the Session 120 Presbyterians, that would be rather a high proportion, would it not, to three tutors? Other tutors would be going without, I should say, under those circumstances.

1471. But that would rather be the result, again, of the pupil's own selection?—Yes. There is a difficulty.

1472. But it seems to me that the objection that a student might be put in charge of a tutor who might be a member of the Disestablished Church does not really hold good, because, as I have pointed out, the student may choose his own tutor?—I am not conversant with the steps that are taken by the students when they come up here.

1473. CHAIRMAN.—Mr. Kelleher is a Fellow of Trinity, and a tutor, and he therefore speaks with knowledge?—I know that is so.

1474. Mr. KELLEHER.—I would like to ask you this: Does the fact of the existence of the Divinity School at Trinity College prevent a great number of Presbyterian students from coming to Trinity College?—It prevents some.

1475. Are you aware that three Presbyterians have been elected to Fellowships of Trinity in the last nine years?—I am aware of that.

1476. Considering the number of Presbyterians living in the South of Ireland, that is a very large number, is it not, in nine years?—Is that an average in any way?

1477. No, that is in the last nine years; during that time there have been three Presbyterians elected to Fellowships?—There has been no alteration in the organisation of Trinity College since 1873, I suppose?

1478. No?—Of course you know you have profited, I have not any doubt, by the dislocation of the old Queen's University, especially in these last years. I have come across quite a number of men who say that they will not allow their sons to go there—men who were trained in the Queen's Colleges, and who have a warm enough feeling, in a general way, towards the place in which they were trained, but they say, "We do not where they are going, and the degrees are less in value, and consequently we prefer to send our sons to Trinity."

1479. May I ask you a last question, and I ask it because I consider that differences of opinion are valuable as well as agreements: In this Statement† of your Committee an unanimous expression of opinion, or is there a large minority opposed to it?—I will answer that to the best of my ability. There has never been any other policy practically since the first date I have mentioned, which was 1872, in these Resolutions; there was never any other policy agreed to in the General Assembly; there might be little incomplete statements, or inquiries ordered into things, but on the whole the policy has been as I have told you, and as I have read out from this copy of the Resolutions. There has, for the last few years, been an opposition—in fact there has been, as far as I remem-

ber, a small opposition since the interest in this question was revived, about seven or eight years ago—I think largely owing to Mr. Balfour's letter about the settlement of the University question—it is given in the evidence, or in the documents, printed in connection with the former Commission—but as to the last three or four years, I have only been Convener for two or three years, and the first year the proportion was about one to five, the second year about one to seven, and this last year there was a bigger vote—there was a Resolution proposed to delay matters simply, and to wait, and the opposition was bigger than it has been in former years; but on the whole you can take it that the policy of the General Assembly has been pretty consistently in the direction I have mentioned.

1480. But there is an opposition amongst Presbyterians to this policy?—Oh, yes; there are groups.

1481. CHAIRMAN.—Just one more question before we depart from this branch of the subject. I think, upon some matters, you have probably found that Trinity College is not quite what you thought it was when you came into this room; is not that so?—Well, I have hardly had time to size up my general impressions.

1482. But have you learned something with regard to attendance at Chapels, for instance, which was new to you?—Oh, yes, I believe so.

1483. And also with regard to the student's power to select his tutor?—I knew there were Presbyterian tutors on the staff, and I had heard of some Presbyterian students who were under those tutors.

1484. Has your objection to Trinity College been somewhat diminished by what you have heard to-day? You are a very candid witness; will you tell us whether some of your objections have not been somewhat diminished?—Well, on the broad question I think it would be a great advantage to Trinity, as well as to the country in general, that the Divinity School, which represents one particular Church in the community, should be removed. I am sensible that I have been kindly treated, and I have enjoyed being here as much as a man could who is, as it were, under cross-examination, and who is not a specialist in the subject; but at the same time I believe that in order to settle the University question, and to settle it in an academic direction, it would afford a good proof to the country that Trinity was in earnest on the subject if the Divinity School was removed and placed under a representative body.

1485. I have, of course, no right to press you for an answer to my question, and I do not wish to do so. I merely wish to observe that what you have just said is not an answer to the question I put to you?—I will answer it to the best of my ability. You ask me if my opinions have not been changed to some extent.

1486. What I asked was whether your objections to Trinity College had not been somewhat diminished by what you have heard since you came into the room?—Well, have I not conveyed that the serious objection remains? That is what I want to convey.

1487. I do not wish to press you in the least?—That is what I want to convey.

1488. I believe you have been good enough to prepare some observations upon the larger questions relating to this inquiry, and it is my duty to remind you that before the former Commission a Statement was put in by Professor Dickey, on behalf of the Committee on Higher Education of the General Assembly of the Presbyterian Church in Ireland. That is a very elaborate document which began with a full statement of the position of the question, the proposal to endow a separate College for the Roman Catholics, and the other schemes foreshadowed. All this has been fully considered; that document is before us, and we are required, by the terms of our Commission, not to go into matters which have already been taken before the Robertson Commission. Subject to that we shall, of course, be glad to hear anything you may have to say, but you will understand, from what I have said, that you must not go over the ground which has already been covered by the previous Commission?—If you will be good enough to allow me to read my remarks I shall be glad to do so. I made a Memorandum with regard to the Divinity School, as I thought it would be better to have something prepared.

1489. That we have heard?—You have heard that, and you have kindly heard the substance of the Re-

* Appendix to First Report (Cd. 3176), 1906, page 20.

† Ibidem, page 107.

solutions bearing on Trinity College at those times when it interested our Church especially. This other Memorandum which I desired to lay before you was on the later history—as to the relation between Trinity College and the Royal University, and as to the relation between Trinity College and the settlement of this Irish University question.

1490. If you think it does not go over the ground already covered by Professor Dickey's Memorandum, we shall be glad to hear it?—It is not the same thing, but there must be points of contact. I am afraid it is impossible to deal with Trinity College in any large way without affecting, and in fact, determining the settlement of the University Question, for the rest of Ireland, and that is why at least one scheme must be discussed that carries us outside Trinity College. The education question in Ireland at the present time is pre-eminently religious, or, one might more accurately say, ecclesiastical. Other questions would breed comparatively little contention if the relation of the Churches to the University and to the authority and resources of the State were settled. In a general way there are two theories on the subject, the Sec-tarian, and the United or Mixed. If you eliminate from Trinity the signs of one ecclesiastical ascendancy you offer to all the world a guarantee of your fairness and desire for equal treatment, and do something to defeat the opposite theory: if you maintain the present predominance in Trinity College in favour of the Protestant Episcopal Church then there will be one or possibly two other sectarian Universities in the country. The latter alternative was that adopted by the late Premier, Mr. Balfour, in his letter to a constituent (Mr. Orrell, January 1899). One chief object that he had in view was to maintain unimpaired the Protestantism of Dublin University. That it is Protestant he asserts without any hesitation, and with the descriptive particulars he gives, the Protestant government, the brilliant Protestant controversialist, and so on, we would have little difficulty if, in the place of Protestant he wrote Protestant Episcopalian. But at any rate it is Protestant; it is so Protestant, he says, that if you could imagine a seat of learning in exactly similar circumstances with the exception that you would read Roman Catholic where you now read Protestant, hardly any Protestant would send his son to it. He shrinks from the possibility of a large invasion of Roman Catholics, although it was a fundamental proposition of Provost Salmon (*Contemporary Review*, April 1899), that they could come in and capture Trinity College under present conditions if they pleased. So to protect the Protestant University Mr. Balfour agrees to found one that will be Roman Catholic, and again another in the North. The objections to this solution of the difficulty appear to be most serious. The general tendency of Universities both in Europe and America in recent times is to be noted. It is against sectarianism and in favour of freedom. A portion of the evidence given before the recent Royal Commission may be quoted in support. On page 40 of the Appendix to the First Report of that Commission Professor Butcher puts a question to Bishop O'Dwyer (479)* from which the following is a quotation.

1491. I am afraid that is going beyond the limits which, as I have already explained, our Terms of Reference impose upon us?—The course of this Memorandum is one or two criticisms—three, I think—offered on the other solution.

1492. The other solutions, as I have already observed, are not before us in any sense except as affecting Trinity College. We are concerned only with the question of improving Trinity College, and if any part of that Memorandum bears upon that point we shall be glad to hear it, but we have a little difficulty in hearing a general dissertation upon the whole question?—There were two reasons why I put these observations into writing, and I may say here, that, of course, it is not a document that has gone before our Committee. The first reason was the Terms of the Reference under the last two Clauses—what improvement could be made in the general education of the country in and through Trinity College, and I have been trying to put forward a positive theory, and then it seemed natural to look at the question: if this theory is not taken what theory is to be taken?

1493. We are only concerned with that in this sense—that we may say (I do not know, of course, what we shall say), that some one or other of those schemes is better than altering Trinity College in regard to its fundamental position. I do not know what we shall do, but that is conceivable. If you think that your Memorandum is very relevant to that, we must listen to it, but I think you came here rather to represent the Committee of the Synod on the questions they had considered; is not that so?—If you rule me out I am, of course, bound to bow to your ruling, but the latter part of the Statement contains the history of this question.

1494. I think you may assume that the history of the question is really before us, and that we do not want to deal with that. The history of the question was gone into very largely before Lord Robertson's Commission, and, as I have already stated to you at the beginning of the interview, all that is before us?—Quite so, and if you think I ought not to be heard upon this branch of the subject I will not persist.

1495. I am sure that you will understand that we are much obliged to you for the assistance you have given us, and that we have not the slightest wish to curtail you in any way, but we must mete out the same rule to other witnesses as to you, and if every witness were to give us the history of the question I am afraid that these proceedings would tend to perpetuity?—I am quite satisfied with the courtesy I have received. I would, of course, have liked to put my points before the Commission, but if you are unable to allow me to do so, I am satisfied with your ruling.

1496. Please understand also that you must not assume that we have made up our minds in any direction. If we have put questions to you in a certain direction, it is because we want to get your opinion, and not because we have made up our minds in the contrary direction?—I thank you.

The witness withdrew.

N. J. SYNNOTT, Esq., Representative appointed by the Committee of Irish Roman Catholic Laymen, called in and examined.

1497. CHAIRMAN.—I think you come before us to represent the Committee of Irish Roman Catholic Laymen?—Yes.

1498. That I think is, so to speak, a voluntary Association of gentlemen who take the same view upon this question?—It is.

1499. And you have been good enough to present us with a Statement† of that Committee. That Statement, in the first place, points out the objects of the Committee; then it refers to the late Royal Commission and the action of the Committee before it; then, it gives certain reasons for looking for a solution in the University of Dublin and rejecting other schemes; and, then, it deals with the question of a separate College under the Royal University; and, finally, it deals with the Dunraven scheme?—Yes.

1500. Then, I think one of the last actions of the Committee has been embodied in a resolution of

July of this year—or, rather, not a resolution, but a Statement§?—Well, as I point out, that Resolution was in the first instance not the work of the Committee, but, having been adopted by a number of other persons, it met our views in general, and so we passed a resolution in favour of it.

1501. That resolution embodies, does it not, the chief points to which you are anxious to call our attention:—"We, the undersigned Catholic laymen, desire to place on record our conviction that no solution of the University difficulty in Ireland, based upon Trinity College being constituted as the sole College of a National University, can be accepted as satisfactory so long as it fails to provide for:—(a.) A substantial representation, from the start, upon the Governing Body, with a power of expansion of such representation dependent upon, and fairly proportionate to, the number of students whom Catholics send into the College, and the academic distinctions which

N. J. Synnott,
Esq.

they may there win." Now, that is in the nature of an interim arrangement?—Certainly.

1502. Therefore, I will, with your permission, pass it over in the first instance, and come to what is supposed to be permanent:—“(b.) The establishment of dual Professorships in, at least, Mental and Moral Science, and in History.” Now, do you conceive that those are all the subjects in which it would be necessary to establish dual Professorships?—Of course, by that is meant dual Professorships on a strictly denominational basis. I never imagined that if there were a large accession of students to Trinity College, and certainly if it were possible that the Medical School at Cecilia-street, and, if one may hope for it, the College at Stephen's Green, were taken over, there would not be other Professorships.

1503. I was speaking of dual Professorships with regard to religious differences; but I may call your attention to the fact that, I think, in the year 1845 certain amendments of the scheme then before the public were proposed and approved by the Bishops, and one of them was in these terms:—“That Roman Catholic students could not attend the Lectures in a large number of subjects which were specified, including Geology and Anatomy, without exposing their faith or morals to imminent danger, and that a dual Professorship was requisite in each of those subjects”?—I am well aware that that was the statement of the Roman Catholic Bishops, but I would prefer you should address questions upon that point to some person who represents them; but before the last Royal Commission Dr. O'Dwyer and others were asked questions similar to what you are now putting as to the College or University—in the College certainly under the Royal University which it was then proposed to establish—Dr. O'Dwyer was asked the specific question whether he considered it necessary to have a separate Professor of History, and he said he thought not, and I do not think there was a single witness who said that it was necessary to appoint separate denominational Professors in the other subjects.

1504. Then, you think the Bishops have altered their view?—I think probably that is so; I do not think there was a single witness who said that, for instance, in Anatomy a dual Professorship was necessary—in fact, it was inconsistent, too, with the other principles laid down by, I think, all the ecclesiastical witnesses—that on scientific and purely secular subjects, as long as the Professor taught his subject and nothing else, he was not to be interfered with. The reason that we suggest the dual Professorship in Mental and Moral Science, and in History, is because, I suppose, that, in the first place, on educational grounds, there is some basis for the opinion that on both those subjects (and I think the documents which have been presented to the Commission bear this out) they take here a rather narrow view of the question, and certainly we, as Catholics, conceive that Philosophy—both Moral and Mental Philosophy—in many respects lies at the root of all knowledge, and, certainly, lies at the basis of the Theological Course, which is also, of course, one of the conditions that we make.

1505. Then, to go on to the other requirements (I do not know that we shall have much to ask you upon them), you further propose:—“(c.) The religious instruction of our students by clergymen of our own Church; (d.) The establishment of a Faculty of Catholic Theology on terms of full equality with those enjoyed by Protestants; (e.) The establishment of a chapel for our students within the College; (f.) The creation of a Council or other body to secure the practical efficiency of the safeguards provided for our students in religion, faith, and dogma.” I think I should like to ask you just one question, because this seems to me to be very important. The scheme which you propose is obviously one for mixed education, is it not?—Well, I should like to qualify that. I have a good deal to say upon that, and I should like to qualify it very much.

1506. By all means do so?—“Mixed education” has been used as a phrase to cover such an immense number of different things, that it entirely depends upon what sense the term is used in.

1507. I will put it in this way:—Is it, in your judgment, a scheme of mixed education in Trinity College within the meaning of those words as used by the Bishops in their document of the 25th July of this year. You know the document I am referring to—I do.

1508. Is it a scheme of mixed education according to that document?—I do not exactly know what is the meaning of the phrase as used in that document, but I do not think it is mixed education within the proper meaning—what I mean to say is this, that I think the only “mixing” there is the mixing of students together; that is all that can conceivably be objected to.

1509. Their communication with one another in their common studies?—Yes. What I mean is this:—In the scheme here proposed, it is not a secular education, which is one meaning that has been attached to “mixed education,” because it is not merely secular, seeing that religious instruction is provided. It is not any scheme of proselytising, or possible proselytising, because that is provided against. It is not a scheme by which Catholic faith can be undermined, because that is also provided against. And, in addition to that, there are distinctively Catholic Professors in the essential subjects of Theology and Mental and Moral Science and History. I mean, when it is reduced to that, the “mixing” is really in the nature of mixing the students alone, and, with regard to that, I cannot find, looking at the history of the subject, and looking at what has been done and allowed in other countries, that that is at all an insuperable objection.*

1510. I think I have seen “mixed education” somewhere defined as education to some degree—to some extent—by persons who are not members of the Roman Catholic Church?—I do not remember that definition.

1511. Now, I will take you back to that paragraph in the Bishops' document, which seems to show that what they mean by “mixed education” there is something other than “(1.) A University for Catholics; (2.) A new College in the University of Dublin; and (3.) a new College in the Royal University.” It is something other than those three. I am quoting from the last paragraph of that paper:—“To sum up then, the Standing Committee of the Catholic Bishops feel that they are safe in stating that the Catholics of Ireland would be prepared to accept any of the following solutions:—(1.) A University for Catholics; (2.) a new College in the University of Dublin; (3.) a new College in the Royal University; but that on no account would they accept any scheme of Mixed Education in Trinity College, Dublin.” Now, does your scheme come within any of the three subject matters which would be accepted by the Bishops?—I think my statement makes it quite clear that as regards the two schemes of a College for Catholics in the University of Dublin, and a reorganised and adapted University of Dublin—or Trinity College, which is the same thing—we do not definitely pronounce in favour of one or the other, except that we suggest that possibly a solution obtained by consent, so to speak, for an adapted and reorganised University of Dublin would be possibly more attainable. But as regards the other, you ask me the question whether any of these schemes are within our view; we say that a College for Catholics in Dublin University would not be rejected provided it satisfies the conditions set out in paragraph four; but, in further answer to your question, it seems possible from this statement of the Bishops, and from other statements, and from what we know has been passed already in the resolutions and so on, that some of those conditions are not such as they might approve of. For instance, effective academic government (I am not quite so sure about this) after a temporary period. That is to say, that the atmosphere and complexion of the College should be that which the Professors and the students and the Faculties make it. Then, of course, the second is accepted—no religious test. With regard to point No. 4—“Joint examination for Degrees and standard of studies to be under the University Governing Body”—it seems quite clear that if the College is to be such as is proposed by the late Royal Commission, under which each College was to have a separate Professoriate and separate Courses, and were even to examine for their own Degree, and the only function of the University was to fix the standard, although that standard might be a varying standard in each College, we say we are absolutely opposed to it. Whatever our Committee may have differences of opinion upon (and these are mainly upon the point, I think, of feasibility as between one solution and the other), they are absolutely agreed about that.

1512. Mr. BUTCHER.—I think I ought to correct you on one point. The late Commission recommended that

* Note added by Witness. See on these points Questions 748 to 751, Vol. I., App. First Report Royal Commission on University Education, p. 56, Dr. O'Dwyer's evidence.

† Appendix to First Report (Cd. 3176), 1906, page 80.

there should be University Examiners in order to secure a uniform standard between the College examinations?—I am aware that there were to be external Examiners, but as the Courses were to be separate and the Professoriate separate, it is difficult to see how there would be necessarily a common standard. To come to No. 5 and No. 6, the whole conception of what we had of the College was more in the nature of a College in the Universities of Oxford and Cambridge, in which there is free association of the students, in which, as I understand, it is competent, and even common for a student to select his Tutors and to attend the Lectures of a person outside his own College, and where there would not be, either theoretically or in practice, so to speak, a wall thrown up between the two Colleges; and, of course (and this brings me to paragraph seven), to come again to the question of mixing, we were absolutely against any solution which would set up a bar to the free mixing of students of different denominations, provided there were adequate security given for their religious beliefs and religious instruction.

1513. CHAIRMAN.—Of course, the history of University education in Ireland shows the great influence of the Roman Catholic Episcopate upon the success or failure of such institutions?—I quite agree.

1514. Is there any reason to suppose that if Trinity College were modified so as to give effect to all those conditions which were imposed or suggested by the document signed by the Catholic laity in July of this year, such a scheme would receive the approval of the Roman Catholic Hierarchy?—You mean an adapted University of Dublin, as apart from the College?

1515. Yes?—Well, I sincerely hope so. The only thing I can say is that the Bishops in England were at one time—in 1864—equally opposed to Catholics going to Oxford or Cambridge. In fact, I think, if I am right—I am not quite sure that I am, but I think their Statement upon that question rather amounted to a prohibition instead of a warning, as was the case with regard to the Queen's Colleges and Trinity College. In fact, as I know personally—although I have not the document before me—it was the rule that before a student could go to either Oxford or Cambridge he had to ask for and get the consent of his own Bishop.

1516. I think there was a notorious division of opinion between two of the eminent leaders of the Roman Catholic religion in England on that point—Cardinal Newman taking one point of view, and Cardinal Manning the other?—Oh, yes; that was when Cardinal Newman proposed to open a College, or House of Residence and afterwards.

1517. Cardinal Manning opposed that, and for a time successfully, and, then, after a time, the rule was relaxed?—I have here (and it is extremely interesting) the two documents which show the history of that.*

1518. But to go back to the Irish Episcopate?—Yes; well, I have some hopes that they would relax the monitions which they have issued on the subject.

1519. But the policy of opposing the attendance of Catholic students at Colleges where education was given by non-Catholic teachers has been consistently held, has it not, by the Roman Catholic Hierarchy of Ireland ever since shortly after the formation of Queen's College?—It was not the question of non-Catholic teachers alone, but many others; but I may point out that their resolution was passed in 1897, by which there were to be no tests in a new institution, and by that resolution they recognised, as I understand, substantial lay government of the College, and academic government. I understood that it was admitted before the late Commission that there was to be, after a temporary period, academic government, and that the appointment and dismissal of Professors should be in the Governing Body subject to certain rights of Boards of Visitors. It seems to me that the things that they admit completely changed their attitude as regards Queen's Colleges, and therefore I hope perhaps they may further change. I mean theoretically, except as regards the mixing of students I understand everything else has been admitted, if there is added, what I, of course, hope will be added, a Declaration to be required of the Professors, such as is required in Queen's College, and a conscience clause such as exists under the Oxford and Cambridge Act.

1520. You will, of course, agree with me that the question whether any scheme which we may propose would or would not be acceptable to the Roman Catholic Hierarchy is a very important one?—No doubt.

1521. Do you think you could give us anything beyond a hope that they may relax. I mean, is there any evidence in that direction?—In the first place I can only point out that that Statement of the Standing Committee of Bishops was written before this offer, or this suggestion, by the Fellows and ex-Fellows and Professors of Trinity was thrown out, and I may say that personally that offer or suggestion was certainly more, in some respects, than I had ever expected, not of course that I should not wish it to be still further enlarged, but I never conceived, for instance, that it would be openly suggested that there should be a clean sweep of the existing Governing Body, and as that document of the Standing Committee of Bishops was written before that, of course they could not have had it in their minds.

1522. But since the publication of the Bishops' Statement has there been any manifestation, or expression, of a modified opinion, from the Roman Catholic Hierarchy?—There have been personal expressions of opinion, but I do not know of any joint action.

1523. Have those personal expressions of opinion been favourable or otherwise?—I would rather not go into that, because I was most unwillingly brought into the controversy, and I advocated from the first, that there should be a round table conference on the subject. But when you ask me whether there has been any further expression of opinion, I would ask the Commission to look at an article in the *Irish Ecclesiastical Record* of October, 1906,† written by a Professor of Theology in Maynooth College, and certainly this article answers the question which you put to me in the first instance, as to whether I was opposed, or the Bishops were opposed, to mixed education, because it is obvious that the phrase "mixed education" there is used in a most qualified and limited sense. There are two or three things pointed out in that article; in the first place it is pointed out that the warning addressed to the Queen's College was issued in view of the very special circumstances of the time. It was issued at a time when of course none of the tests were removed from either the English or the Irish Universities, when there was a general spirit of infidelity, when there were various attempts at proselytising in Ireland; and the Professor points out—I think at page 324—that he very much regrets that at that time the Bishops did not provide for those spiritual necessities which they said were neglected by the Queen's College scheme—so much as to say that the Bishops should have appointed at that time the Chaplains, and given the religious instruction. He goes on to point out that even now it is a pity that Catholics do not go, for instance, to Cork and Galway, and train that Professoriate which would be necessary if there was to be any Catholic institution, or any kind of institution for Catholics. He says further: "We complain that Protestants get all the positions in Galway Queen's College. But while only very few Catholic students go there, how can we expect that Catholics will be appointed to teach Protestant and Presbyterian students from the North of Ireland? And if Cork and Galway Colleges were re-constituted to-morrow on Catholic lines, and if we got a College for Catholics in Dublin, have we Catholics ready to fill the Professorships in these Colleges and in the seminaries? Shall we be ready when—if ever—the education difficulty is finally solved?" I point out that supposing to-morrow we were given an institution for Catholics, where are the Professors to come from? Dr. O'Dwyer pointed out—I think I have his words here—before the late Commission that the Catholic Clergy, who have complete control of the Secondary schools, were without University education. It was pointed out that there were no lay teachers. He says, in Volume I., Question 324: In the case of the Catholic Clergy this is very serious"—that is, the absence of higher education—"as well for themselves as for general education. Almost all Secondary education in Ireland is in the hands of the clergy. In almost every diocese there is a seminary, which is the school both for candidates for ecclesiastical Colleges and laymen. In these diocesan schools there are from 3,000 to 4,000 boys. The clergy that teach them have never received a true education." He develops

that at very great length, and says that "There are no laymen competent to teach at all." Of course that last expression is perhaps rather strong, because there is a competent staff of a very limited kind at University College, but the President of the University College has admitted that with regard to Science and Mathematics he has had to get the assistance of Protestants, and unquestionably if there was to be a full University we must go for help outside.

1524. LORD CHIEF BARON.—But why should we not go outside?—I do not see why; I am in favour of it; but I am trying to answer the difficulty which is put to me.

1525. There is no objection upon the part of the Catholic Hierarchy at present to a College in which a number of the Professors should be Protestant?—No, certainly not, in theory.

1526. Nor is there any objection to its being a College to which Protestants should be freely eligible, nor any objection to there being no tests?—Quite so.

1527. CHAIRMAN.—The writer of this article deals with this rather: he says, "The presence of a few non-Catholic teachers or students in a Catholic University would not prevent the formal approval of the University; the University would receive approbation, and the presence of the few non-Catholics would be said to be tolerated"?—Yes; I had noticed that passage.

LORD CHIEF BARON.—But the Hierarchy have admitted long since that in any institution which might be founded there are not to be tests.

1528. CHAIRMAN.—Perhaps you would like to make your statement continuously, without questions being put to you?—Thank you; I have tried to make it as short as possible.

1529. LORD CHIEF BARON.—I think the Commission will be glad to hear you fully; you represent a very important body?—You must please stop me if I seem to exceed in any degree the limits of your inquiry. I first of all looked into the historical aspect of the matter, to discover what was the original purpose and design of this University, as to whether it was national or intended for all classes of graduates or not, and probably, as you will have other evidence upon that, I need not go into that part of the subject.

1530. I shall be very glad, for one, to hear you fully upon that; it is entirely within the limits of our Commission?—I have a few facts, and I will just mention the authorities, and then the Commission can refer to them for themselves. The first public step towards its foundation was taken by James Stanishurst, who, it is said (and the authorities for the statement are Mr. Urwick and Mr. Macneile Dixon, both Protestants, and holders of degrees in the University of Dublin), was Speaker of the House of Commons in the time of both Mary and of Elizabeth, and it is said also, a Catholic. Catholics joined in subscribing towards its establishment, and it was not until the Caroline period that tests were set up, Protestant religious observances enjoined, and Fellowships confined to clerics of the Established Church. By the original Elizabethan Charter the College was self-governed, and free from State or Episcopalian interference. Whatever may have been the early history, the State, by the Act of 1793, and finally by the Act of 1873, abandoned the policy of keeping the College and the University as a close corporation for Protestants. The Irish Church Act of 1869 ended the recognition of a State religion in Ireland; all religions were thenceforth to be equal before the law, and when, therefore, the Preamble of the Act of 1873 defined the objects of the measure—that "the benefits of Trinity College and of the University, and of the schools in the University, as places of religion should be rendered freely accessible to the nation"—the Legislature must have intended to include the whole nation and the religion of the majority. As no party or creed in Ireland desires purely secular education—that is to say education without religious instruction—the only plan of making a University and its schools as places of religion and learning accessible to the nation (in the words of the Preamble) is to give opportunity equally to all in respect of educational facilities, religious observance, and religious and dogmatic teaching. Alteration in methods of government is machinery which helps to this end. That is to say,

in other words, it was illusory in substance to offer us a Divinity School and religious instruction, if that Divinity School was to be under a body which was *de facto* Protestant, and perhaps consisting of a majority of members of a different religion. And in further explanation of the Committee's attitude towards what I may call the Trinity College proposals—although we wish to preserve, so to speak, a benevolent neutrality as between a College in a University and this reorganised and adapted College—I would like shortly to refer to the historical aspect of the question. For a long time the Catholics have, so to speak, been "knocking at the door of Trinity College, or rather complaining that it was only half open, and in criticising strongly its *de facto* Protestant constitution, Protestant atmosphere, and absence of special dogmatic and religious teaching facilities for Catholics, presumably the removal of these objectionable features was desired as a possible alternative, and not merely that they should remain and become the basis of a similar claim on the part of Catholics for equal privileges. I am not aware that it was ever denied (until, at any rate, recently) that the claim for equality could be met by levelling down as well as by levelling up—that is to say, equal opportunities to be given within the University and College instead of outside it. There has been a phrase constantly used in regard to this question of "Hands off Trinity." Now "Hands off Trinity" was not a Catholic cry at all, and I do not know who invented it.

1531. It has been explained that there has been a mistake about it, and I think it may be left out of account?—Then I will drop the phrase, and say that the principle was not ours. In fact when phrases of that sort were used, there was some talk in the Press about their narrowness, but the policy now seems to be rather the other way, and it is said, "We will allow your monopoly or narrowness, but that monopoly and that narrowness shall be made the basis of another claim by us." With that I have no sympathy, and I do not think that our Committee have any sympathy with it. Now, I would like to refer, if you will permit me, to some very remarkable facts. From the beginning of Catholic Emancipation—from its first inauguration by the Act of 1793, I find a consistent attitude, certainly by Catholic laymen, in respect of this question. They have constantly, as I have said, been "knocking at the door" of Trinity, and down to 1875, when the Synod of Maynooth passed a resolution applying the warning which had been given as to the Queen's Colleges to Trinity, I do not find anywhere a suggestion on the part of the ecclesiastical authorities that Catholics were wrong, so to speak, in seeking to make Trinity open, or that they were wrong to go there. Now, the Act of Parliament of 1793, the Catholic Relief Act, which opened Trinity to Catholics, did a great many things besides doing that. It abolished the Oaths and it allowed the Franchise, and I want to point out that most of the things that it did were done in pursuance of the petition of a body called the Catholic Association, which at that time was launched on a democratic basis by counties; and one of the things this Association sought for was this very thing, the opening of the University. Plowden's History* has a very full account of their proceedings, and protests were made by the general Committee in Council in 1792, before the Act passed, against various disabilities—professions shut to them and so on, and at the end they say they are excluded from the Bench, the Bank, the Exchange, and the University. There was a Petition to the King on behalf of the Catholic Prelates and Laymen, which is found in the Proceedings of the Catholic Committee, signed not only by the Committee, but signed by all the Roman Catholic Prelates of the time, and I have here the text of the Petition and the signatures. Amongst other things they set out their grievances, and one of the things they set out is that they are shut out from the University. When the Act passed the Roman Catholic Bishops presented an address to the Crown thanking the Crown for the removal of disabilities. That is to be found in Plowden's History. Now, I want to point out that Maynooth was founded in 1795, in consequence of a Petition of the Catholic Bishops to endow seminaries for the education of their clergy.

1532. CHAIRMAN.—Was it for the education of their clergy?—Well, that was their object.

1533. It was not in terms—it was general?—No, the terms under which it was sanctioned were quite

* Historical Review of the State of Ireland, by Francis Plowden, 1803, pp. 406, 448, 519, etc

general, but the Petition of the Bishops was confined to that. Now, although it is historical matter, perhaps all this answers the question you put to me as to what the attitude of the Bishops is, or may be.

1534. I do not wish to stop you, but do you think we need go very deeply into the history of 1793?—I will make it as short as possible. In their Petition they say that although the education in the University may be well adapted to form men for the various departments of public business, yet, for various reasons which they set out, the education in such a University would not be at all adapted to students for an ecclesiastical career. Now, it appears that the Catholic Laity freely availed themselves of the Act of 1793, and then from 1830 down to 1846 there were various at-

tempts, by Sheil, by Wyse, by Dr. Heron, and by Mr. Fagan, Member for Cork, in Parliament to open the University and its offices and emoluments altogether for Catholics; and I find (and I have read most of their speeches on the subject) that throughout their great desire seems to have been to modify religious animosities and those differences which they say were based on ignorance, one class of another. Now, in Mr. Wyse's book on Educational Reform, you will find that both in 1830 and in 1844 he sought to open the University, and he said throughout—I presume as we would say now—"If that cannot be done by any possible means, then we must have a separate institution."*

DUBLIN.
Oct. 19, 1906.
N. J. Synnott,
Esq.

After a short adjournment.

1535. Will you please go on?—I was pointing out that Richard Lalor Sheil, who worked with O'Connell in obtaining Catholic Emancipation, moved in Parliament in 1834 to admit Catholics to Scholarships and secular Fellowships. And in 1845 Mr. Denis Caulfield Heron, afterwards Queen's Counsel and member of Parliament, was elected by marks a Scholar of Trinity College. He was defeated after a long and expensive suit in his attempt to obtain the Scholarship, but he spent a great deal of time, and he wrote a book, "Heron's Constitutional History of Trinity College," which was published in 1847. Now it is to be noted, seeing what the tone of that book was, that it was published in the year after the Queen's Colleges had been proposed by Sir Robert Peel. That book was published in the throes of the discussion at the time as to mixed education, and Heron's book was written for the purpose of showing, in the first place, what I briefly dwelt on that Trinity College was originally a non-sectarian institution, and that it was intended for the benefit of the whole country; and, secondly, I believe that he was legally entitled to the Scholarship, but that at any rate all the offices in Trinity College should be opened to Catholics, and that they should freely go there. At page ninety-eight of that book he says that the small number of Catholic students at Trinity College arises not by reason of either prohibition or warning or anything of that kind, but from the simple fact that the emoluments of the University are not open to them; and, of course, he points out, too, that the fact that the emoluments of the University were only open to Protestants, especially the Scholarships, lent itself to something in the nature of a temptation to Proselytism. He gives us the number of Catholic students there at that time, 120, that is about one-eighth of the whole at that time. And at page 185 he practically uses the language that the Catholics used fifty years before, and says, "Emancipation should have begun here rather than in other places. Did not exclusion remain fixed in educational monopoly sectarian feud might long ago have died away." Now, Mr. Fagan was M.P. for Cork in 1854, and he moved that Trinity College, Dublin, should be opened up in all respects, and there was a most instructive debate, and Mr. John D. Fitzgerald, who was then M.P. for Ennis, used a remarkable phrase. Both Cork and Ennis were Catholic constituencies, and Mr. Fitzgerald, who was afterwards Lord Fitzgerald, a Lord of Appeal, was a Catholic, of course. He said, "It was certainly true, as had been stated, that a large majority of the persons who belonged to the College were Protestants. But why was this? Simply because, although Catholics could be educated there, they could not be members of the Governing Body or gain any of the honours of the University, and they would, therefore, not send their children to an institution where they were not on an equality with Protestants, but simply tolerated." Now, I am not aware that in that expression of opinion, and there were many others of the same kind, it was ever hinted that there was any objection to the mere mixing of students, but it was pointed out that the Professorships and all the offices were closed to Catholics, and that that was what produced or was the cause of the atmosphere which they objected to. Then in 1870 there were the Resolutions of the Catholic laymen, and the Lord Chief Baron has already stated before the previous Commission what the origin of those resolutions was. Now, I have read them most carefully, and it is quite apparent that when the Catholic body then were framing special resolutions stating their grievances—and this was be-

fore the Act of 1873—they did not at all ask in terms for a separate denominational institution. What they asked for was equality, the removing of conscientious objections, and a change in the system of University education. They used the word "change," a change in the system that would give them equality. The phrases used were substantially equality in representation, I think, educational facilities, and so on. Now, in 1875 there was a Synod of Maynooth, and that was the first time there was any prohibition or warning against Trinity College, and I have not the exact words.

CHAIRMAN.—We need not trouble you about having the exact words.

1536. LORD CHIEF BARON.—They are in the Report of the former Commission?—But, curiously, this was not before the previous Royal Commission as proceedings of former Synods were. The proceedings of this Synod were not.

1537. MR. BUTCHER.—Where are they to be found?—The collection is described as "*Acta et Decreta Synodi Plenariae apud Maynutiam*," but I have not it here.

1538. LORD CHIEF BARON.—Have you an extract from it, Mr. Synnott?—It is appended to Dr. Hogan's book or pamphlet, "Irish Catholics and Trinity College," at page 140. And the ground of it is remarkable. The ground of that prohibition is not because of this mixed education. The phrase "mixed education" is never used, but it says, "It seemed to us to enact the same with regard to the non-Catholic College of Dublin, and *eo vel magis quia in Academiam illam recenter inductum est systema Educationis mere secularis*"—"the more on the ground that recently to that institution or University there has been recently brought in a system of education merely secular"; and therefore the ground of it was that the Act of 1873 had passed. And that is more clear in the contemporary pastoral of Cardinal Cullen, which you will have in the body of Maynooth Statutes to which I have referred, and he puts it quite clearly that Trinity College under the Act of 1873 had become a godless College, and that, therefore, that was the reason, or one of the reasons, why the warning with regard to the Queen's Colleges applied to Trinity College.

1539. CHAIRMAN.—It was rather hard for Trinity College to be accused of being godless and of being too godly?—That was inconsistent with the line taken on this point in 1870. The statement was that Trinity College has been distinctly the great Protestant nursery of the Established Church both in the past and now. My object is not to point out inconsistencies, but to point out what the Catholic case with regard to Trinity College was officially from 1793 down to 1875.

1540. Does it amount to prohibition?—There never was prohibition.

1541. There never has been prohibition?—There never has been. It recites the rescript of 1850. It recites the warning as to Maynooth. Well, of course there was prohibition as to the clergy taking office; there was that prohibition; but there was only a warning as regards the body of Catholics, and it is a remarkable thing, and Dr. Coghlan in that pamphlet points out that the prohibition as to ecclesiastics accepting office in Universities was not distinctly laid down in the Statutes as regards Trinity College—and I hope that is of good omen. Perhaps I had better

* "Notes on Educational Reform: Speeches, Letters, &c., of Sir Thomas Wyse, K.C.B., 1901."

DUBLIN.

Oct. 19, 1906.

N. J. Synnott,
Esq.

take up the subject of mixed education here, as I was asked a question about it. The subject is rather a difficult one, and perhaps I had better shortly state what I wish put on the notes on the subject. And of course this question as to whether Protestants and Catholics should mix together is involved in the question of a University scheme or College scheme as we look upon it. The phrase "mixed education" was used first, as far as I can see, with regard to primary education when the Kildare Place Society established their schools, and during the controversy as to the establishment of a National system of primary education. The phrase seems to have been transferred to the question of higher education in relation to the Queen's Colleges controversy, but apparently covered quite different principles and ideas, that is secular education, or irreligious atmosphere, or non-Catholic professoriate, or the absence of any voice or government by the Bishops. It seems to cover all these things, but it is a rather remarkable phrase, and does not seem to be used officially in the rescript from Rome, nor does it seem to be used in the resolutions of the Synods. That is the phrase "mixed education" does not. There is a very good account of the whole controversy given by Gavan Duffy—of course Gavan Duffy was a Catholic—and it is given in Gavan Duffy's "Young Ireland." I have the cheap edition, and at pages 252 and 262 he points out there that the controversy never was as to the mere mixing of Catholic and Protestant students in itself. In page 254, where he is commenting on the proposals made by the Bishops he says, "The Bishops accepted the principle of mixed education provided there were adequate safeguards against Proselytism"; and he quotes the Bishops' requirements, that the Bishops should have some voice in the appointment of the Professors instead of the suggestion that the Professors should be in the appointment of the Crown; and he points out that the question of the mixing of students did not arise, and he states that the whole of the Young Ireland party at that time, Davis, Gavan Duffy, Dillon, Smith O'Brien, both Protestants and Catholics, urged that Protestants and Catholics should be educated together, and that that was one of the main reasons why they were in favour of the Queen's College scheme, provided there should be security for religious belief and religious observances; and, of course, they did support the Bishops' view that there should be some assurance that a fair proportion of the Chairs should be held by Catholics. Davis summed up the thing in this way, and it is quoted by Gavan Duffy, "The objections to separate education were numerous. The reasons for it were reasons for separate life, for mutual animosities, for penal laws, and for religious wars." Of course, they may be rather rhetorical, but there it stands. Now, it is remarkable that petitions in favour of the principle as amended were signed by a number of Catholic gentlemen. Their names are given here, at page 163. "The petitioners admitted that the proposal to educate students of different creeds together, and to leave open the emoluments and honours to persons of all religious denominations, would tend to promote charity and extinguish religious feuds in Ireland. But the measure was defective in not providing religious instruction for youths removed from the care of their parents, and in giving the selection and control of the professors to the Crown." ["Young Ireland," by Sir Charles Gavan Duffy. *Irish People's Edition*, vol. I., page 163.] But it is remarkable that amongst those signing were Mr. John O'Hagan, who was afterwards a Professor of the late Catholic University under Dr. Newman, and Mr. D. F. McCarthy, who held a similar position afterwards; and amongst others who supported the petition was Thomas O'Hagan, afterwards Lord O'Hagan. Mr. Heron, who was, as I have pointed out, the author of that book and afterwards a member of Parliament, Sir Colman O'Loughlen, and Sir Dominic Corrigan, a man well known as a strong supporter of denominational education and the author of a number of pamphlets and letters to the Press at the time on the subject. Well now, I have a number of quotations here on the subject of mixed education from the late Royal Commission, and I will only point out that Dr. O'Dwyer stated that there was "no immutable principle," and Dr. Delany stated that the Queen's College Scheme was "excellent on paper," and pointed out that it involved the mixing of Catholic and Protestant students, and Dr. O'Dwyer stated, vol. 1, page 56, that there was not a hair's breadth of difference between what was in Sir Robert

Peel's mind and the proposal of Mr. Balfour for a University for Catholics or a College for Catholics. I wish to point out also that the question of mixing of students was accepted, as I understood, with regard to the Queen's College, Cork, before the late Royal Commission. There was a suggestion for altering the Governing Body to a wider principle, or that the locality should be represented, or something of that sort, but there was no suggestion that in any modification of Queen's College, Cork, it should not be freely open to both Catholics and Protestants. I have concluded on that point, and I wish to draw your attention again to a paragraph in our Statement in page 2, in which we point out, that there is this mixed education in that sense (which is the only sense I am alluding to) in Oxford and Cambridge, and in various Universities in Germany, and we trust your Commission will be fully advised on these matters by competent impartial witnesses. Information of this kind was promised to the late Royal Commission, but was not obtained, at any rate, first-hand information was not obtained. Allusion to this part of the subject has constantly been made before Parliament and still will be, and it goes to the very root of the matter, and we do feel that this is one of the things that will certainly be inquired into, and I do not know what exactly the result of that evidence would be, but I am willing to abide by it, speaking for this Committee. But I do not think that we can shirk that question, and we feel that if there is not some special explanation of the whole of that matter, we may have set up against us an argument before Parliament which it would be very difficult to meet; and I point out that no private individual can obtain information upon those points. Now, I will just deal with a few other matters on these controversial topics. I have said that in 1870 the memorial of the Catholic laymen at that time, in the first place urged that conscientious objections should be recognised, and, secondly, it advocated that there should be a change in the University system of that time; and we accept the spirit and almost the letter of the wording of that declaration. We were disposed to look upon the Trinity College Scheme, that is the scheme formulated by those Fellows and ex-Fellows, as an attempt at any rate to remove the conscientious objection referred to in the second Resolution of 1870, and we were in hopes that more might be obtained by consent, which it would be difficult to obtain by compulsion. For example, it had to be considered and found out how far Parliament would go in granting and endowing, in a new institution, a Divinity School under the Roman Catholic Bishops, and special classes of Philosophy and History, and allowing *ex-officio* or other special representation of Catholics on an Advisory Board or on the Board of Visitors. We had to look, in the first place, for what was attainable. We had to consider whether, if these things were put down in a Bill with regard to a separate institution for Catholics, there would not be the most tremendous opposition, and whether, if proposed from within by the authority of an endowed and incorporated body, which had the name at any rate of being strongly Protestant, it would not be very much more likely to be attained. There was also the consideration that an Institution like the University of Dublin, reformed in the main from within, was likely to proceed on its new career with less friction than where a reform was imposed altogether by external authority. It is evident from the statements of Fellows and Professors, now made public, that there is strong opposition in Trinity College to the proposal for a second College. We, however, do not know how far such opposition would exist to a second College, under the conditions named by us as essential, or whether such opposition is not rather aimed at such an independent College as was outlined in the late Royal Commission. We are not insensible to the fact that the scheme as outlined here is a mere skeleton, and it must not be thought that if we do not make any definite suggestions we do not desire to add to what is proposed from within by the Fellows and Professors; but I have already pointed out—it does not seem to be alluded to here—that it would be probably necessary that there should be a declaration imposed on the Professors, and accepted by the Professors, that in the discharge of their duties they would not teach any doctrines, or make any statements derogatory to the truths of revealed religion or

offensive to the religious belief of any of their students, as in the case of the Queen's Colleges; and I do not find that this raised any difficulty; and then there should be, as I stated, a Conscience Clause as in the Oxford and Cambridge Act of 1871, as mentioned in our Statement "that no person should be required to attend any College or University lecture to which he, if he be of full age, or, if he be not of full age, his parent or guardian should object upon religious grounds." Now the College Statute against blasphemy, which I have read, does not seem at all specific enough upon this point. It is unnecessary to add that any College statute, regulation, or custom which prescribes that Protestant religious services or ceremonies should be used officially in the College or by the College authorities on any occasion should be repealed. If we do not refer to the other heads of reform, and specially as to the deficiencies in the curriculum and in the methods and scope of the teaching, for instance, the need for widening the programme in the subjects of Irish history, language and antiquities, modern languages, economics and social science, law and jurisprudence and research, and the need for a new and extensive science equipment in various branches, it is not because we do not conceive them important, especially under the second head of the Inquiry, but because they are matters outside our special province. There are two or three points which require special attention, as they bear directly upon the question of making the College or University acceptable to those who are Catholics. Definite proposals should be made as to providing residential accommodation for new students, and that accommodation should be considered in relation to the Medical School's proximity to the Hospitals. The question of reduction of fees will have to be considered. And it is a question whether special provision should not be made for candidates for a teaching career, in respect of residential quarters. The Committee are strongly of opinion that to ensure that the proposals of the Fellows and Professors of Trinity College be generally acceptable, an arrangement should be made, by consent if possible, by which the Medical School of Trinity College and the Cecilia Street Medical School should be amalgamated. It would be unreasonable not to consider the vested interests of those schools, and as any considerable access of students to Trinity College would involve an increase in the teaching staff, in many cases Professors might be added on or be duplicated, either altogether, or *ad interim*, perhaps with right of succession. The Professors thus brought over should be electors of the Governing Body and eligible for it. If the new proposals are accepted a similar operation might, the Committee hopes, take place with regard to the staff, or some of the staff anyhow, and the students of University College. And it will have to be considered whether such of the staff as are not taken over should be entitled to compensation. These matters should be dealt with in a generous spirit, having regard to the large efforts and expenditure in establishing and developing independent institutions, and the long delay in settlement of the question. Now, I wish to point out with regard to the Medical School, that both from the evidence of the late Commission, and here, it appears that both the Medical School of Cecilia Street and the Medical School of Trinity College are making large demands on the public exchequer both in regard to equipment and increase of the Professoriate; and this opens up a grave question. Is it likely that if you go to Parliament for equipment and endowment on a large scale in respect to that School, Parliament will grant it on denominational lines? That is what we have to face. And is there any reason why such a School as that should be divided up on denominational lines? I admit that the Medical School of Cecilia-street have a most efficient staff, but it is a question for them to consider whether, according to their own statements, by their own witnesses, that their buildings are cramped, that they have practically no endowment for them, an insufficient equipment and no facilities for research, whether they will get them from Parliament on strictly denominational lines? Whichever solution is adopted, dual College or reformed and adapted University, if the principle of elective academic government is finally to reign, and if there are to be no tests for students or Professors, and all secular Professors are to have free-

dom in teaching in their own subjects, the complexion and atmosphere of the University or of the new College, as the case may be, will, in course of time, in all respects be what the Professors and students make it, and, therefore, it will have to be considered whether in respect of religious aims and ends, there will be so very much difference between the two solutions in the result. It may happen that both Episcopalian and Presbyterian students attracted by the open door, and the attractive new buildings and large equipment and endowment anticipated, and a modernised course of studies, may frequent the new College in large numbers, and gain a large number of Professorships and seats on the Governing Body, and that mixed education may result, which is considered the danger of the other plan. There is ten per cent. of mixing already in respect of the students at Stephen's Green, even although it is of exclusively Catholic complexion. If, however, the demand be made that security be given, other than open academic election, for a *de jure* Catholic Governing Body in *perpetuum* in either College or University, that such a College should be autonomous, that the atmosphere should be determinedly Catholic, this is the claim which has been refused State support and endowment for the last sixty years. Will it be granted to-day in the present attitude of parties and people on the other side of the Channel towards such a solution? Equality is the basis of the claim against the State, but if the claim involves *de jure* rights as Catholics, it will be met, by the argument that this is more than Protestants have in Trinity College. Equality in 1850 meant tests, and education controlled by ecclesiastics, and it has to be considered whether in view of the Tests Act the demand is the same thing as in 1850. Nor do I see the wisdom of a claim which involves giving the right to the University of Dublin *de jure* to have a Protestant government and a Protestant atmosphere in *perpetuum*. Now, we have also to consider, from the point of view of the State's attitude towards this question, whether there will not be obvious objections raised to the duplication, or, it may be, triplication, of endowment for higher secular education, especially as the subjects of University teaching are so largely increased. Many of the additional subjects require expensive equipment, and in the separate subjects courses and teaching have necessarily become specialised. Many of these extra subjects, moreover, have little or no religious tinge—Applied Science, Economics of Industry, Commerce, Agriculture, Medical Research; not to speak of the more Professional Schools of Law, Medicine, and Engineering. I only wish to point out that if we Catholics claim these as denominational subjects, and to be separately treated, it may be that others will set up the same claim, Trinity College amongst others, and, I suppose, amongst others, Belfast; and it may be that this increased demand on the State for financial help may deter the Government that is in power from touching the question at all. I have already dwelt incidentally on the difficulty of obtaining a special denominational teaching staff, and I do not pursue that question further. Now, with regard to the reply of the Catholic Bishops in England to the memorial of laymen in 1894, which is in the Appendix to the Report of the late Royal Commission, I only wish to point out summarily, that that address was answered by the reply from the Bishops, and if there was anything pointedly wrong in doctrine or practice in this document, signed as it was by a very large number of influential names, you may be perfectly certain that the authorities in Rome or the Catholic Bishops who received this document and who answered it, would have pointed it out. It is sufficient to say that the principles there laid down in the memorandum are such as in the main, I think, our Committee would agree with, and we pointed out in our note that in the reply of the Bishops, they avowed that there was an essential difference between the doctrine of mixed education as applied to Primary Education and as applied to Higher Education. Now, it is remarkable that this question was raised in England by the Hierarchy themselves, as to attendance at the National Universities of Oxford and Cambridge, before the laymen broached the subject at all. And so far from the mere mixing being condemned, it is one of the reasons this body of men asked for that alteration. They say it would be necessary in these days, that there should be an "intimate understanding of the thought and temper of the times" on the part of a Catholic, "and a knowledge of the point of view of those who do not share his

faith." "In the University, as in the world, all shades of opinion are to be found, and a man must be there to hold his own belief firmly without the direct support of a surrounding public opinion." I think if that was true in England, it is, perhaps, even more true in Ireland that people should be trained to see that they should express their views and beliefs without the support of a surrounding opinion.

1542. CHAIRMAN.—I do not think that you suppose that we entertain such difficulty as to the question of mixing?—I only wished to get this on the note.

1543. Rather the difficulty is what the Bishops seem to have said?—Yes. Well, let me point out this, that if Catholics say Protestants are prejudiced, and honestly wish to remove this prejudice, they should surely welcome any legitimate method of making their position and tenets better known, and be confident that such knowledge would, at least, remove misconception. It has been a constant complaint that Catholic doctrines have been misstated—I will not go into that, it is not necessary, but that Catholic philosophers are not even dipped into, and that certain historical epochs have been distorted, and so on, and they ought to welcome an opportunity of presenting their doctrines and opinions in their true light under conditions when they are more likely to be considered. Within recent years we find certain works of St. Thomas, and the historical works of Abbot Gasquet and the Rev. Father Maher made text-books for courses at Oxford. You can never hope for this tolerance, if the hall-mark of religious exclusiveness is to be stamped on each institution, and students are to be educated on strictly denominational lines. It has been openly stated that the Irish Catholic University students are less prepared to withstand religious or other influences in a mixed University than Catholic students either in England or abroad. This has been put, for example, by Dr. O'Dwyer on historical social grounds, and he says that if there was no religious question, this makes mixed education a practical impossibility. The students are, he says, deficient in mental equipment and religious instruction. This argument is difficult to understand, for it seems inconsistent with the proved mental capacity shown in the results of the Royal University examinations, and Intermediate Education results; as for being insufficiently instructed in religion this seems a strange criticism—which I do not agree with—on the religious training in Secondary Catholic Schools. This line of argument is either based on the tacit assumption that imperfectly educated boys from the Elementary Schools are to flock *en masse* to the University, which Dr. O'Dwyer characterised as "rhetoric," or goes a great deal too far, for it would make the student from a Secondary School unfit generally for the world and its occupations, either as teachers, civil servants, merchants, or members of the legal profession; in fact, those public occupations to which a large number of the higher Intermediate students now flock to. If there is foundation in the suggestion it might be a good reason for reforming methods of instruction in such schools, or for a warning to parents such as was issued by the English Bishops, but hardly for depriving a large body of students of the benefits of a University education. Now, I notice in some of the statements a shifting of the ground from the strictly religious point, the conscientious objections which have been constantly made to the political, national, and social grounds. This is, of course, absolutely different in kind from the conscientious grounds which inspired the Bishops' disapproval and prevented the Queen's Colleges at Cork and Galway being frequented by Catholics. Apart from religious considerations, there was no reason why those institutions should not have taken any political, national, or social complexion that the mass of students would have made then. But are these reasons to be emphasized now for asking the State to establish and endow separate educational institutions? It seems a dangerous process to change the basis of argument that has been advanced for sixty years when State favour is sought for. Granted that there are political and social lines of cleavage in Ireland as well as religious. Are these to be widened and emphasized by State help? Is it the business of the State to divide people merely by class or party distinctions—above all, the rising generation of students?

This was not the policy of extreme democratic parties at the end of the 18th or middle of the 19th century—the United Irishmen, or the New Ireland party. These differences of opinion may, and probably will, remain, and there will be the rich and the poor, but it ought to be the business of the State, especially a democratic State, to diminish the rancorous expression of opinion, class hatred, and artificial social distinctions. Now, I wish to point out as to the grounds of objection to a College for Catholics in the Royal University and a College similarly constructed in the University of Dublin, if these Colleges are to be independent, as was outlined in the Report of the Royal Commission, and having a duplication of equipment, that there is exactly the same objection to such a College in the University of Dublin as in the Royal University. And now I may point out that Father Delany says so in terms, although he asks a University of Dublin as one solution whilst he prefers a separate University. He distinctly states that such a College must be of the type proposed by the late Royal Commission. The grounds of objection to a College for Catholics in the Royal University as outlined in the Report of the late Royal Commission, and to a College for Catholics similarly constituted, and of a similar scope in the University of Dublin, are in many respects the same, though the Royal project has objections of its own, for instance the additional duplication of equipment and buildings. It is instructive to find that some who most vigorously supported the scheme of a separate College under the Royal University are now urging the objections to any such federal system, and this with the purpose of showing that the only solution is a separate University. Arguments in which both the President of University College and Mr. Edward Gwynn agree must have considerable force.

1544. I should like to ask you this. Does it not appear to you, that there would be, in some way, much less difficulty in founding a College for Catholics in the Royal University than in founding one in the University of Dublin? The University charges for matriculation are opposed to the addition of a second College, and a Catholic College already exists in the Royal University. If you put a second College in Dublin University you must have an independent Governing Body for the University, and there would be a difficulty in settling that, whereas in the case of the Royal University you have already a Governing Body settled and working with a certain amount, I believe, of success. Would not, therefore, a reform which took the form of the establishment of a second College in the Royal University be better?—From what you have said there might be less difficulty in founding a College in the Royal University than in the University of Dublin, but I am not at all sure that the Fellows of the University of Dublin would have the same objection to a College such as I propose.*

LORD CHIEF BARON.—Has the Governing Body of the Royal University been condemned?

1545. CHAIRMAN.—It is in evidence that it works with a fair amount of harmony. It appears to me to be a very important question, whether the line of least resistance is not the establishment of a second College in the Royal University rather than in the University of Dublin?—I think if we are to call things by their right names there is not a particle of difference between the so-called autonomous Colleges of the Royal University and the Royal University itself. Now, I have one thing more to add, and I will deal with it very shortly, it is with regard to the difficulty raised as to the Maynooth students. It is evident from the proceedings of the late Royal Commission that the number of students from Maynooth who would reside or attend lectures at a new College or University would be comparatively small. Now, before the late Commission, if I may mention a personal matter, I stated that although I had not changed the opinions I expressed in 1897 that a solution, something of the kind that we have before us, would be the best. I thought, at the time of the late Royal Commission, that there would be a great difficulty about the Maynooth students. I favoured the solution of a College, because there would be additional means of giving higher education to the Maynooth students. I found that since then, according to Dr. O'Dwyer's evidence,

* (Note added by Witness).—I find I did not answer this question fully—but the views of the Committee on this point have been already presented at page 2 of their written statement. The Committee, from the first, have been resolutely opposed to a College in the Royal University as exhibiting the worst type of a federal system, and as neither adequate nor final. Such a college would be accepted only as a stepping-stone for a separate University—a plan condemned by the Royal Commission. We think such a plan would meet with great opposition from many persons who would look with favour on a solution in the University of Dublin.

and Dr. O'Dea's, who was then President of Maynooth, that it is not proposed by the ecclesiastical authorities to send any large body of Maynooth students into this new College at all, but only to send a number of selected students, and, as I understand, some rather for post-graduate courses, and that necessitated that the Arts course in Maynooth should remain there, and that Maynooth College should be a College in the new modified Royal University. Now, in the face of that it is to be considered whether, for the benefit of these Maynooth students alone it is necessary to establish this separate College, if they proposed to keep the Arts course at Maynooth. And there is another point to be considered. If the example of foreign Universities were followed, including the University of Louvain, which is entirely under the Catholic Bishops, and after the example of the Universities of Bonn, Tübingen, and Breslau, and others, where there are Catholic Chairs of Theology and Philosophy there would be separate houses of residence for ecclesiastical students, where they would have their own discipline and regulations, and in Oxford and Cambridge the same plan is followed. There are some houses of residence for both regulars and seculars. As to the Catholic Divinity School, this would be, according to the proposals made, under the control of the Catholic Bishops, both as to professoriate and courses, and though in the University formally. Although it is proposed that that School of Theology should be in the University, if a separate house for Maynooth students is necessary in any case, would it not be better, and would not the same end and purpose be attained, if this Divinity School were attached to a separate house of residence outside the College proper? The next point is the question of ways and means, and as this was not alluded to in the Report of the late Commission, though evidence was given, I refer to it now because it is an important matter, and I do not wish it to be overlooked. As any scheme to be adopted will probably involve demand for public moneys, I desire to point out that Ireland has a right, an equity, that any grant or endowment for higher education should not be taken from any Irish fund. Except the Queen's College Grant the Imperial Government gives nothing out of general taxation towards higher education in Ireland, because by the Irish Church Act of 1869 the Exchequer was relieved of three annual payments charged on the Consolidated Fund—the Maynooth Grant, £26,000, the Regium Donum of £45,000, and the Queen's University, £4,900, amounting altogether to something like £76,000 a year. Now, there were a number of other things put upon that Irish Church Fund which ought properly to have been paid out of the Imperial Exchequer.

1546. LORD CHIEF BARON.—Mr. Synnot, you have referred to the origin of Trinity College. You observe that the Charter of Elizabeth makes no distinction in reference to the creed of the students?—None.

1547. It would appear to have been a Charter intended for the benefit of all Irish students?—Certainly, and I think the Charter itself expresses it that it should be for the poor, and the very poor, and it is notorious that those classes are synonymous with the Catholics of those days.

1548. But then it appears that by reason of a matter extraneous to the Charter itself, the Statutes affecting Roman Catholics, the class of students became limited?—Certainly; that was under Acts of Conformity.

1549. We need not go into that. But so that when these restrictions were removed it would appear that all students in Ireland had a right to the benefit of the Charter?—Certainly.

1550. Now, you observe that the Charter contains a clause (page 7 of the first volume of the Charters) prohibiting University instruction being given elsewhere without the license of the Crown?—Yes.

1551. Then later on, the Acts of 1660 and 1793 show that the University which sprang out of Trinity College was intended to have more Colleges than one?—Yes.

1552. Well, then, the Act of 1793 seems to distinguish between the two colleges, one the existing college and the other a second college, the foundation of which is contemplated, being to a certain extent, a Catholic College?—Well, yes.

1553. Has your attention been directed to that?—I am not sure of the Catholic College, if for Catholics only.

1554. A college in which Catholics were to have rights which they were not to have in Trinity Col-

lege?—Yes. As far as we are concerned, that was to be open to all.

1555. Now, in your opinion all the restrictions having been removed by Fawcett's Act, do you consider that the title of every young Irish student to enter the University of Dublin and to have the benefit of this great foundation is the same whether he is of the Catholic religion or of the Protestant religion?—Most certainly so. It is so stated in plain terms by the Statute of 1873.

1556. You know that a young Roman Catholic student is not free in the choice of a University or College. You know that if there is an absolute ecclesiastical prohibition against it he is unable to enter it. To do so in these circumstances would be against his religion. Now, passing from Roman Catholics as a body to the individual Catholic, if there were such a prohibition against any particular college he could not in the conscientious exercise of his religion make use of it. Supposing there was a prohibition against a college within the University of Dublin, he, by reason of his religion, would not be able to enter it?—Quite so.

1557. He would be deprived by reason of his religion from that benefit which a person of any other religion would have?—Yes, if there was such a prohibition.

1558. Has the individual Catholic student any voice as to whether there is a prohibition or not?—No.

1559. Do you consider that each subject of the State has a right to education?—Certainly.

1560. I wish to bring you to another matter. In this Report your body appears to be rather neutral upon the question whether there should be a second college in the University, or whether there should be a change in the organisation of the existing College itself?—As a committee we are neutral. It would be idle to deny that there were not leanings of opinion to one side or the other.

1561. You are representing the Committee?—Yes.

1562. That Committee is neutral in reference to this question?—Yes, except that we are not neutral as to the type of the College.

1563. I intend to come to that. You have said a great deal in reference to mixed education. Of course you are aware?—I may say candidly I did not intend to allude to the matter at all. I had it in my notes only, but did not intend to raise the question in that sense. But I thought it my duty to read what I had written out. I had intended to avoid this highly thorny subject. I am not a theologian.

1564. Well, I want to remove the effect of that evidence so far as I think it is erroneous. Are you aware that the Catholic Hierarchy have in the statement they have sent in, page 82,* second paragraph, stated: "It is quite another thing when we come to Dublin University. Students of different religions and various social and political views may fraternise with advantage in the same University, and if a scheme were formulated for setting up in the University of Dublin another College in addition to Trinity College we should be prepared to consider it with open minds." Do you observe that the objection is not to students of all religious denominations mixing in a University?—Yes, but again that depends entirely upon what the College is.

1565. But surely any college that can now be constituted must be a college which Protestants, Jews, and Atheists will have as much right to enter as Roman Catholics?—Yes.

1566. I don't see how you are able to say that a proposal to erect a new college having regard to Fawcett's Act can be taken to include the idea of having that college as a college for students of one denomination. I thought that was given up years and years ago?—I would ask you to look at the paragraph at page 81. I don't wish to read it.

1567. Read anything you wish?—It is very long.

1568. As I understand this document without reading it they do make objection to education in a college, and they make a distinction between education in a college and education in a University, and whilst they say they won't have education in Trinity College they say that the same objection might not extend to students of the University?—I answer it in this way: Suppose we tried a college in the ordinary sense, like Oxford and Cambridge, with a joint professoriate, and joint equipment, and I suppose the medical schools consolidated, and the students are mixed very largely with each other, that there are not only lectures but social intercourse, and so on. What is the difference,

DUBLIN.

N. J. Synnot,
Esq.

DUBLIN.

Oct. 19, 1906.

N. J. Synnott,
Esq.

then, I want to know, between such mixing in a University and in a college? The paragraph I refer to says that "special treatment is given to Catholics in Trinity College; they are treated like guests in a family." I don't understand that position. It seems to me that argument bears out my contention that what is objected to is the intercourse of the students, the intercourse of Protestants and Catholics. If I am wrong I shall be glad to be corrected.

1569. I consider you are altogether wrong. I cannot of course answer your question. Would you have any objection to a College to which Catholics and Protestants were equally admissible and in which it was immaterial whether the Professors were Catholic or Protestant attached to the University in which the Honour lectures would be given by the Professors of the University and not of the College, lectures which would be attended by both Catholic and Protestant students, who would jointly compete in one single examination, and mutually succeed or be defeated in their examination according to their abilities? Would not that establish a healthy rivalry between the young men of all religions?—All these things would exist in a common College.

1570. Suppose you do not get a common College?—We say so provided we have these conditions. The conditions you name are the conditions we will require. That is academic government—and that after a temporary period, the complexion of the College, should be what the Professors and students make it.

1571. Must we not have some regard to existing facts? Is it any use making recommendations which can never come to anything? If we recommended your scheme when there were these objections on the part of the Roman Catholic Hierarchy do you believe it would come to anything?—I suppose not.

1572. I am trying to come to something practical. Passing on to one suggested solution, a new College, a College in Dublin University, I am trying to ascertain what are your views in reference to that. According to my view it is a matter of the very utmost importance to Ireland that the young men of both religions should have the opportunity of meeting and competing with one another at the very earliest moment of their careers. Is not that so? They meet at present in the professions, or when they enter business at the age of 21, but they have had very little opportunity of meeting earlier than that up to the present, at least with the exception of such of us as went to Trinity. You, I am sure, will agree in any scheme that would enable them to meet on terms of friendship and respect at the earliest period. It would be most desirable. Is not that your opinion?—I agree absolutely.

1573. Is there any more effective way of making them friends, and to make them entertain a respect for each other than by setting them to compete side by side in examinations in a University?—I do not understand that. Not in Honour examinations only.

1574. Cannot the College have pass examinations of its own and also let its students compete in the ordinary University examinations?—I think they do compete in the Pass examinations at Oxford and Cambridge.

1575. I would let them pass in the College?

The CHAIRMAN.—In the University?

1576. LORD CHIEF BARON.—Yes, in the University. You are aware, at all events, of the advantages of this kind of competition?—Certainly. I would go beyond mere competition. I would have constant intercourse.

1577. Yes, constant intercourse. Don't you think that when a student has been beaten in an examination by another student it would tend to give him a respect for that student. I know I felt that to be the case myself?—If the students in the separate Colleges here are to be mixed and associated together in the same way as in the Colleges in Oxford and Cambridge, I personally could not see that there would be any objection.

1578. Do you think that any College Charter or any Act of Parliament will compel students to mix together. Is it not more reasonable to say that the mixing will result necessarily from giving them the opportunity of doing so?—I think that is so.

1579. If it be not possible to so reconstruct Trinity College that it can be frequented by Catholics in large numbers, don't you think the next best thing as a solution is a separate College in the University of Dublin?—Certainly. These two schemes were before our Committee, but they did not decide. We did not commit ourselves to one or the other. As a Committee we do not favour one as against the other. We put forward one scheme because it seems the more attainable. Others might think another scheme more attainable.

1580. If the new College scheme were not attainable and the University scheme were attainable you would be in favour of the latter?—We must take anything we can get.

1581. That is also my view. Take whatever instalment you can get?—Yes.

1582. So far as the Academic Government of the new University is concerned, are you in favour of the plan that each College should elect a certain proportion of the Governing Body of the University?—I suppose that would be so.

1583. For the Governing Body of the College it should be formed by a peculiar method for a certain period, say a period of twenty years?—It will have to be named. At least presuming there is no other alternative. There might be according to one plan, the power of graduates of the Royal University, to co-opt, or elect themselves into the new Senate.

1584. What right would the present students of the Royal University have to elect representatives to the new College in Dublin University?—That is what I do not see.

1585. Put that out of the question. At the end of this transition period would not the best plan be to have the College under an academic government elected on the principle of being representative of the classes in the College itself?—Yes; they should be elected by the classes in the College.

1586. The College itself should elect representatives on the Governing Body?—Yes, of the University.

1587. I take it that the Professors should elect some, and perhaps Convocation would elect others, and that the Governing Body should be elected by the various classes in the College?—Oh, certainly.

1588. That, you think, would satisfy your first condition. Now for number two?—The difficulty is that Belfast would be excluded.

1589. I am not talking of Belfast at all?—That is one of the propositions.

1590. I am not referring to these numerous propositions; they are as numerous as leaves in Vallambrosa. There is one specific proposition. You say the Committee would approve of the new college in the University of Dublin provided it satisfied certain conditions?—Yes; number three refers to the appointments.

1591. Under the Robertson Commission Report the Commission recognises that the Crown should have a voice in the appointments. I suppose you would prefer that the election should be in the hands of the Governing Body themselves so as to have the control purely academic?—I think the Robertson Commission suggested that the Crown should make the appointments only at the beginning.

1592. Only at the beginning?—I think so.

Mr. BUTCHER.—I think that was so.

1593. LORD CHIEF BARON.—Of course there should be one common standard of studies fixed by the University which should be followed by each College?—That is our view, certainly.

1594. And the students of each College should be examined together by the University at the one examination as at Oxford and Cambridge. And there should be residence for a fixed period necessary for obtaining degrees?—Quite so; these are general regulations.

LORD CHIEF BARON.—That is all. I have nothing more to ask you.

1595. Sir T. RALEIGH.—Supposing this University or College were established on your lines it would be open to Protestants as well as Catholics, but it would be governed in accordance with the views of your Church?—I would only say this as representing the Committee. In the beginning it would have no machinery for elections to the Governing Body except the one. The other classes would not exist. There would be a certain number, perhaps a majority, of Catholics. After a fixed period it would be left to take care of

itself. Right or wrong it would be that which the Professors and Students would make it.

1596. It would be left to itself on your lines. In course of time it might change from a Roman Catholic to a Protestant College?—I think that is possible. The College must be open. I have dealt with it in my evidence. It is involved by the repeal of the Test Acts, and I think the Bishops would agree to that.

1597. You think it is quite possible that this College given to satisfy you at the time may possibly become a Protestant institution?—It is possible, but not likely. The Catholics will remain in the majority. The Protestants will continue to come here. I said in my evidence that Protestants might be attracted to it by the low fees and modern equipment, but I do not look forward to these complications, though they are possible.

1598. But there is nothing to prevent the suggested College, so constituted, from becoming such that it would not continue to be distinctively Catholic?—Our notion is that it should be established on the basis of academic government in the future, whatever it is in the beginning. I think the Students and Professors will settle the matter. I understand that the Bishops have waived the point of *de jure* representation.

1599. I know they have made a certain concession of that kind?—Well, that is our opinion.

1600. LORD CHIEF BARON.—The Robertson Commission recommended that two Catholic Bishops should be on the Governing Body. Do you say that has been given up?—I am not sure; it has been so stated.

1601. SIR T. RALEIGH.—That being so, there would be the possibility of the College having that complexion?—I believe it is possible. I believe that there might be a reorganisation of the University, and that the Colleges might be on the same basis in twenty years' time.

1602. Can you imagine it possible for the State to effect these changes without providing a large sum of money. I think the two Colleges might be of the same type. Is it not a dangerous experiment to spend a large sum of money in establishing these two colleges when there might be no difference in the end?—It was our idea to have a common professoriate, and, therefore, the dangers will be very much minimised. I agree that the type of College suggested by the late Royal Commission would involve duplication.

1603. Allow me for a moment. The common equipment would be the University as distinguished from the College equipment?—Yes, I should say so.

1604. Do you say that it would be possible for the Engineering Laboratories to be common to the two Colleges?—I think it would be most desirable. If we were to ask for wholly separate engineering equipment on denominational lines, it would be very difficult to argue it, and we would not do so.

1605. In view of the fact that there is a Professor of Mechanical Engineering and an Engineering Laboratory in Trinity College, how would that particular problem be dealt with?—I suppose it would be treated as a University course.

1606. And the students from this new College would have to go to Trinity College to receive their teaching in Engineering?—I suppose so.

1607. I mean you do contemplate a considerable moving of the students backwards and forwards from one College to another, and the teaching of one should be recognised by the authority of the other?—With such a course as Engineering I should say necessarily.

1608. And the same would apply to the scientific subjects, of which the equipment is very elaborate and expensive?—There is no question about it.

1609. Would you go so far as to say that not merely would the students work in the laboratory, but they would be taught by the same Professors?—I see no objection in the case of these subjects.

1610. Then what is the distinction between that and having one College—for I think you have already stated that you prefer the one-College solution?—No, I do not. I have pointed out that there is not so much difference between the two, but what does make a great difference is the question of attainability. You referred to the Engineering Schools, and I refer again to the Medical Schools.

1611. I would be delighted to hear that that would be so, but in the case of the great majority of the students in those branches getting their instruction in Trinity College, do you think that that would be acceptable to the Roman Catholics?—There are two parties to satisfy. You must get something from

Parliament. The alternative to that is to say to Parliament, "We want in these things a College which would have a new equipment in Engineering, in Medical Science, provision for Medical Research and new equipment and all these things, and we claim that in a separate institution." That is the only alternative.

1612. Claiming it in a separate institution?—Yes, in a separate independent college. You put it to me that there was no difference between the two.

1613. You think that in Engineering there would be no difference between the two?—I say there is not very much difference between the two if there is to be a common equipment and a common professoriate.

1614. DR. JACKSON.—I desire to ask you one or two questions with regard to your views as to what the governing body would be. I gather that with the two-college scheme, with which I will begin, you assume that there would be an academic government and a collegiate government for the new college, and I presume some sort of collegiate government for the old Trinity College?—Yes.

1615. It seems almost a necessity that, if there were to be an alliance of two colleges in one university, there must be a council for the university, and a council for each of the two colleges to do the domestic work of these two colleges.—Yes.

1616. Do you anticipate any difficulty in distinguishing the functions of these three bodies?—I suppose the university governing body would control the courses, appoint university professors, have control of all equipment; and the college authorities, I suppose, would have charge of all domestic discipline in that college, making regulations for it and for the control of the college property. And I suppose they would appoint the college teachers.

1617. That was exactly how I thought out the thing to myself. Supposing that there was only one college in the University, might it not be possible in the same way to distinguish the academic from the collegiate functions, and, if it was necessary to introduce persons there for a particular reason, to introduce them into the academic body only, and not into the collegiate?—Except that I understand you are alluding to the functions of the proposed Advisory Committee.

1618. No; the Advisory Committee is distinct again, is it not? I want to suggest to you that there might be an academic governing body and a collegiate governing body, and to ask you whether the representatives would inevitably be on the collegiate governing body as well as on the academic governing body?—I suppose it would be desirable, if the collegiate governing body are to make the regulations as to domestic discipline.

1619. You think it necessary that there should be a substantial representation in regard to the domestic discipline as well as in regard to the academic studies?—I certainly think it would be desirable, if there is to be that distinction.

1620. MR. BUTCHER.—I wish to ask a question or two. It is about the constitution of the second college in the university. I think the real crux of the solution depends on how you are to form the governing body of the university, and how it will work in relation to the two colleges?—Certainly, and on what are the functions of the university as distinguished from the college.

1621. I think from some remarks that you have made it is clear that you are of opinion that, if there are to be only two colleges inside the University of Dublin, the tie between them must be much closer than that contemplated in the colleges that were to be joined in a federal union under the Robertson Commission?—I think it is quite clear that it must be.

1622. I am glad to have that opinion from you, because I notice in a good many statements of those who approve of the scheme of the two colleges, the assumption is made that the new college shall be equally independent with the proposed colleges under that federal union?—Certainly. Father Delany explicitly says so, and that is why the Lord Chief Baron asked me that question there as to the statement of the Bishops, page 82.*

1623. I quite apprehend. But does not it lead us again to this, that, if that tie is to be so close, if the colleges can be in no sense autonomous, does it not

Esq.

follow that the question of the constitution of the University becomes one of supreme importance?—Naturally.

1624. And on what general principle would you be inclined to constitute it—must it be, in other words, equal representation of the two colleges on the governing body?—I cannot see any other system.

1625. In fact, you come back to the system which in its general outline has been existing in the Royal University of Ireland?—Yes, except that that would be only for a limited period.

1626. But I go farther than that. You would have such a system for more than the transition period, you would be obliged permanently to give equal representation to the two colleges?—Yes, but it need not be divided up as the existing Senate of the Royal University is, that is on strictly denominational lines.

1627. Not in theory. But would it be so in practice, do you think?—That depends on the denominational character of each of the Colleges. I may say at once that I dare say one College would be predominantly Catholic, and the other Protestant, as a matter of fact.

1628. And practically it is only that which justifies the institution of such a College at all. We need not blink the matter?—No.

1629. And can you conceive any other mode of representation that would be accepted in Ireland except the equal representation of Protestants and Catholics—and does not that at once excite a certain amount of alarm in one's mind if one looks to the academic welfare of the institution—I am really very anxious to know this?—I don't know. It entirely depends on the spirit which actuated it. These persons, after all, would be elected as academic persons. I think they would not be elected because they were Catholics or Protestants, but because they were the best men. And I would hope that they would have the interests of the University at heart before anything.

1630. Let me put a concrete case. For these are difficulties that I foresee will arise in administration. Suppose a vacancy for the Chair of Latin in the University as re-constituted. This year a Protestant gets it. Then the next vacancy occurs. Looking to Irish custom and tradition and the general atmosphere of Ireland, is not it morally certain that it will be said next time that it is the turn for a Roman Catholic?—If that sort of appointment had to be made, and you had two independent colleges, I would say, "Probably yes," to your question; they would be elected on that principle. But if (as I hope there will be) there were common courses, with intercourse and association on the part of the students and professors of the two colleges, I think in the long run they would be elected on academic lines.

1631. I am glad to hear that hopeful anticipation. But we must start with the fact that one will be labelled Catholic and the other Protestant from the outset, and that it will not be in the least like a single college in which Catholics and Protestants are fused together without any denominational label?—If what you say is so, it is certainly hopeful.

1632. CHAIRMAN.—Is there any other institution in Ireland where Protestants and Catholics meet together for common purposes in which they act otherwise than on the principle of turn and turn about?

1633. Mr. BUTCHER.—We may take in detail the Royal University, the National Board, and the Intermediate Board?—(Witness).—The Crown appoint them turn and turn about; but this is a difficult question, which Mr. Butcher puts to me—as to whether these electing bodies would choose professors on that principle.

1634. The Crown appoints in that way, because of an extremely strong public opinion that prevails in that direction?—I presume so; but I certainly hope that that public opinion will not pervade the University. I may mention the Colleges of Physicians and Surgeons are mixed bodies, and they elect Protestants and Catholics without regard to their religion. I know I have heard of some complaints; but they do elect them to their professorships and offices.

LORD CHIEF BARON.—The Benchers are a mixed body, and they never think what religion a man is.

1635. Mr. BUTCHER.—Yes; but, as far as my observation goes, Irish education in all its forms—from causes that are easily understood—has got this peculiar

characteristic, which is absent, of course, from all professional life even in Ireland?—(Witness).—As the Lord Chief Baron has put to me the whole of this document submitted by the Bishops, it is very hard to draw an inference from one passage. If they wish to be in a college in the University, they must be prepared for this—that the representatives from that College on the University Board must act on academic lines; and there ought to be a public statement to that effect, if necessary.

1636. No statement, of course, would alter the fact if they proceeded on the other lines?—I mean, if you do not wish to work on strictly academic lines, it would be far better to have a separate University, but in my opinion you will never get that.

1637. You look to the professorial lectures as being calculated to bring the students together in social intercourse?—It is probable that they would.

1638. Supposing the colleges are each of a definite denominational character, and each has got its own teachers in a considerable number of subjects, would it not be at least possible that the professorial lectures will, as at Oxford and Cambridge, not count for much—in fact that the collegiate lectures will take the place of the Professorial?—Yes; but I presume the University fixed the standard and assigned the books, and so on. And then, consider all these scientific chairs and medical studies; and there must be a very large gathering of students. For very many of the students in this new college will be going in for professional careers, and you will not have so many men of leisure as you have in Oxford and Cambridge.

1639. I agree that science may be a bond in future. Let me take one point more. It is as regards Maynooth, which is an extremely important point in the programme. It was only at the end of the sittings of the last Commission that its importance appeared. The demand made was that Maynooth should be affiliated with a Catholic College or Catholic University as part of the Faculty of Arts in that College or University?—Yes; that was the claim.

1640. The original proposal was that the Maynooth students, as you said, should come to Dublin; reside here, and go to the lectures of the College?—Yes.

1641. But the Bishops made it quite clear that that was impossible. Now the question I would put is this: the course for an Arts degree may be so laid out by the University as to include the subjects that are acceptable to Maynooth as well as acceptable or required by Trinity College?—That is to say if the Maynooth students were to come in.

1642. I am assuming now that Maynooth is made an affiliated College, its Faculty of Arts being part of the Faculty of Arts of the College, for that was the demand, and I therefore suggest that in drawing up your University Course for Arts you must frame a common course for those ecclesiastical students who are studying within the walls of Maynooth and for the students of Trinity College. Do you think that this would offer difficulties?—I think it might unless they were content to take the University course as it was constituted by the Joint Board. In an Arts Course, it might be that they would be perfectly willing to do that.

1643. But the Governing Body of the University will have to say what the course is?—I am not aware that Maynooth is claiming to have special representation on the Governing Body, if they are affiliated.

1644. That was, I think, put forward, and there was some evidence as to the kind of Course in Arts that would be acceptable to the students at Maynooth. Certainly it would not be a Course in Arts that would fall in with the traditions of Trinity College. And how would you solve it—would it be by giving an alternative Course for the Arts Degree?—I do not really know how you would solve that.

1645. It is one of the problems that the University Governing Body would have to reckon with. You spoke about one single Course common to the two Colleges. I think you would find that you would be driven to giving an alternative Course?—My suggestion is that the Maynooth students would come into the College in a house of residence.

1646. If the Bishops accepted your suggestion, well and good?—I admit that there is a difficulty in the other case if they do not.

1647. As introducing the novel principle that residence in a Theological Seminary should be equivalent to residence at a University?—Yes. And the Professors would not be nominated by the University. I suppose the Bishops would never give up the right to nominate their own Professors.

1648. Dr. DOUGLAS HYDE.—I have only one or two questions to put. We followed with the greatest interest your historical account of the attitude of the Roman Catholics towards Trinity College, Dublin. I take it that you introduced the whole of that historical disquisition with the object of showing that the Bishops have at various times adopted a more or less varying attitude?—There was only one case in which I quoted the petition of the Bishops. Catholics were knocking at the doors of Trinity College for a very long period. It was only for that purpose that I went into it, and to show how extremely foolish we would be, having gone on for so long a time observing that attitude, we were now to say that we wanted to go outside. And also for the purpose of showing that for a very long period there did not seem to be any objection by the authorities to the mixing of students, Protestants and Catholics.

1649. To show that the Bishops have changed their attitude?—Well, I only say that I cannot find in those times any official warning to Catholics not to go to Trinity College. In fact, it is notorious that some of the Catholic Colleges in the land encouraged their students to do so.

1650. But now, the Bishops having issued a warning?—But, pardon me, you put me that question perhaps a little leading. They wish to be in the University of Dublin, and I hope that they interpret it in the way that the Lord Chief Baron interprets it—that the College is really to be a College in the University in the proper sense.

1651. Your Committee have proposed an alternative scheme that it should be reformed from the inside, and against that we have the absolute and unanimous objection of everybody concerned in the College; or a second College inside Dublin University—I mean against that scheme for a second College inside Dublin University we have Trinity College opposing it from start to finish, and we have the Bishops opposing mixed education in Trinity College. Now, that must have come before your Committee, and in face of that you have stated that the establishment of a separate University in Dublin for Roman Catholics is out of the question in your opinion. Surely of the three it is the line that offers the least resistance, if instead of saying a University for Roman Catholics you say a second National University. Nobody opposes that. The Bishops do not oppose it, the body of Catholics do not oppose it, and Trinity College does not oppose it. And why should your Committee seem to have left it out of consideration?—Because there was an inquiry which lasted a year and a half before the late Royal Commission, and they practically unanimously ruled it out. And, not only so, but there were Catholics on that Committee, and they said that there were not only objections to it, but that it was untenable. And the Government, of course, have that before them.

1652. Then your consideration of this matter was limited in its scope?—We could not, of course, shut our minds to what is in the Press, and what has been going on for 50 years, and that is that a separate University for Catholics is a red rag to a great many persons.

1653. But, supposing we had a National University in Dublin without the Bishops being *de jure* on the Governing Body, and no mention of Catholics at all in regard to it, why would the Committee that you represent object to such a settlement as that?—That is a complete change of front. Remember what has been going on for 50 years. The demand for a National University that has no religious complexion is a completely new demand, and you would have to justify it before Parliament, and they would ask—“Why do you not make Trinity College a National University—why don't you capture it, and make it one.”

1654. But supposing, in face of the opposition from Trinity College, we are unable to do that?—I don't know whether the objection to a National University has come from Trinity College. They do not object to being called or made a National University. What

they object to is the peculiar religious complexion suggested to the rival institution.

1655. You say that no Royal University scheme, however modified, would appeal to Irish sentiments and traditions?—Yes.

1656. And you appear to think that Trinity College appeals to Irish sentiments and traditions?—It is an existing University; it has a magnificent site; it has produced a great number of famous men, and many of the great democrats and leaders in Ireland, and it is there. It is a much easier thing to reorganise an existing institution than to establish a new one.

1657. And you really think that there is no necessity for considering the question of another University. Supposing that we cannot get a footing inside Trinity College for one reason or another, do you think, as your Committee seem to think, that there is no need or material for a second University, if we cannot get into Trinity College by hook or crook, I mean into Dublin University?—I do not like to contemplate that alternative. I do not see why you are to assume you will not. If you ask me to assume that this place is to be razed to the ground, of course we would want a separate University. But it is not. It is there.

1658. Is not there a barrier raised up around it in the words of the Bishops when they say that “On no account will we accept any scheme of mixed education in Trinity College, Dublin.”

Mr. KELLEHER.—The word is “they”; not “we.”

1659. Dr. DOUGLAS HYDE.—Yes. Very well. (*To Witness*).—If we cannot get into Dublin University, do you see no need for the establishment of another University? You seem to think that there is neither need nor material for such?—I do not think that there is any need for another, when there is an existing one.

1660. But when we cannot get into the existing one?—That remains to be seen. I don't know why we are to assume that. Why, the Bishops want to get into it.

1661. Dr. JACKSON.—Is not the real objection to the foundation of a second University that it requires a very large sum of money to run a second University when you have already got one?—Oh, yes.

1662. I have had occasion to think of this in more ways than one, and it seems to me that the starting of a second University in the same place creates enormous difficulties.—Yes; and in the same city. Dr. Hyde has suggested that it should be a new National University. It depends a good deal on what interpretation you put on the word “nation.” I should say that on principle you should make it include all classes and creeds.

1663. Dr. DOUGLAS HYDE.—I don't think I used the word “national”?—(*Witness*).—You said, if it were considered from a national point of view, and not a religious.

1664. Then you hope that the Cecilia street School of Medicine should be incorporated with the new school inside of Trinity College or Dublin University. Would not the Cecilia street School of Medicine require a *quid pro quo* for what they would be giving up?—That is the reason that I say it would be most desirable that their Professors, if possible, should be made Professors of the University. I think it would be very reasonable to say—“If we bring in these students, and you require, on your own admission, an enlarged medical staff here, take over our Professors or such as you approve of.” I think that would be very reasonable.

1665. At present is not the Cecilia street School of great advantage for the science in Ireland?—Yes, but it is a question whether the whole medical profession should be conducted on wholly denominational lines; and it is for Parliament to consider whether in the administration by public bodies their medical appointments should be on strictly denominational lines.

1666. Dr. COFFEY.—Which would you take as the better expression of the opinion of the Catholics of Ireland in reference to Trinity College, the statements of prominent individuals at different periods or the number of Catholics who have gone to Trinity College over a lengthened period of time?

DUBLIN.

Which do you think represents more effectively the attitude of Catholics towards Trinity College?—I think that the reason that there were so few Catholics is the reason that Mr. Heron and Mr. Fitzgerald gave, and that was that they had no voice in the Governing Body, and they were not eligible for the best offices.

1667. You mean that they have kept out of Trinity College, whatever the reason?—There is no doubt about the reason.

1668. Now, as to one statement on page 2 of your Committee's report*:—"There is neither need nor material for two residential teaching Universities in Dublin, etc." Do you mean by that no need or material for two residential colleges; does the term cover colleges as well as Universities?—No.

1669. You only apply it to residential Universities?—I do not say that there is no material for a new college. It is part of my case that there is.

1670. LORD CHIEF BARON.—Was not the very foundation of your Committee in order that you might press the second college within the University?—Most decidedly, as against any college in connection with the Royal.

1671. DR. COFFEY.—"There is no need nor material for two residential teaching Universities in Dublin." You say that you do not apply that to colleges?—No; a University is a very different thing from a college.

1672. The question of a second college in Dublin University has been a long time before the public?—Oh, yes.

1673. Bills have been promoted in Parliament?—Mr. Fagan was the first person who proposed one.

1674. Has it not been the case in the last dozen or fifteen years in Dublin that the rival advantages of a college in Dublin University and in the Royal University have been much written about?—In the last four or five.

1675. Has not the Catholic Archbishop of Dublin been advocating it for a considerable number of years?—Yes.

1676. And do you agree that in that way the public mind has become familiar with the idea of a second college in the University?—Yes, familiar with it since Butt brought forward his Bill in 1877.

1677. And you, Catholic laymen, expressly appeared before the last Commission to advocate that scheme?—Yes; but you must not draw conclusions from that; it is wrong to say that we appeared there. We furnished a statement after certain evidence had been given there by Catholics in favour of a college in the Royal or a separate University. And we said that of the solutions brought before that Royal Commission we thought the scheme for the college in Dublin University was the best.

1678. But had that actually been brought before them?—Yes; by the Lord Chief Baron and by The O'Connor Don and by Monsignor Molloy.

1679. Your Committee acquired a position of great representative importance, inasmuch in supporting that form of settlement you were supporting one of the solutions that the Bishops always said that they would accept?—That is what I said in my evidence.

1680. Well, when recently members of Trinity College thought of opening up the college to Catholics I believe they interviewed some members of your Committee?—Well, but I had nothing to do with that.

1681. No doubt your committee became aware of the movement that was going on in Trinity College. Then did your committee submit to Trinity College any scheme for a second college in connection with Dublin University?—No.

1682. Your views as to the nature of that second college now seem to be pretty clear. You have given us what you think the characteristics of such a college ought to be?—Yes.

1683. And you were aware, of course, that much interest was taken in this second college by the public generally in Ireland?—Yes.

1684. And you did not at any time submit to them the question of the possible establishment of such a college?—To whom?

1685. To the Trinity College authorities, knowing that they were moving and suggesting reforms,—you did not suggest it to them in any way?—We had no communication as a committee with the Trinity College authorities.

1686. You did not see your way to communicate to them this scheme of re-organising Dublin University on the two-college plan?—We knew that they were opposed to that two-college scheme, because they passed a resolution against it after the report of the Robertson Commission. But I may tell you that I do not know yet whether they are so opposed to the two-college scheme on these lines as on the other.

1687. I want to know did you submit to them any scheme of a second college on the plan you advocate here?—No, we thought the whole thing would come before this Commission.

1688. Now as to some of the points you have dwelt on—the broadening of Trinity College on the plan suggested by the members who favoured the establishment of a Catholic Theological Faculty, and so on—that, I take it, could scarcely be carried on without at the same time going into the other reforms suggested from within Trinity College, namely, the mode of election to Fellowship, the question of a new Board, and so on?—Oh no, they hang together.

1689. Hang together and relate to one another?—Yes.

1690. And does not it occur to you, with these new modes suggested for the election of Fellows, in which so much power is reserved to the Governing Body in the college, practically referring to a considerable extent, over and above, merits on examination, the selection of the successful men to the authorities of the college, if you have the Catholic students coming in, do you not think that, coming in under the conditions which we are all of us aware of exist in Ireland, there would be a great deal of watchfulness on the part of the Catholic students in the college as to those who were selected to fill the appointments?—Certainly.

1691. Would not that tend to prolong this balance of religions that has been so much spoken of, so that if a Catholic is appointed this time it would be insisted on that a Protestant should be appointed next time? Would not the watchfulness be greater in reference to such appointments?—I daresay they would watch them, but I hope the thing would be done on academic lines. I understand that there are to be always academic considerations. The Professors, I understand, would elect one class on the Governing Body, and the Fellows another, and the Senior Moderators another.

1692. And, as a matter of fact, the Catholics would have to give up their colleges outside to go into Trinity College?—And I think they would sweep the whole place in a few years. I think they might do that.

1693. On this question of the mode of election, and of the particular men appointed to chairs, would not there also be greater watchfulness on the part of those already in the college when the Catholics come in?—I cannot conceive why the persons who made this offer should be animated apparently by the desire of getting Catholics in, and, having got them in, should try to drive them out.

1694. CHAIRMAN.—I think you have made it clear that you believe that the proceedings would go on on academic grounds?—I think, if you get academic persons together in a University, they would soon forget these controversial matters. I find it in the bodies that I am connected with, and that is my candid opinion.

1695. DR. COFFEY.—There is another question. A residential University of the Trinity type involves a large degree of ordinary teaching for pass Arts Degrees, the men live in college and attend tutorial lectures. Where you have two such colleges, each undertaking the collegiate instruction of its pupils, don't you think that there is more room in connection with the professorial studies for the expansion of knowledge than where you have only one college within the University organization?—In the strictly professorial course—

No, in the general course.

1696. What I mean is, will the college be, so to say, astride of the University where you have only one college. And where you have two or more, have you not got a certain educational rivalry which is beneficial to the higher professorial work of the University?—I am not so sure that such competition is desirable.

1697. Would not it give you a greater variety of teachers with the two colleges and a larger staff?—I would have the staff strengthened in the re-organised University, too, most decidedly. Candidly, whichever course is adopted, I hope there will be a healthy rivalry between Protestants and Catholics, but not as Catholics and Protestants.

1698. One last point is in reference to the question of endowment. Have you any experience yourself of the kind of equipment that is required for medical study?—No, I am not an expert in that matter, but I have read the evidence as to it, and there seems to be no question that both the school here, and the school in St. Cecilia Street, are in need of very much more equipment.

1699. Are you acquainted with the German University medical organisation?—No.

1700. In order to bring up the medical equipment to the European standard, would you not require to have very much larger endowment for the necessities of present day medical education?—I have read the figures given as to Leipzig and Berlin, and of course they are tremendous, and I quite agree; and that is why I say that, if you are going to ask Parliament for the adequate equipment for an independent college, if you go on strictly denominational lines, you are asking what you will not get, because you are asking for double the amount.

1701. You seem to think that the State will lose by a generous endowment of higher education in Ireland?—Oh, no. I say that if you ask for separate equipment you might be imperilling your claim altogether, and get nothing at all.

1702. Don't you think that the special claims of Ireland with reference to education would demand a broad margin of endowment?—A large endowment; but you would have to satisfy Parliament that duplication was necessary.

1703. And your difficulty is the one of satisfying Parliament?—I think that is a most crucial difficulty, and it has been at the bottom of the whole question for the last fifty years—to try to satisfy Parliament.

1704. Do you think that Ireland deserves special treatment in this matter of educational endowment?—Most decidedly, because I think the state of things is due to Parliament's own act, and other measures in the Penal Laws.

1705. MR. KELLEHER.—You have told us the history of the committee; and I would like to ask you if you are aware that there is a large body of opinion amongst educated lay Catholics in the country in favour of the attitude which your committee have taken up on the University question—that is, the attitude of trying to get a solution within the University of Dublin, a solution by means of Trinity College?—There were a large number of signatures which were sent to the late Royal Commission which expressed a desire for a solution for collegiate education within the University of Dublin. About 400 of those were obtained merely by private request. As regards the other proposition, you have the signatures there of some 300 or 400. As a committee we advisedly did not attempt to get any signatures to that.

1706. Apart from those who have signed, do you think that there is a large body of opinion in favour of the proposal?—I do. And I think there are many gentlemen who did not like to express their views in view of the statements made by higher authority.

1707. Take the final paragraph in the statement* sent to us by the Standing Committee of the Roman Catholic Bishops, in which they say:—"The Standing Committee of the Roman Catholic Bishops feel that they are safe in stating that the Catholics of Ireland would be prepared to accept any of the following solutions:—(1.) A University for Catholics. (2.) A new college in the University of Dublin. (3.)

A new college in the Royal University, but that on no account would they accept any scheme of mixed education in Trinity College, Dublin." Do you think that that is a fair statement of the opinions of the Catholics of Ireland? It seems to me that if this is a statement of fact "as regards the Catholics of Ireland," then, to some extent, it is weakened by the action of your Committee?—I think the answer to your question is: in the first place, as to the solutions that they would accept. I think the attitude of Catholics generally as to the College in the Royal was significantly shown when the Report was published; I don't think that there was an echo of approval from one end of the country to the other. But, as to their accepting any solution contained here, their document was prepared, I think, without consultation with the Catholic body in general; but I would prefer that you would ask some of the authors of it. It is hardly competent for me to give an interpretation of it.

1708. I would ask you, if a second college in Dublin University is impossible, and if a college in the Royal University, situated in Dublin, is so undesirable as to be unattainable?—An autonomous college.

1709. Do you think it is preferable that we should hold our hands and wait until a more conciliatory attitude is adopted between parties in Ireland on the question of University education?—I hope that the Commission will consider this entirely from the point of view of educational efficiency, and satisfying the demands for religious instruction and denominational education. As I said, I hope that some of the statements in this statement of the Bishops may be modified. If the statement really means what has been suggested by the Lord Chief Baron, at page 82, personally I agree with it, but if it means more than that, I do not.

1710. LORD CHIEF BARON.—May I ask you one question with reference to what Mr. Kelleher has asked. You were appointed Secretary to the Committee of Catholic Laymen when it was established on the 6th March, 1902?—Yes.

1711. The first resolution of that Committee was to the effect that a Committee should be appointed, and be requested to act, for the purpose of taking steps for making known to the Royal Commission the views of Catholic laymen, and supply a solution of the University question on the lines of collegiate education within the University of Dublin, and to take all necessary steps, etc.?—Yes.

1712. And I have here a statement sent us by the Catholic laymen:—"We are strongly of opinion that of the various proposals submitted to the Royal Commission the best is to be found in the establishment and endowment of a college in Dublin for Catholic students affiliated to the University of Dublin"?—That was the first resolution.

1713. Has there, up to the present time, been any resolution of the Catholic Laymen's Committee modifying that?—No, except that resolution; which we passed in July, approving of the statement then sent in.

1714. Is not that that they are neutral as to which mode should be adopted?—We approve of the statement saying that no solution would be satisfactory on the lines of a reconstituted Trinity College unless certain things were done.

1715. Do you say anywhere that you are not of opinion that the best solution is in the establishment of a new college?—I am very glad you asked me that question. That is, of the schemes presented to that Commission.

1716. But was not there a new resolution that they are neutral as to which solution shall be adopted—the affiliation of a new college or the adoption of the scheme mentioned?—Certainly; except with the addition in which we point out that probably one is more attainable than the other. On the merits, as a Committee, we are neutral; and I respectfully ask that if I have gone outside the four corners of this document it is to be taken as the expression of my own opinion.

DUBLIN.

N. J. Synnott,
Esq.

The Witness withdrew.

* Appendix to First Report (Cd. 3176), page 80.

GEORGE FOTTRELL, Esq., Clerk of the Crown and Peace, Dublin, called in and examined.

DUBLIN.

Oct. 19, 1906.

George
Fottrell, Esq.

1717. CHAIRMAN.—Mr. Fottrell, do you hold any official position?—Not in connection with education. I am Clerk of the Crown and Peace for the County and City of Dublin.

1718. You hold no official position in reference to education?—No.

1719. You represent yourself only?—Officially I represent no one.

1720. Are you a graduate?—No, I am sorry to say I am not a graduate. Perhaps I may be allowed to state that my father became a graduate of this University in the year 1831, two years after Catholic Emancipation, but during the time which elapsed between his obtaining his degree and my arriving, in 1865, at an age fit for entering a University, a great change had taken place in the relations between the Catholic Hierarchy and laity of this country and Trinity College, and although my father had the strongest wish that I should have the benefit of a University education, he had a conscientious objection against my entering Trinity College. I therefore did not enter it, and I have remained without a degree. In the year 1895, when my son became of an age to enter the University, he was very anxious to have a University education; and on carefully considering the matter, I decided that I was not entitled to inflict upon him the injury of refusing him my permission to enter as a student of Trinity College; but I considered it my duty as a Catholic, there being then no safeguards for faith in the college, to urge him most strongly to abstain from attending lectures in mental or moral philosophy. He therefore obtained a degree; he has had no training in philosophy; but I hope my grandsons will be able to enter Trinity College without any restriction in their course of study.

1721. Are you a member of the Committee of Irish Catholic Laymen?—I am; and have since 1903 taken an active part in their proceedings.

1722. We have before us the statement which has been put in by that body, and have also a full expression of their views from Mr. Synnott, in consequence of which we had to keep you waiting, for which I am sorry. You are one of the signatories of the statement of that Committee, and I suppose you have read it?—I have.

1723. Does it express your views?—It does.

1724. I suppose you have read the document that has been laid before us on behalf of the Catholic Hierarchy?—Yes.

1725. That document does not seem favourable to mixed education?—It does not seem favourable to mixed education in Trinity College; but I am not aware that the Catholic Hierarchy have expressed any opinion upon the proposed solution of the question which I am here to support. There has been no document signed by the Bishops, and no official pronouncement by them, since the date of the document which has been laid before you, and that was previous to the proposal, the principles of which I uphold.

1726. Have you received any information as to what the opinion of the Catholic Hierarchy is with regard to it?—No; we are, as far as I know, without any information as to what opinion the Catholic Hierarchy, as a Hierarchy, have formed upon it.

1727. Your proposed solution has now been before the public for some time?—Yes, but not prior to the 1st August, 1906.

1728. And there has been no intimation from the Catholic Bishops that they would accept it?—I did not expect that there would be. In point of fact there has not been any such intimation.

1729. I would wish you to explain what exactly is meant by "mixed education," and what the opinion of the Irish Catholic Bishops, as Bishops, involves?—I would ask your permission to put in, as portion of my evidence, an article which has appeared in the October number of the *Irish Ecclesiastical Record*.*

1730. Our attention has been already drawn to that article?—If you would insert it in the Appendix it would, I think, be of great assistance to the public in understanding the questions under discussion. The article is stated to be written by the Rev. Daniel Coghlan, D.D., of Maynooth College, and at page 311 I find this paragraph:—

"A 'mixed system' is not necessarily secular; it may enforce in primary schools denominational religious instruction, and in Universities it may recognise, formally or virtually, the right of the Church to exercise supervision over all that may concern the faith and morals of its subjects. The 'mixed' system supposes that, by law, entrance to the college and access to its emoluments and offices are open to members of all religious denominations. Then it is a 'mixed' college, at least in theory and in law, but it may be purely denominational in reality. The presence of a few non-Catholic teachers or students in a Catholic University would not prevent the formal approval of the University; the University would receive approbation, and the presence of the few non-Catholics would be said to be tolerated. But if the Professorships and entry to a college were open by law to non-Catholics generally, if Professors could not be vetoed on the sole ground of being Protestants or infidels, then the system of education would be the 'mixed' system, and, I think, for reasons to be indicated farther on, the University would not be formally approved by the Church, but only tolerated. The Church necessarily condemns colleges where conformity to false religion and worship is insisted on, or where attendance at and acceptance of false doctrine is required. She formally and explicitly pronounces judgment of 'toleration' in favour of colleges in which, though the Church ideal be not realised, satisfactory safeguards exist for the faith and morals of Catholic students."

1731. Please proceed?—I have read these passages for the purpose of pointing out, first, that the Trinity College solution, i.e., an altered Trinity College as the sole College of the University of Dublin, undoubtedly involves "mixed education," as does also the solution which proposes to establish a second College for us within the University of Dublin, and as does also the solution which proposes to establish a College for us under the Royal University. All three solutions involve "mixed education," and, secondly, that the "mixed system" of education is one which the Church can "tolerate." There is a popular belief that between "approval" by the Church and absolute condemnation there are no intermediate stages. This is a mistake. There are several intermediate stages. Trinity College as it has hitherto existed has been declared to be "intrinsically dangerous to faith and morals," and by reference to the article in the *Irish Ecclesiastical Record*, to which I have referred, I find, page 313, this statement: "We may assume that in colleges intrinsically dangerous to faith and morals, ecclesiastical supervision is altogether denied." This assumption plainly cannot apply to the solution whereby an altered Trinity College, with religious safeguards, would be the college for both Catholics and non-Catholics. That altered college would not be open to the charge that within it "ecclesiastical supervision is altogether denied"; on the contrary, it would be an institution in which the right of supervision and vigilance by the Church would exist over the faith and morals of the students, and therefore, with very great respect, it appears to us as to be one which might secure from the Church a judgment of "toleration."

1732. Do you wish to add any remarks upon the general question?—If you would allow me, I would like to say this—that in our opinion the solution which we support is the best that has been put forward. It is the best for the country, because it would bring students of all denominations more closely together than any other system that has been proposed. It is the best for Catholic students, because it brings them more near to attaining perfect equality than any other system—by which I mean equality in enabling them to secure and participate in all the advantages which the University can offer. In my opinion, not alone is it the best for that reason, but because it is also the most feasible. I regard what is occurring here as a kind of arbitration between two opposing sides—the Protestants on the one side, for whom Trinity College is a representative, the other side being

* See page 414

the Catholic clergy and laity. If we have secured, and I trust we have secured it, the assent of one of the parties to the arbitration, viz., Trinity College, to this single College scheme, within the University of Dublin, and if this scheme be fortunate enough to obtain the approval of this Commission, then we, Catholics, can at once, by agreement among ourselves, bring the scheme within the region of practical politics by showing to the Cabinet that it is one which will not meet with serious opposition in Parliament.

1733. From the past history of what has taken place with regard to the University question, it would seem that no scheme would have the effect of attracting a large number of Catholic students to the University unless it had the approval of the Hierarchy?—I trust it will receive their approval.

1734. We have not had any intimation as yet that it has their approval?—Well, sir, the Hierarchy of Ireland have very grave and serious responsibilities in this matter, and this question involves not only the position of lay Catholics, but also the position of clerical students with regard to the University, and it is not reasonable to expect that they should pronounce their opinion on the question until they have had time to consider it fully and carefully. In my view, there is a close analogy between the question as to the Dublin University and that as to the University of Oxford. In Oxford, as you are aware, Catholics are at the present moment allowed to enter, though there are no safeguards such as are suggested in the scheme we propose, and I would call your attention to the fact that there were, in the case of Oxford, several changes of policy from time to time on the part of the Hierarchy, first, in the time of Cardinal

Wiseman, and subsequently in the time of Cardinal Manning.

1735. We are aware of that?—Yes. I refer to it, as it goes to show that from time to time there has been a change on the part of the Catholic Hierarchy—a change not in principle, but in the application of the principle to the facts of the case, where the facts of the case justify the Hierarchy in taking a view which they did not take up at an earlier stage. It is only fair to say that with regard to the solution which is now put forward, the Irish Hierarchy have not yet had sufficient time to examine and pronounce an opinion upon it. The proposition has come upon us entirely by surprise. Even we, Catholic laymen, anxious as we were, and are, to have the benefits of University education, were astonished when we heard of it, because we thought the scheme of a second college was the one Trinity College would be most likely to accede to.

1736. LORD CHIEF BARON.—You think we may expect to receive evidence of their approval?—I think it is highly probable that this evidence will not come before the Commission at all.

1737. CHAIRMAN.—Do you suggest that we should report in favour of a proposition not approved of by the Hierarchy, or, at all events, upon which they have not as yet expressed their opinion, and the result of which might be a repetition of the Queen's College episode?—If you think it is the best scheme and the one most calculated to further the cause of the higher education of Ireland, and to bring about the peace of the country, I may be pardoned for saying that I see no reason why you should not recommend it, although it may not yet have received the official sanction of the Hierarchy.

DUBLIN.

George
Fottrell, Esq.

The Witness withdrew.

The Commission adjourned until the following morning

FIFTH DAY.

SATURDAY, 20TH OCTOBER, 1906,

AT 10.30 O'CLOCK A.M.,

At Trinity College, Dublin.

Present:—The Right Hon. Sir EDWARD FRY, P.C., D.C.L., LL.D., F.R.S., F.B.A. (Chairman);
 The Right Hon. C. PALLES, P.C., LL.D., Lord Chief Baron of the Exchequer in Ireland;
 Sir THOMAS RALEIGH, M.A., D.C.L., K.C.S.I.; Sir ARTHUR RÜCKER, M.A., D.SC., LL.D.,
 F.R.S.; HENRY JACKSON, Esq., D.LITT., LL.D.; S. H. BUTCHER, Esq., M.A., LL.D.,
 D.LITT., M.P.; DOUGLAS HYDE, Esq., LL.D.; DENIS J. COFFEY, Esq., M.A., M.B., F.R.U.I.;
 S. B. KELLEHER, Esq., M.A., F.T.C.D.;

and J. D. DALY, Esq., M.A., Secretary.

J. P. JOHNSTON, Esq., M.A., SC.D., Resident Master in Trinity College, called in and examined.

DUBLIN.
 Oct. 20, 1906.
 J. P. Johnston,
 Esq., M.A.,
 SC.D.

1738. CHAIRMAN.—Mr. Johnston, we have a letter from you, dated 15th October, and I believe you are rather anxious to say something to us in support of the observations contained in that letter?—Yes.

1739. You are, I believe, a private tutor in the University, with accommodation in the College?—Yes, and also Lecturer to the Indian Civil Service class.

1740. Is that a class in the College?—It is in the College, but that does not give me a position on the staff. Although my name is printed in the return sent to you as one of the lecturers, it does not appear in the College Calendar, or in any official publication.

1741. Your functions are two-fold, then?—Yes, as far as the College is concerned.

1742. Will you say anything you wish to, especially on the subject of private tutorships?—Being a Resident Master in the College, who takes private pupils, I am grateful for this opportunity of adding to the statement I have already sent you relative to subject matter VII of your enquiry. I, perhaps, should add I am also one of the Lecturers to the Indian Civil Service class. My remarks will be confined to the work done by those Resident masters, colloquially, but hardly politely referred to as "grinders," the correct and courteous title being "private tutors."

1743. I did not use the term; I said private tutors?—Yes; but the expression has been used. As I say, my remarks will be confined to the work of those Resident Masters to whom rooms have been granted in College for the purpose of teaching in Arts; the necessity for it; and the position of these teachers in the College. The Board determines who these private tutors shall be. The work may be divided into two classes, ordinary and honour. Though both classes are indispensable for the welfare of the College, and there are many points of similarity, I think it will be wiser for me to confine myself to that with which I am more particularly conversant, namely: Mathematical honour work. The instruction in this branch, directly supplied by the College, consists of one course of lectures every term for each of the first three years of the undergraduate course, and the lectures of the Professors of Pure and Applied Mathematics, which latter are intended for Moderatorship candidates. No matter how painstaking one of these lecturers may be, no matter what skill in teaching he possesses, he cannot supply all the wants of each member of his class. There will always be in a class, particularly as it will generally contain, both first and second honour-men, those who cannot keep pace with the lecturer, unless he does grave injustice to the average man. Then again, in the case of a good man, the part of his course in which he most requires assistance may not be that part which the lecturer considers most needful for the majority. In order that a student may make the best use of his abilities it is highly desirable that it should be in his power to get individual instruction and help when he needs it. He is, at present, able to get the assistance he requires from one of the unofficial teachers. That the student

should be able to get this assistance is particularly necessary in the case of Moderatorship candidates. The only official instruction received by them in their last year is that obtained from the lectures of the Professors of Pure and Applied Mathematics. The average candidate requires much more assistance than he can possibly expect to get from these lectures. The function of professorial lectures is not tutorial, but rather to broaden and extend the ideas and views of a student and sow the seed of future original work. The tutorial assistance should be otherwise supplied. To supplement the work of the Professors and College Tutors, the present private tutor is necessary, or else, the existence of other men who will do exactly the same kind of work as they do, if anything in the nature of a School of Mathematics is to exist and flourish. The private tutors here have no recognized position and no part in College life. They do a considerable portion of the teaching and by no means the least important part. For instance, the University Professors are the only persons who give more advanced instruction in mathematics than some of these teachers. There are, practically, no posts on the regular College Staff to which they are eligible for election, and I think it would be to the greater advantage of the whole institution if there were. Should Readerships as suggested in Statement V. be established, and the present private teachers be considered eligible for election to some of them, it would do much to remove the hardship of which I complain, namely, that of persons doing good and absolutely necessary work being without adequate recognition.

1744. I suppose the majority of those who succeed in the competition for Moderatorships have been assisted by private tutors?—Well, I should say, at any rate, one half of them.

1745. Some considerable number then, perhaps one-half, are able to get Moderatorships without assistance from private tutors?—I think some do; I only know definitely about the men who come to me.

1746. But when the lists of the examinations come out you know how many of the students get through, and how many have had assistance from private tutors?—There would be some who would get through without assistance, but I should say that at least one-half get assistance.

1747. In the case of private tutors their remuneration is the fees which they receive from students?—From the students who come to them.

1748. There is no pooling of fees?—No.

1749. Sir THOMAS RALEIGH.—May I ask one or two questions about the Indian Civil Service men; are there many of them?—No; the classes are small.

1750. How many candidates do you send in in the year?—I would say, perhaps, seven or eight. I could not say definitely, but the numbers who come to the mathematical classes with which I deal are small.

1751. Compared with the numbers who go in, I understand that the number of your successes is very creditable?—Yes, I think so.

1752. They have an opportunity of going on to a degree, I suppose?—Oh, yes, most of them do go on to a degree.

1753. That is since the age was altered, I suppose?—The classes have been regularly established here for some years past.

1754. Are the students left to find their way as individuals, or is there any authority specially in charge of them?—There is a Registrar of the School of Indian and Home Civil Service.

1755. And does he superintend the whole of their work?—He arranges all the classes they will go to, and advises what College lectures they shall attend, but the men have a choice of the subjects they will take up; he does not control that.

1756. When one of your men obtains a place in the open examination, do you keep him here for the probationary year?—Yes.

1757. And he can get the Oriental languages and so on here, just as well as in London, I suppose,?—Just as well as in London or any other place; there are regular teachers appointed for the purpose.

1758. And for the legal part of it, which is important?—I believe so, but I cannot speak definitely as regards that.

1759. There must be some lecturer or tutor, I suppose, who knows the Codes?—I think they can get the full instruction here, but I could not speak definitely; I am the Lecturer in Mathematics only.

1760. We should like to know how the Code part of the work is done?—I could not say.

CHAIRMAN.—From the statement of Dr. Purser, there appear to have been courses of lectures in Roman Law and in English Law; I do not see anything about Indian Law.

1761. Sir ARTHUR RÜCKER.—Are there a limited number of these Resident Masters who give teaching of this kind?—The Board decide who they will be; they only grant rooms to certain persons.

1762. Is that done on application?—That is done on application. Having applied for rooms, I received the following letter from Dr. Ingram: "Dear Mr. Johnston—I have brought your matter before the Board, and they direct me to say in reply that the question of the number of private tutors to be provided with rooms in the College is regularly considered immediately after the Long Vacation, and that the Board are unwilling to go into single applications at other times." That is the reply I got to an application for rooms in 1894.

1763. They do it once a year, practically?—Once a year, and the number is limited.

1764. Do they fix the fees, or is that left to you?—The fees are fixed by custom. They are three guineas a month for ordinary work, but Moderatorship work in Mathematics is charged for at the rate of four guineas a month.

1765. Is it usual if a gentleman has once been given rooms in College for him to retain them for a long time or for life?—He usually retains them for life, provided he continues to teach.

1766. It practically becomes a permanent post?—It becomes a permanent post in that sense. I have never known the College to take back rooms except where there was some fault which they considered grave.

1767. CHAIRMAN.—Are there private tutors who have not rooms in College?—There are certain men outside who teach, and there are a great number of students who teach. A scholar who retains his room as a matter of right up to M.A. standing can teach if he likes, and these are not appointed by the Board. There are a few teachers in the place who, although of M.A. standing, have not proceeded to their Master's degree, and they hold their rooms, of course, from the Board.

1768. Dr. JACKSON.—Does the undergraduate choose his private tutor for himself?—Yes; he is absolutely free.

1769. He probably would take advice from the College tutor before deciding?—In a great number of cases they go to the College tutor, but in a great many cases they get a senior student to advise them.

1770. They get clearer advice in a matter of that sort than they would from a person who does not know the aptitudes of the private tutors?—I think so; it is quite possible.

1771. I was not quite clear as to what you said about the number of honour students who resort to private tutors. Do you think that in mathematics most of

them resort to private tutors?—Not in the earlier years, but in the case of men reading for Scholarships I think the majority of them go to private tutors, and for Medal, I should say, that at least one-half go to private tutors.

1772. A man who is getting a part of his instruction from a private tutor is, I presume, attending college lectures—professorial and tutorial, at the same time?—In most cases professorial or tutorial, but occasionally one will have a man, as I sometimes have, who fails to get honours at the first attempt, though reading with a private tutor; he is a weak man; it is not advisable for him to go to college lectures; he would not follow them.

1773. I come from Cambridge, where we have had and still have a system similar to yours.—Yes.

1774. During a number of years, before I had college work, I used to take a considerable number of pupils in classics. Of late years we have found that the college could do what classical men wanted: but in spite of that, in mathematics, "coaching," as we call it, continues. Mathematical students seem to want it more than students in any other subjects. Can you tell us anything about other subjects? Do undergraduates who are reading for honours in other subjects resort to private tutors to the same extent to which they do in mathematics?—I do not think so. I do not think they do as much. I am told that perhaps one-half the men for Scholarships and probably one-half for Medal do; but they read a very much shorter time in classics.

1775. Part of the time then they are getting the whole of their instruction from the official teachers?—That would be my impression.

1776. I was rather anxious to get out that distinction, which I expected to find from my experience elsewhere. Then, I should like to put to you this question. Is it not an advantage in this sort of teaching that the relations between the pupil and the teacher are informal?—Yes.

1777. Certainly, it was my experience that there was an advantage in the informality of the teaching. A man came to me of his own choice; he left me of his own choice; therefore the relations between him and me were less formal than those between the college lecturer and himself. To some men that was an advantage. I am raising this point, because I want to ask you whether, if the informal teacher were formally recognised, there might not be a certain loss in that respect? Would not a new grade of informal teacher arise?—When I was in Cambridge I do not think there was any loss through the coach that you went to being a college lecturer at the same time.

1778. I see. You think that those who are performing these functions ought to have a certain amount of college lecturing in order to give them a position?—Yes. It would also, I feel, while not diminishing the good effects of the informal relation, tend to prevent any ill effects arising from it.

1779. That, in fact, your own position, which is two-fold, ought to be made general?—My own position is two-fold, but though I am lecturer to the Indian Civil Service class, that does not really give me any position in the college.

1780. That is to say, it does not give you any status as a teacher of mathematics for ordinary students?—No. I get no position. I am simply employed. Though I am spoken of as a lecturer, I am simply employed to teach these men.

1781. Are there many private tutors who have not got the recognition implied in the occupation of rooms, practically for life?—I beg your pardon?

1782. I am afraid I have not put my question clearly. I understand that some of the private tutors occupy rooms, practically for life?—Yes.

1783. There are also some Honour men who are here for a time and who are taking pupils. Are there any completely unauthorised private tutors who do not come within the view of the College at all?—There are some outside.

1784. Do they teach Honour men or Pass men?—Pass men, I think, altogether.

1785. I ought to have asked this question earlier: I gather that you teach a number of Honour men?—Yes.

1786. Do you also teach Pass men?—Very few now, practically none at the present time.

1786A. You have enough to do in teaching Honour men?—I have enough to do in teaching Honour men and the Indian Civil Service class, and I am also As-

sistant to the Professor of Mathematics in the Royal College of Science.

1787. Do Pass men resort largely to private tutors?—Yes, a very considerable number of them for the Little Go and the Degree.

1788. May I conjecture that the worse Pass men want more of this sort of teaching than the better men?—I would say so, most decidedly. There is one thing I would like to say regarding the question you asked me on our position in the College. We come into our rooms and we go out; we are not in the habit of attending Commons, are not members of the common room; and have little or no part in College life.

1789. Dr. DOUGLAS HYDE.—Are there many teachers with rooms inside the College?—There are seven or eight.

1790. And do they pay for their rooms to the Board or do the Board give them free?—They pay for the rooms, and they pay fees.

1791. Fees as well?—Fees as Masters of Arts.

1792. Yearly?—Half-yearly.

1793. CHAIRMAN.—You have spoken of private tuition in mathematics and in classics; is there any

private tuition in scientific subjects—not referring to mathematics in that sense?—There are a certain number of students who attend in experimental physics.

1794. Physiology and medical subjects?—I could not say as regards medical subjects, but there is a certain amount done in teaching experimental physics. Of the masters who hold rooms at present for the purpose of teaching, there is some experimental physics taught by one for the Engineering School.

1795. I suppose the chief amount of private tuition is in classics and mathematics?—Yes, mathematics first, and then classics.

1796. With science a bad third?—Yes, and there is more done in mathematics than in classics.

1796A. Do you sometimes have men going in for a Fellowship?—There is practically no private teaching done in mathematics for Fellowship; but there has been a considerable amount done in mental and moral philosophy for Fellowship.

The witness withdrew.

A. F. DIXON, Esq., M.B., D.Sc., Professor of Anatomy in and examined; representing the signatories to Appendix to the First Report (Cd. 3176), 1906.

1797. CHAIRMAN.—You have come before us, I believe, in support of the first part of what we call "Statement VII."?—Yes.

1798. Which has been submitted by members of the staff of the School of Physic in the University of Dublin?—Yes.

1799. Perhaps you will make to us any observations which you think desirable?—I think that one of the characteristic features of our Medical School is that the University of Dublin requires that all our students should take an Arts degree as well as the ordinary degree in medicine. In fact, each student must have completed his Arts course and passed the examination for the B.A. degree before the degree of M.B. is conferred upon him. Students are, however, allowed to run certain of their courses concurrently. Some of the medical students enter on their medical courses after the first half-year of their Arts course, and they are then allowed to run their Arts and Medicine courses concurrently. The more purely Arts portion of the course, i.e., such subjects as mechanics and logics, are taken in what we speak of in the Medical School as the summer term, and arrangements are made by which a certain amount of time in the morning is given up to those subjects. Many students, however, do not enter the Medical School in their first year of Arts, but enter in their second year or their third year, or even sometimes in their fourth year. I might say that quite recently an arrangement has been made by which certain definite Arts instruction must be taken. Medical students are not given as much choice in the Arts courses and lectures they attend as the ordinary student in Arts; they are compelled to attend certain lectures if they are running their Arts and Medical courses concurrently. There is not the same amount of choice now given to them. This is mainly in order that they shall get what is thought to be the best part of the Arts course for them, and also for time-table purposes.

1800. Do those arrangements meet with your approval, or are you anxious to suggest that they should be modified in any way?—I think that they most certainly meet with the approval of the Medical School. I should like to say that they are also highly spoken of by the Arts lecturers who take part in the instruction of the students.

I should like, too, to have an opportunity of mentioning the names of the teachers and lecturers who are responsible for the post-graduate instruction.

1801. You mean the officers?—Yes. I simply propose to quote the names, in order that they may come before the Commission in some way, because I understood the Commission wished to inquire into who the teachers were and the way the duties were performed. It is merely that they do not occur in the College Calendar.

1802. I think we hardly require to know the names of the individuals?—I was merely saying that they do not occur in the College Calendar or in any document.

1803. Perhaps you will just mention them?—They are as follows:—Medicine, Henry T. Bewley, M.D.,

and Chirurgery in the University of Dublin, called the Joint Statement VII., printed at page 35 of the

F.R.C.P.I.; Alfred R. Parsons, M.D., F.R.C.P.I. Surgery, Thomas E. Gordon, M.B., F.R.C.S.I.; Edward H. Taylor, M.D., F.R.C.S.I. Gynaecology, E. Hastings Tweedy, F.R.C.P.I. Diseases of Eye, Henry R. Swanzy, M.B., F.R.C.S.I. Diseases of Throat, Nose, and Ear, Robert H. Woods, M.B., F.R.C.S.I. Diseases of Skin, Wallace Beatty, M.D., F.R.C.P.I. Pathology, Alex. O'Sullivan, M.D., F.R.C.D. Anatomy, A. Francis Dixon, M.B., sc.D. X-Ray work, William S. Haughton, M.D. Cystoscopy, K. E. L. G. Gunn, M.D., F.R.C.S.I.

1804. Dr. JACKSON.—What is the status of these gentlemen?—These gentlemen are appointed lecturers in these subjects for the post-graduate courses which are given each summer.

1805. By whom are they appointed?—They are appointed by the Board of Trinity College.

1806. CHAIRMAN.—Will you proceed, please, with any observations you want to make to us?—As it is possible that the Commissioners may desire to make recommendations based upon the tables furnished by the College showing a summary of accounts, salaries, &c., I would ask to be permitted to make some remarks on the figures which concern the Medical School. In the first place, the names, titles, and emoluments of the King's Professors of the School of Physic, with the exception of the King's Professor of the Institutes of Medicine, do not appear in these tables.

1807. Are they not paid by the Dunn Fund?—Yes, and in other ways. These professors (1) Practice of Medicine, (2) Materia Medica and Pharmacy, and (3) Midwifery receive £92 (£100 Irish) from the Fellows of the Royal College of Physicians as trustees of Sir Patrick Dun's estate, together with the fees paid by the students who are members of their classes. These latter fees do not appear anywhere in the accounts as given in the tables, for they do not pass through the hands of the Bursar. The King's Professor of the Institutes of Medicine also receives £92 from the trustees of Sir Patrick Dun's estate. That does not appear either. The fees paid for the summer (optional) course of anatomy, for advanced practical physiology, and for instruction in bacteriology and other subjects required from the candidates for the Diploma in Public Health do not appear in the accounts, as they are paid directly to the professors or lecturers who conduct the courses. None of these courses are required from candidates for the M.B. or M.D. degrees. I would like also to draw attention to the fact that under the heading "Medicine" in Table III., page 15, of the Appendix of First Report of the Royal Commission, several sums are entered which are only to a relatively slight extent, or not at all, connected with the teaching of medicine. This is probably due to the fact that teachers of chemistry, botany and zoology were originally appointed in the interest of the Medical School only, and their names are still retained, and the moneys paid them entered in the part of the College books devoted to the Medical School. The emoluments mentioned under the heading "Medicine" amount to

about £5,860, but this sum includes the entire incomes of the professors of Chemistry, Applied Chemistry, Botany, and Zoology, as well as those of the keeper of the herbarium and the demonstrator in chemistry. Among the details of the incomes of the various teachers may be seen many sums paid for work done outside the Medical School, such as "Art School fees," "Engineering School fees," "Curatorship of Museum," etc. On the other hand, the salary of the Lecturer in Pathology appears in Table II. as part of the income of one of the Junior Fellows, for the lecturer, in addition to his position in the Medical School, holds a Fellowship in the Arts Faculty. If these considerations were taken into account, the sum—£8,806 4s. 2d.—given in Table V., page 9, of the Appendix to the First Report of the Royal Commission as expenditure "Medicine," would be considerably reduced.

1808. You propose a division of the salaries of the professors of chemistry, &c.—Yes. Then I have another statement I should like to make about it. I believe that a more accurate estimate of the annual expenditure on the Medical School can be made from a study of a "schedule" entitled, "Scheme for division of fees and salaries," drawn up and adopted in the autumn of 1903.

1809. By whom?—It was drawn up by the Board of Trinity College, and the professors were asked to sign it at the time. May I hand you a copy of it? (*Document handed in.*) This scheme shows a net annual cost to the College of £3,274 5s., on the assumption that fifty students enter the school in each year. At the same time it will be seen that the Scheme includes the salary of the Professor of Applied Chemistry, under the title of assistant in chemistry. The Professor of Applied Chemistry devotes very little time to the teaching of medical students, but is almost entirely an Arts teacher. It also includes the salary of the demonstrator in chemistry.—I would also like to draw attention to the fact that the scheme does not take into account the sums paid by medical students in *licent* fees and fees for degrees. An examination of Appendix Section B., Return II., enables one to estimate the average value of these latter fees during the last six years at, approximately, £1,400 per annum.

1810. I am not sure that I quite follow this. It is a little complicated. I see that it starts:

For average of 50 students, total fees, £2,861 5s.

Deduct capitation for 17 courses, ... 850 0s.

leaving to be divided into eighty shares of £25 a balance of £2,011 5s. Is that the income?—These sums appear in the Report which you have in these Tables.

1811. I was only anxious to understand this document which you have just handed in. Is the sum of £2,011 there mentioned the annual receipts?—The total fees are £2,861 paid into the College by students, taking an average of fifty students.

1812. Then it leaves a balance of £2,000, roughly speaking?—Yes; and this sum is divided into eighty shares, twenty-eight of which are paid to the Board to provide part of the expenses of the School. Before this scheme was invented, these fees were simply given to the various teachers, who had to provide for the assistance and to a large extent also for the working expenses of their departments. When this scheme was invented, this money was divided in a certain way. You will see by the first page of the document that the object of the scheme was to enable changes to be made in the curriculum without hitting severely any one teacher; but another object was to provide for a certain amount of expenditure for the working of the departments. The way in which the money is divided is this. For every student whom a teacher has in his class he received a capitation fee. These capitation fees are seen in the fourth column. In addition to that he receives a salary from the Board, which is in the third column. The remainder of the fees, after deducting a certain amount for the part equipment of laboratories, is allotted to the teachers. I am afraid it is very complicated. The only reason I have brought it in here is simply to show that the cost to the college according to this scheme is shown at the bottom to be £3,274, as against the much greater sum shown in the Tables in the Blue-book.

1813. What is the other sum?—It is not balanced in any one part, but it would appear in one of the

Tables as £8,331, less the fees, which are about £2,000.

1814. LORD CHIEF BARON.—What page is that?—Page 8.*

1815. CHAIRMAN.—That is about £6,000?—But even then, this net cost to the college does not allow for the fees which are paid by our students for examination fees and for degrees, which would represent another £1,400, about.

1816. MR. BUTCHER.—Is that scheme in operation now?—Yes, it is now in operation.

1817. SIR ARTHUR RÜCKER.—For how long has it been in operation?—For the last three years.

1818. CHAIRMAN.—And the difference does not depend to any extent on an increase of expenditure?—No. In the Returns, as they are given in the Blue-book, the entire incomes of the Chairs such as chemistry and botany, the curatorships of the museum, and of some Chairs which are scarcely connected with the Medical School at all, are all charged to the Medical School.

1819. SIR ARTHUR RÜCKER.—This £675 for the Professor of Chemistry is not the whole of his income, is it?—It is not the whole of his income; he receives in addition fees in Arts and in the Engineering School.

1820. Pathology is included?—We have drawn attention to that in the statement I have just read. He receives £400 from the Medical School scheme.

1821. CHAIRMAN.—What inference do you draw from that as regards the Medical School?—The inference we draw is that we are entitled to ask that the Medical School should be more liberally treated by the University and College than it is.

1822. This scheme is now in operation, is it?—Yes. I am not speaking of incomes in connection with this scheme, but in regard to the question of research work, additional assistance, and things of that sort.

1823. You do not desire to disturb this arrangement?—We do not at all.

1824. But you would like more money for research work?—We wished, if the Commissioners were making any Report, or any suggestion based on those figures, that they should have before them the correct amount spent on the school.

1825. You think we might act on the idea of an expenditure of £6,000, whereas it ought to be reduced in this way?—Yes.

1826. Is there any other point you wish to mention?—Of course we recognise that large outlays have to be made at irregular intervals in extending and keeping up to date the various laboratories and museums, and, in addition, there must be certain annual expenses not provided for in the schedule; but we consider that all these together can scarcely exceed in amount the total gain to the College chest by Arts fees paid by medical students who enter the College with the sole object of obtaining a medical degree.

1827. LORD CHIEF BARON.—I do not understand you to suggest that there is anything wrong in these accounts on page 6 of the Appendix?—Most certainly not.

1828. Because on the other side of the account there appears "Medical School and Dissecting Room Fees, £1,507 3s.," and also receipts from students in Arts; is not that so?—Yes.

1829. It is only that you direct attention to it for the purpose of showing that something more should be spent upon the Medical School?—Yes, quite so; that is exactly the point.

1830. There is no reason why we should not take these accounts as correct?—Oh, no.

1831. But we know now, upon consideration of your statement, the exact receipts and outgoings of the Medical School?—Quite so.

1832. CHAIRMAN.—I think your point is that certain professorships ought not to be charged entirely to the Medical School, but should be divided?—Quite so.

1833. SIR THOMAS RALEIGH.—What careers do you prepare your medical students for—an ordinary career in practice, I suppose, in most cases?—Very largely; a very large number of our men go into practice.

1834. Do they usually obtain employment in Ireland or out of Ireland?—A very considerable proportion leave this country, and numbers of them go into the Army Medical Service, and into the Indian and Navy Medical Services.

1835. Are there any relations between your school

DUBLIN.

A. F. Dixon,
Esq., M.B.,
D.Sc.

and the other School of Medicine in Dublin?—The College of Surgeons and the Cecilia Street School.

1836. Yes?—The courses given in the College of Surgeons and in Cecilia Street are recognised as qualifying courses, provided the amount of instruction is equivalent.

1837. Do you think it is an advantage or a disadvantage to have two schools—your school and the Cecilia Street school?—Do you mean, would it be an advantage to join the two schools?

1838. I was not suggesting that; I was merely asking whether you thought it operated to the disadvantage of medical education or to the advantage?—I think it is a very difficult question to answer, but I think there must have been some advantage in having two schools originally, or the second school would not have been founded. I believe that both schools are doing exceedingly good work.

1839. Sir ARTHUR RÜCKER.—I understand that the medical students have to go through the Arts course as well as the Medical course. How far do subjects of the Arts course coincide with those they would have to take in the Medical course?—Formerly, not at all necessarily; but recently the arrangement has been completely changed. Medical students are given better courses in botany, zoology, and physics, and they are allowed to count these as a larger proportion of their Arts course than they were before.

1840. They are examined in those subjects for their Arts degree?—They count for their Arts degree.

1841. Are they examined in them again for their Medical degree?—No. They also have special courses in mechanics to which they have to go. These are lectured in, and examined in, the Arts faculty. They have to pass an examination in botany, zoology, chemistry, and physics. These are counted to them as part of their Arts course.

1842. Botany, chemistry, zoology, and physics, they are all included?—Yes.

1843. So that the work is not done twice over?—No; the examiners and lecturers are the same.

1844. In that way the two courses do very largely overlap?—Yes.

1845. And does it add very materially to the length of the medical students' studies—the necessity for taking the Arts course as well?—I do not think many of our students qualify within the five years as they could do. Most men take a little more than five years, some a good deal more. It does add to it, certainly.

1846. Do you think that that, on the whole, works for the good of medicine, taking it from the point of view of the University?—You mean, does it turn out better men?

1847. Would it?—Certainly it does. It is very difficult to judge the ages of men from different places, but taking the men who go up for the Army Medical Service, where the ages are given, our students average a year younger than the Scottish and English graduates, so that taking these Arts courses does not delay them too long.

1848. Do you think the additional length of the course implies a condition that prevents poor men coming in: does it act as a deterrent in that way, do you think?—It does in this way—we lose a few every year by young men beginning, and then finding they are not able to go on.

1849. Are you aware whether there is any pecuniary difference between your students and those of the other school? Are the fees less?—No, the fees are similar in all three Dublin schools.

1850. So that there is no grave difference in the pecuniary position of the students in the two schools?—No, I think not. Of course, the students who go through Dublin University have to pay the extra money for Arts fees.

1851. And do you think that those fees would be a very heavy burden?—I think myself they are a heavy burden.

1852. Mr. BUTCHER.—Do they pay full Arts fees?—Yes.

1853. For how many years?—For four years. The whole sum total is about £83 or £84.

1854. But the Arts course in medicine does not extend over four years, does it? I mean, the Arts subjects in the medical course do not extend over four years?—They do, very nearly.

1855. Sir ARTHUR RÜCKER.—What additional subjects has a medical student to take that do not count in his medicine course?—In his first and second years he must attend lectures in Mechanics (including some Trigonometry), English Composition, and Logics, and he is examined in these subjects and in one language, viz., French, German, Latin, or Greek. In his third and fourth years he must attend lectures in Astronomy and Ethics, and pass examinations in these subjects and in English Composition.

1856. There are really a number of subjects added to the medical course?—There are, certainly. If you compare our course with the course a medical student in, say, Edinburgh, would go through, there are certainly subjects added to it; there are more also than there would be in the University of Cambridge. When we went into this question, we studied very carefully what was done in other places, and our men have certainly a longer Arts course.

1857. The medical teachers do not object to that?—I think we do not object to the present system.

1858. Dr. JACKSON.—I understand that the teaching in botany, chemistry, and zoology given in the medical department is the only teaching in those subjects provided in the college; is that right?—No; it is not quite correct.

1859. Would you mind explaining?—There is a course of lectures given in physics and in chemistry in the college in the Arts course which could be credited to the students after they had passed their Little-Go, that is, at the end of their second year. These lectures are attended by medical students in whatever year they are in, so long as they have taken a special course in mechanics beforehand; there is a special course of practical chemistry given to medical students during the whole of the summer session; it is one of the heaviest parts of the chemistry course, and it is for medical students only. Botany and zoology which medical students take is a completely different course from that given to Arts students.

1860. CHAIRMAN.—Is it a more advanced course?—It is a different type of course; I do not know that it is more advanced; it is a much heavier course while it lasts; it is more concentrated.

1861. There is more of it?—Yes.

1862. Dr. JACKSON.—Who gives the course delivered to Arts students in those subjects?—In chemistry, the professor of chemistry and in physics the Erasmus Smith professor of experimental philosophy.

1863. That is the same professor who gives the lectures in the medical department?—Yes.

1864. In fact the same persons provide all the teaching?—Yes.

1865. Whether it is given as part of the Arts course or as part of the medical course?—Quite so.

1866. The question I want to ask you is whether it is quite satisfactory that in such subjects as botany, chemistry, and zoology there should not be a distinction between theoretical teaching and practical teaching? Or perhaps I might ask this preliminary question: In the higher lectures given by these professors, are the interests of the medical students mainly considered or are they ignored?—They are not ignored. I might mention that the courses which the medical student takes out in chemistry, botany, zoology, and physics are better courses than those which the ordinary pass man would take for his degree.

1867. Certainly; there is more practical work in them?—They are more extended courses. They are not as advanced courses as the honour students would take for his B.A. degree; that is what we call the Moderatorship.

1868. CHAIRMAN.—In fact, there are three classes: the class for the ordinary pass Arts student; the class for the medical students; and the class for the honour men in natural science?—Many of the ordinary pass men do not attend the lectures in botany and zoology; in chemistry and physics I believe many do.

1869. Dr. JACKSON.—I want, then, to ask this question: Are the interests of science properly considered when the teachers have to give a very considerable part of their time to the preparation of medical students?—You mean, is there too much work for the teachers?

1870. Yes.—For the professor of chemistry?

1871. Has the professor too much work to do if he has to consider on the one hand the interests of pure science, and, on the other hand, the practical teaching which men want if they are to become good medical men?—I think, taking the case of chemistry, that the medical class would always require to be taken by itself, because there would not be accommodation for the medical and the Arts students together. It is a matter of expediency and of the time-table.

1872. Have you separate classes in that subject?—I think it is better that they should be taken separately.

1873. How many teachers of chemistry have you then?—We have a professor of chemistry, and a professor of applied chemistry who assists, and also an assistant.

1874. You have differentiation in that case?—We have a certain amount of differentiation.

1875. Have you differentiation in zoology?—We have not. We have one teacher in zoology, who also, you will notice, is called in the papers Professor of Comparative Anatomy. Formerly those two Chairs were separate, and the professor of comparative anatomy simply took medical students, and none else. About ten years ago the Board permanently united the two Chairs, and he is now professor of zoology and comparative anatomy.

1876. And the subject is not too large?—I think myself, if we get what it is hoped we shall get (under the Science scheme) much better equipment for zoology, the two Chairs should be separated once more. I am speaking for myself, of course, in this matter; I think they ought to be separate.

1877. Mr. BUTCHER.—You said just now that Arts students did not, as a rule, go to lectures when they took botany and zoology?—I meant in the practical work; I should have said that Pass students did not take as much practical work.

1878. Do you draw a distinction between the laboratory work in these subjects and the mere lecture work—or is there such a distinction?—An Arts student in a subject like botany is required to take pass lectures and demonstrations, but in Dublin University, except in the case of medical students, lectures are not compulsory. I think they should be compulsory myself; I think the medical scheme has made an advance in making these things compulsory.

1879. In the case of medical students, they have to do practical work; have they any laboratory work in botany, zoology, and chemistry, as well as mere lecture courses?—Certainly, and in physics in the future.

1880. And in physics in the future?—Yes.

1881. That has not been so hitherto?—They had in chemistry, and the last year they had in botany and zoology; in fact, more than half the course is practical work, and they get practical examinations.

1882. That is a distinct advance?—Yes. The difficulty formerly was that there were no buildings in which to do it. Under the scheme which doubtless has been before you—Dr. Joly referred to it—it is hoped we shall have botany, zoology, and these subjects put on even a better footing than they are in at present; we are very anxious that it should be so.

1883. Dublin University, as you say, retains the B.A. degree as a preliminary condition of the medical degree. Which other universities still do that?—Oxford is the only other.

1884. Cambridge gave it up some years ago, I think?—Yes, but practically all students in Cambridge do take it. Oxford has reduced its Arts course for its medical students very much in the last few years.

1885. So I gather. The course of study for medical students, as you gave it, was very interesting to me, because I observe that within five years, which is the minimum medical course—that is, I think, by regulation of the Medical Council—you are able to put in not only the medical course but also a certain number of Arts subjects which do not naturally come into medicine—the literary subjects, one language and English?—Essay-writing.

1886. That is interesting to me, because I know that elsewhere the complaint in medical schools is that they cannot in the five years put in even the necessary medical subjects?—I should like to mention that in making this arrangement we have ceased to permit our medical students to begin medicine the very moment they pass the entrance examination of Trinity College.

1887. You have?—They must, in addition, pass another examination which is a stiffer, a more advanced examination; and this we consider to be the equivalent of at least half a year's work in Arts.

1888. Is that the preliminary science examination?—No, it is the examination described in page 331 of the Calendar.

1889. Let me get this quite clear. You have, first of all, your regular preliminary examination that is required by the Medical Council?—Yes.

1890. As regards that examination, and the standard of it, I suppose the University examination here is of a considerably higher standard than the minimum required by the Medical Council?—I think it is higher.

1891. But only as supplemented?—I think the public examination was probably the standard required by the Medical Council, but I really am not sufficiently informed to judge of that. But I am convinced that what is now required is higher than the minimum.

1892. But there is no serious complaint on the part either of the professors or of the students that the courses are now overloaded?—There are complaints; a very large number of departments think they should have more time.

LORD CHIEF BARON.—That is very much the same in every profession.

1893. Mr. BUTCHER.—No doubt it is. Can you tell me how many students there are in the faculty of medicine? I find, Sir Edward, that we have not in our returns the number of students in the separate faculties—medicine, arts, science, engineering, etc., and I think that that is a return which we ought to have.* (To Witness).—Do you know how many it is in the case of medicine?—I can give the number of men who have entered the school of medicine during each of the last ten years.

CHAIRMAN.—I suppose there would be no difficulty in getting such a return?

Mr. KELLEHER.—None whatever; it could be got within an hour or two on a less busy day than to-day.

Mr. BUTCHER.—I think we ought to have it.

CHAIRMAN.—I quite agree. I think we had better make some arrangement for getting the return.

Mr. KELLEHER.—Any day next week, I think, it could be done.

CHAIRMAN.—Will you undertake the charge of it?

Mr. KELLEHER.—I will.

1894. Mr. BUTCHER (to Witness).—Can you give us the numbers in medicine?—In 1896, 65 students entered; 1897, 63; 1898, 60; 1899, 61; 1900, 50; 1901, 64; 1902, 46; 1903, 42; 1904, 65; 1905, 69.

1895. On the whole, you have been pretty constant?—On the whole. Our scheme is calculated on an average of fifty students entering each year. There are two years in which there was a big drop.

1896. The time of the Boer War?—Yes. A large number of students who were in the college at that time left.

1897. Looking back over the last ten years, has the Medical School in general kept up its numbers; I know that other medical schools have tended, for various reasons, to decline?—I think we have, omitting those two years, we have been fairly constant. Last year was the biggest year for ten years past. Before that there were some big years, just before the five years' scheme was introduced. A number of students then entered, because if they entered then they could qualify within four years at any time.

1898. Your entrances, being from fifty or sixty in the year, how many do you think your total number of medical students on the roll would be in any single year—of course, some drop out?—They do. One can estimate the number that drop out by taking the table, which shows the number that come out each year at the end. There is a table given of M.B.'s

1899. They are graduates. I suppose there are a good many failures?—The average of those who have taken degrees during the last six years is forty-one.

1900. Dr. JACKSON.—These are the numbers of the students on the books of the Medical School?—These are the numbers of students who have commenced medicine, and the numbers who have come out at the end with degrees.

1901. Mr. BUTCHER.—Passing on to the scheme of fees—which, of course, one has only just glanced at—I am I right in saying that until the last few years all the fees of any given Chair went directly to the professor?—I think that is so. In the time of Dr. Cunningham, all these fees for dissections and so on were

A.Sc.

paid to him, and he paid the junior demonstrators and assistants.

1902. That is precisely the same system which existed in Edinburgh until recent reforms. Now I understand the income of the professor depends partly on salary, which is fixed, and partly on capitation fees, which are variable, and also upon a certain dividend, which is, I suppose by arrangement, agreed upon between the different Chairs?—Yes.

1903. Each Chair having so many shares?—Yes.

1904. Are those shares calculated according to the amount of work and the number of students, roughly speaking?—Not quite. It was arranged in the first instance to make the incomes of the Chairs approximately equal. It is a very artificial system. But if a man has a great number of students the capitation fee for his courses is in some cases halved.

1905. It strikes me as being rather too complicated a system for the purpose?—Then I have a statement which I should like to make, if I may. I make it entirely on my own responsibility.

1906. CHAIRMAN.—If you please?—I believe that in Trinity College the incomes of the various teachers are too largely dependent upon the amount of the fees paid by the students. The fixed portion of each teacher's income is too small in proportion to the variable part, and this condition may cause the incomes of certain teachers to be unduly influenced by alterations in the arrangement of the curriculum, and may render discussion regarding the omission, or introduction, of new courses difficult or almost impossible. To take as an example an extreme case—it has been suggested that the Arts course should be reduced from four to three years. Without attempting to give any opinion on the matter, which, so far as I know, has never been formally discussed—it will be evident that the teachers who are best qualified to speak on the advisability, or otherwise, of such a step, and who form the only body of men likely to have energy and influence enough to carry through such a change, are exactly the individuals who would suffer severe financial loss if the change were made. In a similar manner the dependence of the teachers for income upon fees paid by students may render it difficult to propose and carry out useful changes in the Medical School. The "Scheme for division of fees and salaries" had as one of its objects the removal of some of these difficulties; unfortunately it still leaves the teachers in the Medical School with incomes which are too largely dependent on the number of students in their classes.

1907. Mr. BUTCHER.—That seems to me to have great force, and I must say it is precisely what occurred to me, for I have seen precisely the same evils to be met in adjusting the fees in the medical school of the University of Edinburgh, and the problem was just that—how to make the professor independent of these accidents outside his own Chair, in the curriculum or otherwise—to increase the income that comes from the constant as distinct from variable sources?—We felt this when Dr. O'Sullivan and I drew up this statement—but I am afraid I am now speaking on the second part.

1908. CHAIRMAN.—And another gentleman is coming in to assist on the second part?—Yes.

1909. Mr. BUTCHER.—Very well. Some of the medical professors give their whole time to the university, do they not?—Yes.

1910. Which are they?—Practically those which appear on this list—anatomy, physiology, chemistry, botany, pathology.

1911. The others, who have smaller incomes, are most of them engaged or may engage in private practice; is that so?—Yes.

1912. The Professor of Pathology, is he allowed to take private practice, or not?—He would be, but if he does take private practice, it must be an exceedingly small amount. I do not think there is any to speak about.

1913. Dr. COFFEY.—Would he be allowed to take private medical practice?—I do not think the question has ever arisen, but I do not think there is anything in his appointment to stop it.

1914. LORD CHIEF BARON.—Was not Professor Purser professor of physiology?—Yes, and he had a private practice.

1915. He was a great authority on pathology, and took private practice in it?—He was the only person who taught pathology here for many years.

1916. Now there is a separate Chair?—There is a separate lectureship.

1917. Dr. DOUGLAS HYDE.—In addition to chemistry, botany, zoology, and physics, which are part of the Arts course and also of the medical course, the medical student has to pass in astronomy, ethics, logics, and one language, and you also mentioned lectures in English composition. What is the meaning of lectures in English composition? I do not notice them in the ordinary Arts course?—There are none at all for students other than medical students, I believe. The Medical School, when these changes were being made, asked that their students should be instructed in essay-writing, which was a thing we felt our students were deficient in. We were met at once by the Arts faculty, and it has now instituted essay-writing as a part of the instruction for the medical course.

1918. What kind are the lectures in English composition?—The way in which they are conducted is this, the students are told they will be required to write an essay on some subject, and they are given some days to prepare. They come in and write an essay, and then it is gone over and corrected.

1919. That only refers to medical students?—Yes, at present.

1920. Dr. JACKSON.—The teaching in essay-writing is provided by one of the teachers in Arts?—It is part of the Arts work.

1921. You have not tried the method, which I confess I believe in, by which the teacher of the student sets him to write on some subject in which he is likely to be interested?—I think that is done by the Arts teachers. They go through a certain book, or they may be lecturing in astronomy, or something of that kind; the subject set is in connection with the work they are doing.

1922. Have you tried stimulating interest in English composition by setting students to read their essays aloud in the presence of their fellow students?—I have had nothing to do with it myself.

1923. Dr. DOUGLAS HYDE.—Has any friction ever arisen between the Medical School and the Arts course people as to the heavier course in Arts?—I do not think there has been any friction. There has been discussion, and each side has put forward its views, but there has been no friction.

1924. The Medical faculty would be sorry to see the necessity for a degree in Arts abolished, would they?—I think on the whole they would be, most certainly.

1925. Have you any idea as to the proportion of those who take a medical degree who remain in this country, and what proportion emigrate?—In our statement we said that we thought the position of the school might perhaps be indicated by certain figures. I have tried myself during the summer vacation to get some indication on the matter, and I have got these figures. Unfortunately, I have not separated England from Ireland, but I could give the figures, I think, without much trouble.

1926. They would be interesting?—I have a statement here. Without attaching undue weight to examination results, or to individual successes, the position which Trinity College Medical School holds as an organ of medical education may be inferred from the following figures. The numbers stated are by no means exhaustive, as there is much difficulty in tracing past students, and only known and verified cases have been counted. Among the consulting physicians to the various hospitals of England and Ireland, the names of Dublin University graduates occur in 43 cases; among the consulting surgeons in the same hospitals in 16 cases; among the visiting physicians to these hospitals in 56 cases; among the visiting surgeons in 52 cases; among the gynaecologists in 18 cases; among the pathologists in 12 cases; among the anaesthetists in 10 cases; among the ophthalmic surgeons in 16 cases; and among the permanent members of the resident staffs of asylums and other medical institutions in 27 cases. I have a further statement in regard to the Royal College of Physicians and the Royal College of Surgeons. The reason I have brought these figures is that we say in our general Statement that the position of the Medical School may be estimated by taking these numbers. There are in all 66 Fellows of the Royal College of Physicians, Ireland, of whom 47 were educated either in part or wholly in Trinity College, and 37 of these hold Dublin University degrees. Among the 440 Fellows of the Royal College of Surgeons, Ireland (omitting women), 95 are graduates of Dublin University, and a total of 120 were educated

wholly or in part in Trinity College. Trinity College is represented by about 180 past students in the Royal Army Medical Corps, by 38 in the Royal Navy Medical Service, and by 57 in the Indian Medical Service.* On the teaching staffs of medical schools in Ireland, excluding Trinity College, the names of 15 graduates of our school appear, while on the teaching staffs of the universities and medical schools of England and Wales, Trinity College Medical School is represented by at least 15 graduates.

1927. CHAIRMAN.—In Scotland?—I am afraid there are none. Finally, there are four of our medical graduates amongst the living Fellows of the Royal Society.

1928. Dr. DOUGLAS HYDE.—It would be very interesting if you could make a return of the number who remain in this country and the number who go abroad, if you could do it with any accuracy?—Except in the large towns, not many remain in this country, because, unfortunately, the poor law service, on which medical men depend so much, is so bad a service that one really feels justified in advising men not to go in for it.

1929. Dr. COFFEY.—In reference to the figures you mentioned, of the sums of money which come to the University through the Medical School, do you include in that total the Arts fees paid by the Medical students?—I do not. I think that is an important point.

1930. It is a very important point?—And in this paper, for which I am responsible, I have a statement saying that in what might be considered a fair medical account there would be a considerable balance to the University chest in the Arts fees from Medical students which the University would not get otherwise. We regard it as part of the duty of the University, even if it costs it money, to teach Medicine just as much as Arts.

1931. Do you not think—in fact, you have stated it already, but it had occurred to me—that you have a big claim on the common fund of the University on account of the large sum of money paid as Arts fees?—I think we have.

1932. I gathered from you, at the beginning of your statement, that many of the students of the Medical school begin their medical course when they are well-advanced in the Arts course. Would you favour that, if it were possible, all the conditions considered, students should begin the medical course a little late in the Arts course?—I do not think it is desirable. Until some fifteen or twenty years ago students were debarred from beginning medicine until they had passed their Little-Go, that is, at the end of their second year; they got no professional privilege, as it was called, until the end of the second year. I think students now are coming to the University older and better prepared in Arts subjects than they were formerly, and little by little they have been entering the Medical School earlier. Then this change which was introduced last year prevents students entering the Medical School before they are sufficiently well equipped in Arts. When they entered too soon they spoiled both courses, and it was much harder on themselves. So we have made the entrance examination a stiffer examination, and after that they are given further privileges.

1933. Do many of your medical students seek the Moderatorship in Natural Science in their Arts course?—That is a change which has been made recently. Until two years ago, there were only two Honour degrees including medical subjects, one the Moderatorship in Experimental Science, which includes Chemistry and Physics, and the other the Moderatorship in Natural Science, which includes botany, zoology, geology, and mineralogy. Within the last few years, about two and a-half years ago, a new Moderatorship has been introduced, which is sometimes called the Medical Moderatorship, or the Moderatorship in Natural Science B. This permits a student to take an Honour degree in subjects such as anatomy—not merely surgical—but anatomy as a science, physiology, pathology, and bacteriology; the subjects are arranged in certain groups. The students are allowed to group the subjects, and we have a considerable number of men doing this since the course started. There is no doubt that by giving us a much better type of student as our senior students it will improve teaching in all these subjects.

1934. It struck me that the greatest number of successful candidates for the Moderatorship were in that particular department?—Yes.

*Note by Witness.—These numbers have been taken from the Medical Directory where the individuals put down the schools in which they studied. They are not from the official lists, because the schools are not there mentioned. Some who have retired are included, but a number of candidates who gained commissions at the last few examinations are not included.

1935. In Class B?—In future I fear we shall not have so many in every year; this year only four or five, but we hope it will be a thing that will grow.

1936. Have you considered the possibility of any arrangement by which the scholarships might lead on to the Medical school, instead of remaining wholly, or almost so in the Arts school as it is at present?—Of course, the Medical school have very little to do with the subject, but I think the FitzGerald Scholarship will quite probably lead towards the Medical school.

1937. CHAIRMAN.—The Research Scholarship?—I should not have called it the FitzGerald Scholarship; it is the scholarship which has been started in Experimental Science. I called it by mistake the FitzGerald Scholarship, he was so energetic in urging the establishment of such scholarships in Science.

Mr. KELLEHER.—The scholarship in Experimental Science; the FitzGerald Scholarship is quite distinct.

LORD CHIEF BARON.—I think Dr. Coffey referred to the foundation scholarships.

1938. Dr. COFFEY.—Yes?—It is a foundation scholarship. Quite recently the College has come in for a sum of money which was left by the late Dr. Begley to endow studentships in the Medical School; but these have not been offered yet; there is some delay about the trust deeds in connection with the matter.

1939. Would it be possible to associate such subjects as chemistry with subjects for the scholarship?—It is awarded in Experimental Science; chemistry and physics are the subjects.

1940. My last point is in reference to the very interesting figures you submitted to us of the distinctions held by Trinity College graduates in different institutions. I think in the case of the College of Physicians the number is accounted for by a special reason, but I do not suggest that that is in any way against the distinctions and successes which they have obtained in the other places mentioned. There is a special connection between the College of Physicians and Trinity College, is there not? They appoint some of your professors?—Yes. At the same time, we have always put the College of Physicians' Fellowship before our students as a Fellowship which it was most desirable they should get if they were remaining in Ireland.

1941. CHAIRMAN.—Does the connection between the College of Physicians and Trinity College in any way influence the Fellowship?—I do not think it does in the very least; all candidates have the same examination for membership, and there is an election to the Fellowship. (Dr. Coffey).—It is election for the Fellowship.

1942. Mr. KELLEHER.—You said a great amount was gained by the University from medical students who entered the College merely for the medical degree?—My words were "with the sole object of obtaining a medical degree."

1943. Could they not get it in the Royal College of Surgeons equally well or from the Cecilia-street School?—They would have to pay their Arts fees. I do not understand the point. Neither of these give degrees.

1944. My point is, that they come here for the medical degree of the University, which includes as a condition the B.A. degree?—It is partly for this reason some, no doubt, desire to have an Arts degree together with a medical degree. But it is only a small point. I believe many take the Arts degree because they could not otherwise get our M.B. degree.

1945. One other question, with reference to the poor law service. Do you know any other reason, apart from the inherent drawbacks of that service, why our students do not seek to enter it?—It is a matter which I personally do not care much to discuss. But there is certainly the point that Trinity College men at present, are distinctly handicapped in going up for it. There is a very distinct feeling that a Trinity College man would not get a post if he does go up for it.

1946. So that your men don't hold posts in that service could not be taken as a reproach to the Trinity College Medical School?—No. I think there is not the least doubt that it could not be taken as a reproach. We feel that it would be a most desirable thing that our graduates should get these posts and hold them if the posts were improved. We are very anxious to see them improved, but one feels that the posts will not be improved as long as the best men do not try to go for them. If, however, you had the best type in the country trying for these posts they might be

DUBLIN.

Esq., M.B.,
D.Sc.

improved, but as long as they are posts which are given for other reasons, in some cases, than purely for good qualifications they will not be improved.

1947. CHAIRMAN.—You have mentioned the subjects which a medical student has to study during the four years' course. Are not the subjects almost too many? In the Arts part have you noticed that there is one subject put down for each year's work?—I do not think that in that way there are too many. There was a discussion as to whether it would not be better to have permitted a modern language in the final year to be optional with Astronomy.

1947A. You do not think that too many subjects distract the attention of the student?—I do not think there are too many.

1948. Mr. BUTCHER.—I wish to ask one question concerning a proposal made to us on behalf of registered practitioners of at least five years' standing. Perhaps you are aware that it has been suggested that they should be allowed to dispense with the requirement of the Arts subjects in order to get their M.B. degree. Might I ask what are the subjects in Arts which such a practitioner has to take, because has he not already taken necessarily in his medical course, physics, botany, zoology, and chemistry? Are the subjects alluded to English and another language, astronomy, and mechanics, or what?—I suppose so; but I think I am right in saying that if a student wanted to take courses in Arts elsewhere in Britain, and have them recognised, they would have to be taken either at Oxford or at Cambridge.

1949. What has a practitioner of five years' standing really to do when he comes here to get an M.B. degree?—I am not certain of the length of time, but some have simply to pass in pathology, applied anatomy, applied physiology, and the final subjects of our degree.

1950. They specially mention the Arts subjects necessary for the degree of B.A. I was rather wondering whether you had any views as to remitting these subjects in the case of practitioners of five years' standing?—I think some of us have distinct views in regard to these men who have taken degrees elsewhere, that they should be able to come and work with us, and be entitled to go up for our higher degrees—that if they are capable and have a good knowledge of the subject, they should be entitled to get a higher degree mainly on work which they do in the laboratories here.

1951. CHAIRMAN.—I suppose that many of the class of persons referred to are not University graduates at all?—Some of them who make applications are not.

1952. But merely licentiates of the College of Physicians?—Yes.

1953. They would not have gone through the course? No. Everyone of these applications comes before what is spoken of as the Medical School Committee, and the Board are advised by the Medical School Committee.

1954. On each case separately?—Yes.

1955. Mr. BUTCHER.—The danger then would be that you might lower the value and prestige of the medical degree of the University which implies a University Arts degree?—That is so, but we are anxious that gentlemen with recognised qualifications in medicine should come to us to work in our laboratories.

1956. LORD CHIEF BARON.—Irrespective of the culture which is incident to passing through certain

years in Arts?—The question that has really to be discussed is as to what is possible. For my own part, I think it would be a very good thing if they did come. I fear that in answering these questions I have confused two points mentioned in the letter referred to by Mr. Butcher, namely, (1) the offering of opportunities to do research work in our laboratories, and (2) the right of qualified men other than Trinity College graduates to take our degrees after work in our laboratories. I believe that the Medical School authorities have always been anxious to offer facilities to all qualified men to work in our laboratories, but the question of granting degrees is a difficult one; personally I think that graduates of recognised British and Colonial Universities should, after work in our laboratories, be permitted to go in for our higher degrees on the work done by them in our laboratories if it is judged sufficient.

I should like to say again that the fact that there is a decrease in the number of students holding poor law appointments and posts throughout the country cannot be taken as a reproach to Trinity College in any sense.

1957. CHAIRMAN.—There are other influences at work?—Yes.

1958. Dr. COFFEY.—Is there not one point of view which might be overlooked, namely, the localities from which you draw your students. Forty per cent. of your students come from the City and County of Dublin, and only ten per cent. from Munster, and five per cent. from Connaught?—I think it is another reason. In the first instance, our best men do not want to go for these posts, and the men who would go for them prefer to go to England rather than try to settle in this country, because they know they are handicapped here.

1959. As long as you do not get students from the other districts, do you not think that that will always be a drawback?—I am content to accept that, but one must really recognise that they are fearfully handicapped. One has only to read the newspapers to recognise that.

1960. It comes back to the general University problem in Ireland.

1961. Dr. DOUGLAS HYDE.—That is why I said it would be interesting if you would give us a return of how many of your men remained in Ireland?—In former years the number of men who got these posts was much greater than at the present time.

1962. Dr. COFFEY.—Was not that before the days of the present Local Government system?—It was before the appointments were put into the hands of a certain type of person.

1963. Under the former Local Government system?—I suppose it was, but there has been a great deal of pressure brought to bear to have qualified men from another school put into these posts.

Dr. DOUGLAS HYDE.—It has a great bearing on the whole University question if the medical men you turn out cannot keep themselves in the country.

1964. LORD CHIEF BARON.—Would it not be a great advantage to medical men if this question which has been called the University question were settled to the satisfaction of all parties in Ireland?—I think it would be a great advantage to every person who has to live in Ireland.

A. C. O'SULLIVAN, Esq., M.D., Fellow of Trinity College, Dublin, University Lecturer in Pathology, called in and examined (together with Professor A. F. Dixon, already under examination); representing the signatories to the Joint Statement VII. (ii.), printed at page 37 of the Appendix to the First Report (Cd. 3176), 1906.

1965. CHAIRMAN.—I think you have come before us, in conjunction with Professor Dixon, in support of the second part of the Statement submitted by three Members of the Staff of the Medical School?—(Dr. O'Sullivan) Yes.

1966. And that second part deals with rather a different part of the Medical question from that which has been dealt with by Professor Dixon already?—Yes.

1967. Perhaps both of you will now make any observations you desire to put forward in support of that statement. I do not know which of you will begin, but I think you, Dr. O'Sullivan, are connected with Surgery?—With Pathology.

1968. You lecture in Pathology?—I lecture in Pathology, yes. May I add something further to that?

1969. By all means?—With regard to this Statement generally, I should like to say this: The previous one was a statement of facts concerning the

school; this one contains some suggestions, and what I wished to say was that these suggestions are of two kinds; some of them would require legislation in order to carry them out, while others would not. As regards the second class, I believe there would be very little difficulty in getting the reforms we require as far as the funds will admit of them, if once the fundamental reform—that is, the institution of an elective and representative governing body, were adopted. I would like to make one remark, if it were not considered to be outside the question, on the scheme that has been proposed for the reform of the governing body, and that is that I do not think that such a scheme would ever be carried from inside—that is, with the co-operation of the Board as at present constituted. It has always been observed in the history of the place that however desirous a Junior Fellow was for reform of the governing body, his desire always disappeared when he became a member of the Board. I think that that is partly due to

DUBLIN.

O'Sullivan.
Esq., M.D.,
with Professor
A. F. Dixon.

a feeling of loyalty to the order among which he has come; but I think it is quite idle to expect that the Board will themselves co-operate in their own reform. Those suggestions which could only be carried out by means of legislation are most of them suggestions for alterations in the School of Physic Act, and my own feeling about that Act is that it would be very well if it could be done away with altogether.

1970. You mean the early Act of George III.*?—The fortieth, I think, of George III. That is the final Act; of course there were several before that. One of the suggestions which we have made which would require an alteration of the Act is that the heads of teaching departments should be appointed by the same Governing Body, which is not the case at present.

1971. You are dealing rather with the relations of the King's Professors and the University?—Yes. We make the suggestion that they should be appointed by the same Governing Body. That is not the case at present; the King's Professors are not appointed by the Board—so that that would require an alteration in the Act of Parliament. Then all these remarks which occur in the first paragraph, on the duties of the Professors, which are all regulated by the School of Physic Act—these also would require an alteration in the Act to carry them out.

1972. Perhaps you will just mention to us who are the electors to the King's Professorships now?—The College of Physicians.

1973. Do you know whether the College of Physicians would be willing to lose that power?—I think the College of Physicians are somewhat divided on the matter. There is a considerable body of them, I think, who would have no objection to sever their connection with the College, but they are not all agreed.

The statement says on the Subjects of Inquiry III. and IV.:—"We believe that the incomes of the teachers should be fixed." What I would have myself to say about that is that I myself did not intend that to exclude the possibility of an increase of income according to length of service; being "fixed" does not mean that a man has absolutely the same income from the time he takes up a post until his appointment terminates.

1974. LORD CHIEF BARON.—You mean that it should not depend upon the number of students?—That is what I mean.

1975. CHAIRMAN.—To no extent?—Would you object to have part fixed and part variable?—We have included small capitation fees, I think, but they should be very small. The reason for this, of course, is this—a man should have some interest in keeping up the size of his class, but I do not think that that should be anything very great. But if the incomes depend upon the courses which a man gives, any change that one thinks desirable to make in those courses involves either pecuniary gain or pecuniary loss, and it is often very difficult to make alterations which are desirable in consequence of that.

Then we said that we thought that each important Chair should have a suitable income assigned to it.

1976. That is very desirable, no doubt?—Yes. That sounds as if it were rather a truism, but what we mean by that is this—that in Trinity College, not only in the Medical School but elsewhere, the income of a Chair is as a rule £200 a year. Of course that is not a sufficient income, and the consequence is that the income has to be made up in other ways, and sometimes there are other duties attached to a Chair which rather distract the Professor from his proper work. If it were arranged that each important Chair should have its own income assigned to it, a man could be left to do the work of that Chair altogether. I may perhaps mention myself as an instance of what I mean. I lecture in Pathology and Bacteriology in the Medical School, but I have also to lecture in Classics.

1977. In Classics?—Yes, as a tutor to the Arts students. And when I leave this room to-day I shall be examining in Geometry. One is practically obliged to do rather a bewildering number of things.

1978. It really almost implies omniscience on the part of a Professor?—Yes, and the omniscience is unfortunately not there. But that is the meaning of that suggestion.

Then, as regards the Subject of Inquiry XII., we have stated that we believe that the most important step that could be taken for the purpose of increasing the usefulness of Trinity College to the country would

be the adequate endowment of research. I wish to say a word about research specially in connection with the Medical School, if I may be allowed. The subject has already been discussed more generally.

1979. We shall be very glad to hear what you have to say?—I think the laboratory is becoming now more and more important every day, and one great feature of Medical Science is that research is becoming organised. There is an enormous field of minute investigation to be covered, and I think people recognise now that the only way in which that field can be covered is to have a great body of investigators working under direction. These men are not supposed to be all geniuses; they are selected from those who are above the average intellect and in industry, and they must be taken comparatively young. They must, of course, have received a previous training beyond the ordinary curriculum to fit them for their work. They do not in many cases spend their whole time in pure research; they gravitate later on to active professional work, the best of them teachers, and all of them take a higher position in their profession than those who have not done original work. The public is becoming more and more educated to feel that any man who is to receive their confidence as belonging to the highest class of medical man must have begun his career in this way. Well, what I have been speaking of as growing in the public mind we in Dublin, I think, are only beginning to feel; I do not think these ideas have become as widely spread among the public, or even among the profession, in Dublin as they have elsewhere; but I have not the least doubt that they are growing, and that it will become more and more necessary, as time goes on, for a Medical School of the highest class to give its best students an opportunity of distinguishing themselves in this way, otherwise those students will not take the highest posts when they go into their profession. That is not putting the claim for research upon the highest grounds, perhaps, but I am endeavouring to show what a practical necessity it is that one should have a school of the kind. I think it follows from that that if we are to retain our position as an instrument of the highest medical education, we must have in each department selected workers of this kind, and some provision should be made to enable them to devote the greater part of their time to what is for the time being unremunerative labour. At present the money which is spent on this subject in our Medical School is about a quarter of what is available for the students of Queen's College, Belfast, for example, who belong also to the Royal University, and it is still more trifling as compared with what is available in the English Universities.

1980. But are there research students in medical subjects at the present time in the College?—You mean men working?

1981. Yes?—Oh, yes.

1982. But they have no remuneration, have they?—There is no endowed research, is there—except, I know, that there is the FitzGerald Studentship or Scholarship?—Yes, and there is a sort of research assistantship in my department, and one or two small prizes, the total amounting certainly not to more than £200 a year.

1983. Then how many research students have you at the present time in your department?—In my own department?

1984. In your own department we will take first?—At present there are three men working there.

1985. And in the other departments connected with the Medical School?—(Professor Dixon).—With the exception of one of my assistants there is no one doing research work at present in my department. I cannot speak for other departments.

1986. Have they time and opportunity for doing it?—Some of them have; there is the assistant, who is called the Chief Demonstrator; one tries to give him as much time as one possibly can, and he is trying to carry out good work at the present moment. Then there are always junior assistants giving assistance in the Anatomical Department.

1987. LORD CHIEF BARON.—Are they paid, these junior assistants?—Yes, a small sum. (Dr. O'Sullivan).—Another requirement with regard to research work is that both professors and assistants should have more leisure to work for themselves and direct and oversee the work of advanced students.

1988. CHAIRMAN.—It is very much, I suppose, a question of finance?—I think it might be helped in one way by the men who are working at these research

A. F. Dixon.

subjects spending a certain amount of their time in taking such part of the teaching as could be left to them.

1989. In other words, you would wish the teachers to have part of their time only occupied in teaching, the rest being devoted to research?—A short time in teaching, and the main part of their time in research work.

1990. Would Mr. Dixon like to add anything on this part of the case?—(Professor Dixon).—We say in our Statement that we think a suitable income should be assigned to each Chair, and I should just like to say that in other places every Chair is recognised to be worth a certain sum of money. In Trinity College that is not the case; many of the Chairs are worth insignificant sums of money. Chairs of this kind can only be taken by some person who is already in the University, and who has an income made up in other ways. In this way the number of candidates for such Chairs is sometimes very limited. The Professor's income may be made up of sums paid for other work which he undertakes. For instance, the Regius Professor of Greek is also Senior Assistant to the Professor of Hebrew, and in the Medical School, in consequence of the state of things I have alluded to, the Curator of the Museum, the Registrar of the Medical School, the Superintendent of Examinations, and the Professor of Zoology and of Comparative Anatomy are all rolled into one in order to assure a man a sufficient income; my own belief is that each of these Chairs should have a certain money value which should be sufficient to support the holder.

1991. LORD CHIEF BARON.—You mean, of course, a minimum value?—A minimum value in connection with each Chair.

1992. CHAIRMAN.—Would you propose to give that by way of electing to Fellowships in the College?—No, I do not think that would be the right way. I think if one looks at our scheme it would be possible to increase the salaries and diminish the amount of the capitation fees, and in that way to make the fixed part of the income more satisfactory. When the Chair of Anatomy was last vacant, the statement sent out said that the salary was £250, together with the fees derived from the Medical School, which were put down at a certain sum approximately: some people did not apply for the Chair at that time, because they did not understand what the value of the Chair was, and no person who had not been at Trinity College could understand from that statement what the value of the Chair really was. I think this is really not a matter of sentiment only, but a matter of serious and practical importance. We have also stated in that Statement that heads of departments should be appointed by the same Governing Body, and I believe firmly that if a Medical Faculty were established on the lines laid down in the scheme, Statement No. V.,* and if all the lecturers and professors were appointed in the manner there recommended, many of the present disabilities of the King's Professors would be removed, and they would feel that they were really a part of the Medical School, while at the present moment there is a kind of feeling that they are only so in a limited sense.

1993. LORD CHIEF BARON.—The posts are not permanent—they are not life positions?—Ours are not life positions either.

1994. But if they were life positions, no matter who appointed them, it would identify them to a greater extent with the University?—Yes. I also understand that the King's Professors apply that they should be given certain representation on the School Committee. I believe, if the Faculty were organised in the way we have asked, that the present state of dissatisfaction would totally disappear, and all would feel that they were part of the same Medical School.

1995. CHAIRMAN.—I do not know whether you have seen the Statement of the King's Professors in the School of Physic?—I have.

1996. And you know that that concludes with two recommendations—first, "that the School of Physic be incorporated in the University of Dublin as the Professional School in the Faculty of Medicine"; and secondly, "that the King's Professors on the Foundation of Sir Patrick Dun be accorded the rights and privileges of officers of the University." Do you agree with those recommendations?—I do.

1997. And is that the case with Dr. O'Sullivan, also?—(Dr. O'Sullivan).—Yes.

1998. LORD CHIEF BARON.—As I understand from your evidence, you consider that both the provision and the encouragement for research in Trinity College are too small?—Yes.

1999. You have mentioned that it is less than in one of the Colleges of the Royal University one of the Queen's Colleges: could you give me a definite figure?—I should like to have something a little more precise than that general statement?—I know that you will get that figure from another source this afternoon; I am sorry I cannot give it to you now.

2000. Could you give me the figures as to some of the great English Medical Schools and Universities?—Well, I am afraid I could not give you the exact figures at the moment, but one knows that there is a very large number of studentships, research scholarships, readerships, and things of that kind under different names. There are often notices sent over of vacancies to these appointments, and one gets to have a general knowledge of them in that way.

2001. Could you give me, then, any detail of the recommendation which you would advise this Commission to make in reference to increased encouragement of research? I fully agree in the absolute necessity of it. Would you like to have some positions in which the student would be entirely confined to the work of research, spending his entire time in that work, and not obliged himself to teach?—I made some recommendations in Statement VI.†—a Statement which had special reference to research. If you will look at page 34, you will see that in the last paragraph but one of the section headed "School of Pathology," I say this: "If we had three or four readerships or scholarships of £50 a year, given on condition that the holder should devote his time to research, I believe that excellent work would be done in this laboratory." That is what I think.

LORD CHIEF BARON.—That satisfies me entirely.

2002. Sir ARTHUR RÜCKER.—Would £50 a year secure a good man—is it sufficient?—I think so; at the time the man would come to us, he has become qualified; he has got no practice; he is just waiting, and he merely wants to be kept alive. I think it would be enough. Of course, if it could be made more, so much the better.

2003. But you think that sum would secure him?—Yes, I do. The present man has £50 a year—the man that I referred to earlier in my evidence as being my assistant.

2004. Dr. JACKSON.—In regard to the third paragraph in Statement VII., § section (ii.), I should like to ask you a question or two about the Professorship of Physiology. Is that Professorship a medical Professorship, or a scientific Professorship? The paragraph in question reads: "It should not be a part of the duty of the Professors of Anatomy and Physiology to give clinical instruction." Who is the Professor of Physiology, and what sort of subjects does he teach?—He teaches Physiology.

2005. Yes, but is it rather in the interest of the Medical Students, or is it rather in the interest of scientific inquiry?—His duties are very largely with medical students, but the subject also enters into the Moderatorship in Natural Science. It always has been part of that Course. That Moderatorship is the Honours Degree, and he has to teach the men who are taking up that subject.

2006. In fact, then, he represents the subject from both points of view—both from the scientific point of view, the point of view of research, and from the point of view of the medical profession?—Yes.

2007. You have not found it necessary to differentiate between these two aspects of the subject?—I should not think it should be.

2008. You do not think it desirable?—I hardly think so.

2009. Then I should like to ask you one question in this connection. Of course I am completely ignorant upon this matter, but does not the teacher of Practical Physiology require clinical opportunities? I suppose that a Professor of Physic would be sadly at a loss if he had not clinical opportunities?—Yes.

2010. Is it different in the case of the Professor of Physiology?—Oh, I think quite different.

2011. Thank you. I was ignorant of that, but I am aware of the difficulties which may come about if a Professor wants clinical opportunities and has not got them ready to hand. That was what made me ask the question, and I am quite satisfied, of course, with the answer which you have given. As to the encouragement of research, in the first place amongst Professors, my experience is that those who take part in academic work find their time crowded up with teaching and with business to such an extent that during Term time it is impossible for them to do continuous research work, and thus it becomes im-

* Appendix to First Report (Cd. 3176), page 27.

† Appendix to First Report (Cd. 3176), page 34.

§ Ibidem, page 37.

† See page 391.

portant to know what the length of the Vacation is. May I ask what is the duration of your Vacation?—We stop at the beginning of July; we commence Lectures again this year—regular Medical Lectures—on the 15th of this month. I have always had a Class in Bacteriology during the Vacation—usually from the middle of September on to the middle of October or after.

2012. I agree with you that the time is short, more especially if you have to give part of the Vacation to teaching, and I think it important that it should be noted that time is wanted for the Professor. But now about the young men whom you desire to train in research: is not the appointment of a considerable number of Demonstrators to do work in the Laboratory under the Professor a very good way of breeding researchers?—I do not quite see the difference between that and what I suggested myself.

2013. It was not quite clear to me whether you were proposing the establishment of a number of Studentships which did not carry with them any practical work, or whether you were proposing to establish a number of Demonstratorships which did carry a moderate amount of work done under the eye of the Professor.—In speaking of the question of time, I mentioned that I thought it would be desirable that such teaching work—a little part of the teaching work such as could be left to these men—should be given them.

2014. And surely that teaching work is better if it is done under the eye of the Professor than if it is private work such as you spoke of. That is the point I wanted to bring out?—Yes, very much better.

2015. And might I suggest further that it may be advantageous to have occasional Studentships to be held by men who shall be, for the time being, detached even from the Demonstratorship work, that they may have the opportunity of carrying out some inquiry which they have started?—I quite agree with that.

2016. In fact, I wanted to suggest that the Demonstratorship is a very useful post, both in so far as the Demonstrator can help the Professor, and even carry out work for him, and also in so far as the Demonstrator can at the same time be learning to research?—Yes.

2017. I should like to ask you just two more questions. In the first place, is there any Chair which seems to you to be specially wanted in connection with the Medical Department?—I think the only thing which we have not got which is in other places, and with advantage, is a Chair of something in the nature of Preventive Medicine, which is usually called Hygiene, or something of that sort.

2018. Secondly, does it seem to you that there is any Chair which is especially wanted in connection with what I may call the Department of Scientific Biology?—I think the whole arrangement of the subject requires great consideration—the arrangements there are for teaching it, and the Department itself, but the Chair is there and it is held by a Professor who holds a great number of other things as well, as Professor Dixon has already said.

2019. But you do not see the need for the creation of an additional Chair or Chairs?—No, but it should be quite differently managed.

2020. The Department?—Yes; the arrangement is most unsatisfactory.

2021. Would the change be in any degree in the direction of discrimination between the medical and practical side on the one hand, and the scientific or research side on the other hand?—I think it would involve that.

2022. Mr. BUTCHER.—I should just like, Professor Dixon, to go back to this question of the payment of Professors in the Medical Faculty, and I would ask you whether this kind of scheme commends itself to you—that all the fees should be put into a common fund, as, indeed, you propose in your scheme, and that then there should be a normal salary attached to each Chair, such a salary as you think on general grounds, and looking to the Fee Fund as a whole, ought to be received by the occupant of the Chair. Further, that in case the fees as a whole do not suffice for the payment of those full normal salaries, that there should be a proportionate reduction in the salary paid to each Professor. In other words, the essential difference between that and the scheme which you are adopting is this—that a Professor would not get any fixed proportion of the fees of his own Class, and that the salary should be fixed subject at least to the condition that the Fee Fund is able to bear those salaries?—(Professor Dixon)—I think it would be a great improvement, but I am not quite certain that the University should not take upon itself the responsibility

for these salaries to a much greater extent than at present.

2023. I might say that would not be inconsistent with my scheme—that I could imagine that a certain fixed part of that sum should be given out of the University funds, but that the remainder should come out of the Fee Fund of the Medical Faculty, and that no professor should have a direct interest in the numbers of the Students who come to his class—it would be only an indirect interest dependent upon the condition of the Fee Fund as a whole. There are two different principles—one is that each Professor should have some motive for increasing his own Class by increasing the proportion of the fees, and the other is that each Professor should have a collective interest in the Fee Fund as a whole, and that, therefore, if there were changes in the curriculum or in any other way which affected the fees of a particular Chair, no individual should suffer from such accidents?—A collective interest is best. I think the chief thing that is wrong with our present scheme is that each Professor has now too great an interest in the number of men attending his own class.

2024. Would you give him some interest, or not?—Yes, but a very small one; it should be reduced very much from what it is now.

2025. CHAIRMAN.—The balance should go to the common fund?—Yes.

2026. I do not quite understand whether your scheme contemplates that the University should make up any deficiency in the salary, or, at all events, contribute some part of the deficiency?—I think the University should be responsible for a considerable part of the salary—more than at the present moment; otherwise it appears as if we were a kind of company working the Medical School rather than members of a University.

2027. Mr. BUTCHER.—It is the case, is it not, that the fees of the Medical Faculty alone, apart from some University contribution, would not suffice for an adequate income?—Yes; the fees would not suffice.

2028. There should be a certain minimum guaranteed salary?—Yes; there is that, of course, at the present moment, but it represents only about £275 for each Chair.

2029. And that is too small, of course?—Yes.

2030. Dr. DOUGLAS HYDE.—With reference to those Readerships that you advocate in Statement V,* I was wondering whether any of them could not be made available for research work?—(Dr. O'Sullivan)—I certainly think it might happen. Of course they are distributed over the whole of a very large field; we are contemplating there the whole field of science and literature, but there is no reason why we should not have one in Physiology or Pathology—it is quite probable.

2031. Dr. COFFEY.—Just in connection with that same point of the Readerships. In Scheme V.* you still propose to have an election to Fellowship by examination, and are not the existing endowments for the Fellowship examination very large? Those who are rejected at the present time will, in the great majority of instances, get very considerable prizes?—Yes, the Madden Prize is a very large prize.

2032. So that those endowments will still remain?—In our suggestion we say that the Madden Prize should be converted to aid the fund for providing these Readerships, as far as I remember. I have not quite lately been on this scheme.

2033. Then there are other prizes, are there not, still offered to those who fail to get the Fellowship, but who are third, fourth, fifth, and so on in the running?—Yes.

2034. It occurred to me the other day in connection with this system of Readerships that if they were not limited by association with special subjects they would be a still further endowment for those who work up for the Fellowship examination and fail?—I am not familiar with this document now, because it is some months since I was looking at it, but I can remember that in it we stated something about the disposition of those prizes? Yes, the Studentships are proposed to be merged. I may have made a mistake as regards the Madden Prize, but my view was that the Madden Prize ought to be merged also in the general fund.

2035. It is a very valuable prize, is it not?—Yes.

2036. LORD CHIEF BARON.—You think it should be merged on what principle?—The annual outlay. We say here, in Statement V,* that "as it is proposed to merge the present University Studentships in the Readerships, the annual outlay on these must also

be taken into account"; and I should think it would be very desirable to deal with the Madden Prize in the same way.

2037. Make it applicable to Readerships?—Yes, applicable to those Readerships. As far as I understand Dr. Coffey's point, it was that we should have the benefit of two different things—Fellowship Prizes and these Readerships.

2038. Dr. COFFEY.—Yes; I thought, from reading this Statement, that the endowment would remain still a huge endowment, and that in that connection it might be wise, from the point of view of the Medical School to allocate definitely certain Readerships to certain subjects?—Yes; we contemplate that those reading for Fellowship by examination would have Readerships.

2039. That is just what I thought?—I am surprised to find that in the Statement what I have suggested about the Madden Prize is not included. I know that we debated it, and that it was my view then, and is my view still—that all those prizes should be merged in the Readerships.

2040. Otherwise the endowments you think might be too heavy?—Yes.

2041. Do you suggest that in connection with the endowment of research in the Medical School there should be Exhibitions established for those who take high places at the Medical examinations?—I think endowment for research should be endowment specially for research—that research should be a condition of the man's receiving the money—and I do not think it is desirable that the man should be chosen by examination.

2042. Could you not attach to high places at the Final Examination in Medicine Exhibitions of value, with a condition for research in the Medical School?—I think it would be better if they were given by appointment. Of course they would be given to the brilliant men, but I think one recognises that there are some men who may do very well at examinations but who would not be the best men to turn on to that kind of work.

2043. Mr. KELLEHER.—Do you think the State should assist the University in the encouragement of research?—I do.

2044. Do you think that it is the duty of the University alone to provide the cost of research work?—How do you mean?

2045. Do you not think that it is something special that is added to ordinary University responsibilities, and that the State, as having a direct interest, ought to bear some of the expenses?—I am not quite sure that I follow you.

2046. The point is whether the business of a University is to teach or to investigate?—I think it is a most important part of the work of a University to investigate.

2047. Do you not think that a portion of the expense of that investigation should be defrayed by the State?—Yes.

2048. Dr. DOUGLAS HYDE.—Do you agree with Professor Dixon that a very large number of your Medical students, as soon as they take their degrees, leave this country and go abroad?—Certainly; yes.

2049. Do you not think that more go away from this place after taking their degrees (more proportionately I mean) than is the case with those who take their degrees in other institutions?—I have no basis upon which I can say anything about that; I do not know the figures.

2050. Do you think that a medical student graduating at Trinity College suffers any disparity, or is at any loss, in competition for a Poor Law appointment with those educated in other institutions?—Oh, of course that is so; he never gets one at all.

2051. I am only asking the question because it has an important bearing upon the whole facts before this Commission, because if it turns out that the medical students educated in Trinity College are unable to stay in the land which educates them, do you not agree that there must be something very wrong in the state of affairs?—Well, I think you are going into a rather complex question now.

Sir THOMAS RALEIGH.—Might you not say the same of the Edinburgh Medical School—do not they export a large number of their students?

CHAIRMAN.—It is sometimes said that the prosperity of a nation is to be judged by its exports.

2052. LORD CHIEF BARON.—As in Ireland there is an excess of talent, no doubt it is natural that some of it should go abroad?—In order to answer Dr. Hyde's

question I should have to go into what I consider to be the reasons which prevent our men from getting these appointments.

Dr. DOUGLAS HYDE.—I do not wish you to do that; I only wanted to ascertain a matter of fact.

2053. LORD CHIEF BARON.—Might I ask Professor Dixon one question—I think it has been said before, but I want to make it clear. Would you not consider training in research, and research itself, as part of the medical training of a University student. You cannot turn out a skilled medical man without giving him some experience of research, can you?—(Professor Dixon).—Of course all medical students must have that; hospital training is training in research.

2054. But I mean the special research that we are dealing with here, which I suppose may be said to be laboratory research, is really part of the essential training of a first class medical man, is it not?—Yes, of the best medical men.

2055. Of the best medical men; and therefore part of the training that a first class University like this would be expected to give to its medical students. Now, in reference to the amount of money to be put at the disposal of the Medical School, I understand that you think either that part should be contributed by the endowment of the University itself, or at least out of the Arts fees received from the medical students; is that right?—I think it is the duty of the University to encourage research just as much as it is to teach its students, and by some means or other it must do it.

2056. I quite agree. Your first suggestion, I think, was that recourse was to be had to the Arts fees of the medical students?—I do not know that we really considered this matter very much, but we felt that the statements which appear here might mislead some people into thinking that an enormous sum of money was spent on the school every year. As a matter of fact there is not such a large sum spent, when one remembers that a large number of things have to be done to the Medical School really, and we thought it was important that these facts should be pointed out in order that if any recommendation should be made the Commissioners should have the correct figures before them.

2057. I quite agree with you in the importance of that, and it is for that reason that I am trying to get as closely as I can towards the true figures. Can you give the Commission any rough estimate as to the annual amount of the Arts fees of the medical students. If there were 250 medical students a year, I suppose their Arts fees would be £3,750?

2058. Mr. KELLEHER.—4,000 guineas would be the amount?—I think one half of this goes to the University chest, in addition to which there would be, I think 250 £15 entrance fees to be added to that.

2059. LORD CHIEF BARON.—However, Mr. Kelleher tells us that the amount is 4,000 guineas, and I will take that figure?—And half of that goes to the University chest.

2060. Could you tell me roughly would that amount be sufficient to keep up the Medical School, or would we be obliged to go a little further for that information?—I do not know the accounts of the College sufficiently well to tell you about that, but there are always expenses which do not appear here—lighting, heating, etc.—and I have really no idea how much these things represent.

2061. What I am coming to is this. Do you suggest that when a University is endowed, which is to teach Arts, and also to teach medical science, *prima facie* the endowments of that University are as applicable to medicine as to Arts, provided that they are required for that purpose?—I think so.

2062. Mr. KELLEHER.—Just one supplemental question as to research. I was under the impression that the research referred to here was post-graduate research. It is original investigation—not for the purpose of training the student, but for getting at facts not hitherto discovered?—That was what I meant.

2063. Dr. JACKSON.—I also would like to put a supplementary question. Is it not desirable to put a young man who has completed his undergraduate course upon a course of training in the doing of research work? Is it not a good thing, in other words, to encourage the man who has acquired his instrument to use it?—I certainly think it is. In some of the Moderatorship examinations as they exist at present—in the Natural Science Moderatorship examinations one part consists in the student being given something

at the beginning of the year, which he has to work at himself, and has to lay before the Examiners at the end of the year the result he himself has arrived at, and he has to contrast these with the results obtained by others.

2064. LORD CHIEF BARON.—Do you not consider that it is the duty of a University to provide for its alumni post-graduate training just as much as it is to provide undergraduate training?—I think it is.

2065. If it did not, it would not turn out the class of men that a first class University always does turn out?—No. May I make one more statement?

2066. CHAIRMAN.—Certainly?—It will be noticed that there is only one teacher in the Medical School—the Lecturer in Pathology—who holds his appointment for life, and who is therefore not subject to periodical re-election. The contrast which exists in Trinity College between the conditions under which the Fellows and the Professors work is well illustrated in the Medical School, where there is one Fellow—the Lecturer in Pathology—on the staff. Although he is head of one of the most important departments in the School, and has his life work there, he receives his rank and the greater part of his income as Junior Fellow, and he votes with the Junior Fellows for representa-

tion on the Council. He alone of all the members of the Medical School is assured in his old age of a seat on the Governing Body of the College, and of an income which will increase. He is also provided for in case of retirement through illness. He is the only member of the School who is entitled to recommend readers for the Library. There is not the least doubt that the Medical School and the College as a whole gains enormously by the presence of a Fellow upon the Medical School staff, and it can scarcely be asserted that an extension to the Professors of some of the privileges which this Lecturer enjoys as a Fellow—such as those concerned with representation on the Governing Body, status, tenure of office, pension and retiring allowance could produce any but beneficial results. The Professors are as deeply concerned as the Fellows in the success of the Medical School and the University.

2067. That is really in support of the views that Dr. O'Sullivan put before us in his Statement?—Yes; we have both signed that Statement.

CHAIRMAN.—We are much obliged to you for the assistance you have given us, gentlemen.

The witnesses withdrew.

DUBLIN.
Oct. 20, 1906.
A. C.
O'Sullivan,
Esq., M.D.,
with Professor
A. F. Dixon.

Miss GWYNN, Lady Registrar of Women Students in Trinity College, Dublin, called in and examined.

2068. CHAIRMAN.—Miss Gwynn, you hold the office of Registrar of women students in Trinity College?—Yes.

2069. You have to give them advice in case they have any difficulty?—Yes; if any matter arises upon which they have any difficulty, they come to me; and if the question is one on which I do not feel competent to advise them upon, I apply to the Tutor under whom the student is entered.

2070. I wish to ask you how far you are satisfied with the present arrangements as to lady students. Certain statements have been made to us on the subject; it is said, for example, that there should be a limit of age, and that no lady should be admitted as a student under the age of eighteen; and another suggestion is that they should not be allowed to reside except in hostels, or in registered lodgings. Now, first, as regards the limits of age, what is your opinion?—I think eighteen is a very good age, but there have been some cases where girls have matriculated at seventeen.

2071. Have there been a good many who have attended under the age of eighteen?—No; in the cases where they have entered at seventeen, they have generally reached the age of eighteen before they have commenced to attend lectures. If a girl is competent to pass the entrance examination, say, when she has attained the age of seventeen and a few months, I should be in favour of allowing her to do so; that has occurred in a few cases, so that when she commenced to attend lectures she would be nearly eighteen. In the case of a talented girl, who passed the Senior Grade Examination of the Intermediate Board, perhaps with honours, soon after she had attained the age of seventeen, I should not be in favour of keeping her waiting for a whole year before admitting her to the entrance examination. As a rule, few girls are competent to pass the entrance examination before eighteen; but some have passed the Senior Grade Intermediate Examination under that age, and it would be a hardship to keep such a girl back for an entire year because she had not attained the age of eighteen.

2072. Then I suppose you would be in favour of a rule that in general eighteen years should be the limit of age, but that in special cases, where a girl was of extraordinary talent, she might be allowed to enter below that age?—Yes.

2073. Now, with regard to the residences of the students, what is your opinion?—It has always been from the outset part of my business to be acquainted with the residence of each student, and to satisfy myself by inquiries, as to the suitability of the places where they reside. As a rule, the majority of them live with their parents in Dublin; and of the rest, many of them live with relations or friends, the small remainder having no relatives in town, lodge with families recommended by me. But I am not satisfied with that, and I think we ought to have a residential hostel for our Trinity College women students

under the immediate control of the University. I have represented that to the authorities, but there is a lack of money for the purpose of erecting a suitable hostel, but I hope that we shall succeed in having one before long.

2074. You would prefer that they should live in hostels?—That is what I should wish. Though they may be under the care of respectable elderly people, it is scarcely likely that they will be in an atmosphere sympathetic to their studies, and it would be much better that they should reside together in a hostel under the control of the University.

2075. How many women students have you under your care at the present time?—Altogether in the two years we have had seventy-eight women students, and there will be seventeen or eighteen more in this year's Junior Freshman Class.

2076. Are those seventy-eight all attending lectures now?—No, some of them are not; a few come up for examinations only, but of the students who attend Pass Lectures almost all are Honours students as well; our women students are practically all Honours students. You understand that our system necessitates the student keeping her terms in both science and languages, and almost invariably our women students go to the Honours Lectures on one side or the other.

2077. How many are there now attending the lectures? The number you have given us, seventy-eight, is, I think you said, the number of admissions?—Yes, the total number of admissions—and there are seventeen more this year. I believe those seventeen all purpose to attend the lectures.

2078. I suppose some have dropped off?—I think about five dropped off, and about ten did not attend the lectures, because they were living in the country.

2079. Then there would be between seventy and eighty?—Yes. We have some medical students.

2080. And those are not included in the numbers you have given us?—Yes, they are included, but they attend medical lectures just on the same conditions as the men.

2081. Is there any condition, or stipulation, which you think we ought to introduce, or suggest the introduction of, into the system of the College with regard to these women students?—What I should like to see myself would be a Residential Hostel, which would be under the control of the University, for our own students. I daresay you are acquainted with the past history of this movement, and know how largely it has been the work of the body of women calling themselves the Schoolmistresses' Association of Ireland (whose place as years passed was taken by the Women Graduates' Association), and it was their efforts almost entirely that led to Trinity College opening its doors to women; you have in the Report before you the statement of what they desire.

2082. That is, I think, in the Robertson Commission?—Yes; but after the King's Letter was issued they wrote to the Board as follows:—"That the Association cannot too strongly urge upon the autho-

JULY 20, 1906.

Miss Gwynn,
Lady Registrar.

rities of Trinity College, when making their provision for the teaching of women-students, the absolute necessity of giving to them exactly the same advantages as men-students have, by opening to women all lectures, both Pass and Honour, delivered within the walls." That is practically what is being done, and the Women Graduates' Association is exceedingly well contented with the present position of affairs.

2083. A suggestion has been pressed upon us of this nature—that some of the lectures delivered to the Alexandra College students ought to be recognised as equivalent to lectures delivered within the walls of Trinity College: are you in favour of that?—Not at all. What the Women Graduates wish, and our women students wish, and I think I may add that the parents of our women students wish, is that they should be admitted freely to the lectures given to the men in Trinity College.

2084. It is not suggested that it should apply to all the lectures delivered at Alexandra College, but that some teachers of sufficient eminence might be recognised as teachers of the University, so that attendance at their lectures should count; you do not favour that view?—I do not think it would find favour; it would be extremely difficult to arrange matters between the two; the conditions of time and space and so forth would make it very difficult to arrange, and I do not think the students would desire it.

2085. The Alexandra College took a leading part, of course, in the movement for the education of women in Dublin?—They have done a great deal—a very great deal.

2086. And they feel that it is something of a hardship upon them that their lectures should be in no way recognised, and that there is in fact something like competition between the two Colleges?—Well, I do not think that they put forward that view originally; I believe they joined with others in asking to have this University opened to women students, but at the time of the last University Commission there was a division of opinion. Alexandra College and Victoria College approached the Commission, and asked to be recognised as Colleges under the Royal University. Upon that the Women Graduates' Association was formed, and circulars were sent out to 400 women graduates asking them among other inquiries, what they meant by admission to the privileges of men, and did they desire that women students should attend lectures in women's Colleges and have such lectures recognised. 305 answers were received, and out of those 305 only three considered that lectures in women's Colleges should be recognised.

2087. LORD CHIEF BARON.—You say you think it would be a hardship to have a hard and fast regulation that no lady should enter under eighteen years of age?—I think eighteen is too hard and fast, although personally I should prefer not to have girls under eighteen unless they were exceptionally promising students.

2088. To pass in the Senior Grade of the Intermediate a young lady must be under eighteen?—Under eighteen.

2089. Under eighteen upon the 1st June?—Yes.

2090. Then if she were only seventeen years and one month old when she passed her Senior Grade Intermediate Examination, her studies would be interrupted for eleven months, unless she was able to enter the University before she attained eighteen?—Precisely, and I think that if a girl passed the Senior Grade with credit at that age, she would be quite fitted to come in as a University student.

2091. Or, if the general rule was that a girl should not enter until eighteen years of age, but there was an exception in favour of young ladies above seventeen who had passed the Senior Grade in the preceding year?—Yes, but not younger than seventeen. I know, of course, there are some boys and girls quite capable of passing the Senior Grade at sixteen years of age.

2092. You would rather have the limit fixed at eighteen, if it were not for working a hardship upon these young ladies for this eleven months?—Yes, exactly; I think they should be allowed to come in as students of exceptional ability.

2093. We had one witness here, a very eminent divine, who objected to the ladies attending the same classes as the men students. As I understand, your opinion is in favour of their attending the same classes as the men?—Yes, and that is what the demand of the women has been—to be admitted to the same teaching.

2094. I know, but I am not looking so much to the demand of any particular class as to what really is best. What do you consider is best upon the whole, taking everything into consideration—that there should be separate classes in Trinity College for ladies, at least in Pass subjects, or that they should be allowed to attend with the men?—Well, when the classes were arranged in the Junior Freshman's Year the women in one or two cases have had a class to themselves in Mathematics; but I do not know that they showed any more progress than those who were lectured in the next year with the men.

2095. You do not share the opinion of the gentleman I have mentioned, that there should be separate classes for men and women?—Why divide them for the Pass Lectures, when they must go to the Honours Lectures together? If they are to be allowed to go to the Honours Lectures together, it seems rather idle to divide them in the others. I know another University where something of the sort is done, and it is found to be rather irksome that the Pass Lectures are given separately and the Honours Lectures together. I think it is really reducing the thing rather to an absurdity.

2096. Then you are in favour of men and women attending the same Lectures?—Yes.

2097. This, perhaps, is rather beside the present question, but there was also a question raised as to the previous preparation of your students. Do you think, speaking generally, they are able to profit by a University Course when they come here?—I think they are; they have shewn themselves to be so.

2098. It has been stated in particular that they have come here in some cases quite ignorant of Latin?—You refer to the two "noughts"?

2099. Yes?—Well, the statement is a little inaccurate in some particulars. I may say that in the first instance that the student referred to was a student of Alexandra College, but she has never matriculated; she was advised here in Trinity College not to proceed with her Course at present but to go back and pursue her studies further; and she has not re-appeared. As there has been some inaccuracy I may as well point it out. The statement made is: "To my knowledge a student passed at entrance, although she had two noughts in Latin on elementary papers, and her total percentage on all subjects was 28 per cent."* Well, there are not two papers in Latin on entrance—two *viva voce* examinations and a Latin Composition paper is rather formidable for a Pass Student, and I think a great many men as well as girls fail in that. This girl got a "3" in one and a nought in the other *viva voce*.

2100. CHAIRMAN.—3 out of 100?—No, 3 out of 10. Three is generally regarded as a Pass mark. The young lady did not proceed with her studies here, and never came on the College books.

2101. Sir THOMAS RALEIGH.—If I may put a question on another point, all your women students aim at a Degree or a University examination?—All of them, most certainly. Yes.

2102. I thought that possibly a woman student might come and take one class merely out of interest in the subject?—Oh, no, that would be impossible, I think, because a student has to matriculate and come regularly on the books, otherwise she could not attend lectures. With the exception of one or two Professorial Lectures the classes are not open to any but our own students. Some of our students would like to be allowed, having taken Moderatorship one year, to stay on another year and read for a second Moderatorship.

2103. CHAIRMAN.—Would it not be a great advantage to have the Classes more open, so that young ladies who did not wish to go in for a Degree might attend some Classes in subjects in which they were interested?—It might, but I think it might have disadvantages too.

2104. You mean in the way of bringing in amateurs?—Yes.

2105. Yet, of course, amateurs are sometimes useful?—Yes, but it would be a doubtful experiment in my opinion.

2106. LORD CHIEF BARON.—Do the young ladies consider it a hardship not to be allowed to stand for a Fellowship?—They have hardly got so far as that yet, and I must say I should be very sorry to see any woman try for a Fellowship under the conditions which now prevail. I do not think any woman would be fit for it physically. But our women have done

* Appendix to First Report (Cd. 3176), 1903, page 135.

exceedingly well so far; at the end of their first year's work, when there were only about fifty students in a position to present themselves for the examinations, forty-eight Honour Prizes and distinctions were gained by women students.

2107. Sir ARTHUR RÜCKER.—I have three questions only to ask you upon the following points upon which I think questions might arise—the provision of a Hostel, allowing women to attend Classes with men, and men and women working together in Laboratories. Now, first, with regard to the Hostel; do you anticipate that there would be any difference in the class of girls who would go to a Hostel if provided and those who already go to Alexandra College?—No, I do not think so.

2108. They would cover the same ground?—Yes, they cover a very wide ground at Alexandra College, and I think we should do the same—possibly wider.

2109. So far as that goes, you think they would be similar to the Alexandra College students?—Yes, in that way, but I think they would come to us because they wished to go through a College Course as students working for degrees.

2110. We will come to that in a moment. Now, with regard to the Classes in Laboratories, of course each of us has his own opinion as to what we would do with our own daughters, but do you think there is a large class of parents who consider it desirable to have their girls taught separately from men?—I have had no indication of that.

2111. Has there been any provision made in Trinity College to meet the wishes of such a class of parents?—In the Medical School there is a separate dissecting Room, not a separate Laboratory.

2112. When you say that you have had no experience of the existence of a class of parents holding the views I have referred to, does not that arise from the fact that you have naturally come in contact, from your position, only with girls whose parents do not hold those views?—Yes, I suppose that is so; if the other parents are not satisfied they do not send their daughters here.

2113. And do you not think that the fact that there exist in London two or three Colleges for the reception of girls alone points to the existence of a class of parents holding those views?—Quite so.

2114. And do you think it is an advantage or a disadvantage that, assuming there is such a class of parents in Ireland, Trinity College does not, at present, make any attempt to meet the wants of that class?—Well, I should hardly be prepared to say it was a disadvantage.

2115. You think they are to be ignored?—It is difficult to say. Would it not be very costly to provide for them? For instance, I do not think any women's College in Dublin is at present equipped with laboratories such as those in Trinity College.

2116. Let us keep the question distinct as between lectures and laboratories, and let us keep to the question of lectures at present. Admitting that for one reason or another there is in Ireland a class of parents who would desire their girls to mix with other girls only, should Trinity College make provision for that class or not?—I think my experience is inadequate; I have not come across them.

2117. Assuming that what is known to take place elsewhere is strong *prima facie* evidence that there is such a class of parents, how would you propose to meet their wants in Dublin?—I suppose their girls would attend classes either at St. Mary's College or at Alexandra College, and take their degrees at the Royal University.

2118. You would exclude the children of such parents from the benefits of Trinity College altogether?—No, but I think their voice should be heard distinctly; they should approach the University and make their wants known. I have never heard that any such request has been made.

2119. You do not think the unquestionable result of the English experience is of sufficient importance to make it desirable for the University to consider the matter here?—But surely at Oxford and Cambridge the women have access more and more to the lectures given, in common with the men.

2120. Mr. BUTCHER.—Not in the Medical Classes?—Of course we have many Experimental Science students who are not medical students.

2121. Sir ARTHUR RÜCKER.—I think a great city like Dublin is more analogous to London than to

either Oxford or Cambridge, and in London we have three large Colleges for women only; and I want to get quite clearly from you whether you think either that there is no such class of parents in this country, or that if they do exist you do not think the University of Dublin can provide for them?—I think the University would have considerable difficulty in providing for them, and, as I say, I have no evidence of the existence of such a class—their voice at all events has not made itself heard.

2122. Now, to come back to the laboratories for a moment, do you think the objections to men and women students working together in laboratories are greater than those attaching to their attending the same Classes?—I suppose they might be considered greater. Our own arrangement is that we have one bench on one side of the Laboratory devoted to the women students, and as far as the work goes it is better, because they have the same instruction as the men exactly.

2123. I should just like to say in explanation of my cross-examination that I have taught common classes all my life, and I have never found any difficulty, but at the same time I am convinced that there is a large class of parents who do not like it?—Yes?

2124. Dr. JACKSON.—I should like to ask one question in regard to age. I quite understand your objection to an age limit which would oblige a student to stay down for a whole year, because if she were to come up at a given moment she would be under the age of eighteen; but would you see any objection to a hard and fast rule of this sort—that no woman student shall come into residence under the age of seventeen?—None whatever.

2125. Would it not be a gain to have that rule distinctly understood?—I should be quite in favour of that.

2126. I mean that while a hard and fast rule at eighteen would create hardships, I myself, from my experience at Cambridge, should be sorry to see a woman under seventeen started in residence, and I want to put it to you that it might be quite advantageous to have a strict rule?—Yes, I should be quite in favour of that.

2127. Barring the one exceptional instance you mentioned to us, you have had no student entering under seventeen?—No.

2128. I thought you mentioned one case of a student under seventeen?—Yes, one only.

2129. Well, it seems to me that there cannot be a real hardship in saying, "You shall not come into residence under seventeen."—No; personally I should wish that eighteen should be the age at which they enter, because I think as a rule the age between seventeen and eighteen is a very important one both for development of character and educational work.

2130. One question about what the Americans call "co-education." Have there been any difficulties since ladies were admitted to the ordinary classes in Trinity College?—No, I do not think there have been serious difficulties; I think the young men have behaved exceedingly well. Of course, at first it was not a popular movement amongst the undergraduates; they thought their rights were being invaded and curtailed and so on; but really I must say they have behaved very well.

2131. May I ask whether the experience here is what my own experience has been—that the presence of ladies in the classes has done something to smarten up the work of the men?—I think so; they do not at all like being passed by their feminine rivals.

2132. Mr. BUTCHER.—Just to go back to the age question; at Newnham, I think, eighteen is the limit, and that is a hard and fast limit. I think that is so, is it not?—I am not quite sure.

2133. Anyhow, it is the regular thing?—Yes, the recognised thing.

2134. I have not heard that it works out hardly on the whole, though, perhaps, there may be individual cases of hardship.

2135. LORD CHIEF BARON.—They have no Intermediate Act in England—nothing to correspond to our hard and fast age limit?—On the other hand, all our Trinity College Entrance Prizes are open to students under nineteen, and there is no necessity for a girl to come in early.

2136. Mr. BUTCHER.—I think we heard something about Intermediate Middle Grade candidates being encouraged to come to the University by Exhibitions being given?—We have never had cases of it among

DUBLIN
Oct. 20, 1906.
Miss Gwynn,
Lady Registrar.

DUBLIN.
Oct. 20, 1906.
Miss Gwynn,
Lady Registrar.

women. These are offered by Sir John Nutting, and I believe they are open both to Senior and Middle Grade students who have distinguished themselves, but I understand they almost invariably go to Senior Grade students, and we have never had a woman Middle Grade student holding an Exhibition.

2137. I do not think one can generalise until one has had more experience and seen how the thing works out, but as regards the standard of the Entrance Examinations, to what would you take that to be equivalent—is it equal to the Senior Grade Intermediate?—It is difficult to say; every student must pass at Entrance in two languages, Algebra, Euclid, Arithmetic, History, and Geography; but in the Senior Grade a student can choose her subjects. It is very hard to compare the two.

2138. And there is no system of equivalent examinations in Ireland, such as there are in England, by which School Certificates are accepted for entrance to the Universities?—No, it is a new thing that the Intermediate certificates are accepted partially.

2139. Which are accepted?—The Senior Grade only.

2140. That is what I meant when I was trying to ask you to equate the standards?—The Senior Grade Certificate is accepted provided the student has passed in all the subjects; if not, we call upon him or her, as the case may be, to present himself or herself for examination in the missing subjects.

2141. Have you had any opportunity of judging how far the standard of the Entrance Examination at Trinity College corresponds with the standard of the Royal University Matriculation?—I believe the matriculation at the R.U.I. is looked upon as the more difficult, but as I understand it, that examination is one of the series of their University examinations, whereas our Entrance Examination is rather to test the fitness of the candidate for admission to the teaching of the University.

2142. I have heard that the Entrance Examination at the Royal is the harder, and I wanted to know how far your experience confirmed that?—It is very difficult for me to compare them at the moment, though one could, of course, easily find that out.

2143. I feel sure that the standard of the Entrance Examination has a good deal to do with the question of the age at which candidates come up, and if the standard at Trinity College was such as to encourage girls of seventeen to come here, it would, perhaps, be a doubtful gain?—I do not think that is so; as things stand in girls' schools, my experience would show that girls are weaker than boys in Arithmetic, Algebra, and Euclid, and a girl is not likely to come up prematurely for examination in those subjects.

LORD CHIEF BARON.—Girls may pass the Intermediate even in the Senior Grade without any Mathematical subjects; other subjects may take their place, such as Modern Languages, and so on.

2144. Mr. BUTCHER.—I am told that clever boys and girls can very easily pass the Intermediate Senior Grade at sixteen?—That is so; and that is why I should wish the age limit to be approximately eighteen.

2145. Would you explain a little more exactly who compose the class whom you call Honours students; does it mean that they have taken Honours in some one subject?—In one or more subjects—Classics, Mathematics, Modern Literature, &c.

2146. And all your students are Honours students?—Almost without exception.

2147. But all doing certain Pass subjects as well, which are also requisite?—Yes; I think that is so with the men also—they do not go in for Honours in both science and languages; all students must take Pass work as well as the Honour work.

2148. Of the whole number of women students, according to a statement we had presented to us earlier in the year (perhaps it may be different at this moment) it appeared that some sixty-six per cent. came from the Alexandra College; that is to say, there were fifty-six students out of a total of eighty-eight?—A large majority of our students have been formerly students at the Alexandra College; of these several have gone there for certain Classes preparatory to coming to Trinity.

2149. The claim of Alexandra College to have certain individual teachers recognised does not conflict, as I understand it, with the wish of Alexandra College in common with all the women's Colleges to have the Lectures within the University open to women—they do not desire that their own lectures should be

recognised exclusively?—Oh, no; I do not know that they would go so far as to wish to make it compulsory on the women students to attend there.

2150. I rather gathered that you understood their claim to mean that the lectures generally should be given at Alexandra College rather than at Trinity College?—They say they are satisfied with the provision for Honour students. The Honour student has to come to Lectures here, and if she were to take her Pass Lectures elsewhere it would be very difficult to arrange a suitable time-table both here and elsewhere so that she could attend both sets of Lectures.

2151. But would not the other institution have to adjust its time-table as best it could to the time-table of Trinity College?—I think it would be practically impossible, because each girl may desire a different group or combination, you see.

2152. I have seen elsewhere such a system at work; for instance, at Glasgow there is a Women's College, the Lectures of which are taken as equivalent to the Lectures given in the University to men; many of the women students there attend some College Lectures and some University Lectures, and between the two—no doubt by adjustments of the respective time-tables—they make up their complete Course?—Yes?

2153. That in itself would seem a reasonable arrangement?—But surely the women's College at Glasgow exists solely for the University of Glasgow, and it should be remembered that at Alexandra College there are at least four different kinds of students. (1) The large number of girls preparing for the Middle and Senior Grade Intermediate, and doing definitely secondary school work. (2) Another group working for the examinations in the Royal University. (3) A large number of casual students taking classes in one or more subjects which interest them. (4) The students who are preparing for matriculation in Trinity College.

2154. It points to this—that you would not recognise all the Lectures and all the Courses at Alexandra College, but you would do what is common in the University of London—recognise individual teachers and particular Courses? I mean you would assure yourselves that the standard is an academic standard and that the teacher is a qualified academic teacher. That is the only distinction?—I do not agree.

2155. Anyhow it would seem a proposal which has got a considerable academic precedent, I think?—Perhaps to some extent.

2156. About the mixed classes—do I understand that in Trinity College all the Medical Classes, or only those in the scientific branches of Medicine, such as Zoology, Botany, Chemistry, and so on, are open to women?—All the Lectures are open to women in the Medical School.

2157. Even in Physiology and Anatomy?—They practise dissections separately from the men; there is a very good dissecting room fitted up, and a Demonstrator attends there.

2158. But the actual Lectures they attend in common?—The Lectures they attend in common with the men.

2159. Dr. DOUGLAS HYDE.—Would you say that the admittance of women into Trinity College has been carried out with complete satisfactoriness on all sides?—Yes. I think the women graduates who fought the question are very well satisfied with the conditions now prevailing for their younger sisters. The women students are perfectly satisfied themselves, and I think that the gentlemen who have lectured and examined them would bear cordial testimony both to the good conduct and the industry and ability of our women students.

2160. And the opportunities given to women of enjoying these privileges within the walls of Trinity College have given rise to no sort of unpleasantness?—No.

2161. Nearly eighty per cent. of your women students go in for Honours?—Yes; attending the Lectures and presenting themselves for the Honours Examinations.

2162. Does not that tend to show that they are really earnest students?—Yes; and not only have they done well in the optional Honours Courses, but last year at Little-Go a compulsory examination which all students are required to pass, and at which the "mortality" is usually very high, all the women students passed successfully.

2163. For the Laboratory work you say they have separate benches. May I ask whether in the ordinary Arts Course one side of the room is reserved for

ladies, or do they sit on the same forms?—That is entirely at the discretion of the lecturer. Very often the women students are placed on the front forms, and it depends on the total number in each class, and on the proportion of men and women. In the Laboratory the women work together along one of the benches.

2164. In the ordinary Arts Course they go as they like?—As the lecturer chooses.

2165. In America I had a good deal of experience of this particular matter, and I wanted to know whether here the conditions were similar?—In Chicago I understand the students of both sexes mix freely, and segregation does not seem to mean there what it does here; the students have a common life together, which we should not attempt here.

2166. Supposing this Hostel were established, you

would wish to have it outside Trinity College?—Yes, and purely residential.

2167. You would not confine the advantages of that Hostel to students going in for Honours only?—Oh, no, I would have it for all our women students who needed such accommodation.

2168. Just for curiosity I would like to know whether you have got any girls from St. Mary's attending the Lectures at Trinity College?—We have four Roman Catholic ladies amongst our numbers, but I do not know if any of them were educated at St. Mary's.

CHAIRMAN.—We are very much obliged to you, Miss Gwynn.

The Witness withdrew.

DUBLIN.
Oct. 20, 1906.
M^{rs} Gwynn,
Lady Registrar.

After a short adjournment,

W. H. THOMPSON, Esq., M.D., M.CH., SC.D., King's Professor of Institutes of Medicine, called in and examined.

2169. CHAIRMAN.—I think you come before us partly in your own capacity, as representing yourself, and also in another capacity as representing the King's Professors in the School of Physic?—That is so.

2170. You have in the latter character furnished us with a Statement of the King's Professors*?—Yes.

2171. And in the former capacity you have been good enough to furnish us with a Statement,† and also with a précis of your evidence. Those documents we have before us, and perhaps it would be better to take you first in your representative capacity. I think the conclusions you arrive at are these—that you ask us to hold: “(1.) That the ‘School of Physic’ be incorporated in the University of Dublin as the Professional School in the Faculty of Medicine; (2.) That the King's Professors on the Foundation of Sir Patrick Dun be accorded the rights and privileges of officers of the University”?—Those are the general conclusions which we have ventured to suggest, but if I may be permitted I would like to summarise the matter which is contained in the Statement presented as the “Statement of the King's Professors in the School of Physic.” It is, perhaps, unnecessary to say that there are four King's Professors, and that they are appointed by the College of Physicians. This foundation dates back to the year 1785. It was added to in 1800 by a further Act, which created a hospital, and this further Act of 1800 repealed, but re-enacted all the main provisions of, the original School of Physic Act. The provisions of the Act of 1800, § so far as the business of our Statement is concerned, may be summarised very shortly. First, it provided for the establishment of a group of King's Professors, elected and controlled by the College of Physicians, each of whom was to be paid an annual salary of £100 Irish out of the proceeds of Sir Patrick Dun's estate. Secondly, it provided for a group of University Professors elected, controlled and paid by the Provost and Senior Fellows of Trinity College. Thirdly, it provided for a hospital, to the erection and maintenance of which, was to be devoted the residue of the funds accruing from Sir Patrick Dun's estate, after the payment of the salaries of the King's Professors and certain other charges, including £70 a year Irish to be paid to a librarian for taking charge of Sir Patrick Dun's Library. The King's Professors were to lecture in Dun's Hospital, the University Professors in the medical buildings of Trinity College. Both sets of Professors were entitled to charge reasonable fees to students attending their lectures, such fees to be regulated in each case by the electing body. Both sets of Professors were to give clinical instruction in Sir Patrick Dun's Hospital, for which a fixed scale of fees was arranged. Part of these fees, namely, three guineas per annum, went to the support of the hospital. Some slight but important changes were made in the foregoing provisions by an amending Act passed in the year 1867.** These were for the most part suggested by the recommendations of the Royal Commission of 1851.

Disregarding for the moment the minor matters to which we have drawn attention in this Statement, we think it must be admitted that the provisions of the School of Physic Act have in not a few instances become unsuited to present conditions.

2172. May I just ask you this question: Were these Professorships in the same subjects—did they overlap in any way, or were they in different subjects?—They were in different subjects.

2173. So that the two sets of Professorships covered the whole of Medicine—they did not overlap?—It was what was called a Complete School of Physic at the time, and covered the whole range of subjects supposed to be necessary at that time. As a matter of fact there was no completion about it, as we regard matters nowadays. To resume my summary, I was observing that we think it must be admitted that the provisions of the School of Physic Act have in not a few instances become unsuited to present conditions. For instance, the dual control which was established by this Act can hardly be claimed as satisfactory, though in our Statement* we have disapproved of the way in which it has been, to all intents and purposes, extinguished—namely, by first suggesting, then assuming, and afterwards acting on the assumption, that the School of Physic in the University of Dublin is something wholly different from the School of Physic founded by Statute.

2174. One has been called the School of Physic in Ireland, the other the School of Physic in the University of Dublin?—As a matter of fact, School of Physic in Ireland is hardly a correct title; it is simply School of Physic, and is called so in the body of the Act. The title of the Act is “An Act for founding a Complete School of Physic in this Kingdom” (referring to Ireland). In consequence, the name School of Physic in Ireland has come to be applied to that foundation very generally, but it is, correctly speaking, the School of Physic. It came about that in the course of time the provisions for the dual control were to all intents and purposes extinguished, and it has become a fixed belief with many people that the School of Physic in the University of Dublin is quite a different thing from the School of Physic founded by Statute. In 1879 a medical school committee was appointed by the Board of Trinity College to manage the affairs of the School of Physic, subject to the general control of the Provost and Senior Fellows; and since then the College of Physicians has had no voice in its management. It is not to be understood that we complain of the actual doings of the committee in the working of the School. On the contrary we have little but approval to express for this form of management. We do, however, point out that it is at variance with the provisions of the Act, and further that the King's Professors have not been given a proportionate representation on the Committee.

2175. Your idea would be as I understand, that it should be enacted that the present status should be the legal status as well as the *de facto* status?—The legal status has been, so to speak, got round.

2176. But your desire is that the existing status should be legalised?—Not quite. Shall I go on with what I was saying.

2177. If you please?—The foregoing was the first point that we wished to call attention to—the fact that the provisions of the School of Physic Act cannot be claimed to be in correspondence with the present conditions. The desire to escape

from the dual control accounts also in part for the series of steps which culminated in the promulgation of what we have called in this joint statement the prohibitory claim of 1886. This is a matter affecting our position somewhat seriously, and perhaps I might call attention to it a little more fully than that mere reference.

2178. Please tell us anything which you may desire should be before us?—At one period, in 1867, a distinction was attempted to be drawn in the Calendars between the School of Physic in Ireland and the School of Physic in the University of Dublin. This nominal distinction would be of little consequence had it not led to the practical disregarding of the dual government of the School of Physic. We quote here from the Calendar of 1867 in order to draw attention to the way in which this distinction is first made. For instance—

2179. We have got that in the Memorandum?—Yes; here it is said to be a School of Physic in the University of Dublin under the joint control of Trinity College and the President of the College of Physicians. Then later on it speaks of the School of Physic in Ireland as a corporation governed in the same way. Then for some years the joint control continued to be expressly acknowledged over both these schools, the School of Physic in the University of Dublin and the School of Physic in Ireland. In 1870 the acknowledgement of the joint control of the School of Physic in the University of Dublin ceased, and then in 1885 the acknowledgement of the joint control of the School of Physic in Ireland also ceased. First there was the cessation of the acknowledgement of the joint control of the School of Physic in the University of Dublin, and then the cessation of the acknowledgement of the joint control of the School of Physic in Ireland. The year following that cessation, 1886, came the paragraph which appeared in the Calendars from 1886 to 1900, and is now in a special supplementary volume to the effect that no person can lecture or demonstrate in the laboratories or buildings without the permission of the Provost and Senior Fellows. We think that the desire to escape from the dual control accounts for the series of steps which thus culminated in what we have called the prohibitory claim.

2180. In point of fact although two schools are mentioned there was only one school all the time?—Yes, only one school all the time.

2181. It is a curious piece of nomenclature?—Then in other ways the School of Physic Act has come to be unsuited to the present needs. The terms of the Act prevent continuity of tenure of their posts by the King's Professors, and the University Professors of the School of Physic, and consequently the Act stands in the way of a retiring allowance being provided for them. We know of no instance in which pensions are attached to Professorships, terminable after periods of from five to seven years. These are the periods for which these Professorships in the School of Physic are tenable. The term is five years for the University Professors, and seven years for the King's Professors.

2182. During all this time has the College of Physicians elected to the King's Professorships?—Yes.

2183. They have continued to do that?—Yes, it is about the only provision of the Act which is still observed.

2184. They have had no control?—The whole of the control has been exercised by Trinity College?—Yes, since the School Committee was appointed.

2185. Previous to that?—The College of Physicians exercised control. For instance, this is the last resolution passed for the government of the School by the College of Physicians, October 8th, 1878: "It is ordered that in future the Institutes of Medicine and Physiology shall be a winter course and Practical Histology a summer course." The following year the Medical School Committee was appointed, and since then Trinity College has exercised the whole government.

2186. The College of Physicians did not desire to exercise their powers?—They were not asked.

2187. I suppose they would have acted?—They were excluded, but no complaint has been made.

2188. They have never complained?—They have not complained.

2189. It looks very like acquiescence?—It does look like that, sir.

2190. Perhaps you might just allow me to ask a further question. Up to the present time they have never complained of the whole management being taken from them?—There has been no actual complaint, but in a private capacity I know there has been a great deal of dissatisfaction, although they have never expressed it.

2191. It has not come before us in any form. Do you propose they should retain the power to elect the King's Professors?—I could not answer that question in my representative capacity.

2192. Suppose you put that aside and answer for yourself?—We say in our Statement that we confined ourselves for the most part to the difficulties now found in working the School of Physic Act. I think the difficulties themselves are such as would suggest immediate joint action. It might be possible ere long to get the two bodies to make a joint recommendation to the Commission which would be satisfactory to all parties. There is a project with a view to getting a Joint Committee, but until it has really taken shape I could not explain it any further than that it suggests they might be brought into a Joint Committee to consider this School of Physic Act, and see if something better suited to present conditions could not be substituted.

2193. Would you recommend that the School of Physic should be incorporated with the University as the Professional School of the Faculty of Medicine? Would your proposal carry with it the appointment of the Professoriate?—That would not be our idea. We carefully abstain from recommending any alteration. We were appointed by the College of Physicians. We do not recommend any alteration in the mode of appointment. We recommend that the School of Physic as it is, should be given by Statute a position which it has only by courtesy.

2194. There seems to be this difficulty if that be carried out, that with the right of appointing Professors to Chairs you will have an external body appointing to the Chairs of the University of Dublin?—I am quite aware of that. It does not seem to us entirely incongruous. I think there are Chairs to which appointments are made by Boards of Electors in Cambridge University where the electors have no other connection with the University.

2195. But these Boards who make the appointments are regulated by the University?—Yes, appointed by the University.

2196. These Boards are really under the control of the University?—The old provision for electing King's Professors was by means of a Board which consisted of five members, three from the College of Physicians and two appointed by Trinity College. And then when that was done away with in 1867, the whole body of Fellows were made the electors of the King's Professors. The provision before that date was appointment by a Board of five Electors.

2197. Has this Statement of yours been communicated to the College of Physicians?—We have sent it to them, but they have not considered it so far. It is before them. We laid it before them.

2198. We should have difficulties in acting without hearing them?—They had at the same time under consideration whether they should send forward a representative to give evidence in support of their own Statement. I understand they decided that they would not send forward a representative to give oral evidence.

2199. We could not go into that without hearing them?—It would help considerably if the Commission expressed a wish that a Joint Committee should consider the whole matter.

2200. CHAIRMAN.—Is there anything further that you want to say on that part of the case?—Well, there are certain points I have noted here in this memorandum of my oral statement which I wish to make. The question of the continuity of tenure of Professorships in the professional schools of the University was brought under the notice of the Governing Body of Trinity College in 1874 in connection with the changes contemplated in the mode of government of the College. In reply to the representation of the Professors, the Registrar of the Board, Dr. Hart, informed them by letter, dated 28th February, 1874,

that the Board proposed to promulgate a decree (which they afterwards did), for rendering certain stated Professorships tenable for life. The Registrar then added—"The Board do not propose any change in the tenure of other Professorships except those in the Medical School, for which an Act of Parliament will be required." But notwithstanding pressure on the part of the Professors of the Medical School, no further steps were taken. Then another point arises in connection with the rule under which certain Professors of the School of Physic, not engaged in the practice of their profession, are by right of office entitled to act as clinical teachers in Sir Patrick Dun's Hospital. This is not any longer suited to present conditions as regards the Professors of Anatomy and Physiology, and is, as a matter of fact, now inoperative. Nor can it be considered a satisfactory rule that a Professor in practice should lose his clinical appointment when he ceases to deliver lectures in the Medical School. There are also provisions in Section XI. of the School of Physic Act of 1800 with regard to the payment by students of certain fees to the Registrar of Sir Patrick Dun's Hospital which can no longer be acted upon, and which in consequence have been neglected.

2201. What about the fees?—Section XI. of this Act begins—"And be it enacted by the authority aforesaid, that the said King's Professors and their successors shall read and give clinical lectures" at least two days in each week during the session, and then follows the provisions about giving these lectures, "and every pupil who shall attend the said lectures shall pay to the Professor whose lectures he shall attend the sum of three guineas," and before that he shall be admitted to attend the said lectures "he shall enter his name with the treasurer of the said hospital, and shall pay to the said treasurer for the use of such clinical hospital the sum of twenty guineas unless such pupil shall have been matriculated in the University of Dublin or of Oxford or of Cambridge according to the statutable forms of such Universities respectively, and shall have continued his studies in Arts under a tutor in one of the said Universities for the space of two years at least, in which case the pupil shall only pay the sum of three guineas.

2202. That is, he only pays the sum of three guineas in the latter case?—Only three guineas. In our school students go to hospital before two years of Arts instruction, but the twenty guineas is not enforced. Then there is the last point referred to on this verbal Statement. The Act did not provide for the statutory recognition of the School of Physic as a Professorial School in the University of Dublin. In consequence the King's Professors, on the foundation of Sir Patrick Dun, are officers of the University only by courtesy, and that of very recent date. We wind up with the statement to which I referred a few moments ago, that we were conscious of the need for stating the difficulties, and merely making general recommendations.

2203. You think it would be possible to secure the co-operation of the College of Physicians to a scheme for amending the Act?—I have every reason to think that it would be possible.

2204. LORD CHIEF BARON.—I think it would.

2205. CHAIRMAN.—It seems to us it would be better to leave it. Would it not be better if we did not go into the inquiry into that business immediately?—It would.

2206. I think it would clear up the matter very much if you could agree as to what your points of difference even were?—If it came as a ruling from the Commission that some steps should be taken in that direction I am sure it would aid the object very much. The two parties, the Professors and the Fellows of the College of Physicians, are wishful that such steps should be taken.

2207. Will you ask them to consider the matter. That would be better than going into the thing fully now.

2208. LORD CHIEF BARON.—Quite so.

2209. SIR THOMAS RALEIGH.—It would be much better.

2210. LORD CHIEF BARON.—I do not think that this Joint Statement has been brought to the notice of the College of Physicians. Your other Statement I think was published in the Appendix to our First Report.*

2211. CHAIRMAN.—It has been furnished to the College of Physicians. How long ago?—(Dr. Thompson)—

On the second of this month it was sent into the Secretary, and he would receive it on the third by post.

2212. I think we may with propriety express to the College of Physicians our desire that they should meet the joint representatives of the King's Professors and consider the terms of the Act of 1800 and the relations between them, and whether they can agree upon a statement, or desire to present a case to us.

2213. SIR ARTHUR RÜCKER.—Trinity College is not interested? (Witness)—Yes, it is.

2214. CHAIRMAN.—Would it not be better to include everyone interested?—Certainly it would be better to adopt that course. If the other members of the Commission are agreeable we will adjourn the further consideration of the matters arising out of that statement for the present, directing our Secretary to communicate with the Royal College of Physicians and Trinity College, and inviting them to meet you and see if they can arrange about the questions that are in dispute between you?—I do not think anything would suit our wishes better.

2215. You think that would be a very desirable course?—I think so.

2216. LORD CHIEF BARON.—It is the best we can suggest to them.

2217. CHAIRMAN.—When do you think we may expect a Statement?—I should say the next sitting in February.

2218. LORD CHIEF BARON.—We shall not be sitting in February?—We might do it some time in November.

2219. CHAIRMAN.—It would not take very long to have the matter fully discussed?—I think it would require fully a month.

2220. MR. KELLEHER.—The Board of Trinity College would have to be consulted upon it.

2221. LORD CHIEF BARON.—Of course.

2222. CHAIRMAN.—We want a joint action on the part of the two bodies chiefly interested in the School of Physic—the Board of Trinity College and the College of Physicians? Do you think it would take a long time?—Well, the College of Physicians is a large body, and everybody might wish to have something to say with regard to it.

2223. SIR ARTHUR RÜCKER.—The King's Professors would be included?—I think so. In all probability it would be referred to a joint committee, which, as a matter of course, would include representatives of the King's Professors and the University Professors.

2224. LORD CHIEF BARON.—We will give them a month.

2225. CHAIRMAN.—We meet on the 7th November, and if they are not ready then we will give them to the 20th.† You have made a statement as representing the King's Professors. Now, you have another representing your yourself, enumerating what changes you would suggest. We shall be glad to hear your views on that subject?—I should like to go into this—an additional Statement‡ which I sent in quite recently relative to the fees payable by medical students of the School of Physic with suggested reductions, also to prizes and scholarships and suggested additions. You have not got it in the Report, but I have it here. I had to try to correct this, and give it in as a correct copy. The facts set forth in the Statement are under the heads of the inquiry: what steps are proper to be taken to increase the usefulness of Trinity College, Dublin, to the country; secondly, provision for post-graduate study and research. I propose to lay before you, first, some facts in relation to the fees of the School of Physic and the University of Dublin under the Act. The table sets forth the fees payable by students in the Medical School proper. The sum total of these fees for the four years amounts to £67 4s. The second head I give for general hospital instruction, £37 16s; and, third, I give the fees for special hospital instruction, £17 17s. And then I give degree fees, £10 and £17, altogether £27. The total medical fees amount to £149 17s., to which Arts fees are to be added, making the total for a graduate of medicine £233 1s. For comparison, I give the corresponding fees through the Queen's College and the Royal University not for the purpose of advocating equality of fees, but it gives the comparison, and will show in some cases our Dublin University fees to be unnecessarily high, and also indicate where a reduction might be made. For instance, the fees payable under heading I.

Thompson,
Esq., M.D.,
M.Ch., Sc.D.

2226. This is hardly within the scope of our inquiry?—I would suggest that it is in one respect. They are the Hospital Fees fixed by the School of Physic Act.

2227. The Act of 1800?—Yes, the Act of 1800; and the Act for the consideration of which the three bodies you have invited are to meet.

2228. Won't that prevent our going into it at present? I don't think we are likely to settle fees. Still, go on, if you think it important?—The School of Physic Act will have to be done away with if anything is to be done in the alleviation of hospital fees. My views with regard to the suggested reductions are here. May I not give them?

2229. CHAIRMAN.—Yes, but I don't think we shall legislate upon it.

2230. Sir ARTHUR RÜCKER.—Would we not be in a better position to deal with it when we have the joint report from the three bodies?—We shall have to consider the question of fees sometime.

2231. We shall lose touch with it in the meantime. I would rather consider the whole question when all the facts are before us?—May I hand this in as a correct statement?

2232. CHAIRMAN.—This is a revised edition of the figures which you wish to substitute for one already sent in?—Yes.

2233. Sir THOMAS RALEIGH.—Did you get those figures from Belfast or did you work them out yourself?—I worked them out myself, but I had previously done so in Belfast as Professor.

2234. What I want to know is, would the Belfast people admit the correctness of them?—They were published in the *British Medical Journal*.

2235. As their own total?—Yes.

2236. Higher fees have a deterrent effect, to a certain extent, on the number of students entering the School?—Yes. I don't think that some of them can be justified. I have suggested the abolition of the *Licent ad Examinandum* fees of £10. In 1864 the Board of Trinity College suggested that a fee of £5 should be charged on the *licent* certificates for the final examinations in medicine and surgery, the proceeds to be handed over to the governors of Sir P. Dun's Hospital for the support of surgical beds. At that time it was not necessary to take the only degree in surgery which the University then conferred—the M.Ch. The diploma, on which no *licent* fee was charged, was sufficient for qualification. Some years later the B.Ch.—Bachelor of Surgery, was introduced. That increased the *licent*

fees of £10 for the purpose of giving it to Sir Patrick Dun's Hospital to make it a medico-chirurgical hospital for chirurgery; so that the students were taxed to the extent of £10 for that purpose.

2237. LORD CHIEF BARON.—Not by statute?—I mean by Trinity College statute; it was done by order of the Board.

2238. It was not by King's Letter. It was a matter the Board itself could alter?—Yes; the Board had the power to alter it. The hospital receives between £300 and £400 a year in this way. Of course it would be a hardship to abolish it without some compensation.

2239. CHAIRMAN.—We should refer this to the new Governing Body, if there is to be a new Governing Body?—Yes; but one thing that cannot be dealt with, except by legislation, is the general hospital fee of twelve guineas.

2240. That is the Act of 1800?—Yes.

2241. There is a strong reason for dealing with that?—Yes. There is only one thing more I wish to refer to; it has no reference to the reduction of fees. I don't wish to say anything further about that at present. But there are some matters in the first Statement which I sent in that require slight correction. It is mainly with regard to a matter of history.

2242. LORD CHIEF BARON.—Then correct it now.

2243. CHAIRMAN.—This is a different document. If there is anything that you wish to correct in it you may mention it; but it is printed already in our Appendix, and cannot now be altered. If you wish to supplement it we have no objection. It has been already published and presented to the Crown in our Report. If you think the correction is material you can state it now?—Well, it is a historical statement, a statement which might be referred to as reliable from having appeared in your Report.

2244. What is the correction?—It is not very long. It has to do with the relations between the new School of Physic and Trinity Hall, on page 2—the condition that Trinity Hall should be handed back. It was not really a condition that Trinity Hall itself should be handed back, but that the documents relating to the transfer of Trinity Hall should be given up.

2245. CHAIRMAN.—I think the better way would be to write a short Memorandum, embodying the explanation you wish to make, and to send it to our secretary. The paper you sent in has been already printed and forms part of the Appendix to our First Report, and we cannot alter it now?—(Witness).—Very well; I will do that. It will be very short.

The witness then withdrew and the Commission adjourned until Monday.

SIXTH DAY.

MONDAY, OCTOBER 22ND, 1906,

AT 10.30 O'CLOCK, A.M.,

At Trinity College, Dublin.

Present:—The Right Hon. Sir EDWARD FRY, P.C., D.C.L., LL.D., F.R.S., F.B.A. (Chairman);
 The Right Hon. C. PALLIS, P.C., LL.D., Lord Chief Baron of the Exchequer in Ireland;

 F.R.S.; HENRY JACKSON, Esq., D.LITT., LL.D.; S. H. BUTCHER, Esq., M.A., LL.D.,
 D.LITT., M.P.; DOUGLAS HYDE, Esq., LL.D.; DENIS J. COFFEY, Esq., M.A., M.B., F.R.U.I.;
 S. B. KELLEHER, Esq., M.A., F.T.C.D.;
 and J. D. DALY, Esq., M.A., Secretary.

The Rt. Hon. GERALD FITZGIBBON, LL.D., Lord Justice of Appeal in Ireland, and The Very Rev. J. H. BERNARD, D.D., D.C.L., Dean of St. Patrick's (Representatives of a Special Committee of the General Synod of the Church of Ireland), called in and examined.

2246. CHAIRMAN.—Lord Justice and Mr. Dean, I believe you appear before us under a Resolution of the General Synod of the 25th April of this year, under which a Committee was appointed to deal with this question; and in accordance with that resolution, you have presented to us a Statement* of the Special Committee appointed by the General Synod of the Church of Ireland to bring before the Royal Commission on Trinity College, Dublin, and the University of Dublin, the present position of the Divinity School connected with Trinity College, Dublin, and the claims of the Church of Ireland upon that School and upon the College and University. That Statement, which you have been good enough to send to us, you have divided into five or six heads, and we should like to hear what you have to say in support of the propositions contained in that statement?—(Lord Justice FitzGibbon) The Dean and I have been appointed by the Committee to which you have referred to give evidence in support of the Statement which the Committee have presented. At the outset let me remind you that the Statement is not confined to the question of the Divinity School, but it also extends to the question of the claims of the Church of Ireland upon the College and University. We do not represent and we are not authorised to represent, the entire of the Governing Body of our Church, and we understand that two of the Bishops have been deputed to speak for their "House," as we call it under our Constitution. We are anxious, if you will kindly permit us, in the first instance, to remind you that what we claim to call the Church of Ireland consists of 581,000 people, and has hitherto supplied more than 70 per cent., going nearly as far as 75 per cent., of the students of the University of Dublin. We are both of us fully impressed with the idea that the subject matter of our inquiry to-day—that is, the Divinity School, and the connection of the Divinity School with the University of Dublin—is one vital to the Church in respect of continuing to it what we regard as almost essential to its existence, and certainly essential to its existence as a body, such as it is at present, having an educated clergy who have the confidence of their flocks, and who at the same time are supplied with the same standard of education and culture as the highest of those whom they have to guide. In order to explain why we do not represent the entire of the Governing Body of our Church, it will be necessary for me to give you some information about the Constitution of the Church. I consider that necessary also when we come to consider some of the suggestions which have been made to you, in order that you may know the details of the working of the machine of which you are asked to increase the usefulness, when applied to the particular Church with which we are concerned. Therefore, if

you will allow me, I will, as shortly as I can, explain the Constitution of the Church to you, because it is a matter upon which we are well aware that there is a good deal of misapprehension, and, very frequently, I may say, great ignorance. I believe that by some we are regarded as a more or less undisciplined rabble; I know that by a great many we are regarded as a set of involuntary Nonconformists; but, as a matter of fact, we are a body established by law, recognised by statute, having legal rights and obligations, and under the control of a very artificial, but at the same time very effective, and actually working constitutional system. The legal foundation of the Disestablished Church rests on Section 20 of the Irish Church Act, 1869.

2247. Which Chapter is that?—32 and 33 Victoria, Cap. 42. Before the Union, I think you will find that in the documents that you have before you in the Appendix to our Statement, *ecclesia* is used of the Established Church according to the law of the Realm at the time, and the Irish Established Church—the Church of Ireland—although entirely independent of the English Church, was in all respects identical as regards government, doctrine, and every thing concerning "conformity" with the English Church. The provision of the Act of Union is important, because what it did was, in a single sentence—pronouncing that the thing was to be for ever—to unite the Church of Ireland and the Church of England into "one Protestant Episcopal Church, under the name of the United Church of England and Ireland." That was to abide for ever, and it did, as a matter of fact, abide until January 1st, 1871. The Church Act passed on July 26, 1869. When it became law, there was a period of interregnum until January 1st, 1871, during which the Church was in a sort of transition state, and I have to call your attention to what its powers were during that time. New appointments were put an end to, and the property of the Church was captured from the date of the Act. Certain powers were given to the Church and to the State to carry on in a temporary way until January 1st, 1871, and on that date the Church started as an entirely independent body. One provision of the Act which is material for the present purpose is the short section which altered the Constitution of the Church—it is section 2. "On and after the 1st day of January, 1871, the said union (which I have just quoted for you) created by Act of Parliament between the Churches of England and of Ireland shall be dissolved, and the said Church of Ireland, hereinafter referred to as the said Church, shall cease to be established by law." You will observe that the dissolution is confined to the union created by Act of Parliament, and the establishment that is to cease is the establishment by law. The Church, therefore, reverted to whatever its position was before it was established by law, and

in no other respect was it altered. The fundamental section 20 is the source of all our rights and obligations: "The present ecclesiastical law of Ireland, and the present articles, doctrines, rites, rules, discipline, and ordinances of the said Church, with and subject to such, if any, modifications or alterations, as after the 1st of January, 1871, may be duly made therein according to the constitution of the said Church for the time being, shall be deemed to be binding on the members for the time being thereof, in the same manner as if such members had mutually contracted and agreed to abide by and observe the same, and—now comes property—shall be capable of being enforced in the temporal courts in relation to any property which under and by virtue of this Act is reserved, or given to or taken and enjoyed by the said Church or any members thereof, in the same manner and to the same extent as if such property had been expressly given, granted, or conveyed upon trust—mind the trust—to be held, occupied and enjoyed by persons who should observe and keep, and be in all respects bound by the said ecclesiastical law, and the said articles, doctrines, rites, rules, discipline, and ordinances of the said Church subject as aforesaid." It was Lord Westbury who put in that provision about trust, and said he placed the Church of Ireland under a perpetual obligation by transferring the foundation of our property rights from the shifting sands of contract to the rock of trust. You will therefore see that you have to deal with a body all of whom are bound by a statutory contract. Every individual member of the Church is bound by a statutory contract to obey the old law until altered, and all the property with which the Church has to deal is held on trust for people who are so bound, and for none else. Now, the origin of our Constitution is to be found in section 19. We had in Ireland, among many other peculiar things, the Convention Act of 1760, passed for the purpose of preventing anything like representative assemblies in this country, and section 19 repealed it at once. You will observe that section 20 deferred our power of modifying the Ecclesiastical Law until the 1st of January, 1871.

2248. I do not find that in the text of the section—the date you mentioned?—"The present ecclesiastical law subject to such modifications as after the 1st of January, 1871, shall be made." The power of alteration did not come into force until the 1st of January, 1871.

2249. The text, as I have it, runs, "Subject to such, if any, modifications or alterations as may be duly made therein according to the constitution of the said Church"—The date must have been left out of your copy; I am reading from the Act as it was passed.

2250. LORD CHIEF BARON.—The Chairman is reading from the revised statutes?—We have been obliged to put an end to using them at all. They are often misleading.

2251. CHAIRMAN.—The date has been cut out?—Yes, by some gentleman revising. It is quite plain that he treated the date as "spent," and cut it out to save printing. Then section 19 is important. "From and after the passing of the Act—that was July 26, 1869—there shall be repealed and determined any Act of Parliament, law, or custom, whereby the archbishops, bishops, clergy, or laity of the said Church are prohibited from holding assemblies, synods, or conventions, or electing members thereto for the purpose of making rules for the well-being and ordering of the said Church; and nothing in any Act, law, or custom, shall prevent the bishops, the clergy, and laity of the said Church by such representatives, lay and clerical, to be elected as they, the said bishops, clergy, and laity shall appoint, from meeting in General Synod or convention, and in such Synod or convention"—I ask your attention to the extended power we have got—"framing constitutions and regulations for the general management and good government of the said Church, and property and affairs thereof, and the future representation"—that means after the 1st of January, 1871—"of the members thereof in diocesan synods, general convention or otherwise." In 1870, therefore, a Convention was got together, in which, by a very hasty and rough method, the bishops, clergy, and laity were represented, and that Convention framed a provisional constitution, founded upon a Declaration which, as we understand it, takes very much the place in our Church that the Declaration of Independence takes in America; that

is to say, it is a fundamental document which nobody can shake. There are some provisions in it to which I have to ask your attention. You may think I am wandering, but it is really for the purpose of proving to you how separate the Bishops are from the portion of the Church that we represent, and also of explaining to you how it is that, although we are in the same interest, the Bishops, and Dean Bernard and I are really appearing for independent parties.

2252. I am sure that anything you think relevant we shall be glad to hear?—I shall not trouble you with the religious part of the matter—possibly the Dean will—but the second paragraph of the Declaration contains this, which I think important. "The Church of Ireland will continue to minister the doctrine, sacraments, and the discipline of Christ, as the Lord hath commanded; and will maintain inviolate the three Orders of Bishops, Priests or Presbyters, and Deacons in the sacred ministry." Then follows this article:—"The Church of Ireland doth receive and approve of the Book of the Articles of Religion, commonly called the Thirty-nine Articles . . . also the Book of Common Prayer . . . adopted by the Synod holden in Dublin A.D. 1662. . . . And this Church will continue to use the same, subject to such alterations only as may be made therein from time to time by the lawful authority of the Church"—which was to come into force on the 1st January, 1871. Then there is this also:—"The Church of Ireland will maintain communion with the sister Church of England, and with all other Protestant Churches agreeing in the principles of this Declaration." This, I think, for all practical purposes, includes the Episcopal Church of Scotland, and the Episcopal Church of the United States of America; it certainly includes those, and it may include others.

2253. And the Episcopal Church of the Colonies, I suppose?—You probably know better than I about the Colonial Churches, but I understand that according to the Constitution of the Church of England these Colonial Churches are only branches of the Church of England. I may be wrong in that, but I know that in Bishop Colenso's case they sought to make out that they were so. Then, the Church of Ireland, after claiming its authority from a higher source, declares that "a General Synod of the Church of Ireland, consisting of the Archbishops, Bishops, and of representatives of the Clergy and Laity, shall have chief legislative power therein, and such administrative power as may be necessary for the Church, and consistent with its Episcopal constitution."

Immediately after the Act came into force the first General Synod was called, and its constitution is important. I will begin at the bottom. The unit is the Parish Church or Congregation. Every male over twenty-one years of age who signs the formal declaration that he is a member of the Church of Ireland, and that he either has property, or resides, or is an accustomed member of the Congregation in any parish church or chapel, is entitled to be registered as what we call a vestryman of the Church. Being so registered he becomes entitled to vote in electing members of the Diocesan Synod, which includes representatives of the parishes, each parish church and congregation is entitled to be represented by every clergyman who is either beneficed or licensed in it, and by two laymen for each of those clergymen, and those two laymen are elected by all the males who have signed the declaration. I myself was at first—in 1871—the representative of a little country parish; I am now a representative of a Dublin parish; my present constituency is about 1,100; my original constituency was about thirty. They vary, of course, in size, but the number of lay representatives is regulated entirely by the number of clergy. There are two laymen for every one clergyman in the Diocesan Synod. These meet once a year, and by the fifth chapter of our constitution they elect Diocesan representatives to the General Synod. The General Synod consists of 416 laymen and 208 clerics, and these are divided amongst the thirteen dioceses of Ireland in a compound and more or less complicated proportion to the numbers of clergy and the numbers of laity in the various places. Where the laity are very numerous and the clergy are comparatively few, the clerical representation is limited, but there are places where the clergy are numerous and the laity are comparatively few, and there the clerical representation is larger, but between the two the whole House of Repre-

representatives consists of 624 members. It will, perhaps, give you an idea of the way the thing works if I tell you that the Dublin Diocesan Synod, for example, consists of about 780 people, one-third of that number are clergy, and there are two-thirds of laymen added to them, which make a Synod of 780 persons, and this Synod very frequently occupies a much larger amount of what I may call the newspaper attention of the public than the General Synod, which is the Governing Body. These 780 people are represented in the General Synod by twenty-nine clergy and fifty laymen, each order electing its own representatives, who are elected every three years. I may say that ever since 1885, at these triennial elections, my fellow-churchmen in Dublin have always put me at the head of the list. I was not in the Convention nor in the General Synod of 1871, because I then believed that the Church would be better without its connection with the State, and I never had anything to do with its affairs until after it became independent.

Now, I have to call your attention to the way in which the work is done, particularly with reference to the matters with which you will have to deal—that is to say, who are the people who are really charged with and have the power of dealing with the education and the doctrine and the conduct of the clergy, and what are the limits of their power. The Synod consists of two houses, which sit together. "The General Synod shall consist of two Houses, namely, the House of Bishops and the House of Representatives, but both Houses shall sit together in full Synod for deliberation and the transaction of business," except in certain cases with which we need not trouble. The House of Bishops consists of all the Archbishops and Bishops for the time being. The House of Representatives consists of 208 representatives of the clergy and 416 representatives of the laity. These are elected by the clerical members and the lay members respectively of the Diocesan Synods. Neither order has anything to do with the electing of the representatives of the other order for the General Synod, and the Dean has for many years, I think, even before he was a Dean, been one of those who have been elected by his clerical brethren in the diocese of Dublin exactly as I have been by the laity. When we so meet, with the Bishops on the bench in full deliberation with us, there is a provision that if at any time the Bishops express a wish to consider separately any matter in debate the further discussion of that matter shall be postponed until the Bishops shall have had an opportunity of so doing. The Bishops shall vote separately from the representatives, and no question shall be deemed to be carried unless there be in its favour a majority of the Bishops present, if they desire to vote, and a majority of the clerical and lay representatives present voting conjointly or by orders; provided always that if a question affirmed by a majority of the clerical and lay representatives, but in favour of which there shall not be a majority of Bishops, shall be re-affirmed at the next ordinary session of the General Synod by not less than two-thirds of the clerical and lay members voting conjointly or by orders, it shall be deemed to be carried unless it be negatived by not less than two-thirds of the then entire existing order of Bishops, the said two-thirds being present and voting and giving their reasons in writing. Accordingly, you see, nothing can pass the General Synod unless it has in its favour a majority of both orders, and unless, in the case of a difference of opinion with the Bishops, it has been re-affirmed, and then not negatived by at least two-thirds of the Bishops. It is on the analogy of that provision, I have no doubt, that our Bishops have desired to be represented separately before you; and I have given you this explanation because I wanted you to understand that it is no indication of any difference of opinion amongst us, but in the exercise of their own constitutional right, that we do not appear with them. Then there is another very important provision, that members of the House of Representatives shall always vote together, unless on a division being called, a division by orders is asked for by not less than ten people. If that is done, there must be a division by orders; therefore each order has a veto upon the other. It is a most remarkable proof of the working of this Constitution that, although we have revised the Canons and Liturgy of the Church, and although for a period of ten years there was a most bitter division of opinion, and constant debate, upon all the smallest details of business of that

kind, the last time that the General Synod of the Church of Ireland called for a division by orders was in the year 1894. We have never divided by orders since, and the last division by orders that was asked for was on the question whether one of the Canons should be further revised, and it was negatived—my impression being that it was negatived by a majority of each order—and we have never acted upon that power since.

I ask you, therefore, to remember that our Bishops are independent; they have their own powers, and they are a House by themselves. Our Orders also are independent, and they can each of them have a veto upon the other. Therefore, you are dealing with a body which has three orders of legislators in it, and the legislative authority of the Church is of a character by which it is impossible that any change of doctrine, or of ritual, or anything of that sort, can ever be brought about except with the concurrence of the three orders. There is another very strong provision—that nothing relating to doctrine or to ritual can be passed, in the way of change, unless it is first brought in by resolution in one session, and then passed as a statute in the next, and also unless it is passed by a two-thirds majority, in the case of a vote by orders being asked for, of each of the orders of the Church. There was a considerable body of laymen who were at first very anxious to make a great many changes, and there were, on the other hand, some clergy who were very anxious to make none; and, I may add, that the work was finished with the result I have pointed out about 1881.

I now come to the Statement, which is in a sense my brief, and I would ask your particular attention to the prayer. It is divided into several parts. The first part is with reference to the connection between the Church and the University; the second is to establish the proposition that the connection has been beneficial to both the one and the other; the third is to point out the anomalous condition of the present Governing Body of the Divinity School; and, lastly, what we propose by way of reforms. Then, to sum up:—We first ask that this connection shall be continued. Then, in order that the administration of the School may be carried on in a manner satisfactory to the Church of Ireland in future, we ask that the government of the School be transferred to a new Academic Body in communion with the Church of Ireland, and including persons of recognised authority as Theologians, with some representatives of the Episcopal Bench. I ask you to remember what Trinity College is. It is a school qualifying those who go through it for admission to the profession of the Church, and under the propositions I have read from our Declaration of Independence, the Episcopal authority is the only authority by which any person can be admitted to Orders in the Church. We are as strictly an Episcopal Church as any other Church on the face of the earth, our Ordinal is identical with that of the Church of England, and we have bound ourselves by contract to maintain inviolate the three orders of Bishops, priests, and deacons.

2254. But are not the function of the School admitting to Orders, and the function of the School admitting to a degree to be considered separately, and is not the latter the only one which is academic?—With regard to the Faculty of Theology and the power of giving Degrees, that may be so. But the Divinity School in the University of Dublin—I am going to give you facts to show it—is a training school for the education of the Clergy; I will show you for whom and for how many in a few moments. The object of the Divinity Testimonium is as a qualification for Orders, and it is accepted by the Bishops not only of our Church, but of the English Church also. The Bishops will be able to tell you more than I can about this, but it is really as a qualification for admission to Orders that the Divinity Testimonium is sought, and the point which I am anxious to make at present is that, when we ask for this new Governing Body, we wish to have recognised authorities as theologians upon it. We hold that it ought to be a School of Scientific Theology, but in addition to that, that there should be some representation of the Bishops upon it, because, unless the Bishops are satisfied, the qualification will not be of any use to the man who gets it. Unless it is a Testimonium which carries with it, as it does at the present time, admission by the English Bishops, as well as by Irish Bishops, and by Bishops all over the

world, to the sacred profession for which the students are preparing, it will practically be of no use. The third thing we ask is, in the words of the unanimous resolution of the University Council of 18th June, 1879, "That the annual sum at present expended on the Divinity School of Trinity College be secured for the permanent endowment of that School." We hold that the money which has been used ever since the foundation of the College, and many times increased by King's Letter, and used wholly for that particular department of the University's work, is money "enjoyed" by the Members of our Church, and, by the spirit of the Church Act, is held on trust for us.

2255. Are you speaking of the general funds?—Of whatever funds of Trinity College are at present expended in teaching and in maintaining the Divinity School.

2556. On special trusts?—There are plenty of private endowments; I am not troubling about them. But the cost of such part of the work of the Divinity School as is at present paid for out of College funds, we contend ought to be kept to its present purpose. We have a claim which would be, I think, a valid claim for compensation if that was disturbed, but we are struggling to maintain the connection, and so long as the connection is maintained and the work done, we make no claim at all.

It is going out of my line of argument, but I may as well deal with one personal matter now. I believe you have received a communication from Mr. Knox in this connection, referring to a passage in our Statement to which he took exception.* He took exception to that passage as being an abandonment of a claim which he thought we ought to have put forward against the College. Perhaps you will kindly look at the Statement—page 83.† Having regard to the prayer, I cannot read the passage to which he objects as being capable of bearing that meaning. This is the passage in question:—"Before we pass on to urge the importance of maintaining unimpaired the ancient connection between Church and College, we would remark that in the event (*which we should deplore*) of this connection being severed, and of the consequent redistribution of College revenues, it would be unjust if the Church which has aided in so many ways to build up the reputation, and the financial resources, of Trinity College were not treated with liberality, and held entitled to full compensation for any diversion of the funds which were originally intended in large measure for her special benefit." We say further:—"Even when Mr. Gladstone proposed to separate the Theological Faculty from Trinity College (*a proposal which we repudiate*) he not only admitted the claims of the Church of Ireland to have the private endowments of the Divinity School transferred to the Church, but he also urged that the Church should be endowed with fifteen years' purchase of the total annual expenditure upon the School, with £15,000 to be added as compensation for buildings." Then comes the passage to which Mr. Knox's paper refers. After referring to the facts that £372,000 of public money was paid to Maynooth, and that provision was made for the maintenance of the Presbyterian Assembly's College as being more or less precedents, we say:—"If the Divinity School be severed from Trinity College, it, too, in common justice, must be endowed *out of public funds*, for the resources of Trinity College should not be crippled to make good any loss inflicted upon the Church. But we do not desire any severance of the Divinity School from the University; and we go on to point out the importance of the connection between them, in the interest of the University as well as of the Church." The previous paragraph ended as follows:—"On the contrary, we contend that the claim for compensation should be avoided, by permitting the usefulness of the University and of the Divinity School to the members of the Church to continue." Our third prayer is: "That the annual sum at present expended on the Divinity School of Trinity College be secured for the permanent endowment of that School." I have this morning being furnished with "an instruction," which is my reason for bringing this matter in now. The paper is signed by the Lord Archbishop of Dublin, Chairman of my Committee. I personally never heard of Mr. Knox's paper until after it had been sent in, he had not attended any meetings of the Committee, and as far as I know he was not aware of anything that had passed at it. He sent in his paper to you, and forwarded a copy of

it to the Lord Archbishop of Dublin, accompanied by a declaration that he did not think the Statement truly represented the opinion of the Committee. The Committee was called together quite recently, and I have now to read my instruction:—"That it be an instruction to our representatives that the words on page 8 of our Statement, viz., that the resources of Trinity College should not be crippled to make good any loss inflicted upon the Church, cannot, when read in connection with the whole statement, be taken to mean the abandonment of our claim upon the funds now expended on the maintenance of the Divinity School, but only emphasises our strong claim for compensation from public funds in the event of the State, for any reasons of public policy, separating the Divinity School from the University of Dublin.

"We therefore repudiate the charge of having abandoned our claim upon the funds of the Divinity School which, on the contrary, we have reiterated, and we regret that Dr. Knox should have thought it right to make any such charge.

"We also express our strong disapproval of the policy which is apparently recommended in Dr. Knox's letter to the Commission, namely, the separation of the Divinity School from the University as recommended by the Belmore Commission. (Passed and signed, J. F., Dublin, October 11th, 1906." The Dean tells me—he was there and I was not—that the Resolution I have just read was passed unanimously.

Our fourth claim is really only a claim to be left as we are:—"We claim that those whom we represent shall not be deprived of the advantages hitherto enjoyed by them, in an education fitting Ministers of Religion for their calling, and in the degrees which are the appropriate recognition of their attainments." "We claim also that the students of our own Faith, who form the large majority of the present students of the University, shall not be deprived of the ministrations and teaching of their religion, as hitherto provided for them within the walls of Trinity College; and we declare our belief that the exclusion of religion from collegiate teaching and discipline is repugnant to the feelings of the great majority of the educated classes of our countrymen." We at the same time say:—"But we make no exclusive claim, and we shall welcome any provision that can be made for giving to others advantages in the future analogous to those which we have enjoyed in the past. The Governing Body of Trinity College has declared its willingness to co-operate with the authorities of other leading denominations in providing them with facilities for religious education. While welcoming any advance in that direction, we deprecate any attempt to deprive us of advantages which we appreciate, in the vain expectation of diminishing sectarian differences by minimising the influence of religion on University education."

I shall ask leave presently, if you will allow me, to adopt the language of a great Roman Catholic teacher in support of that. Having tried to show you that we are an organised body, that we have doctrines that cannot be changed without the concurrence of all, that we are bound to our Constitution by contract, and that our property is trust property, I should explain, before I go further, that the Representative Church Body, to whom you were good enough to send an invitation to submit a Statement, is represented by this Special Committee. They are a body incorporated under another section of the Church Act; they are really bankers, agents, and trustees of property; they are an incorporated body for the holding of property and the management of business—and right well they have done it; but they have no power to interfere with the General Synod on questions of doctrine or anything of that kind; those are left to the body which I have now explained to you.

I now come to the point of asking this Commission to consider what the work is that this Divinity School has done, and is doing, before you interfere with it. I have prepared three Returns which I will ask you to receive.‡ The first is a Return of the clergy of the Church of Ireland, every man of them; the second is a Return, the purpose of which I will explain, of the clergy holding high office in our Church; and the last is a Return of the clergymen, students or graduates of Trinity College, serving in the Church of England, the Episcopal Church of Scotland, or abroad; that is to say, the clergy who, over and above

* Page 372.

† Appendix to First Report (Cd. 3176), 1906.

‡ Page 362 et seq.

the clergy supplied to our Church, are living by their profession all over the world, through and by means of the Theological education and the Arts education that they received here, which commended them for admission to other branches of the Anglican Church elsewhere. With regard to that, I may say that I have always regarded as by far the chief part of the work of Trinity College, that of enabling Irishmen to make their way through the length and breadth of the world. Before a former Commission I gave a great deal of evidence to show how other classes of our students have succeeded everywhere in proportion to the extent to which they succeeded here; I think Sir Edward Fry will remember when we had at least five Judges on the English Bench; I cannot tell exactly how many we have at the present time, but we have certainly got the Master of the Rolls. Irish medical men, and the men who have attained high distinction in other callings, all starting from Trinity College, are countless.

As to the first Return, I am not going into details, but I will read the headings, and you will see it in print. It is divided into dioceses, giving a classification of the clergy for the purpose I have mentioned, and comprising all the existing clergy of the Church of Ireland. By "existing" I mean those who appear in Crockford's Clerical Directory, which is actually corrected by the men themselves, and our corresponding Irish book, which I have here, which contains not only all our clergy, but also the posts they hold, and the dates of their ordination, but it does not give their education as fully as "Crockford" does. The Return shows the number and proportion of students and graduates of Trinity College, Dublin, and the number of Fellows, Scholars, Moderators, and Electors; also the number of students and graduates of other Colleges and Universities, and the number of literates. I have used the word "literate" to mean clergy as to whom I cannot find that they have ever had any collegiate or university education. I am afraid that in England it means those who have been to some college, but not to a university.

2257. It seems to imply that a man who has been to a university is an illiterate?—It is a complimentary word to justify a Bishop in ordaining him. I do not know how far these facts have been given you already, but I will give you a summary of what you will find in the Return. There are at present—I have taken the figures of 1905-6, but the few men who have died since are made up for by those since admitted—1,676 Clergymen on the staff of the Irish Church, including thirteen working Bishops, one retired Bishop, 1,143 incumbents—each incumbent substantially represents a parish; we cover the whole country; not an inch is left unparochial by our Church—344 curates, 83 diocesan and general clergy (those are clergy that I could not put to any particular diocese), and 93 who are either chaplains not connected exactly with the machinery of the Church but still living as chaplains, or retired clergy. The very last act of our Synod last session was adding to our constitution a very elaborate provision for the superannuation of our clergy; we had a temporary scheme before, but we have been completing it from time to time, and we have a very well-arranged system now, so that now we have some retired clergy. That makes a total of 1,676. In order that the Lord Chief Baron may not take me off on a small point, I have put in a column headed "Trinity College," and I have included both those who have taken degrees, and those who have not. When I speak of "Trinity College Clergy," I will do my best to discriminate between them afterwards, but I have included all who have got either their Arts or their Divinity education in the College, whether they have gone the full length of getting a degree in either or both or not.

2258. But in the case of Divinity School students they have got their Testimonium?—I am giving as far as I can the number of them; but in order to prevent your thinking that I am overstating the case I am explaining that the "Trinity College" number includes those who were either wholly or partially educated in Trinity College, either in Arts or in Divinity, or in both. Out of the 1,676 there are 1,411 Trinity College men. Of those working we have only forty-three Queen's University or Royal University

men; we have twenty-six from Oxford, thirty-one from Cambridge; thirty-four from Durham; nine from London; one from Glasgow; four from Colonial Universities, and three from foreign Universities. The foreign Universities from which four come are in the United States. These make altogether, in addition to the 1,411, 151 University men, and these are all graduates, so far as I could make out. That makes 1,562 out of 1,676 whom I claim as University men, subject only to the qualification that I may have to make afterwards as to some not having taken degrees. Next comes a class which I have headed "Collegiate," and the numbers from various colleges, of which I had better mention the names. They are: St. Aidan's, St. Bee's, Chichester College (which is a Bishop's Theological College), Lincoln (which is exactly the same), the Church Missionary Society's College in Islington, Bishop Wilson's College in the Isle of Man, Lampeter (which supplies a large proportion of the Welsh clergy), the Methodist College in Belfast, Colonial Colleges, and foreign Colleges. The numbers are: St. Aidan, thirty; St. Bee, thirty-one; Chichester, one; Lincoln, one; the Church Missionary College, one; Wilson College, Isle of Man, two; Lampeter, one; the Methodist College, Belfast, two; six from the Colonies, most of whom are from Australia; and one from a foreign College. The result is that of the 1,676 Irish clergy, there are only thirty-eight who are non-University literates. Ninety-three per cent. of our clergy are University men, and 84 per cent. are Trinity College men. We do not want to be self-righteous, but I believe that probably no other Episcopal Church on the face of the earth has anything like it, and I can certainly say with regard to England that it has not, because a large proportion of the English Clergy, although the vast majority are Oxford and Cambridge men, have had only a collegiate course, and I have given you our collegiate clergy separately in order that you may judge what the education of our Clergy is.

2259. When you speak of colleges, those are Theological Colleges, are they not—they are not colleges of a general nature?—I have given the names. They are non-university colleges, and they are colleges only of a divinity kind. They are practically what our Church would have if we were separated from Trinity College.

2260. But they really give instruction in Arts to candidates whose general education is defective when they go there?—They only work them up to be good enough to be ordained. They are exactly what, on severing the connection between Trinity College Divinity School and the Church of Ireland, would be the only sort of School that the Church could maintain. I do not think it could maintain it, but that is a detail. These colleges, of whose students we have in our Church only 76, are of the type of the General Assembly's College, Belfast, or, I might say, though in a very different sense, of St. Patrick's College, Maynooth. They are Denominational Seminaries, and that only, with no doubt the ancillary duty of seeing that the general education of the candidates for Ordination is sufficient to bear the theological finish.

The next return which I have prepared was the foundation of an argument which I presented to the Robertson Commission, namely, that the experience of anyone who knows this place is that going through Trinity College is the passport to success no matter where you are going. I have taken every diocese in Ireland, taking the archbishop or bishop as the case may be, the dean, and the archdeacon, and all the canons and cathedral clergy, including minor canons, because they are generally gentlemen who are selected from their having peculiar qualifications and claims upon those who appoint them; they are appointed by the archbishop or dean as the case may be; therefore, they are selected clergy. To them I have added two other classes. We have an institution here which I will explain in a moment. We have two cathedrals in Dublin. The origin of the two cathedrals goes back to the endeavour of the Irish to keep their own constitution in Christ Church. When the Normans sent Nicolas Comyn to be Archbishop of Dublin he did not like our "liberties," and he got authority to have an ultramontane constitution given to the Collegiate Church of St. Patrick outside the walls.

Until after disestablishment the Dean of Christ Church was the Archbishop of Dublin. The last Irish Archbishop was St. Laurence O'Toole, who was the head of his chapter whenever he was there, and our Archbishop until disestablishment took his place. (*Dean Bernard*).—For 300 years the Dean of Dublin was Dean of St. Patrick's. (*Lord Justice FitzGibbon*).—The Normans first made him so. But I want to tell you about St. Patrick's Cathedral as it is now. We were not able to keep up two Cathedrals in the diocese of Dublin when disestablishment came, but we were determined not to give up any, and St. Patrick's became a "National Cathedral" on this basis: it was formed as a cathedral, the episcopal tenants of which are all the archbishops and bishops of the Church; the Ordinary is the Archbishop of Dublin, and the Dean practically is head of it. Each diocese appoints one canon, which makes thirteen; thirteen other canons are appointed more or less in the ordinary way. It is a great distinction to become a Canon of St. Patrick's, and thirteen canons are actually elected by the Synods of the thirteen dioceses, who always give the appointment to a distinguished clergyman. Accordingly, I think that those who hold these offices ought to be included in this classification. Twelve of them are included already, because they were dignitaries in their own dioceses before they were elected to the National Cathedral. I have included eleven of these as prebendaries and seven canons. Lastly, I have put in one more class which may be taken as a class of honour—the chaplains to the Lord Lieutenant. There are sixteen chaplains to the Lord Lieutenant who are not included in the dignitaries previously enumerated, and I have added those also.

Here is the summary of that return. Of "Higher Clergy" there are 290 in the Church; 266 are Trinity College men; there is one left as a specimen from the Royal University; there are five from Oxford; there are eight from Cambridge; there is one from Durham; there remain of the "collegiates" one gentleman from Lincoln College, and one of the Colonials, and no more. There are among the higher clergy seven of the thirty-eight non-university or college men, and I will say a word about those in a moment. What are the percentages? Of all the clergy 93 per cent. are university men; of the higher clergy 96 per cent. Of all the clergy 86 per cent. are Trinity College men; of the higher clergy 91 per cent. So that the percentage of the higher clergy above that of all the clergy is three in university men, and seven in Trinity College men.

How do these men reach their places? Since 1869 there have been thirty-two appointments of archbishops and bishops, including translations. The way the bishops are appointed is this. The Diocesan Synod nominates the bishop; they have to prepare a select list containing at least two names, and provided two-thirds of the clergy and two-thirds of the laity in the Diocesan Synod—that is the big gathering in which there are 780 members in the diocese of Dublin—have agreed, the person they nominate will be consecrated by the archbishops or bishops, provided there is no good cause to the contrary. Of course there is no pretence that a man could be forced on the bishops if they did not choose to take him. With the single exception of the translation of the Bishop of Derry to the Primacy, when the Church honoured itself by putting Bishop Alexander at its head, the prelate appointed has in every case been a graduate of Trinity College, Dublin. All the deans and all the archdeacons are, without exception, Trinity College men. Therefore, the only figure in regard to which there seems to be any need for explanation is as to how it is that seven of the thirty-eight literates are dignitaries. I venture to think that the explanation is complete. Of the thirty-eight literates now serving the Church eight were ordained before the Church Act came into force; that is to say, they were ordained during the two years 1869-70. It happens that there is no one earlier than that. Twelve of them were elected in the five years that followed disestablishment, 1871-5; they were ordained at a time when all Church affairs were in the melting-pot, when men did not know really where they were going, or how they could carry on the Church, and during the time when the agitation was going on about the revision of the prayer-book, and during the time also, as you will see when you have the figures before you,

when the Divinity School of Trinity College was tumbling down, during a period of uncertainty and unrest. Only four were ordained in the five years following; it happens that nine were ordained between 1881 and 1885; four more were ordained in 1893; not a single one has been ordained for the last twelve years. That is the whole thirty-eight. There is not a "literate" in the Church of Ireland who is not of more than thirteen years standing. These figures speak for themselves. Therefore you have it that 266 of 1,411 Trinity College men have attained high office, while only fifteen of 151 clergy from other universities, only two of seventy-six collegiates, and seven of thirty-eight non-university literates have done so.

2261. You were saying that there was a falling off in the attendance at the Divinity School. Do you know how the present attendance compares with the attendance before 1869?—The Dean will be able to tell you that. I know in a rough way how it is. There was a very considerable falling-off during the period of disturbance; the School rose then steadily and rapidly, and I believe it reached and maintained for a considerable number of years at least as high a position as it had ever held before, and it did this after we had become a voluntary and self-governing Church. I believe there has been a considerable running down again for some years lately, and I do not know whether it has yet begun to feel the rise of the tide that seems to be coming in other schools. I am inclined to speculate that the disorders in the Church of England have had a good deal to do with the present falling-off, and that when they put their house in order, it will have exactly the same result that we have had, and confidence in the clergy will be restored, and the Divinity School will rise again. But that is a speculation. There is a fact I ought to mention. Our provision for our clergy is a great deal better than the provision in England for the average man. Poor as we are as a kingdom, the average payment to the Irish clergy is considerably larger than the average payment to the English clergy, and we have no parishes supplied, as they are in England, by men who have made money as schoolmasters and otherwise, and we do not ask oftener than we can help, when a man's name is mentioned, whether he has private means to enable him to do the work. What is more, the best paid of our clergy are in the places where we are comparatively few. We do not find it as easy to get Church contributions from the people in the North as we do from the others in the South. But we are not peculiar in that respect. Every institution that has to collect money knows that it is hard to get it from North of the Boyne as compared with the South.

There is one more feature I must point out. You will find in the first Return the percentages of University men of the various classes of the clergy, and I think they are important. The lowest percentage of all is that of the Incumbents. There are only 90 per cent. of the Incumbents who are university men, and only 81 per cent. who are Trinity College men. Now, the way in which Incumbents are appointed is important. When a parish falls vacant there must be in office to provide for the event, three men who are called parochial nominators. The whole body of the registered vestrymen of the parish, once every three years, elect three of their body—laymen they must be—to represent them. Every diocesan synod, when it first meets, which it does once in three years, elects three more to represent the diocese, two of them must be clergy and one a layman. In some dioceses they are elected by orders; there is an option; but usually they are elected by the conjoint vote of both orders. Since 1893, when I succeeded the first person who had been appointed—Mr. Alexander Hamilton—I have held office as the sole lay nominator for the Diocese of Dublin, and two clerical colleagues are elected with me. At the board of nomination the Bishop always presides. There are certain regulations; we are not to make the appointment at the first meeting, the claims of all the clergy of the diocese must be considered, and matters of that sort; but during the time I have held the office, the first question, when we have been discussing a man, has been, "What is the educational position of the clergyman?" and if he is a Trinity College man it is a recommendation. Well, then, if this body votes four to three, the appointment is made, because the Board can appoint. But never during my experience has there

been a vote of the four laymen against the three clericals, nor has there been a vote in which the three parochial nominators, if they were unanimous, were not joined by sufficient of the others to make a majority—there has never been an election, in my time in Dublin, against the unanimous vote of the three parochial nominators. The Archbishop, in every case, advises the Board of Nomination. I think it is a proof of the relations between us, though the Archbishop's word is by no means law, that it has never gone against us to the extent of disapproving of the man agreed upon. I am quite sure that the reason of the higher percentage of "literate" and "collegiate" among the Incumbents, is the same that I have already given about the higher clergy—viz., that there was a larger number of them in the Church at the time of disestablishment than there is now, and I think that is shown by the next figure, that of the curates. The curates are appointed by the incumbents; the laity have nothing to do with it. Out of 344 curates, 306 are Trinity College men; there are 98 per cent. of university men, and, of those 98, 89 are Trinity College men. Therefore you will find that we are very determined on getting the university qualification, and liberal about Oxford and Cambridge as compared with other places. I think those are very striking figures. I need not trouble you about chaplains and retired clergy. I give you those figures for the purpose of showing that, no matter what form of election you take, whether that of the Bishops, or that of the Incumbents, or that of the curates, in every case the Trinity College qualification comes in as a large factor.

I doubt whether the point to which I have next to direct your attention has been brought before you at all. Even the Provost, although he mentioned it, appears to me by no means aware of the truth about it. He says: "It has always been the Divinity School of Trinity College, and it has educated clergymen for the Anglican Church all over the world, as well as for the Church of Ireland." He brings this in as an incidental statement, which may be more or less important, but not, so to speak, vital. You will observe that in our Statement we put great weight upon this. There is a passage on which I am now going to offer you some evidence. It is at the top of page 84*: "The numbers and the positions of the Clerical Graduates of Dublin University who, having qualified for Holy Orders here, have entered the service of the Anglican Communion in other parts of the Empire, and in Foreign countries, establish the fact that the usefulness of the Divinity School, and the credit which it brings to the University of Dublin, are not confined to Ireland." My Return C, which I will give you, is a Return of the existing clergy of the Church of England and of the Episcopal Church of Scotland serving in Great Britain, India, the Colonies, and foreign countries, being students or graduates of Trinity College, Dublin; and I give you also in each case the number of Scholars and Moderators, and of Bishops, Deans, and archdeacons. I give the number in each diocese in England, to begin with. The Bishop of London has under him 129 Trinity College men; he actually has under him a larger number than the total number of clergy that several of our Irish Bishops have, and I think there are only two who have as many Trinity College men as he has. But it is not confined to the Diocese of London. There are 79 in Manchester, 62 in York, there is not a single English diocese in which there are not double figures; even in Wales, there are 9 in Bangor, 11 in St. Asaph's, 14 in Llandaff, and 3 in St. David's. The upshot of the whole business is that there are 953 in the Province of Canterbury, 366 in the Province of York, 14 in the Episcopal Church of Scotland, and 195 extra-diocesan clergy, navy chaplains, army chaplains, schoolmasters, secretaries and retired clergy, in Great Britain.

2262 How many in Bath and Wells?—In Bath and Wells 42, and five of them are Moderators. We have two even in Sodor and Man. Now, the Colonies and Dependencies: Burmah, Ceylon, Africa, Australasia, and the rest of them, even Hong-Kong and the Falkland Islands, 150. Then foreign countries: America, the United States, 13; South America, Belgium, China, Denmark, Egypt, France, Germany, Italy, Japan, Norway, Persia, Turkey, Russia, Siam, Switzerland, and Portugal, 51 in all. The general summary is this: Ireland, Returns A and B, Trinity

College clergy, 1,411; Great Britain, Return C, 1,528; Colonies and Dependencies, 150; Foreign Countries, 51; total, 3,140. Those are all living men, and when you are asked to separate the Divinity School, and to turn the teaching of these men out of the University of Dublin, I say you are asked to eviscerate the place. I will point out presently what the effect of separation would be—I mean the mere changing of our School from a University School into a denominational School of the Church of Ireland. There are 3,140 men now living under the existing system who have got their positions because they were trained in a University School. I was unable to ascertain precisely how many of these men are graduates, because "Crockford," as you will see, sometimes puts down "T.C.D." after a man's name, but where the clergyman takes a little trouble about it, the details are given. It was rather a piece of work, but I think it was worth the trouble, and here is the result. "It is not possible to ascertain precisely how many of the above-mentioned 3,140 existing clergy who were educated wholly or partly at Trinity College attended the Divinity School, but at least 1,630 appear from Crockford to have taken degrees in Arts and also to have taken degrees in Divinity or obtained the Divinity Testimonium." There are 1,630 out of 3,140 who have completed both their College course to get their Divinity Testimonium, and their University course to get their degree in Arts. There are 30 more who completed their divinity course, that is to say, got their Divinity Testimonium, but not a Degree in Arts, and the Dean will be able to tell you how that happened. A good many of them, I suspect, are men who have been at the Royal University or the Queen's University, and who came here to get the Divinity qualification. (Dean Bernard) That is it. (Lord Justice FitzGibbon) But there are only about 30 of those, and there are at least 1,290 more who were graduates in Arts. If you add those together, there are not more than 190 left, and that is the ultimate area of uncertainty. My own impression is that they mostly came to Trinity for a year or two, or were required, as they sometimes are by our Bishops before they will ordain them, to go to college. But there are 190 of them about whom I cannot tell you for certain. I daresay a good many of them got degrees, but I cannot trace them.

There is one other important point on this question of the effect of severing the connection. We have two Parliamentary representatives elected by 4,762 people. The University register is not reliable; it is difficult to revise it; they have to guess whether people are living or dead. I know that a good many names on it are inaccurate. They have the same difficulty in Oxford and Cambridge. But there are 4,762 on the register. Of those 4,762 there are 2,077 who have the prefix "Rev." to their names, substantially one-half. I have traced the number of those who are included in my Irish Return A; there are 767 only. I tried to make out how many there were in England, but I found it impossible to say more than that there are in England certainly over 1,000. I daresay some gentleman who has stood for the College could tell you pretty accurately how many there are. But the result is plain. There are 2,685 laymen and 2,077 clergy on the College register. I know myself that ten at least of those are Presbyterian clergymen; I know also that there are at least three Methodists, and that one is a Jesuit Father. I have some reason to believe that there may be more, but I know there is one Roman Catholic clergyman, and three Methodists and ten Presbyterians at least, among the 2,077 Clerical electors. You have left to be represented this balance of 3,140 clergy, which substantially represents the work of the Divinity School among living people. I think that is a point not to be forgotten when estimating the value of this connection with the Church, and the extent to which it is going into the vitals of the place to touch it. How many Divinity Students would proceed to the Master's Degree if they had to pay for their Theological training besides? What would be the effect on the College of cutting off half the constituency? It may be said that we could get on very well if we had a school of our own, and that the Bishops might impose the condition that the clergy should be educated in Trinity College, although they got their Divinity qualification in a Theological Seminary. As a

layman, I am satisfied that even changing the name of the qualification from being that of a University School to that of a denominational Seminary would be destructive of any prospect of getting it recognised abroad or in England, and I greatly fear that it would damage it very much in Ireland. I doubt very much, having regard to the general opinion of the English Bishops as to the character of the Protestantism that we have in our Church, that there are many of them who would be as willing to ordain men who had the name of being educated under the General Synod, though they all take, and are glad to get, clergymen who have been educated in the University of Dublin.

I ask another question. At present every young man we get is tempted to join the clerical profession by its prospects, and these figures show that the prospect of a young clergyman getting ordained is only two-fifths Irish; it is 1,411 out of 3,140. There are 1,411 of the existing clergy employed in Ireland; the rest of the 3,140 are employed elsewhere; that gives the Irish chance of employment at two-fifths. The profession, therefore, on which each Trinity College student enters on his ordination is one in which his chances are two in Ireland and three elsewhere. Of these 3,140 men, 189 have been Scholars of Trinity College, 298 have been Moderators, 22 are Bishops, including a suffragan Bishop in England (it is not very long ago that we had an Archbishop of York); 38 are deans, and 40 are archdeacons. I say that the moment the temptation to enter the Divinity School, by reason of its offering an entrance into the great profession of the Anglican Church all over the world, is narrowed down to the Irish horizon, the immediate result will be to degrade the class of men who will come into the Irish Church. And what will be the effect on the Standard of education in this place? We point out in our Statement (page 84, Par. ii. (a.) that it will withdraw a class of men who at present are largely contributing to promote Philosophical, Classical, and Literary studies in the University. What would be the effect if all these scholars and moderators had to spend their time in a Theological Seminary, and were withdrawn to any extent from their College courses? It would be to diminish the competition in this place, and it would also diminish the number of men going to the profession which of all others gives them the best chance of following out their University education to the end. I do not want to say a word against technical education or against scientific education, but the whole body of classical men and of literary men will be diminished, and largely diminished, by anything that tends to diminish the number of clerical students, and to prevent their qualification for Holy Orders from being a University qualification will diminish the number, and lower the class of the Divinity Students, and I think it will take away from the College many of the people who have been from its foundation its chief support. These are very striking numbers if you work them out. If you think that out of 3,140, 298, or practically 300 were Moderators, and then take the general average of Moderators, you will see that the Divinity students have done far more than their share.

I should like to say a word on another view of the subject. There is a passage in this Statement, of which the original idea is Episcopal, for three Bishops drafted it, which goes to the bottom of the whole theory. We claim that this connection is advantageous for this reason: "It is essential to the well-being of the Church that she should have a learned Clergy, who have received a liberal education along with Laymen, in the free atmosphere of a great University, who know what laymen are thinking about, who are abreast of the philosophical and scientific movements of the day, and who have learnt to tolerate and respect the religious opinions of those who differ from them. In our judgment, the high culture and the open air of a University are better for our teachers than the close atmosphere of a Theological College. We therefore protest against any attempt to deprive our clergy of that liberal education which they have enjoyed for three centuries, and which it was one of the main purposes of the founders of the University of Dublin to supply." I do not care how completely you provide for the effective teaching of the students in a Divinity School that is under the Church, as distinct from under the University, it will be impossible to maintain the same close connection and the same

intimacy of University life as if it was within the walls of the College. You may, no doubt, reduce the change, but the change will be great, even if it is just outside the door. The Methodist College and the General Assembly's College, in Belfast, are both within two or three minutes walk of the Queen's College, in which the clergy of those branches of the Protestant faith receive their education, and no one who knows the difference between the association between students in those institutions, and the association there has always been between laymen and clergymen in this place can, for a moment, suggest that the relations are at all alike. The Provost referred to sports, but I would refer to a more serious proof of the community which has existed between our students here. There is not a list in the history of the University so remarkable as that of the auditors of the College Historical Society. That is a list of men elected one by one each year by members of that great society, and, referring now to the clergy alone, between 1843 and 1892 what is the first name? William Connor Magee, scholar and Archbishop of York. Then there is Dean Dickinson, several reverend authors, one of the most remarkable parish clergymen in England, the Bishop of Derry, Canons of Worcester and of Christchurch, and some Irish incumbents besides. There is another society in which you would naturally expect them to be more largely represented, the Philosophical Society, and it contains the names of a great many students who became distinguished clergymen, including the Bishop of Ossory, whom you will see to-day. These are matters in which the students speak by electing men with whom they are living on the best of terms, and the Divinity School men are most largely represented over a period of years. When a man gets old he looks back seriously on things which did not strike him at the time. I owe everything in the world to Trinity College, and I can see now that the relations that existed here with these Divinity students were most beneficial in their effects in forming the character of the men. The very Bishop I mentioned was an active propagandist of temperance, when Auditor he succeeded in getting the Historical Society to vote for total abstinence. I remember he carried it by a majority of one, and I fear the moral effect was weakened by the fact that this result was due to the arrival at the critical moment of two young gentlemen from the Law School who had dined not wisely but too well. But he fought for two years with all the vigour of a missionary, and did a great deal of good when he was here; and he was only one of several. The habit of contributing money to charities, with myself and many others, began with the missionary efforts of a now distinguished dignitary, who would never allow us to go in for an Honour examination without giving a presentation to some of these "for luck." All these matters may seem somewhat small, but there is no doubt about it the presence of the Divinity School here, and of these young men being, as they are, integral parts of the general body of students, is an extremely good thing for the laymen, and it is largely to their influence that this Church of ours, which is, I suppose, the most democratic Church on the face of the earth, works so well. I have read to you our Constitution for the purpose of showing you how all this work has to be done by a deliberative assembly, sitting together, voting together, debating together, and fighting together whenever it is necessary; and I say without hesitation that the result of the last thirty-seven years' work, since 1869, has been that the process of natural selection of the clergy of our Church has been worked out by the young men who get into the Diocesan Synods having to fight their own corners, and to argue their own points; and not only have life-long friendships been formed between the lay and clerical members of my Church by reason of the associations that commenced here, but also those very associations have been productive of peace and harmony among all who have been engaged in work in which the Church was most vitally concerned. I hold that to sever this connection, or to in any way weaken it, is, in the first place, to damage the Church—fatally I am afraid—but beyond all doubt it would, I think, also greatly injure the University itself. I cannot claim to represent the feelings of the University; I am here to speak for the Church alone, and in that capacity I cannot use any language too strong to express what I hold as an article of belief—that all our future work, as well as our past success, is due most largely to the absolute identity of life between the Divinity and other students of this College.

I should like to ask, who wants a change? I know

only two quarters from which the suggestion has come to you; one of these is a great friend of my own, and a very eminent civil engineer. He, as far as I can make out, would like to try the experiment, and in so doing, I am sure he only seeks to do good; but there is no reason to suppose that he has any mandate on the matter, or that his opinion is any better than that of anyone else. I suppose the suggestion is that the expulsion of the Divinity School would bring in some people who are not here now. I would ask you to look to the only opinion that we have as yet got of what I would call the educational authorities in the Roman Catholic Church (I presume the Bishops will give you their opinion upon this matter, and it is very important that you should have it), and that opinion shows that the Roman Catholics do not want religion to be a mere department of University education. The President of the Milltown Park College, Dublin, says, at page 123*—"They are anxious that religion shall be a continuous influence, permeating, so far as may be, their whole training. They claim, too, a complete freedom in the ordering of their religious teaching and of their religious exercises." Further on he says:—"To secure all this in Trinity College, as it exists at present, seems quite impossible"; and he then points out what might be done—and what does he say? "And this would mean the utter destruction of Trinity College." Is that true? If so, does he want this thing done? The more you withdraw religion from intimate connection with the teaching given in this place, with a view to extending the usefulness of the place by bringing in a larger proportion of Roman Catholics, the more you make it unlike the only thing that could satisfy them. At our Tercentary, in the last of the wonderful speeches made by the late Provost, Dr. Salmon, which was made at the closing ceremony, he began by returning his thanks to two very different people. The first was the Lord Mayor of Dublin—as representing the citizens—for the reception that had been given to Trinity College men and Trinity College as an institution, in its public processions and public ceremonies in the streets.

He next expressed his "gratitude to His Grace the Roman Catholic Archbishop of Dublin, who rightly felt that, whatever our differences may be, he was in perfect sympathy with us in remembering that we were a Religious Foundation, and that our thanks were due in the first place, as we rendered them, to the Almighty God Who had supported us in the three hundred years past, and to Whom we look for our support in days to come." (*Tercentary Record*, p. 152.)

You can refer to the speech for yourselves, and you can see the feeling of the Roman Catholic *ecclesia* as to the separation of the teaching of religion from the University. The President of Milltown Park College goes on to say*—"A scheme might be put forward which should appear to lessen, in some degree, the Catholic objections to it, while still preserving its Protestant atmosphere." Catholics might obtain representation on its Governing Body." Note, however, what he says in a line or two further on:—"But these and such like measures could never render Trinity even tolerable to Irish Catholics." Then he says again: "Catholics, as such, have no wish to destroy Trinity College. They would not, I think, lessen its distinctively religious character. If Irish Protestants wish to retain it as it is, or with such improvements as changed educational ideals may seem to call for, Catholics will raise no objection. We do not seek to pull down, but to build up; and we recognise that to make Trinity College a suitable institution for the Higher Education of our children, it should be pulled down utterly, and rebuilt on wholly different lines." I am anxious to keep the case of the Church wholly separate from any general question. I have told you already you may do what you like—we make no exclusive claim, and therefore it is not material for me to say more than this: that every step you take to weaken the connection of religion with Trinity College is a step further away from bringing in the Roman Catholics.

The only other claim put forward for separation is the Presbyterian claim, and I may perhaps be allowed to give you roughly a figure or two about that. What are you to gain? There is a condition of Irish life which can only be realised by people who have studied it. That is the distribution of our population. There are altogether in Ire-

land 581,089 (I am now taking the figures of the last Census) members of the Church of Ireland. There are 443,276 Presbyterians, and 62,006 Methodists. Where are they? Of the 443,276 Presbyterians, 425,526 are in Ulster alone, and most of them are in four whole counties and two halves. Outside Ulster there are only, altogether, 17,750 Presbyterians, and there are 14,634 Methodists. I see Dr. Evans, the representative of the Methodists, tells you (p. 144)† they do not want our School expelled at all, but that they want to have a separate Theological Faculty to be constituted for the Methodist Church. Therefore you are to set off the 14,634 Methodists of Leinster, Munster, and Connaught against the 17,750 Presbyterians outside Ulster, on this question. Now, what about the 425,000 odd in Ulster? I am sorry to speak hardly of any proposition put forward by a body such as the Presbyterians, but I must call your attention to what their claim was, as they put it in the communication to the Board which you will find in the Appendix to our Statement (p. 102).‡ The Board, you may remember, in 1903, made an offer both to the Roman Catholics and to the Presbyterians, and here is the answer of the Presbyterians (page 102):—"That in regard to the permission offered by the Board to the members of the Presbyterian Church to establish a Divinity School and Chapel inside Trinity College, which, it may be noted, does not include any proposal for Incorporation," (I do not know what they meant by that—there was no power to incorporate.) "The Committee regret that they cannot recommend the acceptance by the General Assembly of this offer. The Presbyterian Church is in possession of sufficient equipment for Ministerial Training in her Theological Colleges in Belfast and Londonderry." There is a categorical statement that they have got all they want, and I point out that 425,000 out of their 443,000 have got it at their own doors. Therefore the people who are speaking here have already got all that they want. What do they say? "To found an additional College in Dublin might well be needless as well as a difficult and expensive undertaking." I quite agree, if it is for Presbyterian purposes; but they go on—"Further, it is the opinion of the Committee that the *equal treatment* which the Board has in view would be attained most satisfactorily, not by inviting the other Churches to establish new, unnecessary, and antagonistic Schools of Theology within Trinity College but by removing the Theological School already in existence there, and in this way vindicating the non-sectarian character of the College." That is to say, having got what we want, we want you to make your place non-sectarian by taking away from the Church people what they have got, leaving them nothing; and they put in the word "unnecessary," although the existing School is not only not unnecessary, but is vital, to us. "Further, it seems to the Committee that if such a policy, which is in line with a great deal of the later history of Trinity College, were carried out, the religious oversight of the students ought to be entrusted to Deans of Residence appointed by the different Churches." What does that mean? When I was in College—and I presume that it is so still—the Church students lived as members of an academic family, and we had our own place of worship within the walls. I was not a resident in College, but all Dublin students were under exactly the same regulations with regard to that, as with regard to everything else. I challenge contradiction upon this—that no Dean of Residence coming to look up a young man in his lodgings could replace the student's living where he would have his own services in his own chapel, his own Catechetical instruction, and his own teaching in Theology; and that that was the opinion of Presbyterians in my College days, as well as of everyone else, I have no doubt at all. I tried to get a good many things in College, but the only thing I failed to get at the first shot was an Honour in the Catechetical Course, because the Presbyterians who competed for it knew their Bibles better than I did, although I did get it in the end. But who can believe that putting a number of young men under a Dean of Residence is any efficient substitute for living where the principles of religion, and the practices of religious duty, are part of what the students learn from day to day? That such a paper as that could have come from anybody professing to be a member of a religious organisation I am the more sorry, because my mother was a Presbyterian, and my father's

mother was the daughter of a Covenanting refugee from Culloden, and for their honour be it spoken I do not know of any Scotch University or College which has not got its Chapel and its religious teaching, and I do not doubt that Scotch parents think none the less strongly about bringing up their children in religious practices than we do. I go farther; I do not think any father would care to send his son to a school unless there were some provision for religious practices and teaching, and I know that there is nothing that is so frequently, in my own Church, regarded as satisfactory as that the head of the school is a clergyman, or, if not that, that there are arrangements by which the oversight of the pupils shall be entrusted to a clergyman. And is that to stop when a young man comes to be a University student? That seems to me to be the very time of life when it is most necessary that it should not stop.

Almost the whole of the higher education of the Roman Catholic Church is in the hands of the regular clergy. The Roman Catholics have Diocesan Seminaries, but will you please bear in mind (the Chief Baron will, I am sure, correct me if I am wrong in this), that these seminaries have become mainly places for the earlier education of priests to be finished at Maynooth, while the education of the same class of laymen for whom Trinity College provides its teaching is altogether in the hands of the regular clergy. What would any one of them think of a College in which there was no Chapel, and no service, and nothing similar to what we have here?

2263. You would not object, I suppose, to the appointment of Deans of Residence for the various sects, provided the Chapel and the Divinity School were connected still with the College?—Certainly not, but I think it would be unnecessary for Church students, for this reason—that unless they have changed the practice since I was there, I do not know that there would be any duty for a Dean of Residence over and above what was performed in the College itself. I believe the rules are the same still, but in my day we had to attend Chapel once or twice a week, and on Sundays, of course, we always had to attend. Those living with their own families would not want a Dean of Residence, but in the case of men lodging out there might be a Dean of Residence, though I don't expect he would often find the student "at home." I see in these papers that there has never been any question about the willingness of the College to do that; but at the same time, I cannot hold a Dean of Residence to be any equivalent for the provision of religious education, and above all for the regular observance of religious duties.

2264. But you would not object to it as an additional security?—No. I think Mr. Stoney, in his paper,* suggests that provision should be made for students living in College attending some Church outside. I know enough of College life in my day to know that the students went to Chapel in the College, but as for getting anyone to go, or to be sure that they would go, to St. Andrew's Church or to St. Mark's, or anything of that kind, there would have been very little certainty about that. The Catholics were very much better Church-goers than we were, but, anyhow, I do not think it would be at all the same. It is a curious observation—one which is not my own, but with which I thoroughly agree—that at that particular time we never knew any "bad Catholics," although we knew a good many "bad Protestants"; and the feeling of the Protestants was that the Catholics here were more or less on their honour to be straight about their religion. However, that is going into a wider branch of inquiry, and I will say nothing more about it. I do not know that there is very much more that I am anxious to bring before you, except the third branch of the Statement. The Dean will deal with that more fully than I, but it is as regards the present government of the Divinity School.

2265. You are aware, I presume, of what has been proposed by the Provost?—I am. I should like to tell you a little more about that. It seems to have been always conceded that from the time of the passing of Fawcett's Act† the position was rendered anomalous, and was also rendered precarious, to this extent—that whenever circumstances should change so as to bring in those who were not members of the Church, it would be necessary to make some change in the government of the Divinity School. It was

* Appendix to First Report (Cd. 8176), 1906, page 147.

† (36 Vict., c. 21) University of Dublin Tests Act, 1873.

a mere provisional putting off of the evil day. Now, it is a very important thing for the Committee to see the course that was taken by those who were, I think, best qualified to speak about this. The Belmore Commission was followed by bringing in the Belmore Bill.

2266. That you have put in your Appendix?—Yes. That Belmore Bill, before its introduction, so far as I know or believe, was never brought before any large or representative body of people. I do not know precisely where it came from, but I believe myself that it originated with a few of our Bishops, headed by Lord Plunket, and a majority of the Board—a majority of one that was turned into a majority of one the other way within a very short time. It was stated in the papers, p. 87,‡ that it was drafted by the Hon. David Plunket, M.P., for the University, and it was introduced by Lord Belmore and Lord Plunket, who was then Bishop of Meath; but on the same page you will see that the Lord Chancellor of that day, Dr. Ball, gave his opinion, "That the proposal contained in the Bill ought to be submitted to the General Synod, and the Senate of the University." Thereupon the following resolution was submitted by the Divinity School Committee for the consideration of the Synod:—

"That the Synod hereby expresses its earnest desire that the Bill introduced into the House of Lords by Lord Belmore for the future management and control of the Divinity School shall receive the assent of Parliament with as little delay as possible."

That is to say, those who had introduced this Bill submitted to the Synod a cut and dried resolution supporting it; but not only was that resolution never passed, but you will find, again and again, that the Synod would never have anything to do with it, and you will find further that the moment it got to the Senate, it was rejected. The Synod were in rather an awkward position; they had to be courteous to the Bishops, and I think they were; but you will see that they never showed any indication of accepting the Belmore Bill. An amendment was proposed to the effect that it was not advisable, in the opinion of the Synod, that Trinity College should cease to teach Theology to the members of the Church of Ireland. Neither the resolution nor the amendment was passed, and you will find, on page 88, that the debate was adjourned, but on its resumption this resolution was passed:—

"That the Synod requests the Archbishop and Bishops to invite the Board of Trinity College to confer with them on the future management and control of the Divinity School, and to communicate the result of the conference to the Synod as soon as convenient before the close of the present session."

From its form as an invitation to confer with the Board as to the future management you will see that this plainly was a negative of the severing of connection. The terms proposed were that the nomination of Professors and the control of the studies in the Divinity School should be vested in a body acceptable to the Irish Church. These details I am very anxious that you should follow, in view of the Provost's proposals. This was debated on the motion of Dr. Salmon (who was not then Provost), seconded by the Right Hon. William Brooke, Q.C., who was a leading layman of the extreme Evangelical section of the Synod at that time, a resolution which is too long for me to read in its entirety, was unanimously passed on April 26th, 1879, ending:—

"(3.) That the nomination of Professors and the control of the studies in the Divinity School should be vested in a body in which the Church of Ireland can have confidence.

(4.) That the Synod would recognise the Bishops of the Church of Ireland as such a body." (page 88.)

That was passed by the House of Representatives and by both Orders without a division. In the meantime the Senate had been summoned for May 1st, and the Synod (page 88) passed this Resolution:—"That it is inexpedient to decide this question before Friday, May 2nd." The Senate gave it short shrift, for on the 1st May it met to consider the following Grace of the Provost and Senior Fellows:—

"That the University Senate do, at its meeting on the 1st day of May next, consider 'The Divinity

‡ Appendix to First Report (Cd. 8176), 1906 page 87.

School (Church of Ireland) Bill,' and declare its conclusions thereon, and its opinion whether it is expedient and just to the College and the University."

The following was carried as a Preamble, on the motion of Dr. Salmon, seconded by the Archdeacon of Meath:—

"Inasmuch as it appears to the Senate that there are other means by which the connection of the Divinity School with Trinity College can be maintained, and the welfare of the School under the conditions as altered by recent legislation provided for."

That was then prefixed to the previously-moved Resolution:—"That the 'Divinity School (Church of Ireland) Bill' be not accepted." The Senate therefore rejected the Belmore Bill on the express ground that the connection of the Divinity School could be maintained by other means, and that the welfare of the School, under the altered conditions, could be provided for without severing that connection. It then went back to the General Synod, which on May 2nd, 1879 (page 89), resolved:—"That the Synod is of opinion that the Divinity School should retain its connection with Trinity College and with the University of Dublin," as far as was consistent with certain Resolutions which you will find at page 88, and which are very like the Provost's present proposals. Then a meeting of the University Council was held (this is to be found on page 91) on June 4th, and the following Resolution was adopted by the Council:—

"That the Council is of opinion that it is desirable, having regard to its bearing on the welfare of the Faculty of Arts, that there should be a Divinity School in Trinity College, with due provision for its government under the changes which recent legislation has made in the constitution of the College; and that, therefore, the Council does not approve of Lord Belmore's Bill as a settlement of the Trinity College Divinity School question."

The Council also passed another very important Resolution:—

"That it appears to the Council that a satisfactory settlement of the (Divinity School) question can be obtained by following the lines of the Letters Patent, 38 Vict., which established this Council."

The lines of the Letters Patent were the creation of an elected governing body that would represent four classes. I believe the Provost proposes the representation of three classes, and personally I am with him in that. I think that the smaller the number the better, and personally I think nine is an extremely good number, but in my representative capacity I am not instructed to suggest how it should be done. Speaking for myself, however, the Provost's proposals go beyond what we ventured to ask for, when, being anxious to avoid any necessity for applying for a King's Letter or an Act of Parliament, our Bishops went before the Board within the last two or three years. There is one matter I think so important that I should explain it to you. The Provost proposes that the Church should be represented through the Bishops. Now, I would remind you of the Constitution, which I read to you for the purpose of showing that the Archbishops and Bishops are already representative of all Orders in our Church, being the Ordaining Authority, but also a body which must have the confidence of both clergy and laity, by whom they are nominated, and therefore there is a sort of double election by which the Church would be represented by Prelates already elected by itself. They are also the ordaining body, and therefore the body to use the products of the School, and I personally think that the Church ought to be satisfied with the Provost's proposals.

I have now to bring before you a very important matter. At page 95* you will find that all this negotiation stopped, and that nothing whatever was done for twelve years. Then the thing was begun again, in 1902, by reason of the proposal that the Board was bringing forward about other Divinity Schools, the Archbishops and Bishops were in negotiation with the Board, and it ultimately ended in the Bishops bringing forward, on the 12th April, 1904, a communication to the Synod. I am very anxious that you should follow what happened then, as it does not altogether appear here. The Bishop's communication was very unsatisfactory as regards the way in

which the Board had met them. Practically the Board refused to do anything, and the Bishops (if it is possible for Bishops to be in such a state) appeared to me to be in rather a bad temper; and here is what they brought forward (page 97)†:—"The Archbishops and Bishops, in laying before the Synod the foregoing reply, received from the Board of Trinity College, cannot refrain from expressing their deep regret that it deprives the Church of all hope of obtaining from the Board any control or influence over the Divinity School. They recognise fully the desire of the Board to maintain the connection which has so long existed between the Church and the Divinity School; but they cannot be blind to the fact that the Church has no longer any assurance that the provisions for the theological training of candidates for her Ministry will, in the future, be of such a character as to enable her to accept the training with confidence. In view of the grave position in which the Church thus finds herself placed, and in view still further of the fact that large endowments have been provided by the State for the Divinity Schools of other religious bodies, and in view of assurances formerly given to us, the Archbishops and Bishops are of opinion that the Church of Ireland should press as strongly as possible upon the Government her claim for relief or compensation in the matter of the Divinity School, the position of which has been so gravely altered." I was in the Synod when that message was read. Our method of receiving communications from the Archbishops and Bishops is the same as that of the House of Commons receiving a communication from the Crown—and when that was read (I can speak for myself) the construction that was put upon it by many of us was that we were forthwith to make an attempt to get a Divinity School for ourselves, that would not be connected with Trinity College. I would be very glad, when the Bishops come before you, if some of you would ask them whether they meant that or not. Of this there can be no doubt—that that was the impression produced at the time upon me and upon many others. The very first thing that happened—I remember it as if it was yesterday—was that the Dean of St. Patrick's came over to me and said: "What does this thing mean?" "Why," I said, "it is mid-summer madness."

2267. Sir THOMAS RALEIGH.—Might they not mean that contingently?—Quite so, but I am telling you the effect of hearing it read; we did not see it—it was read by the Bishops, and that was the impression it produced upon us, particularly these words: "That it deprives the Church of all hope of obtaining from the Board any control or influence over the Divinity School." I read that as meaning that we must "cut the painter." I know now that many of the Bishops did not understand their words to have that effect. That is why I say that I think it would be well, when the Bishops come, to call their attention to this. I am speaking at present only—do not misunderstand me—of what I understood when that was read from the Bench, and the impression produced on my mind, and I am sure on the Dean's also, was that they were trying to persuade the Synod to set up a Divinity School of our own. This was in 1904. The Belmore Bill was forgotten, and had been dead and buried since 1879, but it was mentioned in the Synod at the moment. The next person who spoke to me was the Solicitor-General, Mr. Campbell, member for the University. I said, "Campbell, you and I must stop this; but go and get this Belmore Commission, for I forget all about it." He went off to get the Belmore Blue-book, and we arranged that he should read it and the Belmore Bill, and find out what the proposal of the Bill was, and he and I were then to meet and see what could be done. Now I must go to the Journal of the Synod, and read one thing which has been left out of our Statement—a thing which, in my opinion, is necessary to explain the force of what was done. I have it here in the Journal of the Synod. That communication of the Bishops was made on 11th April, 1904. Upon that it was immediately proposed by Dr. Kyle Knox, seconded by Canon Pooler, and resolved:—"That this communication be printed and taken into consideration to-morrow; and that the best thanks of this House be given to the Archbishops and Bishops for the trouble they have taken in the matter." Dr. Kyle Knox is an old College friend of my own, and he spoke to me about this. He had the Belmore Bill in his mind and he mentioned it.

The Right
Hon. Gerald
FitzGibbon,
LL.D., and
The Very Rev.
J. H. Bernard,
D.D.

I said:—"I cannot have any compromise with you at all upon the basis of the Belmore Bill; I maintain that we must keep up our connection with the College, and, speaking for myself, if you want to carry anything else, you will have to fight me in the morning, and beat me first." The Solicitor-General and I met that evening, and again in the morning at the Synod. You will find the next day's proceedings in our Journal (April 13th), it was proposed by Dr. Kyle Knox, and seconded by Canon Pooler:—"That the Synod regrets the refusal of the Board of Trinity College, Dublin, to recognise the rights existing in the Church of Ireland in connection with the Divinity School, and considers that this decision of the Board compels the Church of Ireland to press at once upon the Government their claim to have the *finding of the Belmore Commission with respect to the Divinity School carried into effect*, and such definite legislative provision made for the Church of Ireland as was made by the Church Act, 1869, for the Presbyterian and Roman Catholic Churches." You see that he bases that motion upon the communication from the Bishops, and therefore he put upon the Bishops' communication the same sense that I did—that it raised the immediate necessity of falling back upon the provision for separation, and he actually proposed the Belmore Bill as the way to work it out. Now, here is the amendment that was proposed. It was proposed by the Solicitor-General, and seconded by myself:—"To omit from the words 'the Synod' to the end"—that is, the whole of Mr. Knox's motion except the one word "That"—for the purpose of inserting the words following:—"The Archbishops and Bishops be respectfully requested further to consider the relations of the Church of Ireland with the Divinity School of Trinity College, Dublin, and to formulate proposals for safeguarding the interests of the Church, if possible, *without separating the Divinity School from the College.*"

2268. CHAIRMAN.—Was the amendment carried?—Not only was it carried, but what happened was this. Mr. Campbell made a most persuasive speech, I seconded it, saying all I could against leaving Trinity College, or trying to set up a Seminary of our own, and Dean Bernard made one of the most valuable contributions he has ever made to our debates, saying that the Divinity School that they wanted to get, and that the Belmore Bill would give them, was a Divinity School such as no University on the face of the earth possessed—that the Church of England had no such School, and that it would be a denominational College and nothing else. Three Bishops spoke in support of our amendment, and, although in their speeches they showed that they were very sore at what had occurred, not one suggested that they would not keep up the connection if they could. Mr. Knox asked leave to withdraw his motion. Then the amendment was passed as a substantive motion with the following addition:—"And in carrying out this resolution, the Archbishops and Bishops be authorised to nominate a committee of members of the Bench and other members of the Synod to assist them, if they think it desirable to do so." That motion was unanimously passed, and what I am anxious that you should understand is that there was a joining of issue directly in a very crowded House on that despondent message from the Bishops, and that the Synod has never been despondent upon this matter. The Senate threw the Belmore proposal out at once, in 1879, and in 1904, that was the course the Synod took. That was followed by a meeting with the Board, and you will find that also in our paper at page 97. You will not understand the proposals then made as being in any way proposals that could possibly be thought a settlement of the question; they were proposals to enable us to go on as we were for the present until some change should occur. The first of them was a proposal that whenever matters affecting the Divinity School were being considered the power which the statutes give the Board of calling up Junior Fellows in order of seniority should be used, and that those who were not members of the Church should withdraw, and the next Junior Fellow be called up. I do not mind saying now that, speaking for myself, I was of opinion there was no power to do that, because, if it happened that the first Junior Fellow was a Moravian, if he chose to come in, I do not see how they could put him out, or indeed, how,

if there were one on the Board already, they could make him withdraw. They answered that afterwards by saying that there were "statutable difficulties," and, speaking for myself, I think there were. The second proposal was that whenever there were appointments they should allow the two Archbishops—because it was thought that would be the more convenient way—to communicate with the Board and give their opinions as regards the qualifications of the candidates. On that the Board divided equally, and it is an open secret that the four clerical members of the Board voted against the Church, because they considered themselves, I suppose, quite as good theologians as any Bishops; but the four laymen were willing, and so it was left an even balance. The third proposal was in regard to changes in the curriculum—that these should be submitted for consideration merely, to the two Archbishops as an Advisory Committee on behalf of the Church. There was some little difficulty in doing that except through the Regius Professor, and that was the state of affairs when your Commission was appointed. Now, we have to consider the proposals of the Provost. As regards those proposals, I was anxious to let you see the machinery about the proposal that the Archbishops and Bishops should represent the Church. I have no doubt whatever that there are members of the Synod who would desire that there should be some representation of the Synod itself. I have tried to point out to you that the Synod is a legislative body; that it is so restricted about orders agreeing with each other and that sort of thing that it would be very difficult to carry out an election through it. I have no doubt that if the Archbishops and Bishops represent the Church the Synod, so far as it has any right to do it, will be able to consider the action of the Archbishops and Bishops, and I can easily see very great inconvenience in giving it a direct power—or duty rather it would be—of interfering. Therefore, speaking for myself, and only for myself, I should be very glad to see that we were represented by the Archbishops and Bishops; and you will remember I read you a resolution of the Synod itself, unanimously passed in 1879, declaring that it recognised the Bishops as a body that had the confidence of the Church.

2269. You would not propose to alter that suggestion that three should be chosen by the Bishops?—If you ask me to answer that question, my reply is that I will not look a gift horse in the mouth.

2270. That is a very good practice?—Whether the Provost could carry it out or not is another matter, but it goes beyond what I have already given you evidence the Synod was willing to accept on previous occasions.

2271. Then, there is an important point raised as to the residential character of the College. I do not know whether you know the actual working of what he proposes there?—He proposes that the Archbishop of Dublin should be the Visitor in matters of doctrine.

2272. The Visitor generally, does he not?—I thought he said in matters of doctrine.

CHAIRMAN.—Oh, yes, I see that is so; I beg your pardon.

2273. LORD CHIEF BARON.—But that the ordinary Visitor of the College is to have charge of everything except doctrine?—That is rather what I understood. Of course this evidence of the Provost was given since our Committee met, and therefore I cannot possibly be speaking for anyone but myself in reference to it.

2274. CHAIRMAN.—Still, we should like to hear your opinion?—I have already shown you what the Church legislation is about doctrine. Some of our friends in England, I suppose, think we have got no discipline, but I want to show you what it is. The 8th chapter of our Constitution regulates all our ecclesiastical tribunals. I have shown you that we have a statutory power of governing on the basis of contract, and machinery for special courts which can administer and enforce the law of contract amongst ourselves.

2275. LORD CHIEF BARON.—As a voluntary Church?—As a voluntary Church, but one that has a domestic court with jurisdiction enforceable in the temporal courts. The court of the General Synod is constituted of three ecclesiastical and four lay Judges, except in cases in which the Representative Body of the Church is concerned, and then they have to get somebody else. (23) "The three ecclesiastical judges shall be the three members of the

House of Bishops, first in order of precedence, who may be able to attend." "The four lay judges shall be the persons first in order upon the list of lay judges elected by the General Synod as hereinafter provided, who may be able to attend." And this is the qualification for them:—"Every person, being a member of the Church of Ireland, who holds or shall have held the office of a Judge of the Supreme Court of Judicature, or of a Recorder in Ireland, or who, being one of Her Majesty's counsel, shall have held for five years the office of Chancellor of a Diocesan Court in Ireland" (every Bishop has a lay Chancellor here), "shall be qualified for election as a lay judge." The whole list of judges who are qualified is submitted to the Synod, and ten are elected, and the judges can always arrange among themselves as to who shall attend; the first seven to answer when the roll is called form the court. No Church Court has any jurisdiction in any matter involving doctrine or ritual or the status of a clergyman except the Court of the General Synod, and on any question which involves the consideration of doctrine or ritual or the status of a clergyman, a majority of the ecclesiastical judges (that is of the three Bishops) is necessary to a judgment. Therefore, on any question of doctrine, supposing that this appeal from the Visitor is given, it is impossible that there should be a decision except one that has the authority of a majority of two out of the three Bishops.

2276. CHAIRMAN.—That, I suppose, would be in your personal opinion satisfactory?—I think so. As to its being satisfactory, I can only judge by results. You have had in England a Commission endeavouring to arrange what they call the "disorders" of the English Church. The Court of the General Synod has sat very frequently; there is a power of referring questions of law to us, and the Court meets generally two or three times in the course of a year; but we have also had to deal on two occasions with charges against clergy which involved doctrine. It is a singular thing that the first was a case in which the charge against the clergyman was one of preaching false doctrine—in our sense of the phrase—that is, preaching that the Roman Catholic doctrine of the Sacrament of the Mass was identical with the doctrine of the Church of Ireland, and that was found to be false doctrine. He was duly warned by the Bishop, but declined to withdraw what he had said, and he was removed from his benefice by a decree of the court. The other case was that of a clergyman who was of quite the other way of thinking, and who thought that all matters of ritual were trifling. He refused to wear a surplice, and he refused to conform to the services of the Church; he was brought up for that and found guilty of it, and, as he declined to amend his ways, he also was deprived of his benefice. Therefore, when the Provost proposes that charges of that sort, if they arise, shall be submitted to the Court of General Synod, he is proposing to submit it to a tribunal which is in working order, and which hopes to continue to work whenever occasion arises; and we have absolutely none, up to the present, of those difficulties which appear to have arisen among the Bishops in England in regard to cases of doctrine or discipline.

2277. You rather approve, if I follow you rightly, of the Church having control of the Divinity School?—Certainly, control consistent with preserving the connection with the University and College; if you have a control I think it might be cognisable by the constituted tribunal of the Church which is interested in the question.

2278. And I think that what the Provost proposes meets your views rather?—I have no hesitation in saying that it does. Now we come to his demand of money. I do not understand that, and I will tell you why. I have shown you that, of all the students who go through the Divinity School, only two-fifths or thereabouts go into the service of the Church of Ireland; therefore I hold that under no circumstances should the Church contribute more than two-fifths of the cost of teaching. But I do not stand on that. My point is this—that the teaching of the Divinity School and the teaching of the other professional schools at Trinity College are on exactly the same basis, and in the teaching of law or physic it is not for the people who get the benefit of the services of doctors or of lawyers to pay for providing that teaching which it is the duty of the College to provide. To come to detail, I should like to know

from the Provost—the Dean will probably be able to tell you—whether the money that is at present spent upon the Divinity School is sufficient for its purposes or not? If it is, the Provost has no right to get money from us, and to withdraw money from the purposes to which it is at present devoted under the existing law, and to economise part of the cost of the Divinity School for providing instruction in chemistry or anything else for which he wants money. I think that the strength of the Provost's whole position is given away if he contends that the teaching given in the Divinity School is not given as part of the education which it is the duty of Trinity College to provide for its students. He puts as a consideration a share of the Government, but a share of the government is not property of value; it is a duty which we are asked to undertake for the purpose of making the Divinity School more efficient. Why should we pay for that? I may mention that we do pay something already, under an arrangement that has been in force for a great number of years; we provide for a Professor of Pastoral Theology, who has to teach the practical details of a young clergyman's work. I thought it was fair enough that the College should not be made to pay for that. That is done by the Church now, and do not take me as having any mandate to say that if any further Professor was wanted the Church would not be willing to give something towards providing for that need.

2279. That is not the point put forward by the Provost?—It is not, but I do say, as a lawyer, that I cannot follow how, if this Divinity School is part of Trinity College, the Provost can ask the Church to give him money to work it—he has no claim against it.

2280. LORD CHIEF BARON.—Any possible claim they have is against students individually—they do not claim that?—They do not claim it because the students are paying them already.

2281. I put the very question to the Provost—is it because they lose students?—No, because the Divinity School is only one of the Professional Schools, and it is the only one that pays its own way. The fees of the Divinity School are more than enough to pay the cost of the whole School.

2282. That is the Arts fees?—Yes, but the fees cover both Arts and Divinity.

There is a little matter I had forgotten to give you about the Presbyterians, and I think it is not unimportant. I looked through the percentages in your Report, page 21,* and I told you the distribution of the Presbyterians—that there were 425,526 of them in Ulster—and now, please follow this. If you look at the Report, page 21, you will see that Ulster, on the average of a certain number of years, sends to the College only fifty students out of 253. There are two reasons for that. One of them is that they have Belfast College, and most of them go there; but the other is (I have no doubt this is the case) that the great majority of our Presbyterian brethren in Ireland go to commercial pursuits, and things of that sort, and get what they want at home, and do not belong to the class which requires the old-fashioned classical and literary training that Trinity College (so far as it is old-fashioned) provides. The Ulster Protestants as a whole are 823,273 strong. They send an average of fifty students altogether in the year, and of those 823,000, 425,000 are Presbyterians. The other three provinces send the remaining 203, and in those three provinces there are only 17,750 Presbyterians altogether. During the last six years only 6 per cent. of the students have been Presbyterians. It is a mere deduction from these figures that the total number of Presbyterian students that could be affected in any way, by cutting away the Divinity School would be about three, and I do not think they would be so many. Mr. Kelleher is a great mathematician, and I am not, but I think that is according to Cocker. So that really, on the whole, the Presbyterians, who alone demand the secularisation of Dublin University, have hardly any interest in the matter.

I have now put the case as fully as I can. It involves the question whether we are to have forced upon us what Cardinal Manning put first amongst the hindrances to the spread of his Church in England—whether we are to have "*Clero ne colto ne civile*." We have now a Clergy who, to a proportion and a degree, that I say are second

to none, are an educated company of Christian gentlemen. We have got that through the connection of this Divinity School with the University of Dublin from its first foundation, and you cannot shake that foundation without shaking the whole structure. I have shown you that from the beginning to the end of this business, through all this stormy time of Disestablishment that we have passed through, up to the time when we are now, I believe, a more lively and living Church than we ever were, the whole source and cement of the concord that exists between the laymen and the clerics, and also the whole manner of the working of our institution, depend on the character of our clergy; and I hold the character of our clergy to have been formed by the fact that more than ninety per cent. of them have had the advantage of the connection which it is now sought to sever.

2283. CHAIRMAN.—Perhaps it would be convenient for you, Mr. Dean, to add anything you desire to add before we proceed to ask any questions. (*Dean Bernard*):—I do not think I need speak in any detail on the larger questions which the Lord Justice has treated, but there are certain points upon which he has not touched, or has only lightly touched, that I should like to be permitted to say a word or two about. I do not desire to amplify or take up time unduly, and if I go on at too great length I hope I shall be stopped. I call attention, first of all, to the fact that the Divinity School of Trinity College is in one respect unlike those of Oxford or Cambridge, inasmuch as not only does it provide a school of scientific theology, but also it provides a training college for Irish clergymen. The Syllabus of the Divinity School, which I hand in, and which is printed in the calendar, will, I think, sufficiently prove that without my going into further details. There are not only the lectures of Professors which the men may attend or not as they please, but there are a large number of lectures given by our Assistant Divinity Lecturers, as they are styled, and instruction is given in preaching and in public speaking, while the debates of the Theological Society enable men to get some practice in extempore speaking. So that in all these ways we try to do some of the work that is done by a theological training college, as well as the work which more strictly belongs to a Faculty of Theology, and because of that two-fold function the loss to the Church would be found to be greater in the case of Ireland if the Divinity School were separated from the University than in the case of a corresponding change at Oxford or at Cambridge. It is not altogether a good thing, perhaps, to try to combine the two functions in one institution—there are certain difficulties—but the simple reason why we do so in Ireland is because of the poverty of our men. And this is the point—if the Divinity School is separated from the University in future a large number of clergy on the one hand will be ordained without University Degrees, because, during their student period they will not be able to pay for teaching at a theological college and teaching at Trinity College, Dublin, as well, so that there will be a direct loss to the Church; and, on the other hand, a direct loss to the University, because a certain number of men will choose rather to go to the Theological College than to the University, and so the University will lose their fees; there will be a diminution in the number of students as well as a loss to the College and the Church if the Divinity School is separated from Trinity College. In the second place, as to the numbers of students who have attended the Divinity School. I was asked that question, and I have prepared a return* which, perhaps, it will be convenient if I now hand in (*handing in the same*) showing the number of divinity students for the past thirty-six years—that is since the Disestablishment. I need not read the figures, but, roughly speaking, it comes to this. The numbers were comparatively small after Disestablishment; they began steadily to go up about the year 1880.

2284. What were they in 1868, say?—I have not brought the figures with me before that, but they were smaller,—I should think the total was about eighty in the year 1868, speaking from memory.

2285. I was taking 1868 as being before the passing of the Act of 1869?—I do not think the numbers would differ materially, because it was expected that something of the kind would happen. But the numbers of the Divinity School touched the maximum

in the year 1895, when they reached a total higher than had been reached for forty years previously, and, as far as I can make out, than had ever been reached. In that year there were 146 men who got credit for Michaelmas term both in the senior and in the junior class—eighty-six in the junior and sixty in the senior. After that the numbers began to go down again slowly. That was the zenith, and they have since gone down again; and last year they were very low. I have got all the figures here, and they roughly run between ninety, one hundred, eighty, seventy; they went down to seventy-three in 1905. They were very low in 1905, and there were in fact only three years since 1870 when the numbers had been so low—viz., 1871, 1873, and 1880. In addition to those figures there have to be reckoned a certain number of men who failed to get through term, and also men reading for divinity examinations. These numbers cannot be exactly ascertained, but probably they would increase these totals by about thirty in each year; and, furthermore, it is to be remembered that as men do not enter the Divinity School, as a rule, until their Senior Freshman year is over, many intending divinity students are always to be found on the books of the College—the number at present being, I should say, not less than seventy.

2286. How do you account for the decline since 1895?—Mainly, I think, by two causes. The one is a large cause which applies to other parts of the world and to other similar institutions. There was experienced for many years in England a diminution in the supply of candidates for Holy Orders. Whatever the causes were which led to that, they are now affecting the Church of Ireland. The currents of public opinion take some time to reach the Irish coast, and we always find that what people are thinking about in England does not reach Ireland until some years later; and the period of depression in England was almost coincident with our maximum period (1895). I think that depression has now reached us, and that we must be prepared to face it for some time to come; but I hope that as it has been in England so it will be with us, and that there will be a recovery. That is one cause, and I think the principal cause, of the diminution, but I cannot conceal from myself, speaking personally only, that another cause is to be found in the feeling on the part of Churchmen that Trinity College is becoming rapidly more and more secular—the feeling, in fact, which has found expression in this Memorial which we support, and in some of the Statements that are printed in the Appendix, is growing, that the diminution in the number of clerical Fellows (only four having been elected in forty years) has had an effect upon the atmosphere of Trinity College. It is also felt that a subordinate place is assigned in the College routine to Theological instruction—what we call catechetical instruction—as compared with what used formerly to be assigned, and also to the Chapel services. Upon both points I wish to say a word later on, but just briefly I would say that I think the second reason for the diminution in the numbers has been that there has not been that confidence in the government of the Divinity School during the last few years that there was twenty or twenty-five years ago. I do not know that I need trouble the Commission by giving over again the reasons which led the Church to consider that some change in the constitution of the Governing Body of the Divinity School is necessary. It is set forth fully in the Memorial, and I think it would be taking up too much time for me to deal with it now.

2287. I think that is admitted on both sides?—Yes, but I should like to speak about these changed conditions in an aspect which I think has not received sufficient prominence. I speak now as a Professor of Divinity, and what I feel is that the most serious change is not so much the change in the religious profession of the members of the Board as the diminution in the number of expert members on that Board. Formerly the members were all in Holy Orders, and had expert knowledge, presumably, of the needs of theological study. They have not got that now for the most part, and the present authorities do not seem to me fully to recognise that theology is a science which requires expert treatment just as much as other sciences. I do not wish to go into detail, but I will just give one illustration which I think will set forth what I mean. There is a prize in Trinity College called the Elrington Theological Prize, which is perhaps one of the most important prizes that we

* See page 370.

have got. It is for the best theological essay by graduates of seven years' standing on some technical theological subject. The subjects during the last two or three years have been these—a study of the Book of Deuteronomy; the Logos doctrine of the Fourth Gospel; the Apostolical Constitutions and the Kindred Literature. You will see that the subjects are abstruse, and would require expert knowledge to deal with them. Now we have a curious survival from the past in regard to the examiners who examine these essays. They are the Provost, the Regius Professor of Divinity, and the Bishop of Ferns. Now, as long as the Provost was a theologian, trained in theology, that worked very well, particularly as in the past the Bishop of Ferns did not examine at all, or examined by deputy; but now we are presented with the spectacle of a Board examining most important theological prize essays on these obscure and difficult topics, topics upon which I think the Commission will recognise non-theologians could hardly be competent to pronounce—we have, I say, the spectacle of a Board pronouncing judgment upon these essays, two of the members of which Board are non-expert.

2288. You say the Regius Professor, the Provost, and the Bishop of Ferns?—Yes.

2289. Then two are clergymen?—But a clergyman is not necessarily a theologian.

2290. And, on the other hand, a layman is not necessarily not a theologian?—No; and it is not a satisfactory state of things that out of three examiners there may be two who have no expert knowledge whatever, and in point of fact I think it would be admitted, if the question were asked, that in the present case two out of the three are not experts.

2291. LORD CHIEF BARON.—That is a question of a private trust, and it could only be altered by Parliament; is not that so?—It could only be altered in theory by going to the Master of the Rolls, but it could be altered in practice if the simple usage were adopted which used to be adopted years ago, of appointing deputies to do the work for them.

2292. CHAIRMAN.—But surely a thing of this kind ought not to be done by deputy?—Well, the late Provost, when he got old, found the burden too great, and he always asked some theologian about the place to act for him.

2293. I should have thought that that was one of the things which ought not to be delegated?—He did not give his vote away, but he acted upon the report of an assessor.

2294. I should not like to countenance any system which made that an essential condition—a system which delegated a duty of that sort?—I must have expressed myself very badly; I did not mean to suggest that—I only meant to say to have a system in practice such as I have described seems to me to betray an inadequate sense on the part of the Governing Body of the Divinity School that theology is a science just as much as medicine or law, and that it is just as absurd for a non-theologian to examine essays on the "Apostolical Constitutions and the Kindred Literature" as it would be for a boy who had just gone through the first six books of Euclid to examine for a Fellowship in Mathematics. I only put that as one illustration to suggest what I want to suggest to the Commission—that the need for the future is not only that the Governing Body of the School should be composed of men in the Church's confidence, but composed of men who will treat theology as an expert science. Then, as to the constitution of the Governing Body which is proposed by the Provost, I may say first that the mandate which the Synod has given the Lord Justice and myself in this matter is on page eighty-five; we ask that the new Governing Body shall have three characteristics—that it shall be (1) academic, (2) expert, and (3) episcopal. Those are the only three things that are said.

2295. And the Provost's suggestions satisfy those conditions, do they not?—Yes, very largely, but I should like to repeat that the Synod have not asked through us for a representation of the Synod as such, nor has it passed a resolution asking for that. That I think would be disastrous on two grounds—first, it would narrow the scope of the school; a school that was under the control directly or indirectly of the Synod would not command the confidence of the English Bishops or of English theologians generally who have a much wider outlook than the Church of Ireland. I am sure that to place the Divinity

School of Trinity College under the control of such a body would greatly diminish its usefulness. Furthermore, I am particularly anxious to say this—that it would be a Governing Body to which no self-respecting Professor could submit himself, because, if the lectures of a Professor of Divinity, and his text-books, were to be reviewed as a rule by a public assembly such as the General Synod, he would be placed in a quite intolerable position; and I may perhaps be allowed to say that, as at present advised, speaking as a Professor of Divinity and as holding a life office, while I would be willing to transfer my allegiance to a Governing Body such as the Provost has described, I would not be prepared to transfer it to a body which had upon it members of the Synod as such, because that would give the right to the Synod to review my acts and my books.

2296. Are you not now rather arguing against a proposal which is not made?—Very well; I will not pursue that. About the Provost's scheme then; the only modifications I would wish to make in that would be these. I note first that when he is speaking of the representative to be chosen by the assistants to the Professors, together with the Professors of Ecclesiastical History and Biblical Greek, he omits the Professor of Pastoral Theology—I do not know why—and the Professor of Hebrew also seems to be excluded. It would be better, I think, to say "one to be chosen by all the Professors and lecturers in the school, exclusive of the two who hold office *ex officio*."

2297. Is the Professor of Pastoral Theology the only omitted Professor in the Divinity School?—Yes, that is the only Professorship to which the appointment is made by the Bishops. It is a Professorship with a private foundation, and appointment to it is made by the Bishops. As to whether the Archbishop of Dublin should be the Visitor, I think it would be an excellent plan, but whether it is usual or in accordance with precedent to have an appeal from the Visitor I do not know. I thought the usual thing was to have an appeal to the Visitor in matters of this sort, and not an appeal from him. I should have thought a better proposal for appeals would be somewhat similar to that which the Professors of Divinity put forward in a statement which they sent to the late Provost some years ago (it is printed on page 99),* in which we contemplated a sub-committee of the Divinity School Council to deal with details, and then we suggested that any act either of this sub-committee or of an individual Professor might be appealed against by the Council to the Visitor, viz., the Archbishop of Dublin. That is the difficulty that I feel—that you cannot have an appeal from the Visitor. (*Lord Justice FitzGibbon*).—The final authority for temporal purposes, as has been explained, is the Court of General Synod, and, at present, any Bishop can bring forward a charge against a clergyman for false doctrine, and so can a certain number of laymen; but what I understand the Dean is putting is whether any question as to teaching being doctrinally correct should be subject to appeal to the final tribunal of the Church, and this, as I explained, would necessarily include a majority of Bishops.

2298. LORD CHIEF BARON.—But it is to a court, the majority of which are laymen?—Yes, but a majority which cannot carry a judgment. In any case involving doctrine or ritual, or affecting the status of a clergyman, the judgment of the court must include that of a majority of three Bishops.

2299. CHAIRMAN.—There is a good deal of doubt as to whether it would be wise to create any further appeal upon such a question?—(*Dean Bernard*)—I think it would be a very serious thing to create a Court of Appeal from the decision of the Archbishop of Dublin, and more particularly to give it to anyone who thought himself aggrieved by his judgment. I think the Provost's proposal is undesirable in that respect. (*Lord Justice FitzGibbon*)—If the Archbishop doubted his own judgment in any instance he would have power under our Constitution to state a Case for the Court of the General Synod. (*Dean Bernard*)—With that proviso I think the constitution suggested by the Provost admirable, and I am quite prepared to accept it. But he states one thing at the very beginning of the paragraph which has been submitted to me which I do not quite follow. If I understand his suggestion aright, he would not give a

place on the Governing Body of the College to the representative of the Divinity Faculty, although he would be prepared to do something of the sort in regard to Medicine or Law.

2300. LORD CHIEF BARON.—That is what he said?—I hold it essential that a representative of the Divinity School should be on the ultimate Governing Body, in order that when the reports and recommendations of the Divinity School Committee come before that Governing Body for ratification there should be a spokesman or representative of the Divinity School upon the Body which has finally to deal with them. I think whatever applies to the Medical School in that case applies to the Divinity School also. Then, I need not go into the question of the money payment, further than this, that if the Provost meant by a claim for money that the additional provision which the Church made should be devoted to payment of additional Professors it would be extremely desirable to have one or two new Professors.

2301. CHAIRMAN.—I do not think that is his point?—The only other matter is page eight-five.* We have spoken not only on behalf of the students of the Divinity School, but also on behalf of the students of our own faith, who form the large majority of the present members of the University; and it seems to me extremely desirable that the regulations for Chapel attendance and for theological instruction—what we call Catechetical Lectures—should be placed under the same Council as deals with the Divinity School; the same reasons and the same arguments will apply—that the persons who are to look after these matters ought to be people in whom the Church as a whole has confidence.

2302. Do you mean that the Chapel should be placed under the control of this Body?—Oh, yes.

2303. The selection of preachers?—Yes. At present the Church has no security that the preachers selected shall be loyal members of the Church—no security whatever. At least once I remember a suggestion was thrown out that one of the University preachers should belong to another denomination. Whether that would be wise or not I do not now say, but at any rate it is a thing that ought not to be done without the concurrence of a body in which the Church has confidence. At present the preachers are selected by no such body.

2304. They are selected by the Provost, are they not?—Yes, and we have nothing to complain of as regards his selection—I do not make that suggestion, but I do suggest that it might be, conceivably, in the highest degree objectionable. A most unfortunate selection might be made at any moment.

2305. The Provost may be of any religious denomination or of none?—Or of none—which is the really serious danger. I feel in fact that the Ordinary of the Chapel ought either to be the Provost himself, if he is in Holy Orders in the Church of Ireland, or the Regius Professor of Divinity.

2306. That is a serious detraction from the position of Provost, is it not?—Yes, but I do not see any other way out of it if the Chapel ministrations are to be conducted in such a way as will command public confidence. No doubt the Chapel is not only for the Divinity Students, but it is specially for them; they must attend, and the Divinity School has a special interest in securing that the ministrations of religion which are there provided shall be acceptable and beneficial to their spiritual life, and also that the teaching shall be in strict conformity with the standards of the Church of England and of Ireland.

2307. LORD CHIEF BARON.—I understand, Lord Justice, that your evidence has been advisedly and deliberately confined, upon this occasion, to the question of the Divinity School?—(Lord Justice FitzGibbon)—Yes; the communication I received from your Commission was to the effect that we were to be examined to-day “on the subject of the Divinity School.”

2308. We will, no doubt, have the pleasure of seeing you later on, when I can ask you some questions about the Law School?—Certainly, but I wish to say that I myself desired, as far as I possibly could, to keep this Divinity School question entirely separate from any other question simply for the reason that I am, as I told you, now representing others, and I do not think that the Church as a Church ought to interfere at all in these other questions.

2309. Then I have nothing to ask you at present.

2310. CHAIRMAN.—On that point of the Law School I also should like very much to ask you one or two questions. Might we put a question or two in writing?

—If you intend to put any questions to me in writing, I shall be greatly obliged if you will be good enough to indicate, in some way, how far you wish me to go—to what extent you desire evidence upon the subject.

2311. LORD CHIEF BARON.—The questions I am anxious to ask you about the Law School can all, I think, be easily answered in writing?—About the Law School I may, perhaps, just say that I was one of three Benchers of the King's Inns who were invited by the Board to form a committee with three representatives of the College, and that we made, as I thought, a very great improvement in the Law School; and I am sorry to see that there has been renewed before you, by one of the Professors a statement which he made before that Committee, which the Committee considered, and on which they unanimously disagreed with him, and that is that the Course which we introduced for the Law Moderatorship was not a scientific Course. It was considered by the Committee in every way, and I believe it to be an extremely valuable Course, in which no person could get a Moderatorship without having a very considerable amount of culture, not only in the Science of Law, but in other things. I know that the competition for it has been very keen, I know that it is extremely useful, and I know, further, that it is no novelty, because when I took my degree in 1859 Classics was my main subject, and I took also what was then one single subject, and I will tell you what it was:—“English and French History and Literature, Political Economy and Law;” and it is hardly to be wondered at that, although I got a Gold Medal in Classics, I was only able to get a Silver one in the other subject. It is quite contrary to fact that this new Course is any innovation in respect of introducing into Moderatorships what may be called subjects suitable to the schools of particular professions.

2312. The deliberations of that Committee were afterwards brought before the attention of the Education Committee of the Benchers?—Yes, and you will find that in the Calendar the result is stated to be that between the Benchers and the University there is now given a complete Course of legal instruction, both scientific and practical. So far as we have been able to do it we have kept what I would call the strictly practical part, the parochial part, of the preparation for the Irish Bar at King's Inns, and we have left to the Professors here the scientific part.

2313. Then the Education Committee carefully considered this scheme, and approved of it?—We not only carefully considered it, but we had the assistance of every single Professor in the School but one, and two of the Professors took a very active part with us—Professor Bastable and the Reid Professor, and Mr. Hart, who is the Professor of English Law—I think that is his title—also gave us great assistance. As you will see from his paper the other Professor did not approve of the thing, and certainly gave us no help—but the reverse.

2314. Then, having been unanimously approved of by the Education Committee, it was ultimately brought up before the entire body of Benchers?—Yes, that is so. The Education Committee is a vicarious body, we have very stringent examinations, and two Professors who work for us in the subjects which we take, and we always report to the general body of the Benchers; in addition, in this particular case, we reported that we advised that the taking up of this Moderatorship in Law should carry with it considerable privileges in the way of being equivalent to taking a special course of education corresponding to what is recognised in the Inns of Court in London, and it is open to young men in this College who succeed in this Honour Course, to obtain credit for that as equivalent to a year at King's Inns; every student must keep one year at King's Inns, but he may if he likes take a second year here. I myself know several of the young men, and I know that the work is not merely very valuable as teaching them law, but is also work of such a nature that the examination could not possibly result in their getting the medal without getting what I consider a very liberal education. When you have one man allowed to specialise in Mathematics, and another in Experimental Physics, it passes my comprehension that a third can be said to be imperfectly educated when we can win a Moderatorship in Law, Jurisprudence and Political Science, a distinctive branch of education.

* Appendix to First Report (Cd. 3176), 1906, page 85

2315. When the Education Committee's decision was brought before the general body of Benchers, I believe there was no division of opinion at all?—I never heard of any.

2316. You were present at the meeting?—Yes.

2317. It was unanimously approved of by them?—Unanimously.

2318. You have read the Statements sent in by some of the Professors—by Professor Brougham Leech and Dr. Hart?—I have read them, but not with the same care as I should have done had I not been engaged on this other matter of the Divinity School.

2319. You know generally the points that they make in reference to this matter of which we have been speaking—I think they are principally made by Professor

Brougham Leech?—I understood the main ground of objection made to this particular Moderatorship and the Honour Course that led up to it was the ground of specialisation. On that I would refer to the fact that in the ancient Statutes there was a provision (being all in Orders they did not want a divine) that one of the Fellows should be what they called the *Jurista* and another the *Medicus*; and from the beginning I maintain that the Board has always allowed the Arts Education given here to be flavoured with some utility besides. I cannot see that this improvement which was made in our Law School, with the approval of the King's Inns, was anything but an improvement.

DUBLIN,

The Right
Hon. Gerald
FitzGibbon,
LL.D., and
the Very Rev.
J. H. Bernard,
D.D.

After a short adjournment,

2320. Sir ARTHUR RÜCKER.—There are only one or two questions I wish to ask you, Lord Justice. You are agreed that it is necessary to make some change in the Governing Body of the Divinity School?—(Lord Justice FitzGibbon)—Certainly; I think that is consequential upon the changes of 1869 and 1873.

2321. And, therefore, the Governing Body of the College will be represented on the Governing Body of the Divinity School, or would you have the latter independent of it?—Not independent of it in any matters where the Divinity School is connected with University teaching, but only in matters which involve the peculiar religious views of the pupils in that particular school.

2322. That is to say, you would leave the University to lay down the conditions under which a degree in Divinity could be got, but you would relieve them of all powers with regard to the actual training of future clergymen?—Perhaps in order to make myself clear I may say what I think about it. I would not recommend or suggest for the Divinity School anything that, *mutatis mutandis*, I would not recommend for every other professional school. The basis I am suggesting is that the Governing Body that is charged with general University teaching must be a Governing Body that is charged also, in retail as it were, with the teaching of particular subjects, and whether it be Medicine, Law, Physic, or Divinity, I consider that the general Governing Body requires expert assistance, and not only expert assistance, but a sub-governing body, which would have special qualifications relating to the particular profession.

2323. This Governing Body of the Divinity School for the training of the clergy, as apart from the curriculum laid down for the University degree, would be, I suppose, independent of the Governing Body of the University—I mean that the Governing Body of the University would not revise its decisions on such a matter?—I do not think it should revise its decisions on any matter on which the expert knowledge of the Governing Body was the special cause of its being called in.

2324. Would there be in such a case some clear delimitation between the powers of the Governing Body of the University and the powers of the Governing Body of the School?—Certainly; there is already—I do not go into the other Schools—but there is already a similar delimitation under the School of Physic Act, which is an Act of Parliament, and beyond all doubt I would recommend that there should be some delimitation with regard to the Law School; in other words, that where they are providing for a professional school the Governing Body of the University, without being deprived of responsibility for anything that comes within their duty as regards that School, should have the assistance of an expert body, and I would not give them any right to interfere with the judgment of their own expert body. Otherwise it would be as if a man employed a lawyer or a doctor, and afterwards proceeded to do his own law business, or to physic himself.

2325. I understand that; but when you state that you are very strongly in favour of a large revision of the relations between the Divinity School and the University the other main point I suppose you insist on is that the residence of the students should be in the same building as at present, that is to say, that they should be at liberty to reside within the walls of the University if they so desire?—Oh, certainly. I do not apprehend that they could be deprived of that.

If the right of admission to the Divinity School were made separate from Trinity College, it would be in the power of the Bishops to say, for example, "We will not take anybody into this our School unless he is matriculated," and the moment he is matriculated he becomes entitled to residence. The conditions of residence in this University have always been very different from what they are, so far as I understand, in either Oxford or Cambridge, for this simple reason:—The University of Dublin is in the capital city of the country, and a very large proportion of the students are at home in this city, and I myself was one of them. I think a majority of the students are living at home all the time. So far as I understand, in my time, there was no circumstance in which the education of students living at home differed from that of those who were sleeping in College, except that the sleeping in College was accompanied by what I call disciplinary control with regard to hours and conduct and things of that sort. I myself lived in an empty house in Merrion Square at the busiest time of the year, and I had to keep hours in College like other students, and had to attend Chapel the same as if I were living in College.

2326. Then, you would contemplate allowing the teaching of students preparing for the profession of clergymen without distinction of those living in the College and those living at home to be carried out in the College as at present?—Certainly, because if the Divinity teaching is not carried out in College it would be absolutely necessary that it should be carried out close to the College, because hours of attendance and things of that sort which are to be observed would make it almost essential, and if the Divinity School was even very close to the College you would have to spend a considerable amount on buildings. Mr. Gladstone estimated it at £15,000. But besides that, there is accommodation in the College for the School, and why is it not to be used?

2327. CHAIRMAN.—And I suppose the lectures which lead to the Testimonium and the lectures which lead to a degree are all the same lectures?—To a degree in what?

2328. To a degree in Divinity?—The lectures that lead to the Divinity Testimonium are held in the same building, but they are no part of the curriculum for the degree. It is exactly the same as the Law School. I am speaking of my own experience about that. To keep my Scholarship I was obliged to attend a professional school, and attend professional lectures. It so happened that for convenience to myself I kept my terms for the Bar during my Freshman years, I got my Scholarship as a Junior Sophister, and then I had to attend the professional lectures. That was one of the conditions of keeping my Scholarship, and for two years I was a matriculated medical student, and attended lectures in surgery and anatomy, and I made great use of them afterwards in cross-examining doctors and surgeons, mostly in defending prisoners.

2329. Sir ARTHUR RÜCKER.—Then, as I understand, there may be these professional lectures under the control of a separate Governing Body?—(The Dean of St. Patrick's).—There is a little confusion in the matter. Divinity degrees are given as the result not of attendance on lectures at all, but as the result of examinations in the case of B.D., and printed theses in the case of D.D. (Lord Justice FitzGibbon).—For the Divinity Testimonium there must be two years' lectures. The Divinity Testimonium corresponds precisely with the

D.D.

Certificate given to the Benchers of the King's Inns with regard to attendance at the Law School lectures. These are qualifications for admission to a *profession*, not to a *Degree*. The Law School lectures used to be at nine o'clock in the morning, and I suppose they are still. The surgical lectures that I attended were at four o'clock in the afternoon, and I believe the professional lectures were always arranged so that they did not interfere with the attendance on the Arts Lectures, which used to be between ten and one o'clock in the day.

2330. CHAIRMAN.—Although the attendance at the Divinity lectures is not essential, I suppose, the Divinity lectures which are given are in preparation for the examinations?—(*The Dean of St. Patrick's.*)—I think I should like to make a short statement to make it clear as to the certificates which are got from the Divinity School. The Divinity certificate, which is called a *Divinity Testimonium*, and which is required of all candidates for Holy Orders, is only given to those who have attended the full course of lectures for two years of three terms each, that is for six terms, and have also passed certain preliminary examinations. The *Divinity Testimonium* is only given to men who have attended six terms of lectures, and have passed certain preliminary examinations. Now, the Degrees in Divinity are on a different basis. The degree of Bachelor of Divinity is given as the result of examination. A curriculum consisting of six sections is prescribed, and men may come up and answer in one or two or three or four courses at a time, as they please. When they have completed their six courses and written a *thesis* which is approved, then they are admitted to the Degree of Bachelor of Divinity; and, then, if they desire to proceed to the Degree of Doctor they must present a printed *thesis*, which substantially means a book of merit, for examination by the Regius Professor of Divinity and an Assessor, who is appointed for that purpose. The Degree is never given except the book is one which either embodies original research or presents in some new and attractive and scholarly fashion the result of research already reached.

2331. Well, a man who intends to go up for his Bachelor of Divinity usually attends the same lectures as the man who does not?—Yes.

2332. There are not two sets of lectures?—(*The Dean of St. Patrick's.*)—No. (*Lord Justice FitzGibbon.*)—May I supplement that by a reference to the attendance at the Law School. The certificate which is designated a *Divinity Testimonium* is a certificate of having attended two years' lectures, each of three terms. We require three years' attendance at Law lectures to be called to the Irish Bar, and some of the certificates are also available for being called to the English Bar, as I was myself, and those lectures are held in College at nine o'clock in the morning. They have nothing to do with the Arts Course, and a great many King's Inns students who are not College students attend them. But for the Degree of Bachelor of Laws or Doctor of Laws, these lectures do not count at all. They have nothing to do with it. You go up for another examination and a different course, and different studies altogether. (*The Dean of St. Patrick's.*)—May I add one thing which is a case in point? I was asked about a course of lectures provided for B.D. I have said that there are no lectures for candidates for B.D. in Dublin; but a curious thing is that there has been quite recently established in Liverpool a course of lectures precedent to the University of Dublin B.D., and I have papers here to show that the Divinity School caters not only for Irishmen who intend to become clergy of the Irish Church, but for Englishmen as well. The Board of Biblical Studies at Liverpool attempt to provide teaching in Hebrew and Greek, and in Ecclesiastical History, and they desire that the teaching shall be thorough and systematic, and so they have adopted as the examination for which the students have to be prepared, the B.D. Degree of the University of Dublin.* (*Document handed in.*)

2333. Sir ARTHUR RÜCKER.—I do not think I have got to the main point I have been aiming at, whether, if you have two Governing Bodies in the one building, you anticipate any difficulty in that concurrent jurisdiction, and should there be some arrangement by which one body or the other, or some body different from either of them should settle the matter in the case of a difference. I will put an extreme case. Suppose a Professor wanted to lecture at nine o'clock, and the place was wanted for some other purpose at the

same time?—(*Lord Justice FitzGibbon.*)—It should be left to the Governing Body of the University.

2334. You would leave it to the Governing Body of the University to settle the case?—(*Lord Justice FitzGibbon.*)—Yes. (*The Dean of St. Patrick's.*)—It is curious that that exact difficulty is continually arising, and even this very week, about the Divinity School Examinations—two people wanting the hall.

2335. I want to know how you intend to get over that?—(*Lord Justice FitzGibbon.*)—Perhaps the Dean might not agree with me, but I have a strong feeling with regard to dividing responsibility; generally divided responsibility ceases to be effective, and, therefore, without meddling with anything that the specialists are peculiarly qualified to deal with, such as teaching and matters of that sort, I think it far better that the sole Governing Body should be the Central Governing Body of the University. But I do say that whatever modification of the present state of things is recommended, there is a field, and a complete field, for expert assistance which, when called in, must be taken, and must have authority in its own field.

2336. Do you think that the efficiency of the Divinity School for the purposes of the Church of Ireland would be interfered with by the examinations of a second religious body in the College?—In my opinion, not at all, because I think they would run on parallel lines which would never meet. But I do not think the case could arise; I have given you figures which show that it cannot arise in the case of the Presbyterians, because they are not in this part of Ireland, and they have got all that they want in Derry and in Antrim. With regard to a Roman Catholic School of Divinity, although it rather bears on the general question and is very remotely complicated with this, one of the greatest wants of the Roman Catholics, if I may speak for them, is an Arts University in which their secular clergy will receive their education. I believe they are making arrangements now by which they will receive education in the Royal University in some way, but I do not think that that question can ever be settled until they are given an *institution*, whether it be called a College or a University, to which St. Patrick's College of Maynooth would stand in the relation in which the Divinity School here stands to the Church of Ireland.

2337. Dr. JACKSON.—Have you thought at all about the way of choosing Professors in subjects other than Divinity?—I cannot say that I have, because I think that belongs rather to specialists in the constitutional law of Universities; but with regard to any particular School I could give an answer.

2338. That would be sufficient for my purpose. What sort of an electoral body would you have?—A body that would commend itself as an authority on the particular subject with which it dealt. In the case of Law, I think, we have an inestimable advantage here in having a Supreme Court of Judicature sitting in the very city in which this University is, and we have there the body of the Benchers of King's Inns, who are an educational body; it occurs to me that they are a typical auxiliary of the Governing Body of a University in which Law is one of the special subjects of study. I adhere to my opinion that the Divinity School does not differ in kind, but I admit it differs in degree, and, above all, it differs in *temperature*. There you already have an admirable School, and at present you have only one, and I would put some Archbishops and Bishops and some Theologians on the Governing Body, and if another School came I would give a suitable Governing Body to it also. And you have one denomination which is in a very peculiar position in this country—that is, the Methodists. They are an educated body, they have some admirable schools, and they have their own Governing Body, and I think from Dr. Evans's paper that it is not impossible that the Methodists would like to have a Theological School, and, if they do, I see no objection to giving it on the same lines as ours. That would leave the question of Degrees, and I do not profess to go into that. You would either have a Superintending Committee of Examinations or something of that kind, or you would have to make the Degree a thing which you could obtain by an examination in Scientific Theology only; but, I confess, I do not think that could be done, for the truth is, there is no market for "Birreligion" in Ireland, except, perhaps, in Belfast.

* See page 370.

2339. Is it not desirable that there should be specialists to appoint Professors in Mathematics?—I think our Board here has always been a Specialist Board for Mathematics. Up to the time I was in College the number of Fellows whom the Classical Scholars recognised as being as good Classical Scholars as themselves was very limited. It has not been so since; we have had a number of distinguished Classical Scholars. But if you go to the general question, I do maintain that it is most desirable that in the appointment of Professors, either experts from outside, or, better still, those who are to be their colleagues, should, when there is a vacancy, have not only the opportunity to advise, but also that their advice should carry some specific weight with it, before the appointment is made.

2340. Would it not be possible that there should be on an electoral board for the appointment of particular Professors persons who would be representatives of external opinion?—I think so; but if you mean bringing in people who are not connected with the University I have a very strong feeling that no person should have anything to do with the government of this place if he was not himself a graduate. I think if you brought in graduates of other Universities they would be either in the majority or minority—you could hardly make them a majority, but if they were in the minority, I think, brought in in that way, they would be probably inclined to say that their own way was so much better than anything here that it would only lead to friction.

2341. I should myself be very sorry to see anyone brought in who was not in sympathy with the College or the University; but I should like to tell you what the method is which we have adopted at Cambridge for the choice of Professors. We have Electoral Boards consisting of the Vice-Chancellor for the time being as an *ex-officio* member, and eight persons nominated by the Council of the Senate or by the Board of Studies and elected by the Senate. Of the eight persons additional to the Vice-Chancellor three at least must be persons resident outside the University, in order that we may secure representation of external opinion, and we constantly have on the Electoral Boards persons who are not members of the University, to our great advantage. The nomination is for a considerable term of years: I do not recollect how many; I think it is possibly eight. If a vacancy comes during that time, then this Board sits. If no vacancy comes, probably the experts will be re-appointed. We find that that is a good way of getting external opinion. What do you think of that method?—I can only answer with regard to that, that as regards the work of which I am qualified to speak, I am perfectly satisfied of the advantages of external opinion being brought to bear. I should like to mention a case in which a member of the Bar, a man of the highest acquirements, was required to fill a vacancy in the Law School after this new Council was established—I call it new, though it is rather old now. The Council had the appointment. On that occasion our Senior Benchers and the Chairman of our Education Committee induced a well-known and very eminently qualified person to apply for the Professorship which was vacant, and he was a practising Irish barrister. The Council did not elect him. The Board had a veto on it, that is to say, the Council only elects subject to the approval of the Board, and I went with Serjeant Jellett to the Provost, and, beyond all doubt, the result of the interview was to satisfy me that if the Council had not had the first word, we should have had a much better chance of our expert opinion having effect than it had. I mention that to show that I consider expert opinion valuable, and, further, that it is very necessary to be most careful in the framing of the Electoral Body. That Council is elected, and at a very early stage of its existence there was a contested election between two representatives of different departments, and the Mathematical method of election resulted in both of these being returned, and in the Secretary of the Council, Professor Dowden, an essential member of the whole body, being left out. Twice afterwards the result of the election turned on the Mathematical procedure adopted, by which voters were allowed to accumulate their own votes upon themselves.

2342. Mr. Dean, might I trouble you with a question as to the Divinity School curriculum. What do you think is the proper body for settling the choice of subjects and books?—(The Dean of St. Patrick's).—

I think it ought to be a body composed of those whom I would call experts or specialists, in the case of all courses, subject to review by some higher authority. In the case of the Divinity School I would suggest that the higher authority be the Archbishop.

2343. Have you here no Boards of Studies?—No.

2344. Do you not think that the institution of Boards of Studies would be useful in departments other than yours?—I think it is of great importance indeed. I think there is something of the nature of a Board of Studies in the Medical School, but I should be glad to see Boards of Studies in the case of all departments.

2345. That is what I was driving at. It seems to me that, now that knowledge is happily so much specialised, it is necessary to allow the several departments to deal with their studies. I should not have thought it necessary that the recommendations of a Board of Studies should be revised by a higher authority, but, of course, there may be in the Divinity School special reasons which I do not perceive. Do you think it absolutely necessary that the recommendations of the Board of Studies should be revised?—Personally, I think not, though I think it may be desirable. I think bringing in a provision of that sort might meet the wishes of a great many members of the Church of Ireland who would like the Archbishop to be given control.

2346. I suppose that they would like it largely in consequence of your Divinity School being not only a Faculty of Theology but also an institution for the training of clergymen?—Quite. That is the reason.

2347. Is there not something to be said for keeping those two functions separate?—I think they ought to be separate, if it was possible. It is much better that they should be separate. As things are, the Professors in the Divinity School have to devote a very large part of the time which they ought to spend in research and advancing the knowledge of Theology, to teaching young men the very elements of Theology. It would be good for the Professoriate if the two functions could be kept separate, and the reason why they are combined, I take it, is that the men who come to us are so poor that they could not afford to pay for teaching in a Theological College as well as in the University.

2348. Thank you very much for that answer. It has interested me exceedingly. Does it seem to you that the University is concerned chiefly with what you call Scientific Theology, and that the training of clergymen, which has been carried on so successfully for so many years here, ought to be carried on under the direction of the College rather than under the direction of the University, more especially as there seems to be a prospect that there will be Schools for the religious training of other communities?—I have not been able very clearly to grasp the distinction between the College and the University that I think you intend me to arrive at, but, broadly speaking, I think I would agree certainly with the view which you have put forward. But I should like to say this, that the difficulty of examining together, or of lecturing together, Presbyterians, Methodists, and members of the Church to which I belong is not so great as might be supposed. I always have had a certain number of Presbyterians coming to my lectures, two or three every year, and one or two Methodists. And on several occasions Methodists, and, I think, Presbyterians, but I am not quite certain of that, have obtained the Degree of Bachelor of Divinity.

2349. I will ask you one question with regard to the Divinity School regarded as a Theological Faculty. Is it under any circumstances conceivable that persons who are not in Holy Orders should hold Professorships?—No. All the Professors in the Divinity School are clergymen; they are all members of the Church of Ireland and in Priest's Orders. We have no provision for electing lay Professors.

2350. And, I suppose, you have not conceived the possibility of admitting to a Theological Professorship a person who has not taken a test?—Do you ask me what my own wishes are?

2351. What is likely to happen?—I do not think it is the least likely that Theological tests ever will be relaxed.

2352. I do not know whether there is anything else you wish to tell us?—I should, indeed, be very glad to see more laymen taking up the study of Divinity. I think the interest that has been aroused in Theological learning by the devotion of laymen to Theo-

logical study in England has been very great, and I wish I could see any prospect of something of the sort happening here.

2353. I will ask you one more question. With respect to the Chapel Services;—the Service in the Chapel is quite distinctly the business of Trinity College?—Yes.

2354. Should the University be enlarged by the addition of another College to Trinity College, would the Chapel be so distinctly regarded as belonging to Trinity College that its separation from the rest of the University would be satisfactory?—In a sense it does belong to Trinity College exclusively. There is another sense in which it belongs to the University, because University sermons are preached.

2355. Mr. BUTCHER.—Mr. Dean, I should just like to elicit a further expression of your opinion on a point on which you have already spoken. It is about the new Governing Body of the Divinity School, and it relates to the proposal which I have made a note of, that the Governing Body should include three representatives chosen by the General Synod of the Church of Ireland from amongst its members. This proposal is of some importance, because it is put forward by representatives of the Bishops of the Church of Ireland. As I understand your evidence, you think that it would be very inadvisable that the question of academic teaching in the Divinity School should come up as the subject of a general debate in the General Synod?—I think it would be simply deplorable and disastrous. It would narrow the possibilities of the School, and it would tend to repel those who look for Orders from coming to us, because a School which was in any way controlled by a popular assembly like the General Synod, could never command the confidence of the English Bishops or the English public. Further, from the academic point of view, I think it would be most mischievous. It would be just as mischievous as in the case of the School of Medicine or the School of Law. If you could excite prejudice in a popular assembly against a particular lecturer or a particular professor in either of those schools, it would be very bad. In the case of the Divinity School it would be, I think, deplorable. But I think I should perhaps repeat what I said about that, that the Synod as represented by us distinctly does not ask that. We have got no mandate.

2356. That is important?—Furthermore, at the meeting at which the Statement presented to the Commission was drawn up, the question was raised whether that should be asked, and it was deliberately agreed to by this meeting that that should not be put in. It was left an open question.

2357. And that is a fact of the utmost importance?—And certain of the Bishops were present when that was done. (*Lord Justice FitzGibbon*).—May I refer to page 88?—I have quoted from it already. The meeting of the General Synod of the 26th of April, 1879. It was proposed by Dr. Salmon, seconded by the Right Hon. William Brooke, and adopted amongst other things:—"That we are of opinion that the Professorships and the control of the studies in the Divinity School should be vested in a body in which the Church of Ireland can have confidence," and then it was resolved "That the Synod would recognise the Bishops of the Church of Ireland as such a body."

2358. That is decisive as regards that date, and it is plain from what the Dean tells us that the Synod has not gone back on that?—(*Lord Justice FitzGibbon*).—So far from going back, when issue was joined upon the change that was proposed by the Bishops in 1904, the contrary proposition was withdrawn. It certainly was not withdrawn till it was perfectly obvious that the sense of the Synod was against it.

2359. It would seem absurd that a body of laymen should take up the question of the teaching of law or medicine and raise a popular debate on those subjects, and I can imagine reasons why it should be much more inadvisable in Theology?—(*Lord Justice FitzGibbon*).—May I say, having been a member of the Synod since 1874, and having often had to act as Assessor, if this power was given to the Synod that is now proposed, the first thing that the Synod would have to do would be to provide by legislation for the exercise of that power, and the provision of checks of one Order against another is so balanced that it is almost impossible to work the machinery of the Synod in matters of this kind without some previous arrangement. I could not tell what the

popular voice would be, but certainly one of the ways that they would consider first would probably be whether the power should be deputed to the Bishops, and unless the Synod changes its mind this would be done.

2360. The power would extend not only to the election of Professors of the Divinity School, but also to the methods of their teaching and the course of instruction?—(*Lord Justice FitzGibbon*).—I have had some experience of that in the Dublin Diocesan Synod. For some years the subject of the Chapel Divinity School has been brought up before that Synod, and some members have objected to particular books used in the School. The Diocesan Synod had no business whatever, in any effective sense, with a question of that kind, but such motions have not been ruled out of order. (*The Dean of St. Patrick's*).—There is this fundamental difference, that as matters stand at present, whatever is said on the subject in the Diocesan Synod is entirely ineffective, and in a technical sense impertinent. It would not be impertinent in the General Synod if the General Synod had the right to elect representatives on the Governing Body of the Divinity School, and consequently the position of the Professors of the Divinity School would be very seriously affected.

2361. Some of us can remember very well the theological debates in the General Synod in the time of Disestablishment, and of course we all know that there was a great deal of excitement prevailing at that day; and it does seem to me that it would be almost wanton to draw the University now into theological controversy raised by persons scattered through the country?—(*Lord Justice FitzGibbon*).—Pardon me, if I say that none of those debates to which you refer were in any sense impertinent in the General Synod at the time, because it was forced upon the Church of Ireland at that time to revise its ritual, canons, and liturgy, and certain changes were absolutely necessary, and the course was taken—I do not say wrongly taken—of practically arraigning the whole of the liturgy and the ritual. All these questions were in form, and they were before the body which had power to determine. And we got through them with a result which I think I could show you has been marvellously successful. I, for one, would be extremely sorry to see us forced to re-open that discussion again. It is right to say that we got rid, without any friction whatever, of several questions which in the English Church are still very troublesome. I will mention one, and you will see the sort of things we had to deal with. There was that extremely difficult question about the Athanasian Creed, and the history of it is instructive on the question of introducing discussion of this kind in a Synod. Archdeacon Lee, who then held the office that is now held by Dean Bernard, was Archbishop King's Lecturer in the Divinity School here. The first resolution of the Synod, which was only preliminary, was to alter the Athanasian Creed by leaving out certain clauses. The instant that resolution was passed, Archdeacon Lee started a proposal to open a Church of England in Dublin. He enlisted the active sympathy of Canon Liddon, and he also had a correspondence with Mr. Gladstone, and the action which had been so far taken was regarded as action which if persisted in practically amounted to schism and heresy. The movement was really killed by an observation of Dr. Salmon, that Archdeacon Lee was troubling himself about getting up an English Church in Dublin, but that he need not give himself much trouble, for a sentry-box would do; but the result of it was that, after several years, the expedient was adopted of simply omitting the rubric at the beginning of the Athanasian Creed, whereby it ceased to be part of the public service of the Church, but it remains still as one of the formulæ of our religion. I mention that incident because it went almost to the very point of a breach with the Church of England; and the General Synod of the Church of Ireland came very well through the trial, and the Church is as united now as ever; and if you think it right to give it direct representation on the Governing Body of the Divinity School, I have no doubt that the General Synod will exercise their power sensibly, perhaps by handing it over to the Bishops.

2362. I see that it was perfectly competent, and indeed necessary, for the General Synod to discuss these theological questions then; but what I mean is, would it be advisable to resuscitate such

* Appendix to First Report (Cd. 3176), 1906, page 88.

discussions now in dealing with University studies?—Do not ask me to say whether it is advisable or not. I should be very sorry to see it done.

2363. Then, Mr. Dean, there is only one other question, it concerns the joint-letter of yourself and Dr. Gwynn, of June 19th, 1903, page 99?—(*The Dean of St. Patrick's*).—Page 99.

2364. You proposed that the new Governing Body should not have the control and direction of studies, but that that should be left to the representatives of the Divinity School on the Governing Body, and that in case of difference the question would go to the Visitor. The Governing Body, as there sketched, is now modified by the omission of the three Junior Fellows, so that you would have only three classes—the three members elected by the Board, the three representatives of the Divinity School, and the representatives of the Bishops, the whole body being nine. Do you think that that body would not be competent, through a Committee of its own, to deal with the courses of study? The Committee would probably be much the same as you suggest—the Professors and representatives of the Divinity School, without creating, I mean, a separate body?—Yes, I think it might. Our proposal was that the Council should consist of twelve members, and it is now proposed that it should only consist of nine. I still think that there might be a Committee with a small Sub-Committee.

2365. Or the Committee might include also the representatives of the Bishops. So that you would be in no danger of being dominated by laymen?—I should be quite satisfied if the body of nine members were there as suggested. They could be trusted, with the aid of the Sub-committees. It would not be easy always to secure the attendance of the Bishops, and they could not meet very often.

2366. The Committee work of directing studies might then be deputed to the representatives of the Divinity School?—I should be quite satisfied.

2367. Dr. DOUGLAS HYDE.—I am afraid I was rather stupid when you touched earlier in your Statement upon the monetary matter. I understand, however, it will appear that your point was the statutory point, that any money held for the Church of Ireland by this Statutory body was money held in trust. What bearing do you mean this to have upon the £3,000 paid to the Board to Examiners of the Divinity School?—(*Lord Justice FitzGibbon*).—What I said did not extend to making any difficulty on the ground that the money spent on the School was a trust fund. That funds are, under the Church Act, held in trust for the members of the Church shows that we are an organic body with powers enforceable by law, as regards property, under the doctrine of trust; as regards individuals, under the doctrine of contract. The Act speaks of property "enjoyed by members of the Church." This certainly describes the funds enjoyed by us in the College. But I cannot say that they are trust funds enjoyed under and by virtue of the Act. We are recognised there as the beneficiaries of all the property we enjoy. I do not know any money more vital to us than this money spent here. So far as that property has, under the constitution of the College, been applied to the particular purpose of Divinity teaching we have enjoyed it, and it cannot be taken away from us without giving us a claim for compensation. We don't want a claim for compensation; we don't want the injury to be done which would have to be compensated. We do not want the Divinity School separated from the College. That would give us a claim for compensation.

2368. Suppose the College had five years ago taken off £1,000 of this £3,000 spent in the Divinity School would you now only make a claim for the £2,000 remaining?—We would not. The College never did that, because it would really have lost money by doing it. The matter was discussed in the Synod, and your argument was used there, and all parties were satisfied with things as they were. The College admitted that the Church of Ireland was their best customer. They were in favour of keeping things as they were, and of not spoiling the goods so long as the Church dealt with them. They wanted to keep the Divinity students for their own interest, and they therefore had to spend a sufficient sum on the Divinity School. The University and the College agree that they do not want this separation, and, therefore, the only danger to face is the possibility of their being prevented by outsiders from spending this money on the Divinity School.

2369. Supposing it were wished to devote money to a new Professorship and that the Board were so generous as to add £500 to it, your claim next year would be equally the same thing. You would not withdraw that £500?—Not if it was really required for the Divinity School. I hold that the Governing Body is entrusted with the duty of providing a Divinity School, and of paying for adequate Divinity teaching. They do it in their own interest, because it attracts students. It is part of their duty, because this is a University. I hold it would not be a University at all if it did not include a Faculty of Theology and did not teach Theology. The Board undoubtedly has a general discretion in the distribution of their funds among several Schools, including the Divinity, Law, and Medical Schools. Suppose they spent all their money on some terribly expensive School of "Science falsely so-called," without a sense of justice, the Divinity School would have a claim against them without any Commission or Act of Parliament. I would not say it could be legally enforced, but at any rate they would not be governing the College lawfully or properly. The most paying School they have is the Divinity School. It is costing them less than any other school.

2370. The claim is for the money expended on it?—We make no money claim. That was Mr. Knox's point. Our claim is to have the teaching of Theology continued. If the funds were not enough, if the College could not afford to teach Theology, we would do the best we could to help them.

2371. That is a commonsense explanation of it?—I hope all I have said is commonsense. Here is our case as stated in the unanimous resolution of the University Council of June 18, 1879:—"That the annual sum at present expended on the Divinity School be secured for the permanent maintenance of that School." Of course, the annual sum is liable to fluctuate, if the endowment or regulations are altered. It would increase if the endowment were greater, it would be reduced if the endowment were less. But all we want is to have the teaching we get secured to us. It would be perfectly impossible for us to get the same class of Clergy if they had to pay two sets of fees. The general run of Irish Divinity students are poor. A large proportion of them are the sons of clergymen. Considering the modest pittance of the Irish clergy, all of whom have small livings, with a superannuation allowance of two-thirds when disabled, and having regard to the length of their families, you can estimate how far they could pay two sets of fees for their sons. And this is the class who send their sons to Trinity College for training.

2372. Do you claim for that?—No, the claim to be indemnified for the loss of education only arises if this separation takes place, and the education of our clergy is taken from us. So long as it is left to us we have no claim at all except to have the education sufficiently maintained, and properly given.

2373. In 1905 the Archbishops approached the Board, and the Board replied to the very moderate demands that you then made, that there were statutable difficulties in the way of meeting the demands?—The statutable difficulties were only in the way of deputing a member of the Church to do the Church business. But the Board, the Council, the Senate, and the Synod have never varied from the position that the amount now spent on the Divinity School should be secured to it, and all parties have always agreed to that.

2374. I would like to ask Dean Bernard would it not be a difficulty in appointing someone to represent the Divinity School upon the Board of Trinity College. Would it not be a contravention of Fawcett's Act? Would it not be against that Act to have certain persons appointed to positions in the College for denominational reasons?—(*Dean Bernard*).—You are referring to the question of the Governing Body of the College, the representation of the different faculties. I do see that there might be a difficulty in connection with Fawcett's Act, that the appointment of representatives of the Divinity School upon the Board might be a breach of it in letter though not in spirit. (*Lord Justice FitzGibbon*).—Pardon me a moment, the Divinity School is exempted from that Act. It does not apply to it at all.

2375. CHAIRMAN.—It is.

2376. Sir THOMAS RALEIGH.—That is so. It does not apply to the Divinity School?—(*Lord Justice FitzGibbon*).—I think, from my recollection of it, that the Divinity School is altogether excepted. I think it

was expressly excluded from Fawcett's Act,* so that the difficulty you refer to could not arise.

2377. CHAIRMAN.—The Act states that so long as the University shall continue to teach and grant degrees in the Faculty of Theology the Act shall not apply to any Professor or Lecturer in Divinity?—(Lord Justice FitzGibbon.)—That does it completely; so long as they continue to teach in the Divinity School the Act shall not apply. Of course if they do not continue to teach Divinity the Act will apply to the Faculty of Theology as it does to all the other departments of the University. But so long as they teach they have the exemption.

2378. DR. DOUGLAS HYDE.—If a man is a member of the Divinity School it seems to be the case of the office rather than the man, but in any other case there is no difference?—Certainly not. But this is not a point for me, but for the two great lawyers sitting with you. Those who are teachers in that School are treated by the Act as being people of a particular denomination, and, therefore, there is a denominational qualification for that office. The Act is not to apply to them, and the way it is worked out is by the definition clause which excludes the teachers and Professors in that particular School.

2379. CHAIRMAN.—How far would that apply to their election on the Governing Body or some other body. It does not seem to be contemplated. Would that be a violation of the Act? (Dr. Douglas Hyde).—That is the point that I desired to raise. (Lord Justice FitzGibbon).—That is a very dubious question. It can be got rid of by the form of the provision for appointment. I don't think there is any legal difficulty in getting representatives from the Divinity School, and at the same time keeping up the tests for employment in the Divinity School.

2380. LORD CHIEF BARON.—That is keeping up tests in one member of the Governing Body?—I don't quite understand that to be the case. (Dean Bernard).—That is the question that was put to me. Perhaps I was wrong to attempt to deal with a nice legal question.

2381. CHAIRMAN.—I don't think it is proposed that the person elected should be a member of the Church of Ireland?—(Lord Justice FitzGibbon).—Oh, no; only that the Divinity School should be represented on the Governing Body of the School. Of course, in practice the result would be that the representatives would be Churchmen.

2382. LORD CHIEF BARON.—My reading is this, that each Faculty, Medicine, Law, Divinity, and so on, may be represented on the Governing Body. It would not contravene Fawcett's Act if this included the Faculty of Divinity. The appointment is not made because of the religion, but because of the office. That is the test.

2383. CHAIRMAN.—I think it turns on this. If the person elected is not necessarily a member of the Church of Ireland, even though he may be a representative of the Divinity School, I think the Act would not apply. But if he were required to be a

member of the Church of Ireland I think the Act would apply?—(Dean Bernard).—I did not suggest the election of a member of the Church of Ireland as such.

2384. CHAIRMAN.—Do you agree, Lord Justice?—(Lord Justice FitzGibbon).—I do.

2384A. And you, Lord Chief Baron?

LORD CHIEF BARON.—I am inclined to think so. I at first thought that the proposal was that a person might actually sit on the Board.

CHAIRMAN.—But not to put a test on that person.

2385. LORD CHIEF BARON.—I was under the impression that the persons elected should be of a specified religion?—(Dean Bernard).—No; the Faculty of Divinity would elect them to the Board on that principle. It does not follow that the representative would be of any particular religion, although in fact he would always be a member of the Church of Ireland. The Faculty of Divinity, technically, may elect an agnostic to the Board. (Lord Justice FitzGibbon).—The difficulty would arise then, but not till then.

2386. DR. DOUGLAS HYDE.—With regard to the Elrington Prize, what would you advise with reference to the examinations?—(Dean Bernard).—In a case of that kind the control ought to be vested in the Governing Body of the Divinity School.

2387. And the Regius Professor?—Yes, and possibly the King's Professor of Divinity, in addition to one or two other Professors to be chosen *ad hoc*.

2388. SIR THOMAS RALEIGH.—Would you allow it to the Professors and not keep the Board altogether outside?—I would certainly keep the Board out of it.

2389. DR. DOUGLAS HYDE.—Am I right in the information I have that in the School of Divinity they are now giving instruction in preaching?—Oh, yes, we have done that for some years past. (Lord Justice FitzGibbon).—There used to be prizes for preaching in my time, and others who were not Divinity students went in for them, perhaps to admire the preaching or to listen to the lectures. (Dean Bernard).—They are more systematic now. All have to write a certain number of sermons and read a certain number of them.

2390. Are there lectures on preaching?—Oh, yes; lectures are given by the Professor, now and then.

2391. Yes; it reminds me of a story I heard in America. They taught the students of a particular Church there to preach with such effect that when you had heard one of them you had heard them all?—Well, it is not in my department.

2392. May I ask you, Lord Justice, had you any ulterior motive in the exposition you have given us to-day of the working of the Irish Church. I think it was the finest Home Rule speech I ever heard?—(Lord Justice FitzGibbon).—I don't go into politics. At the same time in the Church we have governed ourselves very well.

2393. CHAIRMAN.—I have to thank you very specially for the way in which you have laid your suggestions before us, and for your attendance here.

The Witnesses withdrew.

R. Kyle
Knox, Esq.,
LL.D.

R. KYLE KNOX, Esq., LL.D., called in and examined.

2394. CHAIRMAN.—I believe you wish to say a few words about the Divinity School?—Yes; I wish to refer for a few minutes to the report of the meeting of the Special Committee appointed by the General Synod of the Church of Ireland. I object very strongly to the words which appear in that report on page eighty-three,† which appear to me to be of very considerable importance. The words are—"If the Divinity School be severed from Trinity College it, too, in common justice must be endowed out of public funds, for the resources of Trinity College should not be crippled to make good any loss inflicted on the Church." That is what I object to. I wish to say there is no parallel between the case put forward, as the "common justice" of this case and the case of Maynooth trustees. In that case there was a charge on the public funds existing, and this charge was cancelled by the payment of the capital out of some of the funds of the Disestablished Church. The public funds were relieved by the payment. The same claim is put forward on behalf of the Divinity School. We have it put forward that our school wants to be endowed out of the public funds, but that would mean the creation of a new charge. I don't think they are parallel cases at all. I am afraid, and I

think I am justified in the feeling, and I know a good many gentlemen who think like myself in this matter, we must not allow it to go forward, as the words used may indicate, that the compensation must be made to the Church from public sources or that we desire to exonerate the funds of the Divinity School which have been for generations employed to maintain the Divinity School for the Church of Ireland. It is suggested that we have to make application to the Government for assistance before making application for the funds of the Divinity School. I consider such a claim would be perfectly futile and visionary. I do not consider that the present Government, or any Government, can bring an Act of Parliament through which will contain clauses to provide for the maintenance of a Divinity School for the Church of Ireland at the expense of the State. And I do not think the General Synod of the Church ought to be allowed to make such an application, which I believe to be vain and illusory. We were appointed to bring before the Commission the present position of the Divinity School, and the claims upon that Divinity School in the Church of Ireland. We got no authority to make a fresh claim, either present or future, upon the Go-

* (36 Vict. c. 21), University of Dublin Tests Act, 1873.

† Appendix to First Report (Cd. 3176), 1906, page 83.

vernment on the part of the General Synod of the Church of Ireland or to make the statement that Trinity College should not be crippled to make good the loss inflicted upon the Church. That is to say, rather than cripple these resources the funds spent on the Divinity School should be discharged from our claim. The report cites the various claims the Church has made, and the extent to which it has assisted the building up of the financial resources of Trinity College. Our claim upon that College is already ample and sufficient. Our duty in case of a separation of the Divinity School from Trinity College is to make a claim upon the funds. Reference is made to the Report of the Belmore Commission. Although the Report of that Commission was the report of a majority, as to amount there was a minority including Judge Flanagan and Sir Andrew Porter, who agreed to a claim of less amount.

The CHAIRMAN.—The present Master of the Rolls.

2395. LORD CHIEF BARON.—Not the present Master of the Rolls. There was an announcement to-day?—(Mr. Knox).—I think the whole matter of this relation between the Church of Ireland and the Divinity School should be looked into before they make this claim on the State, which would be quite vain. I want to satisfy the Commission by bringing sufficient evidence before them that the General Synod never endorsed that claim upon the public funds. I don't ask you to accept my personal statement for more than it is worth, but personally I have done my best to make the position quite clear. The matter came before the Synod, as you will see on page 97.* There was a motion made in 1902, a resolution which I moved myself, for the purpose of giving the Bishops power to act and to ascertain what control they should have in the Divinity School. In their reply they expressed their deep regret that the reply of the Board deprived the Church of all hope of obtaining from the Board of Trinity College any control or influence over the Divinity School. And this was part of the statement at the end, "The Church of Ireland should press as strongly as possible upon the Government her claim for relief or compensation on the matter of the Divinity School." Now, I do not know of any other reference to the claim for Government endowment but that, and that claim led to nothing. There was not a resolution even formulated on the subject, and there was no step taken at all. We were advised by the best authorities in the Synod that to make such

a claim would be practically useless. The most influential layman in the Synod is Lord Justice Fitz-Gibbon, and he advised us in these words, "Would it not look nice going in such a way for an endowment for a Divinity School for one single denomination. The thing was absolutely hopeless." He told us he did not think there was the slightest possible hope of getting the Bill brought in, or if brought in that the proposal would be even listened to, to provide funds for a Divinity School. There was not, he said, the slightest hope of getting it. The Dean of St. Patrick's put it more strongly. He said, "The Church had no funds wherewith to establish an independent Divinity School, and it is the wildest of dreams to suppose the State would supply it." I, myself, have some influence in the General Synod in a small way. I am one of the original members, and have ever since been engaged upon the Senate, and especially among the laymen. I think a great many would be influenced by me. At that time I told everyone who spoke to me, Bishops, clergy, and laymen, that we might as well go to the Emperor of China for the grant as to Mr. Balfour, who was then Prime Minister, and expect to get anything from the Government for a single denomination, the Church of Ireland to establish and maintain a Divinity School. Therefore I respectfully submit that it is not the General Synod who are responsible for making this claim upon the State. On the one occasion that it came before them they were assured that anything of the kind would be impossible, and that assurance was accepted. Therefore I object to this claim being inserted on the First Report of this Commission as purporting to come from the General Synod as if they were putting forward this claim. When it was put forward in the Synod we were told that it would not be listened to, and that it was the wildest of dreams. I concur in that opinion.

2396. CHAIRMAN.—You ask us in effect to strike out that passage?—Not exactly. My purpose is served if you give my objection and the grounds of the objection. I think it is important that it should be understood through the entire Commission that it was beyond our instructions, that we have no authority from Synod to claim public money for funds to support or establish our Divinity School.

2397. CHAIRMAN.—I have perfectly understood the Statement, and we are much obliged for your assistance?—(Dr. Kyle Knox).—I am afraid it was very limited, but I felt bound to bring it forward.

The witness withdrew.

The Right Rev. Dr. ARCHDALL, Lord Bishop of Killaloe, and the Right Rev. Dr. CROZIEB, Lord Bishop of Ossory, (representing the House of Bishops of the Church of Ireland), called in and examined.

2398. CHAIRMAN.—Will you kindly say what you have to say on this subject of the Divinity School?—(Bishop of Killaloe).—The Bishop of Ossory and myself have been specially appointed by the Archbishops and Bishops as a body, and we have been instructed to bring before the Commission the questions affecting the government of the University as well as that affecting the Divinity School. Because the Bishops think that the government of the University itself and its students will very deeply affect the position of the Divinity School. That seems to be a natural result. In the first place they have to strongly object to the proposal that the University and College should be made secular, and that there should be no religious teaching. They would not claim at all that the Divinity School of the Church of Ireland should be the only one in the University. They would desire that the views put forward by the Board of Trinity College with regard to the different denominations—Presbyterian and Roman Catholic—should be carried out if those who are interested in their people desired it. In fact, they would be rejoiced if it should be so. But they do think it would be a great injury to the College and to its prosperity if it were secularised. We, Bishops, could not, for instance, support it as a place of learning for our sons and indeed of others if it were purely secular. Therefore we think it would be a great loss to the University itself. However, I do not dwell on this, because I do not think it will be resorted to, and I think that there will be no force in this secularist proposal. Therefore I proceed at once to the question of the constitution and government of the

College. We strongly object to a denominational college being joined with Trinity College in the University of Dublin. We chiefly object to it on the ground that such a college would alter and, in fact, revolutionise altogether the College and the University. It would be impossible for the ancient constitution of the University to be continued on the lines upon which its government has from the first been carried out, by persons directly and intimately connected with the College, persons who were educated and brought up in it, and in full sympathy with it. And indeed that constitution must be taken away if there is to be a denominational college connected with it. More than that, the Repeal of the Tests Act would practically cease to exist. If you create such a second college, how could that Act be observed if you had the Board of the University or of the College based, as it must be, upon the appointment of persons drawn from either one or the other of the denominations on denominational grounds. The result would be at once that the University would be revolutionised, and there can be no doubt that what might be gained in the Roman Catholic College would be lost certainly as regards the position of the Church of Ireland in a University like that. The result would unquestionably be that persons who were able to do so would seek the free air of an English University, and would send to it their sons and their daughters. I have experience in the Department of Education in Ireland, in fact I may say I am very thoroughly acquainted with education in Ireland, but I will not delay you in going over my claims. I have been sitting for ten years as a Commissioner of the

National Board of Education, and am in very constant and diligent attendance there, and I understand its working. It works very well and usefully. As matters now stand, we work very amicably together. I would wish to recall to the mind of the Commission and to suggest, especially to those who are not Irishmen, what was the original constitution of the National Board of Education in Ireland. Under Lord Derby's Act you had not a religious scheme, you had a purely secular system provided. We had that system, against which they are struggling, especially in the Church of England, under which religious instruction was to be given outside school hours. The hours set apart for secular instruction are never trenching upon under our Board for religious teaching. In this case how did matters work? The system was to be universal secularism, and also universal undenominationalism. But as to the results, the present existing result is that the Board gave permission to all the religious denominations to have separate schools. And in order to get that perfectly free constitution the National Education Board was constituted, one half of Roman Catholics and one half of Protestants. Ten were Roman Catholics and ten were Protestants. Five of the Protestants were Church of Ireland members and five Nonconformists, four of them being Presbyterians. This was the constitution of the Board, and nearly all the managers of the schools are clergymen of the different denominations, chiefly Roman Catholic and Church of Ireland. There was a very large proportion of lay managers originally, as in the Church of Ireland the clergy excluded themselves owing to a religious objection, but they abandoned this after a time. For some little time also the Presbyterians stood out. But unquestionably now the number of laymen among the managers of schools is very small, and the schools as a rule are under the government of managers drawn from the clergy of all denominations, they are either Roman Catholic, Church of Ireland, or Presbyterian, and a few Wesleyans. The people of each religious denomination send their children to their own schools, but the children of other denominations are not excluded.

2399. CHAIRMAN.—Of course, we have nothing to do here in this Commission with Primary Education. We cannot go into that?—I am going into it as a system, a system intended originally to be free and undenominational, and it has now become extremely denominational, because of having a Board appointed on account of religious opinions, and yet that Board is composed of gentlemen of the highest character and attainments. I think it is fair to trace the argument to this position. I believe if the constitution of the University were placed in the same position in any way as regards religious denominations it would degenerate very soon, and the benefits derived by Fawcett's Act would be lost. Trinity College could not maintain its position in the University with a strictly denominational College beside it, and incorporated in the government of the University. I don't propose to go further into this matter, because it indirectly touches upon the question of our University school. The Archbishops and Bishops are fully of opinion that the Governing Body of Trinity College should be elective and that the several faculties should be represented on it. This matter the Provost has dealt with. On the question of the Divinity School the views of the Archbishops and Bishops agree on the whole with those of the Provost of Trinity College. But, before I pass from this question of the University and College representation, I said in my evidence before the Royal Commission in 1901, that with regard to this University question I advocated the view that there was a great opportunity for a University of another kind being established outside the University of Dublin. If you look at the Royal University and the Queen's College in Belfast, and the Queen's College in Cork and in Galway, I hope this Commission will consider that question very fully in the light thrown upon it by the late Commission of 1902, and will see the need there is for reform in that respect. As regards the cultivation of Arts, Cork College has some men, I know them intimately, some of them are professors of the highest order; they have these professors in the Arts course; it is a city of 80,000 inhabitants and a very large and busy county around the city. It is a pity to see the want of students. In Galway too there is a very high-class teaching staff, and their professors in Arts have only a few pupils to attend to. There is

great room there, very great room for the formation of Colleges of residence in connection with a University, and I think there is a very large amount of public opinion in that direction. The Royal University is doing a very admirable work—in the higher education of the people—but the Royal University is not really a University.

2400. The CHAIRMAN.—We have not to consider the Royal University. The University of Dublin and Trinity College cover the scope of this Commission?—I was going into that. Does it not touch the question of the Royal University in saying what colleges are available for affiliation. Does that not point out to the Commission a way to consider whether they could take into account the work carried on in other places as well as Trinity College?

2401. Do you suggest that we should absorb Cork and Galway, that we should affiliate them to the University of Dublin?—That would not be my idea. They are not in a University now. And the Royal University, I suppose, the Commission could take into account. We have great faith in the wisdom of this Commission. I am rejoiced to find that the Provost practically agrees with the Bishops with regard to the future of the Divinity School. That was to be expected from him, because he was deeply interested in the Church as well. Just one point. We are bound to take exception to the proposal of the Provost that the Church of Ireland should pay a substantial sum of money to the College for the free education of the Divinity students. These students are all undergraduates or graduates of the University, and have all to pay the annual University fees. The Law School is free, and we are free for very good reasons, because the ordinary fees of the College are paid by these students, and thus a very large revenue is derived by the College. The University also, at the time of the Disestablishment, received from the State a very large compensation for the advowsons which were connected with the College, and which were removed by the Irish Church Act. That amounted to £140,000. We have always considered the Divinity School to be our school, to be representative of the Church of Ireland. I am very glad to find the Provost taking the same view as the Bishops have regarding the government of the Divinity School. It is good to find him in accord with the Church of which he is a very able and very earnest member.

(The Bishop of Ossory).—In the observations I have to make, I desire to accentuate two points. First, I have, on behalf of the Bishops of the Church of Ireland, to express our profound objection to the proposal put forward on the part of some, but I think a small portion of the people of Ireland, for what they call the "nationalisation," by which they mean the secularisation of the University of Dublin, by removing from it all kinds of religious services, and catechetical examinations and lectures, such as it has at present. But as the whole of Ireland is practically at one in an intense hatred of secularism, to secularise the College is the last possible way to nationalise it. The Church of Ireland students are represented as having got something very good for themselves, which other students have not. Now, I resided as a student for seven years in the College, and I never heard any student Roman Catholic, Presbyterian, or Methodist, imagining or saying that I had greater privileges than they had, because I had to attend catechetical lectures, and to attend Chapel on Sundays—I don't think they regarded it as any privilege whatever. A fellow-student, a Presbyterian, who was a great friend of mine, told me that on many a morning, as he looked out of his window, when it was cold and wet, and say me trudging along to attend my catechetical lectures, or to attend service in the Chapel, used to say, when he went back to bed, "Well, even in this world there is some advantage in being a Presbyterian," and I am quite sure that many of the Church students looked upon it as rather a doubtful and inconvenient sort of privilege. But, however it may be regarded by the students, the Archbishops and Bishops of the Church of Ireland would welcome the acceptance by any other religious denomination in Ireland of the opportunities for religious instruction which the laity of our Church enjoy in the way of religious supervision over their faith and morals. In some small respects (such as catechetical examinations) the Presbyterians have already availed themselves of the Board's offer, and we should rejoice to see

the sons and daughters of every denomination of Christians as carefully cared for as the members of the Church of Ireland. Certainly a College emasculated by the exclusion of religion from its walls would have no historical connection with a College founded (as its character declares) "for the promotion of learning and piety," and its very title would be a hideous misnomer, namely, "The College of the Holy and Undivided Trinity." I do not think, further, that it is too much to say that from indifference to all religion, and the exclusion of any particular religious observances, such a College would in the course of time, become actively hostile to Christianity. Scepticism must be tolerated, if definite theological teaching is excluded. I cannot think that such a wanton injury to the feelings of many would afford any real gratification to any right-minded Irishman; certainly not to the members of the Roman Catholic Church. We have abundant evidence to show that depriving Trinity College of any religious atmosphere would only succeed in turning it into a "Godless College," which the Roman Hierarchy would deplore as much as the most bigoted Anglican. I may quote in this connection the evidence of the Catholic Bishop of Limerick (Dr. O'Dwyer) before the last Royal Commission on University Education in Ireland. "For myself," he says, "and I think I can also speak for a number of Bishops on this matter, we have no desire whatever to see that state of things brought about" (i.e., pulling down Trinity College); "I do not believe that you will ever do any good for Ireland by wrecking a great educational institution, and I do not think you will ever serve religion in Ireland by weakening Trinity College as a great centre of education for the Episcopalian Protestants. For my own part, I would infinitely prefer to see Trinity College go on as it is, substantially a Protestant institution than to see it made an absolutely secular institution." And a little later on he added, "I would look on the tearing down of Trinity College, or the wrecking of it, with absolute horror." And still further, he said that in condemning the Queen's Colleges as godless the fear of the Roman Catholic Church was not so much "fear of Protestantism, denominational Protestantism, as fear of infidelity and general unbelief." Trinity College may be regarded, in one sense, as a large boarding school, to which young men go up to live at about 17 or 18 years of age—the most critical and impressionable time of life. Now, no one would propose to establish a boarding school without some form of daily prayers and some kind of religious teaching—least of all in Ireland. Even in our primary day schools all religious denominations in Ireland insist on having teachers of their own faith. Dr. Starkie, the Resident Commissioner of National Education, elaborated this point in his evidence before the last Royal Commission. The Committee of the General Assembly of the Presbyterian Church are the only body of any importance who have suggested the exclusion of religious observances from within the walls of Trinity College; but Dr. Starkie showed that the Presbyterians actually refused to join the National Board until their own schools were made *quasi* denominational. For eight years they refused to join the Board until the rule as to religious instruction in non-vested schools was rescinded, and until their schools were confined to the clergymen of their own denomination. I do not blame them for that; but I maintain that if religion is of such importance in their estimation to the poor man's child, it is of no less importance to the youth who is being trained for his life's battle in a University. For myself, I may say I feel more strongly on this matter than on any other point which will come before this Commission. My father and my grandfather were graduates of Trinity College, and I followed in their footsteps, and sent, besides, two of my sons into residence in the College; but with all my affection for the old University, I would strain every effort to prevent a friend or kinsman entering into residence there if it were secularised, and all religious services tabooed. In this I believe I express the sentiments of ninety per cent. of the laity of the Church. Seventy-six per cent. of the students of Trinity College are members of the Church of Ireland, and I cannot see, if you alienate that vast body of students, and the parents and guardians who sent them there, and at the same time fail to satisfy in one iota the claims of the Roman Catholic Church, how you are going to supply other students to take their place. I am more than anxious that every other

body which desires for its members the same religious observances should have them to the full; but it is ungenerous, it is unchristian, it is like the dog in the manger, for any religious body to say, "We don't want it and you shan't have it." We regard this daily recognition of the presence of God as sacred as life itself, and if others do not value it, that is no reason why it should be taken from those who do. That is all I have to say upon the first question. Now, there is another matter on which I would like to say a few words on behalf of the Bishops about the Divinity School; and in the first place I desire to say that the Bishops feel as strongly as possible in favour of retaining the Divinity School in connection with Trinity College, and in deprecating a rival suggestion put forward, I believe by Dr. Knox and one or two other members of the Church, that instead of asking for the retention of the Divinity School in connection with the College, the Church of Ireland having a share in the government of it, to ask this Commission to suggest that it should be separated from the College, that the Church should receive a money compensation. I believe that was suggested by Dr. Knox.

2402. LORD CHIEF BARON.—Dr. Knox did not suggest that. He has just been before us, and he made no suggestion of that kind. (*The Bishop of Ossory*).—I am exceedingly glad to hear that.

2403. CHAIRMAN.—The statement of Dr. Knox was in reference to a possible claim upon the Government for a money compensation if the Divinity School was taken away, and he pointed out that it was hopeless to expect that the Government would ever recognise any such claim?—(*The Bishop of Ossory*).—I was under the impression that he intended to recommend the severance of the Divinity School from the College, because that is the solution he puts forward in the last clause of his printed statement.

2404. It is only fair to say that he did not suggest that to us?—(*The Bishop of Ossory*).—I am glad to hear that he did not. Now, with reference to the Divinity School, it is the strong desire of the Archbishops and Bishops that it should, if possible, be continued in connection with Trinity College, but that some voice in its management should be given to the Church of Ireland, as representing the whole Anglican Communion for which the Divinity School trains clergymen. Here the Bishops must join issue with the only important body which demands a separation—the Committee of the General Assembly of the Presbyterians. Here, again, one main argument is the desire to secularise the University, and the not altogether laudable proposition that, because they do not require the absolute equality which the Board have offered, and which the Church of Ireland keenly desires them to possess, namely, a kindred School within the walls of Trinity College, therefore the Church of Ireland should be deprived of it. They are satisfied, they say, with the facilities they already have for the education of their clergy in Derry and Belfast, and with the provision made for them at the Disestablishment of the Church of Ireland, although the Church, neither then or since, received any money for a Divinity School, the natural contention being that she was already well provided for in the Divinity School in the University of Dublin. The geographical position of the Presbyterian Body explains why they have no desire for a Divinity School in Dublin. Their total numbers in Ireland are 443,494; but of these, only 3,312 are in the province of Munster; 2,270 in Connaught; and 11,735 in Leinster; leaving 426,177 for the province of Ulster; that is, about 96 per cent. of all the Presbyterians in Ireland live in one centre, and possess already, in Belfast, a College, with which they are largely satisfied, and which is predominantly Presbyterian. Out of 347, or so, students on the roll of Queen's College, Belfast, 247, that is, over 71 per cent., are Presbyterian; and they have most excellent Divinity Schools already for the training of their ministers, both in Belfast and Londonderry. I think it would tend immensely to soften denominational prejudice if all the future clergy of every Protestant community in Ireland received their education in Arts side by side in the same University; and though the scheme has been rejected for the present by the Presbyterians, yet speeches by leading men, like Dr. M'Cheyne Edgar, and the influence of leading broad-minded ecclesiastics of that Church in Dublin, lead one to hope it may not be utterly impracticable as a future possibility. The figures supplied at such immense pains by Lord Justice FitzGibbon, which I have had the privilege of seeing,

Crozier.

and the documents appended to the statement by the Synod Committee of the Church of Ireland, show sufficiently the close connection which has always existed between that Church and the Divinity School, and what the Church owes to the Divinity School for the training of her ministers. We desire that connection to be maintained. But the working of Fawcett's Act has gradually made plain the fact that sooner or later the government of the Divinity School may be in the hands of a body utterly indifferent to the needs of the Church of Ireland, or even hostile to it. And should the Divinity School cease to retain the confidence of the Bishops of the Church of Ireland, it would at once cease to attract Divinity Students from either England or Ireland. To the Bishops of the Church is given the absolute and untroubled choice of fit persons to serve in the sacred ministry of the Church. It is their chief commission, and again and again the Bishops of the Church of Ireland have given anxious thought to the matter of the training of those whom they shall accept as the future clergy of the Church, and the Bishops are not prepared to continue to recognise the Divinity School as a suitable training College, unless the rights of the Church are safeguarded as to the appointment of Professors, the right to inquire into their conduct and teaching, and the choice in some way of the course of study. There are two fundamental principles which we would like to lay down. First, that nothing should be done to weaken the prestige, or narrow the breadth and catholicity of the Divinity School, or cripple in any wise the usefulness of the University; and, secondly, that the Divinity School should have its position more definitely and securely defined, and its government committed to a body in whom the Church, as a whole, could have confidence. The present position is an impossible one. The late Provost, Dr. Salmon, who objected as much as any man to share the government with any external body, used these words before the last University Commission: "Maynooth has got an enormous amount of money, about £400,000, while the Divinity School of Trinity College is at the mercy of a body who may at any time refuse to continue paying for it. It has no security at all. It may at any time be left out in the cold altogether. I myself would prefer very much that things should be left as they are; but it is certainly a most unstable position, as far as the Divinity School is concerned." The Divinity School carried out a two-fold function. It is a faculty of theology, and it is a training school for the clergy of a particular denomination. No University could be complete without the former. The Victoria University has lately established a Faculty of Theology, with an advisory Committee representing different religious denominations; and to banish Theology as a Faculty would be, in the long run, to degrade the University by the exclusion of the study of Greek and Hebrew, Mental and Moral Philosophy, and perhaps even History. These studies are too closely connected with Theology to be retained if a Theological Faculty were abolished, for Roman Theology and Protestant Theology may be banned, but you would have instead the Theology of Rationalism. But it is abundantly plain, from the various Charters and Statutes concerning the University passed in the reigns of Elizabeth, Charles the First, and George the Third, that not only was the Divinity School to take the place of a Faculty in Theology, but that it was also to supply ministers for the Church of Ireland. The Report of the Royal Commission of 1853, appointed for some such objects as the present Commission, contains this important recommendation: "The creation, in connection with the Divinity School, of a new body of Fellows, in order that the School of Divinity may rest upon a wider basis, and that College patronage may be made more useful in promoting Theological study, and training an able body of men to be employed through the country in the active discharge of clerical duties." This puts the Divinity School into direct connection with the Church of Ireland, and gives her a special claim upon it. The Commission expressly distinguished between "promoting Theological study" in the abstract, and training a body of men to be employed "in the active discharge of clerical duties" throughout the country. Again, in urging that Professors and their assistants should not be selected chiefly on account of their mathematical proficiency, and that a certain number of classical Professorships should be allowed, they do so on the ground that "Trinity College is the chief seat of Theological education in Ireland for the Established

Church." And so impressed were the Commissioners with the fact that the Divinity School was bound to consider the practical needs of the Church of Ireland, that notwithstanding objections made by the Provost, and even by the Primate, they adhered to their recommendation to create a new class of Classical or Divinity Fellowships. All this is one more proof that the Divinity School supplied the place of a Theological College for the Church of Ireland, besides being a University School of Theology. It is pre-eminently the interest of the State to assist teachers of all denominations to obtain a liberal education, because the influence of such teachers is a power in the State itself. This was recognised in the endowment of Maynooth, in the compensation given to the Presbyterian Church, and in prolonging for the Disestablished Church of Ireland the life of the Divinity School in Trinity College. The Bishops hope most earnestly that it will be recognised by the present Royal Commission. In this connection I have the authority of the Archbishops and Bishops for accepting in their entirety the arguments and claims put forward by the Committee of the General Synod on behalf of the Church of Ireland, and to add that the Church has never in any sense abandoned her claim that the funds at present expended on the Divinity School should be permanently applied to that purpose; and that if the Divinity School is forcibly expelled from Trinity College, for State or political reasons, in opposition to the wishes of the College, and to the pleading of the Church, the Church should be compensated in the most liberal manner for the loss of buildings and class-rooms, and a place of residence for her students. And yet, while not desiring a separation from the College, the Archbishops and Bishops are profoundly dissatisfied with the present position of the Divinity School. They are of opinion that it is anomalous and inconsistent; and they would suggest in its place the following Academic Council:—That the Governing Body of the Divinity School should consist of twelve members, chosen as follows: (1), the Provost of Trinity College, being a churchman, and two other persons elected by the Governing Body of the University; (2), the Regius Professor of Divinity and two other persons elected by the teaching staff of the School; (3), the Archbishop of Dublin and two other persons elected by the Bench of Bishops; (4), three representatives chosen by the General Synod of the Church of Ireland from amongst the graduates of the University; providing, as a matter of course, that each member of this Council should be a communicant member of the Church, and should sign a declaration to that effect. We believe that such a Council, which is plainly required by the other professional Schools in the University, would work well, would keep the Divinity School in touch with current Theological thought, and would be absolutely fair to all the bodies concerned. That proposal agrees in the main with the proposal made by Dr. Salmon, the Provost of Trinity College, in December, 1876; it differs in one respect from the proposal of the present Provost, namely, in the inclusion of Synod representatives.

2405. CHAIRMAN.—He does not ask for a seat on the Council?—No.

2406. Would the Bishops be satisfied with the proposal put forward by the present Provost?—I think I may say yes; although we have preferred to follow the proposal of Dr. Salmon in 1876 in suggesting that the Synod should elect representatives. But while the Bishops entirely trust the Synod the Synod stated by resolution in 1879 that they would be satisfied with the Bishops. But we do not agree to the Provost's suggestion that the Church should contribute a sum of money.

2407. You would give that body not merely the election of the Professors, but also, I suppose, the direction of the curriculum?—Yes.

2408. Then I take it that the Bishops would be satisfied with the proposal of the Provost, I mean in reference to the government of the School?—I think they would. May I answer an objection that an Oxford graduate made to me some time ago—that the Church of Ireland asks for control in connection with the School in the Dublin University, while the Church of England has no control in connection with the Schools in Oxford and Cambridge. My answer is that the connection between the Church of Ireland and Trinity College has always been much closer than the connection of the Church of England with either Oxford or Cambridge. The Bishops of the Church of Ireland require in general, as a qualification for

ordination, that the candidate shall hold a degree of the University. I have been ten years a Bishop, and every man I ordained had a degree, except one, and I ordained him under a promise that he would proceed for a degree within a limited time. On the other hand, there is no such rule in England; and, in point of fact, a considerable number of persons are ordained without possessing degrees. I have here a table which shows that. In the year 1846, 89 per cent. of the English candidates for ordination were graduates; in 1865, 72 per cent.; in 1885, 69 per cent.; and in 1905, only 57 per cent. were graduates; whereas I may say that a very large proportion, as you know, of the clergy of the Church of Ireland are graduates of Dublin University. This fact shows the close connection which subsists between the Irish Church and Dublin University, whereas the decrease in graduates which is due to the Theological College in England would, if it took place in Ireland, practically kill the College.

2409. Sir ARTHUR RÜCKER.—Do those figures which you have given us as to the English ordinations include the graduates of Oxford and Cambridge, or do they embrace the graduates of any University?—I think so. I believe the percentage would be considerably smaller if the figures included only the graduates of Oxford and Cambridge.

2410. Mr. BUTCHER.—With regard to the proposal that the Governing Body of the Divinity School should include three members, to be chosen by the General Synod of the Church of Ireland, I wish to ask you has there been any communication from the Divinity Professors that their lectures might become a subject of discussion in that public body, and that some unpleasant difference of opinion might be expressed with regard to them?—Well, I may say, and I think I may also speak for the other Bishops, that we have great confidence in the General Synod. It has shown very great good sense in later years, and is, in fact, a conservative body, though difficult questions have come before it from time to time. Though some few members might, perhaps, raise discussions as to the teaching of lecturers with whom they did not agree, I think the good sense of the majority would put them down.

2411. I take it that the scheme you have put forward for the constitution of the Governing Body may be looked upon as a tentative proposal?—Yes. There are some other points on which my brother, the Bishop of Killaloe, I think, undertook to express the opinion of the Bench of Bishops, namely—the danger to University education should a denominational college be

joined with Trinity College under a Governing Body elected partly for academic and partly for theological considerations, on which I gave evidence before the last Commission, and, further, our belief that the present mode of government of the University by men who attain their position by consideration of age might with advantage be exchanged for an elective body on which the various faculties might be represented. Before I conclude, may I say a word on a subject as to which I have felt pretty strongly myself, as tending to popularise the University? During my own course in Trinity College I took up, in a very small way, the study of Irish, which was a source of great pleasure to me, and I have often thought since that in a university like Trinity College, and in a country like Ireland, where sentiment has so much to say to everything, and where the people are governed more by their feelings than by logic, it is a pity that Dublin University and Trinity College have not given greater recognition to Celtic study and literature. I notice Dean Bernard agrees with me in believing that the establishment of a Moderatorship in Celtic Language and Literature, and the separation of the Professorship of Irish from the Divinity School, would do much to popularise the University with the emotional Celt. It is to be wished that Irish study and Irish archaeological investigation were fostered with care, and more prominently recognised.

2412. The CHAIRMAN.—I am sure what you have said will commend itself to Dr. Hyde, who is one of our number?—I am sorry that I have not had the pleasure of Dr. Hyde's acquaintance till now. I know he is a distinguished Irish scholar.

2413. Dr. HYDE.—I am afraid you found it very hard to learn anything about the Irish language and archaeology in Trinity College?—Well, as I say, I only studied it in a very small way; but while I was in College I became acquainted with a very clever and a most agreeable man, a distinguished Irish scholar, Professor O'Mahony. All I knew about it I learned from him.

2414. He was an officer of the Irish Society?—I believe so. I fancy his Professorship was established by the Irish Society. It was while I was in the Divinity School that I made his acquaintance.

2415. Do you think there should be a Chair of Ancient Irish and Irish Archaeology?—I do. I think it would tend very much to popularise the University.

The witnesses withdrew.

ANTHONY TRAILL, Esq., LL.D., M.D., M.CH., Provost of Trinity College, Dublin, re-called and further examined.

Anthony
Traill, Esq.,
LL.D., M.D.,
M.CH.

2416. The CHAIRMAN.—You wanted to say a word on one or two points. It will partly affect the Lord Justice and the Dean of St. Patrick's, and, if you do not mind, you will state it in their presence?—I will not keep you very long. What I wanted was to make a supplemental statement in relation to the Provostship. If the scheme put forward by certain Fellows and Professors, and practically agreed to by the Roman Catholic laity, should become acceptable to the Roman Catholic Bishops, viz.—that Trinity College should be the sole College and University, as a solution of the general University question in Ireland, then the Provostship will remain as at present, and, like every other secular office in Trinity College, will be open to all without any test. But if this is not to be the case, and if a College in the Royal University, either in Dublin or in Cork, is to be the solution, a College under the control of the Roman Catholic Bishops, either directly or indirectly, in the matter of the Professors and books in the course, that is, practically denominational, though nominally open to all, it will be essential that its principal shall be a Roman Catholic. In such case it will be only reasonable that the Provost of Trinity College shall be a Protestant, for though the College will still be freely open to all, the number of Roman Catholic students will not be so large as if the first solution had been adopted, and it would be obviously unfair that it should be possible that the heads of the two Colleges should be Roman Catholics. If, on the other hand, it is considered that the Test Act should, in every event, be applied to the Provostship of Trinity College, it would be only reasonable that the election of the Provost should be re-

stored to the Fellows, in whose hands it was before the Charter of Charles the First, of 1637, at which date they surrendered the appointment to the Crown in return for the conversion of their terminable Fellowships into Fellowships with life tenure.

My second point is this, Dean Bernard has suggested that the Provost is not the proper person to have the control of the College Chapel, and that it should be entrusted to the Regius Professor of Divinity as immediate Ordinary. He very properly points out that a Provost who may not be a Churchman is not a suitable Ordinary of services which are for the special benefit of members of the Church. He admits that the Chapel does not belong to the Divinity School, but says that the efficiency of the school depends in large measure upon the suitability of the services of the Chapel. His conclusion, however, does not follow from his premises, which are based entirely on the assumption that the Provost is not a member of the Church of Ireland, and, therefore, that conclusion cannot be applied to the case when he is a member of that Church. As the Chapel services are intended for the whole body of Church of Ireland students, or for any Protestant student who may wish to attend them, I consider it essential that those services shall be under the control of the Provost, who, as a layman, will secure that they shall be characterised by that simplicity that has always been their merit. When I was a College tutor I protested, in the interests of religion quite as much as in the interests of my pupils, against compulsory attendance by the students on week-day services. To expect them to run to Chapel in the morning before going to their various

DUBLIN.

Anthony
Traill, Esq.
LL.D., M.D.,
M.O.M.

lectures, professional or otherwise, would be to treat them as school-boys; and to expect them to leave the cricket field or the football ground at the toll of the afternoon Chapel bell I considered to be a travesty of religion. So, when I became Provost I put an end to all this compulsion; but the Chapel is not thereby closed; the Morning Services are continued, and attended by Divinity students and others, and an Evening Service at nine o'clock, as an alternative for night-roll, has been substituted for that held in the afternoon. Attendance on Sunday morning I keep compulsory on Church of Ireland students under the statute for "The Observance of the Sabbath." Further, I have had occasion to make some changes in the Chapel services since I became Provost, but I have never done so without consulting the Regius Professor of Divinity, and I have always had his approval and consent, and so would any lay Provost; but the ultimate authority in case of difference, say on the introduction of a High Ritual, should always remain with the Provost. In any case I would object to any curtailment of my rights in these matters.

2417. CHAIRMAN.—In the event of the Provost not being a member of the Church of Ireland, you would not object to the power resting with the Regius Professor. I am going to take three cases. I assume, in the first place, that the Provost is not a member of the Church of Ireland?—Yes.

2418. Then, I suggest that the power should rest with the Regius Professor?—Very well.

2419. Then, supposing he be a member of the Church of Ireland, he is either a layman or a cleric?—Yes.

2420. Suppose he is a cleric, no difficulty, I imagine, would arise. Then, the power should rest with him? Yes.

2421. Suppose he is a lay member of the Church of Ireland, I suggest that the power should rest with him after consultation with the Regius Professor?—Well, that is exactly what happens at present.

2421A. Would you have any objection, or would you say that the Bishops would have any objection to that being made a rule?—No; I should say not. Tests were abolished as long ago as 1873, and the Provostship has been open ever since to layman or cleric. I go over the list of Preachers with the Regius Professor every year; the Provost has the power of supervising the ritual, and as the jurisdiction of the Provost is not repealed, that is exactly the position I stand in. Because, if you take the Charter, originally all the College offices were under the Provost, and then after the Test Acts were repealed, Letters Patent came in, in which a large number of the clauses of the statute *De Cultu Divino* were repealed, but this jurisdiction of the Provost was never repealed at all or interfered with, except in one particular case—the appointment of Sacrist. In Aberdeen that is the man who takes charge of the mace, but here I do not know whether he is not the verger. That is the only thing that seems to have been taken from the Provost by the Letters Patent after Fawcett's Act came in. I hold that I am in exactly the same position as Provost Lloyd, Provost Jellett, and Provost Salmon, and that no change should be made.

The Witness withdrew.

The Commission adjourned until the following morning.

SEVENTH DAY.

TUESDAY, OCTOBER 23RD, 1906.

AT 10.30 O'CLOCK, A.M.

At Trinity College, Dublin.

Present:—The Right Hon. Sir EDWARD FRY, P.C., D.C.L., LL.D., F.R.S., F.B.A. (Chairman); The Right Hon. C. PALLES, P.C., LL.D., Lord Chief Baron of the Exchequer in Ireland; Sir THOMAS RALEIGH, M.A., D.C.L., K.C.S.I.; HENRY JACKSON, Esq., D.LITT., LL.D.; S. H. BUTCHER, Esq., M.A., LL.D., D.LITT., M.P.; DOUGLAS HYDE, Esq., LL.D.; DENIS J. COFFEY, Esq., M.A., M.B., F.R.U.I.; S. B. KELLEHER, Esq., M.A., F.T.C.D.;

and J. D. DALY, Esq., M.A., Secretary.

EDWARD P. CULVERWELL, Esq., M.A., F.T.C.D., Professor of Education in the University of Dublin, recalled, and further examined.

DUBLIN.
Oct. 23, 1906.

2422. CHAIRMAN.—Professor Culverwell, with reference to your evidence to-day we are placed in this position: Unfortunately you have been unable to attend on former days, when we would have found you time, and to-day our list is so very full that we are only able to give you the interval from the present moment until the Vice-Chancellor comes—at eleven o'clock. Perhaps in that time you could say what you think it important to say by way of supplement to the evidence you gave before?—When we devised this scheme, we considered it to be necessary to satisfy both the requirements of the Hierarchy as to faith and morals, and the requirements of the laity as to material advantage. As my time is so limited, I will, with your permission, make my statement without quoting any of those passages from the Report of the previous Commission, by which I had intended to support my arguments, and will add them to my evidence as footnotes.* I will classify my observations under headings. (1) *Guarantee for Faith and Morals*. We conceive that under the Advisory Committee as outlined by us, we have enabled the requirements of the Hierarchy (as laid down by Bishop O'Dwyer in his evidence before the late Royal Commission) to be satisfied. We have, we believe, avoided absolutely the rock on which the scheme of the Queen's Colleges split. We believe that we have satisfied the requirements as to faith and morals in all their essentials. (2) *Security for Roman Catholic Doctrine in regard to dual Professorships*. I may point out that while in non-controversial subjects we have not gone quite so far as the Lord Chief Baron went in his evidence before the previous Commission, we have absolutely satisfied his position in respect of these, the only chairs in respect of which he thinks the difficulty likely to arise. (3) *Religious privileges for all denominations*. Before we drew up "C" we had to decide whether we should adopt the view of sectarian education, which is advocated by the Presbyterians, or the view that the University should be a place of religion as well as of learning under Fawcett's Act, and we adopted the latter view. I think "C" will explain itself. (4) *Our desire that Catholics should have representation on the Governing Body*. As to the government, we considered that it was necessary, both for the material advantage of Catholics and in order to give a satisfactory guarantee for the carrying out of the scheme, that there should be a Roman Catholic representation *de facto* on the Governing Body, as a security that it should not be a mere paper constitution. Our scheme has been strongly objected to on the ground that we offered a 25 per cent. representation to the Roman Catholics as adequate. Anyone who puts that forward cannot have read the scheme, for under paragraph 1 we say: "There is, however, one principle which we consider essential, namely—that Roman Catholics should be afforded an opportunity, within a reasonable time of obtaining adequate representation on the Governing Body, according to number and academic merit." We had

already prepared a representation of 25 per cent.; therefore, we recognised that that was not adequate. All the rest of the scheme shows that we desired to do all that we possibly could in order to increase the Roman Catholic representation upon the Governing Body according to number and academic merit. I should explain that there is a very complicated paragraph—the one in small print—which arose from the fact that at a meeting of the general body of Fellows and Professors, summoned on July 18th, the previous portion of the scheme, down to half-way on page 24, (left-hand column) had been passed by a majority of those present of twenty-four votes to seven; therefore we felt ourselves bound to adhere absolutely to the twenty-five per cent.; and as the Moderators would be a varying number, we had to invent a complicated method just to carry out that. We have further shown our desire to widen the basis of Catholic representation on the Governing Body, for at the top of page 24 (right hand column) you will find these words: "We think it most desirable that the Cecilia Street Medical School should be brought into the proposed settlement." That was because we felt that there was a body which we had some chance of approaching, and which would at once give a large number of academic Roman Catholics to the professoriate who could, under the scheme, elect Roman Catholic representatives on the Governing Body. Then provision (f): "We consider that no appointments to teaching posts, except those in the faculty of Theology, or those entirely endowed under private trusts, should be made by external and independent bodies." That was inserted in order to meet the case of those professorships which are now under sectarian bodies—the Erasmus Smith's professorships, and so on—and to do away with a legitimate ground of complaint, as we thought. (5) *The consent of the Hierarchy is needed*. It is quite clear that in our scheme we take full account of the position of the Hierarchy. We deliberately drew the scheme, so that their concurrence was necessary. If they do not approve, the scheme must fall through, not because it involves mixed education, but because the Advisory Committee would be absolutely impossible without their approval. (6) *General possibilities of protecting faith and morals under this scheme*. For instance, it would be quite admissible under this scheme to have hostels for Roman Catholic students, in which disciplinary rules might be enforced far beyond those which would be enforced by the College.

2423. LORD CHIEF BARON.—The numbers you are giving are not the numbers in the print, are they?—No; they are only my headings. I have done with the particulars of the scheme, and I was now giving a general view of our idea. We thought that in that way very large protection would be afforded to faith and morals, because these rules might be enforced at the discretion of the managers of the hostels. (7) *No University compulsion in favour of any Denomination*. We have not stated it here, but we should consider it an essential point that there

* The references prepared were intended to show that by the formation of the Advisory Committee, which should have the control over the Dual Prof's, and the fact of a Roman Catholic Assessor sitting with the Bishops to decide on points of Roman Catholic Doctrine, we had satisfied the claim of the Bishops regarding "faith and morals," as set forth in Bishop O'Dwyer's evidence.—Appendix to First Report, Royal Commission, 1901: see especially p. 17, lines 28-32 (right hand col.); p. 27, left col., lines 33-38 and 21, 20 from bottom; p. 36, especially questions 370, 371, 373, 374: p. 36, question 378; p. 45, question 68.

Culverwell,
Esq., M.A.,
F.R.C.D.

should be no University compulsion on the students to go to any special lectures; they should be free to go to all, as far as the University was concerned, and any particular restriction should be enforced by the authority of the Church, and not by the authority of the University. This would be done by the Advisory Committee whose duties we did not define, as we thought it was for the Hierarchy to say what they desired the functions of the Advisory Committee to be. I did, indeed, prepare, in connection with that—it was never submitted to our Committee—a clearer definition of the duties of the Advisory Committee. Our object in proposing it was to facilitate the Hierarchy in every matter in which protection was needed for faith and morals. (8.) *The guarantee of our bona fides.* The eighth point I should like to make is that there is a substantial guarantee of our *bona fides* in this matter. It is clear that we intend to work the scheme honestly in the spirit in which it is drawn, because if we did not we should be subjecting ourselves to intolerable annoyance from the Advisory Committee and the Catholic representatives on the Governing Body.

2424. CHAIRMAN.—I do not think we should have the slightest doubt about your good faith in the matter?—I am sure that you would not, and that the Commissioners would not; but I think that in regard to those who do not know us, and who have been accustomed to look at us from the point of view that has commonly been represented in Irish controversies, the matter is one upon which it is necessary to put forward something. I want also to show the faith we have that if the Roman Catholics came forward to work the scheme they would also work it honestly. If either party did not come into the scheme with the most honest endeavour to fulfil it for the advantage of all, Trinity College would be a place of torment instead of a place of "religion and learning."

I have now shown, and I should have been prepared to prove it by references to Bishop O'Dwyer's statement and to the statement of the Lord Chief Baron in the last Royal Commission—that we do really practically fulfil all that has been required by the Hierarchy. Perhaps I might now address myself to showing how far the Statement drawn up by the Standing Committee of the Catholic Bishops is opposed to this scheme. This Statement is more remarkable by reason of an omission than by what it states. In every other case the dealings of the Hierarchy with the matter of university education have been done in this way—mixed education has been stated to be a danger to faith and morals, and I think that this is the first statement dealing officially with mixed education in which it is not stated to be a danger to faith and morals. I may refer for a moment to the Chief Baron's point on Wednesday as to their having seen our scheme. They do refer in this statement to certain movements within Trinity College in that direction—perhaps to ours.

2425. LORD CHIEF BARON.—Perhaps I ought to interrupt you for a moment. I have not the slightest idea whether they did see the scheme or not. From the dates it would appear that they could not have had it before them, because theirs is dated July 25th, and your scheme was sent in afterwards?—It is quite possible that they may not have seen our scheme; but they may have seen the gist of it, as mentioned to them by some of the Catholic laymen who saw it before July 16th.

2426. They may have seen something which Mr. Fottrell was getting signed?—Something which Mr. Fottrell was getting signed may have been seen by them or it may not, I cannot say; but what I do want to impress upon the Commission is that where they deal in this Statement with the danger of mixed education and with the objections to it, they deal with it not on the ground of doctrine, on which alone they can speak authoritatively; they give up that ground altogether, and they deal with it solely on the ground of the Catholic opinion on the matter. Even with reference to the question whether Trinity College should be "captured" they do not give the ground that it would involve a danger to the faith and morals of the Catholics who would capture it, but they speak instead of the Protestant objection to it. Then, the final passage, which seems so strong: "To sum up, then, the Standing Committee of the Catholic Bishops feel that they are safe in stating

that the Catholics of Ireland would be prepared to accept any of the following solutions, etc." I should like to observe that this passage, apparently so strong, is, whether intentionally or accidentally I cannot say, absolutely weak when we consider their position. In this document they for the first time when dealing with the question of mixed education abstained from the one declaration which, if made in their official capacity, would be absolutely fatal to it. They declare no doctrine; if they did, the Roman Catholic laymen of Ireland must accept it. They had the power in their own hands to make an explicit declaration of doctrine, a power which they have used so far on every previous occasion of a similar kind; yet here they depart from all precedent; the familiar words as to the "intrinsic danger to faith and morals" no longer appear. And what takes their place? Not the doctrine of the Church; not a declaration made by the Bishops in virtue of their Order; nothing of the kind—a mere statement made in their capacity as citizens; and appearing on the face of it there is a certain element of doubt. They feel that they are safe in stating something as to what other people—the Catholics of Ireland—think! But what is the answer of the Catholic laity, of those who would use the University? You have it in the answer of the one body of Catholic laymen who have been officially before the Commission, as represented by Mr. Synnott, and you have it in the document signed by so many of the professional and commercial men of Dublin, the signatures to which were all obtained in within a very few days. The attitude of Mr. Synnott's Committee, taken in connection with the fact that the Bishops have in their Statement almost indicated that the question is really a laymen's question, is most remarkable. Can it be that the Bishops had before them the outlines of our scheme, so far as it relates to faith and morals, when they drew up their document? I mentioned that that part of our scheme was settled on the 18th of July and the members of the Committee of Catholic Laymen were aware of it. If any member of that Committee told the Bishops of that part of our scheme, and if it was due to that knowledge that they abandoned the question of danger to faith and morals, putting the burden of refusal on the laity, does it not indicate that they too have at last recognised the danger which Cardinal Newman foresaw when in Ireland? It was in 1873 that Cardinal Newman, whom Bishop O'Dwyer rightly describes as the greatest Catholic of the century, wrote: "One of the greatest evils which I deplored in the management of the affairs of the University twenty years ago, when I was in Ireland, was the absolute refusal with which my urgent representations were met that the Catholic laity should co-operate with the Archbishops in the work." That the Roman Catholic laity are beginning to recognise that they must speak for themselves is shown by the fact that the influential body which Mr. Synnott represented—a body which everyone must admit to represent a most important section of cultured Catholic lay opinion—and of absolutely loyal Catholic lay opinion—has expressed a view almost diametrically opposed to that of the Bishops' Statement on every one of the three points on which the Bishops believe Catholic lay opinion to tend in a certain direction. The action represented before you by Mr. Synnott, who has himself for years been in touch with Catholic lay opinion, shows that there is a remarkable body of Catholic laymen who feel so strongly on the matter that they are prepared to state that in their opinion the Bishops have mistaken the trend of Catholic lay opinion amongst those who are most interested in the question of University education—those Catholics who are here and now prepared to send their sons to a University. This is a most significant indication in Ireland. For the first time, as far as I am aware, a real difference of opinion on the question of University education has been manifested between the Catholic Hierarchy and those who are amongst the most loyal members of their flock. I do not know whether some part of what I had prepared further might not come under what you said, Sir Edward, and therefore I will try to avoid it. But I would most earnestly hope that the Commission, whether or not they think that the chances are at present in favour of the Hierarchy seeing their way to approve of our scheme, without which approval it must fall to the ground, would at all events—perhaps at a later opportunity, as there is no time now—discuss it in the fullest possible way with us,

DUBLIN.

Oct. 23, 1906.

Edward P. Culverwell, Esq., M.A., F.T.C.D.

and see how far any objections on the ground of faith and morals can be met under our scheme. Our scheme, I need not say, is not final. It is a scheme which we put forward with the best information at our disposal, but we have really put it forward in the belief that it does contain within itself the germ, at all events, of a solution which meets all past requirements, and which, if it were accepted, would be of incalculable benefit. We believe that it would transform the University. I said that on Wednesday, when I was before you. But what we do feel very earnestly and very strongly is that this Commission might possibly, by arranging for a strict cross-examination of the method in which the scheme meets the requirements that have been put forward, by discussing it in all its bearings, and cross-examining its representatives, be able, at all events, to arrive at such a view of it that it would be found, if they examined representatives of the Catholic Hierarchy also, that satisfactory modifications were possible. For there is no difference in principle between us. The difference on mixed education is not a difference of principle; it is entirely, as has often been laid down, a difference of time and place and circumstance. Therefore, we do hope that the Commission will see its way to go fully into the scheme and the possibility of its offering a reasonable basis for a solution, and if possible to publish its examination of it in such a way that the Hierarchy may have an opportunity of seeing it. I cannot myself believe that if everywhere throughout the country there was realised the anxious desire that we have to enlarge the University, not making it an unacademic place, but making it a place which should be representative of all Irish learning and culture, a solution would be impossible. I explained on Wednesday that we did not think it our place now to formulate details, but I feel, and many of us feel—I have expressed it in public in a letter to the newspapers, which, I think, was one of the first public indications of a long felt opinion—I do feel very strongly that a University cannot fulfil its academic functions in a country unless it is in greater touch than we are with the sympathies and with the history of the country. Though I say I speak for myself, I know that I express the opinion of some at least of my colleagues. I simply say that I speak for myself because the matter was not actually discussed. When we use that word "national" we are indeed sincerely anxious to give up what we had *de facto*, of privileges above the rest of Ireland. We have devised this scheme in order to do it. Studying as we have the views of the Hierarchy on faith and morals, recognising as we do most fully the position of the Catholic laity as to faith and morals, knowing as we do the march of public events and public opinion, which we believe in Ireland has now reached such a stage that we may at least hope that it will be possible to get a solution, if satisfactory guarantees are given as to the protection of faith and morals, guarantees by which we and our Roman Catholic fellow-countrymen should be left free in the purely academic part of the University—knowing all this, we cannot but believe that if by any means we could be brought in contact with each other (and what I had hoped was that this Commission would be able to bring us and the Bishops into indirect contact with each other), a solution could be arrived at. If I expressed too strongly any disappointment I felt at what I thought was some want in the reception of that view, I trust the Commission will attribute it to the excessively earnest desire which I feel in the matter.

2427. CHAIRMAN.—I think we appreciate your position entirely?—Then there was one thing more—

CHAIRMAN.—I am afraid our time is limited.

LORD CHIEF BARON.—I think it would be very unsatisfactory if Professor Culverwell were at all restricted in the matter of time.

CHAIRMAN.—We agreed yesterday that we must see the Vice-Chancellor at eleven o'clock.

LORD CHIEF BARON.—I was not here when that

arrangement was made. Could we not see Professor Culverwell after we have finished with the Vice-Chancellor?

CHAIRMAN.—If you wish it; but at our meeting yesterday it was determined that we could not give Professor Culverwell more than until eleven o'clock.

LORD CHIEF BARON.—I left when the examination of the last witness was concluded yesterday, thinking the business of the day was over. I am very much interested in this point that Professor Culverwell is now developing; in fact, his views and mine are nearly identical, except as to the mode in which they should be carried out; I really think that this is by far the most important part of the matters which have been submitted to the Commission.

2428. CHAIRMAN.—I think Professor Culverwell has really stated his view very fully in what he said the other day, and the additional statement he has just made. Is not that so, Professor Culverwell? You recollect we had the pleasure of hearing you very fully the other day?—I waited to be asked further questions; I am afraid there was a little misunderstanding.

Dr. BUTCHER.—Most of us, I think, understand Professor Culverwell's position; he has made it so amply clear, I think, unless there is any new point that we have not heard.

2429. CHAIRMAN.—Could you come later in the day if necessary?—I could come at any time the Commission arranged.

LORD CHIEF BARON.—Have we any other witnesses to-day besides the Vice-Chancellor?

2430. CHAIRMAN.—Yes; one or two. (*To Witness*)—However, we will communicate further with you if we have an opportunity?—Very good.

2431. If you are furnishing references they must be confined to the evidence given to-day?—Oh, certainly.

2432. Just the reference to the page?—That is so.

2433. We wish to print the evidence; therefore, unless the references are furnished very shortly it will be difficult to add them?—Certainly.

2434. LORD CHIEF BARON.—Just the page and number?—Just the page and number or question.

2435. Dr. JACKSON.—I would like to say one word of explanation, Professor Culverwell. On Wednesday I asked you a question as to the size of the Governing Body. I said—"I fail to understand what the size of the Governing Body would be under your scheme"; and you answered—"There would be twenty members and the Provost"; and I added a remark which implied that I had failed to find any indication of that sort in the scheme. The truth is that I was relying upon these words—"We think it premature to formulate any final plan as to the future constitution of the Governing Body, even in regard to its total number or the mode of its election." I want to apologise for an oversight. I had overlooked the words—"Suppose the Governing Body to consist of the Provost and twenty elected members" which come later, in small print, in connection with the paragraph about the electoral bodies. I ought not to have overlooked those words, and I want to make a very frank apology, which I hope you will accept in the spirit in which it is made.—Thank you very much, indeed. I might explain that we were a Committee appointed solely for the purpose of seeing how we could make Trinity College acceptable to our Roman Catholic fellow-countrymen; therefore, we did not consider that we were in a position to make any definite statement or recommendation as to changes in the government or constitution of the College, except so far as they might be involved in meeting Roman Catholic views, and the only part which can be considered as definite is down to the end of the paragraph which, as I stated, was approved at the meeting on July 18th. I will hold myself in readiness if further called upon.

The Witness withdrew.

The Right Hon. Mr. Justice MADDEN, F.C., LL.D., Vice-Chancellor of the University of Dublin, called in and examined.

The Right Hon. Mr. Justice Madden, LL.D.

2436. CHAIRMAN.—Mr. Justice Madden, we are much obliged to you for coming to give us your assistance. You come before us in the character of the Vice-Chancellor of the University, do you not?—Yes.

2437. You have held that office for how many years?—For eleven years.

2438. You have been good enough to furnish us with a precis of the points to which you desire to direct our attention. Those points, I think, are five in number, and

DUBLIN.

Oct. 28, 1906

The Right
Hon.Mr Justice
Madden. LL.D.

they refer to the constitution of the Governing Body, the mode of appointment to Fellowships, women students, the Divinity School, and the Law School. We shall be very glad to hear any observations you wish to make upon all those points?—In my opinion, the first topic is by far the most important, and in calling the attention of the Commission to some matters connected with the history of Trinity College and the University, I shall confine myself as far as possible to what has a practical bearing upon the questions which you have to decide. It is the less necessary for me to go into historical matters, because there is really a great mass of information in a very readable form available for any member of the Commission who would like to go into the matter from the historical point of view. I may mention the valuable prefaces to the Catalogue of Graduates, one by a learned Fellow of Trinity College, Dr. Todd, who has given great attention to Irish history, and another and more recent one by my predecessor, Sir Joseph Napier.

2439. Those have been circulated amongst us?—Yes. In addition to those there is the valuable history by Mr. Stubbs.

2440. That also has been circulated?—Then there is a most valuable book by Dr. Mahaffy, "An Epoch of Irish History," and you will find that in the Appendices to the Report of the Robertson Commission, of which I was a member, there are two interesting documents, one a judgment of the Master of the Rolls on a question which arose on the construction of a will, and the other a pamphlet by the Roman Catholic Archbishop of Dublin, Dr. Walsh. There is a great mass of information in these writings; but there are some things connected with the original Charter and its development that I should like to bring under the notice of the Commission. The original Charter, as you are aware, was granted by Queen Elizabeth in 1592, and the Corporation—which is still the Corporation of Trinity College—consisted of the Provost, Fellows, and Scholars. The number of Fellows was not determined; they were three *nomine plurium*. The Fellowships were tenable for seven years only. The Provost—and I wish to note this—was originally elected by the Fellows. The College was incorporated, in the words of the Charter, to be *Mater Universitatis*; it was to give birth to a University. It was an autonomous College, and it had power originally—and this also I wish to note—to frame its laws and statutes quite independently of King's or Queen's Letters—*leges statuta et ordinationes*. It was incorporated as a College, but the students were able to obtain at the proper time degrees, and the College was provided with a Chancellor and a Vice-Chancellor. The Chancellor was elected by the Provost and Fellows, as he was up to a very recent time. The Corporation was the Provost, Fellows, and Scholars, but the Seal, which was to authenticate the documents representing this College, which had also a University aspect was under the control of the Provost and Fellows. That, I think, is an important matter to bear in mind, having regard to some observations I shall make hereafter.

2441. Is that provided for in the Charter?—Yes; by the original Charter the Seal was under the control of the majority of the Provost and Fellows. At that time the distinction between Senior Fellows and Junior Fellows did not exist. I shall call attention to that distinction by and bye. The next document of great importance is the Charter of James I. in 1613. That is the recognition of the College as a University, though incorporated as a College. It recites—*Cumque dictum Collegium sit et habeatur Universitas, ac habeat, gaudeat et utatur omnibus et singulis libertatibus, privilegiis et immunitatibus ad Universitatem, sive academiam pertinentibus sive spectantibus*.

It recognised the University character of the College, and then proceeded to give it the power of electing two members of Parliament. That is the substance of this important Charter. I have mentioned to the Commission that the College was autonomous, and could make its own statutes. That continued until the time of Charles I.—the next important—and very important—epoch in the history of the College. I am desirous of not going unnecessarily into details, but there are some important as well as interesting matters connected with these older statutes which were made by the College in pursuance of the powers which it originally possessed. The first complete code of statutes was drawn up by a remarkable man, Provost Sir Wil-

liam Temple. He was remarkable as a philosopher, and as the friend of Sir Philip Sidney, who died in his arms. He was Provost for some years, and it was in his time that the division of the Fellows into Senior and Junior was effected. There were seven Senior and nine Junior Fellows, four of whom were probationers. That is an important fact in the history of the University. He was succeeded by a very remarkable man who became afterwards Bishop Bedell. Provost Bedell reduced the statutes to order and literary form. In an Appendix to Dr. Mahaffy's book, "An Epoch of Irish History," the Commission will find Bedell's Statutes, which, as far as I can make out, are substantially Temple's; and you will find also copious annotations by Dr. Mahaffy, showing the changes which were afterwards made in the time of Charles I.

2442. Those are the Laudian Statutes?—Yes; the Laudian Statutes, which I am now about to mention shortly. It will be interesting, I think, to more than one member of the Commission if I call attention to the very close connection which existed at the commencement of our College between Trinity College, Dublin, and the University of Cambridge, and more especially Trinity College, Cambridge. The first four Provosts were Graduates of Cambridge University; many of the Fellows were imported from Cambridge, and the first two Provosts were graduates of Trinity College, Cambridge. I have heard it observed quite recently that there were traces of similarity between the statutes of Trinity College, Dublin, and those of Trinity College, Cambridge, which is easily accounted for by what I have just mentioned, namely—that Adam Loftus and Travers, the first two Provosts, were Fellows of Trinity College, Cambridge. Laud was, if I recollect rightly, an Oxford man. At the same time, all that Laud really did was to adapt the older statutes which had been adopted from Trinity College, Cambridge, or certainly from Cambridge. The fact that the early Provosts were connected with Cambridge, and more especially Trinity College, Cambridge, explains how it was that from a very early period (I do not quite recollect how far back, but certainly from the time of Charles I.) there were *ad eundem* relations with the University of Cambridge itself, relations which were not extended to Oxford until a long time afterwards. It will be seen that there has been a very close connection between the two Universities. Now I come to the preparation of the Code of the Statutes, which have been revised from time to time, and which are the foundation of the constitution of the University. Lord Strafford, in my opinion, took a real interest in Trinity College, entering his son as a student. I do not regard his main reforms—and I believe they were reforms—in getting for the Crown the power of appointing the Provost, and the surrender by the University of the privilege of making statutes, simply as a part of his policy of "Thorough." I believe they were really in the interests of Trinity College at that time. Whether it is now in the interests of Trinity College that the appointment of Provost should be in the hands of the Crown is another matter; but having regard to the position and history of the College at the time I think those were useful changes. What was done—of course I am not going into details of the Laudian Statutes—but what was done was this:—The University surrendered certain rights; the consent of the Corporation of Trinity College is recited, as it always is, *cum consensu*; they surrendered the right of making statutes and the right of appointing the Provost. The way in which the statutes were framed was this. There was a general repeal of all the statutes made by the College under their powers, but you will find that they were practically re-enacted with the changes that are mentioned in Dr. Mahaffy's notes; so that you have to go back a little beyond the Laudian Statutes for the constitution of Trinity College. Archbishop Laud was Chancellor of the University from 1633 to 1645, and he also took a personal interest in Trinity College. Laud became Chancellor in 1633, Strafford had become Lord Deputy in the preceding year; so that he at once proceeded to carry out his reforms. I have looked through his letters; I do not see any references definitely to these reforms, but I see a great many references to his interest he took in the reforms made in the Church of Ireland—then a branch of the United Church. Archbishop Laud evidently took

a personal interest in the College, because the statutes were drawn up under his direction, and each page of the parchment volume is signed by his own hand. The most important changes I have already indicated; that is to say, the power of making statutes was reserved to the Crown, which is very important, having regard to the form in which your recommendations may ultimately assume. The Board had power to make decrees, with the consent of the Visitors, and that power they still possess. These decrees are in matters not inconsistent with the statutes for carrying out matters of detail; but whenever it becomes necessary to make any important change in the statutes or to affect at all the position of the Crown, the course adopted has always been to approach the Crown by petition and to obtain from the Crown a modification of the original Charters by Royal Letters, some of which are called Charters, others Letters Patent, but I do not know that there is a very essential difference between them in principle.

2443. I should like to ask you one question. It occurs to my mind, and perhaps to the mind of other Commissioners, that it may be necessary possibly, if we make recommendations, that an Executive Commission should be appointed to carry those recommendations into effect, in the same manner as in the case of the Universities of Oxford and Cambridge. Do you think it would be within the competence of a King's Letter under the Charter of Charles I. to appoint such an Executive Commission?—That is a question which I should like to consider before I reply. You see I hold the position of Vice-Chancellor, and I must consider what questions might come before me in that capacity. I think it is a most important question, and I intend to deal with a matter very closely connected with it.

2444. I do not wish to press the question for a moment?—At the present moment I would ask you to let the matter pass. I am very much obliged to you for asking me the question, because it is one aspect of a matter which I intend to bring before the Commission.

2445. You see the importance of it?—I see the importance of it, I assure you, and when I come to that branch of my observations you will see that I do not minimise the importance of it. Then there was an important change in the Visitors appointed by the original Charter. The Board of Visitors originally consisted of seven. There were two Bishops, the Bishop of Meath and the Archbishop of Dublin, the Mayor of Dublin, two public officials, and the Chief Justice of the Common Pleas, and another—seven in all. The Visitors had a power of veto. That is to say, the Board made decrees with their consent, which practically gave them a power of veto. Under the Laudian Statutes the Visitors were the Chancellor, or, in his absence, the Vice-Chancellor, and the Archbishop of Dublin. The division of the Fellows into Senior and Junior was adopted from Temple's Statutes. I do not know whence that division of the Fellows had its origin. Whether that was copied from Trinity College, Cambridge, or not, I do not know; but at all events it was in Temple's Statutes, and it was adopted and stereotyped—this is a most important part of the history of the University—and remains to the present day. The Governing Body consisted of seven Senior Fellows and nine Junior Fellows. At that time, 1637, the entire teaching of the College was done by the Fellows. With the exception of the Professor of Divinity there were no Professors, and it seemed a reasonable thing enough that in a body of sixteen the nine Juniors should wait awhile before they took part in the government of the College. The number of Fellows, as you know, has been increased very largely, and there are now seven Senior and twenty-five Junior Fellows. In the case of the Senior of the present "Junior" Fellows it is now thirty-six years since he obtained his Fellowship, and the word "Junior" can only be applied to him in a technical sense; he could not have been less than twenty-four when he obtained his Fellowship. That is the present position as regards the relation between the Board and the Junior Fellows. But there is another most important change which has taken place. It has, no doubt, been brought to your notice—it stares us in the face at the very outset—in which the position has entirely changed since the time of Charles I. The teaching is now done, no doubt, to a very great extent by the Fellows, but to a very large

extent also by the Professoriate. The Lecturers and Professors form a large body—you can easily get the exact number—and if you look through the Calendar you will see that some most important teaching in the different Faculties is now done by Professors and not by Fellows. That was not so for some time after the Laudian Statutes. At that time the Fellows were obliged to take Orders, but there were two exceptions subsequently introduced; there was a *Jurista* and a *Medicus*, and they were exempted from having to take Orders. The idea originally was that they should do the teaching in the Professional Schools, but as the College developed, of course, the Professoriate developed, and now you have a Governing Body which does not include Fellows who have been more than thirty years doing the work of the University, and which does not include any of the Professoriate. Another change has taken place which is due to causes outside the College. Formerly a Fellow used frequently to rise to the position of a Senior Fellow when he was what I should call a very young man. I have in my possession a note-book in the handwriting of a direct ancestor of mine who was a Fellow of Trinity College—Dr. John Madden—and he notes, "I entered Trinity College at the age of twelve (1702)," and one entry is: "I obtained a Fellowship in Trinity College at the age of nineteen," while another note is to the effect, "I was co-opted Senior Fellow of Trinity College at the age of thirty-two." That was about the beginning of the 18th century. I think a man might be very well required to wait until he attained thirty-two before he was called to take part in the government of the University. In my own recollection, when I was in College, Dr. Moore, afterwards Vice-Provost, was a Senior Fellow, and I know that he was co-opted at the age of forty-four. But now, take the case of my friend, who, I said, obtained his Fellowship thirty-six years ago. Supposing he was twenty-four when he obtained his Fellowship, he must be sixty years of age, and a few years ago he would have been considered quite a young member of the Board if he had attained to it at the age of sixty. He is still a Junior Fellow. That change is due to the operation of several causes. The most important cause, perhaps, is the abolition of the Celibacy Statute. Another cause is this: Formerly there were a number of valuable livings at the disposal of the College, which were offered to the Fellows in turn, and were frequently accepted by them. That state of things continued so long as the Church was established. So long as there were these valuable livings, and so long as the Celibacy Statute was in force, this condition of things continued. From the year 1813-1822 there were elected nine consecutive Fellows of Trinity College, all of whom after a time, went out on livings. You can imagine how rapid promotion to Senior Fellowship was at that time. In 1840 Fellows were allowed to marry, and in 1870 the Church was disestablished. The result is that promotion is now very slow, and the effect upon the Governing Body is obvious. Even as regards the division between Senior and Junior Fellows, what was a sensible and rational arrangement under the Laudian Statutes when there were only nine Junior Fellows, and continued to be reasonable even up to the last century, has now become an impossible position to maintain. That is simply as regards the division between Senior and Junior Fellows. But I am bound to say that the claim of the Professors to have a share in the government of the College and University seems to me to be unanswerable. The question which you will have to consider will be how that claim should be met. There are two possible ways of meeting the claim which have been suggested. One is the admission of the higher members of the Professoriate to the Corporation. Perhaps that would be the most logical solution of the difficulty. At the same time, I think there are great practical difficulties in the way of its adoption. The Corporation is a very ancient Corporation, and its members are very loyal to it. The Corporation, as I have said, consists of the Provost, Fellows, and Scholars, and if a King's Letter is to have any effect at all it is necessary that it should be accepted on behalf of the Corporation. Perhaps the Commission would like to have a reference to cases in which that has been decided and has been the law ever since in University questions.

DUBLIN.

Oct. 23, 1906.

The Right
Hon.
Mr Justice
Madden, LL.D.

2446. LORD CHIEF BARON.—There is no doubt about that at all?—That is so. The case in which it has been decided is "the King v. the Vice-Chancellor of Cambridge University." It is a most authoritative decision, and it is in Burrowes's Reports. The Chief Baron will know the case very well. It came before our courts in a case which I am going to mention. These words are in the judgment which was adopted by Lord Mansfield and the whole court: "It is the concurrence and the acceptance of the University that gives force to the Charter of the Crown for University re-incorporation, because, whatever the Corporation is, it is the concurrence and acceptance of the Corporation that gives force to the Charter of the Crown." The law was regarded as so settled that there was no discussion of the matter in the interesting case that afterwards came on, in connection with the Queen's University. The decision rested upon the question whether the proper parties were before the court, and the court came to the conclusion that the proceedings should have been by information by the Attorney-General. My eminent predecessor in the office of Vice-Chancellor, Dr. Ball, referred to that case, and it was admitted that unless the Corporation accepted the Queen's Letter it had no validity at all.

2447. That decision was actually acted upon, because the Queen's Letter or Charter was not accepted, and the Queen's University was governed ever afterwards by the old Charter?—Yes, and the changes that were ultimately introduced were effected by Act of Parliament, as must always be the case when a Corporation which has a Charter from the Crown refuses to accept alterations by King's or Queen's Letter, or a new Charter. I need not labour that point, but I thought the Commission might like to have a reference to that authoritative pronouncement on the subject. It is of very great practical value. Perhaps I might now deal with the subject the Chairman suggested. It is of great importance. I may say frankly that if we are to have the internal reforms which most of us who take an interest in the University desire some impetus must be given from without to the reforming movement within, and I look forward with great hope to seeing substantial results from the labours of this Commission. I believe the way in which it will best be realized in practice is by a King's Letter accepted by the Corporation. No doubt the ideal plan, if we were living in the Republic of Plato, would be to have an Act of Parliament—though to speak of the Republic of Plato and then pass on to an Act of Parliament is rather a step—but the ideal way would be to have an Act of Parliament appointing an Executive Commission. At the same time, I think it does not require much acquaintance with affairs, and with the course of legislation in the House of Commons at present, to arrive at the conclusion that there would be now great difficulty in obtaining an Act of Parliament dealing with the internal administration of Trinity College. It would be unfortunate if a Bill in Parliament, introduced for the purpose of internal reform, were to be used as a means of opening the wider questions with which we are all familiar, which I hope will be dealt with by substantive legislation. I think it would be possible, if Parliament braced itself for the larger question of University education in Ireland, that a separate bill which would then probably be non-contentious might be introduced side by side with the general measure, appointing an Executive Committee to deal with the internal reforms of Trinity College, but unless the larger question were dealt with there would be difficulty in obtaining an Act such as was passed successfully, I think, for the Scottish Universities—and I think there was one for London also—

2448. In 1898?—Yes; the Chairman knows all about that; but it would be shutting one's eyes to patent facts to suppose for a moment that the reform of this University, standing by itself, without the general question being taken up and settled would be non-contentious. I think no person can suppose that the Government would give up a substantial portion of the limited time at their disposal to a contentious Bill that was dealing merely with the internal reforms of Trinity College. Therefore, I sincerely hope that the Commission will see its way to suggest reforms that can be carried out by King's Letter.

Now, if so, it is a vital matter to apply ourselves to the practical question of what kind of reforms would be accepted by the Corporation. I am only expressing my individual opinion, but I have every hope that a system of reform formulated by such a Commission as that which I have the honour of addressing would be accepted, at all events, in its main lines, by the Governing Body. But a radical change in the Corporation, from a Corporation consisting of the Provost, Fellows, and Scholars, to a Corporation which would include members of the professoriate as such I am sure would be strongly opposed, and would probably not be accepted. But I am merely speculating, and I wish you to understand that I am only expressing my own view as an observer of this question for many years. Before I had the honour of being appointed Vice-Chancellor, I was a representative of this University in Parliament for five years, and I think I am fairly well acquainted with the general trend of opinion both within these walls and outside, having been in contact with the general body of the constituency, and I believe I have the means of forming a fair opinion as to what would and what would not be acceptable to them. But is it necessary to make such an alteration as that? I would submit to the Commission that it is not. The Governing Body that I would venture to submit to the Commission is this. I think the professors are entitled to representation, and to substantial representation, on the Governing Body. You may or may not keep up the distinction between Senior and Junior Fellows; and for the purpose of rendering your scheme less contentious, I think it would be wiser to retain the two grades of Junior and Senior. But the Governing Body should be representative in its character. It should be purely and absolutely academic. We are all agreed upon that point. And there is, I do not say an absolute consensus of opinion, but a very strong body of opinion, that it should be representative, not only of the Senior and Junior Fellows, but also of the professoriate. As to the mode of election, whether it should be by means of the faculties—I shall say a word about the faculties in a moment—or by the professoriate as a whole, I would leave the question to the wisdom of the Commission. The general principle I would venture to advocate this. First of all, I suggest that the existing Governing Body is unsatisfactory. But when I say it is unsatisfactory, I wish to pay a tribute to the liberality and the wisdom with which the College and University have been governed for so many years, indeed for centuries, by the Provost and seven Senior Fellows of Trinity College. It is a matter of history of which we are proud, that Catholics, with their consent, were admitted as long ago as 1793, to the degrees of Dublin University, and that with their consent—it was not actually done by them, because it was done by Act of Parliament but with their cordial consent—all the offices of Trinity College, with the sole and necessary exception of the Divinity School, were, by Fawcett's Act, thrown open; and quite recently I had the pleasure, as Vice-Chancellor, of presiding at a meeting of the Senate at which women were admitted to degrees. It was a meeting of the Senate to consider a Grace of the Board of Trinity College, and of the three old Universities of the United Kingdom Trinity College was the first to admit women to degrees. These are a few salient facts. Therefore, I do not wish it to be understood that I undervalue the work which has been done by the Board of Trinity College, but it has been done in spite of its unsatisfactory character, and I believe that greater progress will be made and better work done by a Governing Body constructed on lines which would be accepted as more satisfactory as being representative in character, to which members, both Professors and Fellows, would be admitted earlier in life, when they were full of vigour and ability for work, to the government of the University.

2449. CHAIRMAN.—Have you thought out any definite scheme for the Governing Body?—If I were to suggest a definite scheme, it would be this: I think nine is a very good number. I should have three representatives of the Senior grade of Fellows, and I should have three representatives of the Junior grade of Fellows. I think the Junior men are probably imbued with a different class of ideas, more or less. So that I would have both the Senior and the Junior grades represented; and I would have

three members representing the professoriate. As you have asked me to adumbrate a scheme, that is what I have been thinking of for some time.

2450. I rather wished to know what was in your mind?—That is what is in my mind. Two attempts have been made to deal with the Governing Body of the College and of the University. The Senate has a curious history. Until 1857 there was no incorporation of the Senate. There never has been incorporation of the University as such, and there was formerly no incorporation of the Senate. There was some curious learning as to whether there was any sort of quasi-incorporation before 1857 of the University, but that is all ancient history, and the Senate is now regulated by Letters Patent, of July 25th, 1857. There were some previous regulations governing the powers and proceedings of the Senate; they were very old; but they were printed for the first time in 1778. They related to the giving of degrees; and there were doubts recited in the Letters Patent as to whether there was power to amend them, and altogether the matter was in very great confusion. But Letters Patent were granted in the year 1857, and the Senate now is governed and its proceedings are regulated by these Letters Patent. The Senate exists, and always has existed, practically for the purpose of granting degrees. Its position shows the intimate connection between the College and the University, which was well expressed by Dr. Mahaffy when he said, in effect, that the University was only one aspect of the College. He was dealing with the position up to 1857, and it is practically the position still; because, although the Senate exists for the purpose of granting degrees, the degrees are really granted by the Board of Trinity College, because the Senate can give no degree.

2451. They cannot even originate a degree?—No; they cannot originate a degree; but they can veto a degree. At the ordinary meetings of the Senate the Vice-Chancellor usually presides; formerly the Vice-Chancellor always presided, because for generations the Chancellor was a Royal Duke, and of course he never came here, and the Vice-Chancellor presided on all occasions. At the ordinary meetings of the Senate now the Vice-Chancellor presides, and he has a veto always; the Provost has a veto on degrees. There is a third member of the Caput, the Senior Master *non regent*, who was originally a master who had ceased to take part in the disputations of the schools. He is nominated by the Provost and the Vice-Chancellor, and is elected by the Senate once a year—he has a veto upon every degree. The members of the Senate are Masters of Arts and holders of higher degrees, having their names on the College books. I do not find any fault with the constitution of the Senate regulated by these Letters Patent. But the Senate has been spoken of by some reformers as a possible entity in the practical government of the institution in the future. I do not think that is practicable. The meetings of the Senate are not attended, as a rule, except by a few members who take a special interest in the business to be done, unless great interest has been aroused in some question, as in the case of women's Degrees, when the advocates on the one side and on the other interest their friends in the matter, and get them to attend.

2452. I was going to suggest whether there were not two changes which might usefully be made in the constitution of the Senate. One is to give power to a certain number of members of the Senate to call a meeting of the body. At the present time I believe it can only be called together on the motion of the Board?—That is so.

2453. Is it not desirable to give power to a certain number of members to require a meeting to be summoned; and the second suggestion I was going to make is whether it would not be desirable to give a power to the Senate to make representations to the Governing Body upon matters relating to University government?—I think that this object, with which I entirely sympathise, could be better met by the development of the Faculties. I do not think good would be done by giving to a body like the Senate a real share in the government of the University. But I think there has been a neglect as to the position of the Faculties. I think that was due to an imperfect realisation of the position. The College and the University were so inextricably connected that I do not think the position of the Faculties has been at all sufficiently recognised. I do not think there is any need of a Senate as a Govern-

ing Body or as a Body taking an important part, or any part at all, in the general government of the institution, for this reason. This University is a one-College University. Where you have several Colleges the Senate must interpose and must be an important factor. But, I think, if you established a satisfactory Governing Body, and if this Governing Body acted in consultation with the Faculties—and I think the Faculties should be developed—you need not give the Senate a voice in the government.

2454. You do not wish a more popular voice?—I do not think it necessary. I know the Senate very well; I have presided at its meetings; and I know that it has not any real substantial existence as a Governing Body. I can mention two or three occasions on which it had a substantial existence—such, for instance, as the admission of women—but that is quite exceptional. I think if you give us a satisfactory Governing Body everything that you suggest can be done by placing the Faculties in connection with the Governing Body as advisory bodies, if you choose to call them so. I do not know what was in the minds of those who framed the constitution of the Senate in 1857; but there was undoubtedly some idea that the Senate would be a different body from what it afterwards turned out to be, because they were given power to acquire property. They never did acquire any property, and they have no property. I should mention that though there are Professorships which are called University Professorships, they are really College Professorships, because the Professors are paid by the Board, and were, until the Academic Council was instituted, appointed by the Board. There was apparently at that time some idea that the Senate should take some definite and important part in the work of the University, because there was power given to apply funds "for the promotion of useful learning in the University, subject to such regulations as the Provost and Senior Fellows of the College shall approve." But the Senate have no property, and in a case that came before Sir Andrew Porter a curious question arose. Some money was left to the "Corporation of the University of Dublin." Well, there was no Corporation of the University of Dublin, but there was the Corporation of Trinity College, and the Master of the Rolls held that this was the Corporation present to the mind of the testator. I have now the quotation from Dr. Mahaffy's book as to the position of the Senate before these rules came into force, and no real change was afterwards made. It is at page 162:—"This set of Rules is no Charter, and the University having no incorporation or seal, can only be considered as a particular aspect of Trinity College." It struck me the writer in these words put the position in very clear and intelligible form. There is another matter connected with the Governing Body that I wish to call your attention to, and that is the position of the Academic Council. The Academic Council, my late lamented friend Dr. Salmon told me more than once, was a child of his. It was an attempt, and to a very considerable extent a successful attempt, to introduce new elements into the government of the College and University—elements outside the Board. I am sure you have before you the constitution of this body, and as I am anxious not to take up your time unreasonably, I will not go into the question of its constitution. I would only remark that it was a makeshift, and if you give us a satisfactory Governing Body, I think there would be a consensus of opinion that the Academic Council, having done a certain amount of good work would be no longer necessary. Its place would properly be taken by the representative Governing Body. My suggestion would be this. I do not think it is necessary to interfere with the constitution or position of the Senate. You there come in contact with a second Corporation, and a King's Letter interfering with that Corporation, or modifying it, must be accepted by that Corporation—not by Trinity College, but by that Corporation. After a good deal of consideration I cannot think that anything would be gained by interfering with the position of the Senate, which has no initiative, and is practically connected only with the granting of Degrees. The Board are at liberty to send Graces down for the consideration of the Senate; they did so, and were, I think, bound to do so, in the case of the admission of Women Graduates, because that was a question dealing with Degrees—

it was admitting a new set of students to Degrees. To sum up shortly, I suggest that the Senate should be left with its Corporation as it is at present; that you should endeavour to frame a constitution which could be embodied in a King's Letter to be accepted by the existing Corporation of Trinity College, and that in doing so you should bear in mind that it is an ancient Corporation, that it would be rather jealous of any violent or any very organic change, and that the admission of the Professoriate can be effected without a change in the Corporation by a system of representation. The next matter to which I would call your attention is one in which you would probably place more reliance upon the evidence given by Fellows, and by those who are connected with the actual working of the institution. At the same time, I feel so strongly with regard to some matters that I should like very shortly to say a few words upon them—I may say that although my official connection with the University and College commenced when I became Member for the University in the year 1887, I resided for several years within its walls, and that my greatest friends throughout my life happen to be among those who were candidates—some successful, some unsuccessful—for Fellowship. Therefore, I have really been in touch with this question during the whole of my life, and I should like to call attention to some matters in connection with it. We all realise the great advantages of the system of election as the result of examination. I need not dwell upon them, and I think in a country like Ireland, where there are unfortunate divisions to which we cannot shut our eyes, it has very great advantages; but, at the same time, I have come to the conclusion that those advantages are too dearly purchased under the existing system. Now, you have had, I am sure, from members of the College a great deal of information upon the subject, both in the printed Papers and from the Fellows whom you have examined. It has, I am sure, been brought under your notice that an average period of five and a half years elapses between the period of the degree examination and the election of a successful candidate for Fellowship. But I do not know whether you quite realise what that means. It means that not only do those years elapse, but that four or five times during those years the candidate presents himself for examination; and he does not go a step higher each time, rising from one intellectual level to a higher, but he presents himself time after time on the same intellectual level, for examination in the same class of subjects.

2455. He keeps his mind stagnant during the whole period at the level of the Fellowship examinations?—That is what I wanted to convey.

2456. Is not that a tremendous loss, or waste of intellectual energy?—It is a tremendous waste of intellectual energy. Think of the loss of all those years! And the curious thing about it is that in some cases—I am not going to mention names unnecessarily, but in some cases the more desirable the candidate was, the more difficult was it for him to obtain a Fellowship under that system. Now I may mention one case. I am sure there would not be the slightest objection to my doing so in the case of one of my most intimate friends, who is Professor of Mathematics in this College—Mr. Burnside. If a Fellow had been elected upon the degree examination, he, like others of our brightest ornaments, would undoubtedly have been elected, because he had early given evidence of extraordinary genius for Pure Mathematics; but his mind is so constituted that he can more readily master a difficult and abstruse subject than studies which are easier to other minds and he was asked to read for Fellowship a number of other things which minds differently constituted were quite able to master, such as Experimental Physics; and while his mind, as I say, was so constituted that he could not so easily take up such subjects. The consequence was that it was ten years from the time when Mr. Burnside showed, at his degree examination, talent that should have at once secured his election as a brilliant and original mathematician, before he obtained his Fellowship, and he only ultimately obtained it by taking up some one or more of the less important subjects, on which his powers were wasted. I think that is probably the most striking example I can give you, but there is another gentleman—and there can be no harm in my mentioning his name—Mr. Russell, a Mathematician of extraordinary

ability. It took him eight years to secure his Fellowship, and he had probably the same difficulty as in the other case I have mentioned, in descending to the less important subjects.

2457. LORD CHIEF BARON.—He is the Registrar of the Law School, is he not?—Yes; I was about to mention that, and he is the best Registrar that there could possibly be; but at the same time I cannot help thinking that a great mathematician is wasted upon such an office as that.

2458. CHAIRMAN.—I should like to put to you an idea which has occurred to my mind, and ask your opinion upon it. Suppose you required, as a condition *sine qua non*, that a Fellow should reach a certain grade in the Moderatorship examination, so that he reached a certain number of marks, whether marks in Pure Mathematics or by a combination of other subjects, and that then, between the men who had reached that level, the choice should be by merit—by merit I mean as shown by what was known of his work in the way of dissertations, publications, and so on—would not that at once get rid of the suggestion of favouritism, and at the same time give a freer hand in the election?—I think that would be a very great advance upon the present system—a very great advance; but I should not be at all afraid to entrust the new Governing Body with the choice of a man from among those successful Moderatorship Honour-men, with, of course, the advice of the Faculties. There is always a difficulty in drawing a hard and fast line as to the number of marks—years vary so much, and examinations vary, so that a man might be, by common consent, a much greater man than any of those who had obtained higher marks in actual examination. But I think that what you suggest would be a very great improvement on the present system, and I think you might restrict the choice of the Mathematical Fellows to men who had been first in the Moderatorship Mathematical examination. I see in one of the papers a recommendation that selection should be upon the Studentship Examination. I wish to call your attention particularly to a circumstance which those who are not, perhaps, acquainted with the internal working of the system might not realise. You cannot, I think, adopt the Studentship system for this reason: the Studentship is granted upon two courses, and to my knowledge men, no doubt of considerable capacity, but very much inferior to the First Gold Medallist in either Classics or Mathematics—have obtained a Studentship by means of the second course, taking up Philosophy or Experimental Physics, or English Literature—one of the second courses which do not count quite as highly as the first course, but nevertheless count sufficiently high to put in a man who would not be the most eligible Fellow. But, although what the Chairman suggests would be undoubtedly very valuable, I should not be afraid to trust a Governing Body, which would have the confidence of the country and of those who are interested in University education. I should adopt the suggestion of Dr. Tarleton—that is that there should be an election in the first case to Provisional Fellowships, or whatever you choose to call them; and, as I pointed out in the earlier part of my evidence, there were a certain number of Provisional Fellows at an early time in the University. But I think Dr. Tarleton's suggestion must be taken with some reserve—it could not possibly co-exist with the rest of his paper, because he proposes to retain the system of examination. Well, you never could ask a man to undergo the ordeal of examination for a Provisional Fellowship, which might or might not develop into a life or permanent Fellowship.

2459. LORD CHIEF BARON.—You might act upon the Moderatorship examination?—That is my suggestion.

2460. MR. BUTCHER.—Is not the only objection to this that men of very great ability are rather slow in maturing, and that the degree examination has not done justice to their rich mental powers—that they “come out,” as it were a little bit later. That is the only objection I see to making the degree examination a condition?—I think that a system of Provisional Fellowships would go a long way to mitigate that, and for this reason: I have several brilliant men in my mind who would probably have been offered Fellowships—one I may, perhaps, mention is Mr. Cluff, who was the greatest Classical scholar in Trinity College in my time. I have no doubt if he had

been offered a Fellowship he would have taken it; but he did not set to and gird himself for the task, and he went to England, where he attained great distinction in the medical schools. Most of the brilliant men, unless they were going to the Bar, or to Medicine, or to some definite post, would accept your Provisional Fellowship gladly. Then would come the weeding-out process; some would develop an aptitude for teaching, and would become tutors (I am not going into the question of the tutorial system; I leave that to the internal staff of the College); others, fresh from their College course, would have taken to research, either literary or scientific, and others, perhaps, would have taken to nothing in particular, and might be weeded out. I think in that way you would have the benefits of examination, and also you would have something beyond examination; you would have a certain power of selection upon approved capacity.

2461. LORD CHIEF BARON.—The result of experience?—The result of experience, which, added to the test of examination, is, I think, of great value. Before leaving the subject of examination, will you allow me to direct your attention for one moment from the successful to the unsuccessful candidates. What of the men who nearly attain to Fellowship—who have gone on year after year, perhaps six or seven times; who have thus spent the best years of their lives; men of very considerable ability, a great many of them. There have been brilliant exceptions, but with these exceptions they have not, in after life—as might be expected after having devoted the best years of life to the unsuccessful pursuit of a Fellowship—attained to the success which, if they had known their destiny immediately after the degree examination, they might have attained, by either becoming Provisional Fellows or by taking early in life to some other profession.

2462. CHAIRMAN.—What do these men, who are knocking at the gate of Paradise, do with themselves during the five years; do they do nothing?—While they are knocking a great many of them take pupils, and there are prizes given to the unsuccessful candidates—substantial prizes some of them.

2463. LORD CHIEF BARON.—There is, for instance, the prize which bears your own name?—I was going to mention that prize. The Madden to whom the Chief Baron refers to was not a direct ancestor of mine, but he was a member of my family who lived about 150 years ago. He founded a valuable prize, worth £300 a year; it is called the Madden Prize, and it is given to the one who *proxime accessit*, and that keeps him in good spirits for one year; and it has been obtained several times in succession. However, what is to become of that prize I do not know—I am afraid there would not be any reverter. I have already said that I have great sympathy with the unsuccessful candidates, who have not obtained the position in life which they probably would have obtained if their future career had been commenced immediately after the degree examination.

2464. CHAIRMAN.—You would approve, no doubt, of an age limit, beyond which men should not be allowed to enter for the Fellowship examination?—I do not know about that, because that might perhaps exclude some very brilliant men who do not mature early; but I do not think that an age limit would be necessary if the election were made in the mode I venture to suggest, because I do not think the Governing Body and the Faculties would ever think of electing men who were not reasonably young, unless perhaps for some very good reason.

2465. LORD CHIEF BARON.—The age limit was not to apply to the Provisional Fellows; some at least of the witnesses told us that the same fixed limit was not to apply?—Yes. Now, I have very little to say about the Divinity School, because it has been brought very fully under your notice, as I am aware; but there are one or two observations I should like to make, although perhaps they have been made before.

2466. CHAIRMAN.—We shall be very glad to hear them?—The Divinity School represents the Faculty of Theology in the University, and it provides clergymen for various branches of the Anglican community. I know that Lord Justice FitzGibbon has, with very great care, gone into that subject, and I am sure that his figures are before you, and that you realise the number of graduates of Trinity College who have been in the Church outside the limits of Ireland. Well, that has a very important bearing upon the question,

because it is important that the Divinity School should have the confidence of the Anglican community generally; and I am strongly of opinion that this would best be secured by retaining its thoroughly academic character—it should represent the Theological Faculty, and should be academic in its character. But though that character is very important to maintain, it is true that the school has always had a special relation to the Irish branch of what was formerly the United Church of England and Ireland, and this has been overlooked—perhaps naturally from the course of events—in recent years, since Fawcett's Act. I mentioned that there were two Bishops upon the original Visitorial Board, and under the Laudian Statutes the Archbishop of Dublin was one of two Visitors. That continued until recently.

2467. LORD CHIEF BARON.—Until after the Church Act?—Until after the Church Act; yes. And now the Visitors are the Chancellor and the Vice-Chancellor in his absence, and the Lord Chief Justice of Ireland for the time being. Well, that was a link, and a very strong link, between the Divinity School and the Church, and there is a curious matter, not altogether without significance, which I may mention. I brought to my friend, Dr. Salmon, I showed him an ordinance, never expressly repealed, of a very early date (I believe it was only printed in 1778) under which the Vice-Chancellor can fine the Professor of Divinity if he neglects his duties, *quinque solidis pro unaquaque vice omissa*, the significance of which he explained to me. I, myself, have not availed myself of that Statute. Now, that is significant, because the Vice-Chancellor was an ecclesiastic till the time of Lord Clare. The very early Chancellors were not, but I have a great ecclesiastical ancestry in the office I hold. Jeremy Taylor and James Ussher were Vice-Chancellors of this University. The Vice-Chancellor was an ecclesiastic for a great many years, and had active duties in connection with the Divinity School. That also shows how there was, in old times, a very real connection between the School and the Church. But I think I need say little about this, because there seems to be a consensus of opinion that that connection should be kept up.

2468. CHAIRMAN.—The only persons who seem to object are the Presbyterians?—One does not quite see their *locus standi* to speak as representative of their Church, and I do not intend to deal with that branch of the question. But I would like to call your attention to some evidence about the position of the Divinity School, not in connection with the Church of Ireland, but in connection with the general body of Students.

2469. LORD CHIEF BARON.—Of course, you are in favour of the Divinity School continuing as at present in connection with Trinity College?—Yes, certainly.

2470. At present it fulfils two functions, as you say—first the Faculty of Theology; secondly, as an institution training the College members for the Church of Ireland?—Yes.

2471. And you think it essential to the best interests of Ireland and of the College that it should continue for the future to fulfil those two functions?—Yes; I am obliged to you for formulating so distinctly what I was endeavouring to say.

2472. We have had some representations from the Presbyterians, and I understand that another gentleman is to be examined on the subject; and I wished to have the benefit of your opinion?—I am much obliged to you for having expressed my opinion so clearly. I used the word “represents” because I quite recognise that it might be desirable that, if possible, the Theological Faculty should be represented not only by the Church of Ireland, but by other Churches. However, I pass away from that, because it does not seem to me practical, and therefore I say the Divinity School represents the Theological Faculty, and it should remain closely associated with the University of Dublin; but I recognise what the Chief Baron has said—that it is also a Divinity School, and therefore I think the Church of Ireland should be represented upon the Governing Body. Upon this I might say that I wish to associate myself generally with the suggestions of the Divinity Professors.

2473. If the School remains, I think it seems to be almost admitted what the constitution should be?—Yes.

2474. I think the differences of opinion are confined within very narrow limits?—I may, perhaps, be going

back a little in saying this, but I do not think it is altogether without significance. In reading over the proceedings that took place between the Synod, the Senate, the Board, and the Academic Council, I think that if I wanted an argument in favour of a satisfactory Governing Body I could not have a better one than is to be found in those proceedings; because that question would have been readily settled if there had been a Governing Body which would have taken it up at once, for it seems to me to be the easiest and simplest of the questions that are submitted to this Commission. Now, I was going to say something—I do not know whether this particular branch of the question has been brought before you—with regard to the relation of the Divinity School to the general body of students. I read in the *Irish Times* a letter from a gentleman who was my contemporary—Mr. Richard O'Shaughnessy. He was a Classical Scholar, and was elected by his fellow-students to the very honourable post of Auditor of the College Historical Society. He afterwards became a Member of Parliament, and was subsequently for many years a respected member of the Board of Works. I quote his testimony, not only because I have great respect for his opinion, but, because the general purport of his letters has been that Trinity College is not satisfactory from the point of view of the Roman Catholic student. I read the following passage:—"Having in the sixties spent seven years, five as a resident, in Trinity, I can say that in all that time, during which our small Catholic colony was naturally observant, nothing was said or written outside the pulpit and the Divinity School of which we heard nothing, to interfere with Catholic beliefs or wound Catholic feelings." Now that statement, from my intimate knowledge as a contemporary, is so true, and so much to the point, that I thought it well that I should bring it before the Commission. I was a Member, with Mr. Butcher, of the Robertson Commission, and we had evidence from some distinguished Catholic gentlemen to the effect that Trinity College was not in their opinion thoroughly satisfactory for a Catholic student; but, said Sir Christopher Nixon, "I never saw anything that hurt my feelings as a Catholic in the University of Dublin while I was there." And Sir Francis Cruise: "I was for six years in close intimacy with its students and many of its Fellows and Professors. I never met anything that could offend me as a Catholic." Therefore, there is a body of evidence with regard to the presence of the Divinity School in Trinity College which shows that, in the view of these witnesses, that particular element in Trinity College does not enter into the consideration whether Trinity College is or is not suitable for the education of Catholic students. There is a very interesting article (I do not know whether your attention has been called to it) by the late Provost in the "Contemporary Review," in which a good deal is said upon that question.

2475. CHAIRMAN.—"Hands off Trinity"—is that it?—Oh, no; the article I refer to is an article by the late Provost, Dr. Salmon.* It deals specially with one particular proposal, but it is an extremely interesting article, as I need hardly say. I observe that in the evidence before you from the Standing Committee of the Catholic Archbishop and Bishops, they recognise public prayers and Catechetical Instruction as (to quote their own words) "of the essence of collegiate life"; and anyone must be singularly unobservant of Catholic opinion if he thought that the removal of the Divinity School from Trinity College would do anything to add to its attractiveness to Roman Catholics.

2476. LORD CHIEF BARON.—I think the general view of all Catholics is that Catholics do not want the Divinity School removed?—Well, having brought out that point I am quite satisfied to leave it there. Now, with reference to Women Students, I should like to say a few words, and I may mention that I have taken a good deal of interest in this question. I have been for many years a member of the Council of the Alexandra College—for certainly more than twenty years—and I am President of the Council now, so that I naturally take a great interest in the question. And before I was Vice-Chancellor—I think it must have been about the year 1894 or so—I was a member of a deputation which waited upon the Board, and it is a remarkable instance of the change in academical opinion—in Ireland at all events—upon that subject, that I had not a single supporter upon the Board. When I came before them the late Provost was in the chair, and two others were present who are members of the

Board still, but they were all opposed to the admission of women to degrees, and, in fact, scarcely seemed to consider it an arguable question. I remember that Dr. Haughton, whom we all respected and loved, attacked me with particular vigour from the point of view of the Medical School, saying how impossible it was that women should be admitted as students to a men's medical school, and he ended by saying, with truth, that he had taken a great interest in the Medical Examinations, adding: "I think I may say *militavi non sine gloria*." I suggested that if he were on my side, he need not have omitted the preceding line: *Vixi puellis nuper idoneus*. Even that did not bring my respected friend over to my side—I took nothing by it. But only about ten years later I had the privilege of presiding as Vice-Chancellor at a meeting of the Senate, in June, 1903, when women were admitted to degrees by an enormous majority, and I may say that the older members of the University, who had formerly disapproved, have come now to consider it one of the ordinary conditions of academic life—at all events they are quite reconciled to it. But I think something remains to be done, and I most sincerely hope it will be done under the advice and with the assistance of this Commission. Now, the resolution passed by the Board on that occasion was this: they resolved "to grant degrees to women on such terms and conditions as may seem to the Board and Council, within their respective provinces, on full consideration to be most expedient." The Dean of St. Patrick's, who is Warden of Alexandra College, made a remarkable speech, which I believe gained a great number of votes, and he laid stress upon the fact that women were indeed to be admitted to degrees, but on terms and conditions such as might seem most expedient to the Board and Council. I am not going into the details of what occurred afterwards, but I may say that the Board had already passed resolutions for the admission of women to degrees, and for placing them in a position of complete equality in all respects as to Lectures, Examinations, and Degrees with male students. Well, I am far from quarrelling with that; on the contrary, it is what I had been contending for for a long time; but I do think—in fact I know—that a large number of the majority in Senate thought that something more and something further should be done. The matter was not dealt with immediately, but a Committee was afterwards appointed, of which I was a member, and regulations were made (I will not go into the details of them, but they will be found in the Calendar for the current year, at page seventy-five) for women students which seemed to me to be of a very useful character, and Miss Gwynn was appointed Registrar. That was a most important step in the right direction; her appointment has worked extremely well, and those regulations, as far as my information goes, have also worked well. But still I think something more ought to be done.

2477. CHAIRMAN.—Do you agree with the Dean of St. Patrick's that an age limit ought to be imposed, and that that age ought to be eighteen?—I think there is a great deal to be said for that. I am aware that that has been suggested, and I do think that it would be satisfactory. The question of women's education came before the Robertson Commission in this way. A great number of women had taken degrees in the Royal University. The Royal University was open to women from the commencement. The London University took the lead in 1878, and the Royal University was the second University in the United Kingdom which opened its degrees to women; then the Scottish Universities followed, and finally Trinity College. But it is right to say that women, though not admitted to degrees in either Oxford or Cambridge, have shared the benefits of collegiate education in Cambridge since 1881 and in Oxford since 1884. They are not, as I say, admitted to degrees, a question which, of course, I shall not discuss. You will find in the Report of the Robertson Commission, at pages forty-six to fifty, detailed information which I am not going to repeat as to the Collegiate institutions of Ireland affording education to women. But I would call your attention in particular, in connection with the University of Dublin, to what is said about Alexandra College. It is at page forty-seven:—"The earliest collegiate institution in Ireland affording to women education of a University type, is Alexandra College, established in Dublin in the year 1866. It was incorporated in 1887 under the Educational Endowments Act. The University students usually number about sixty or seventy"— . . .

* Contemporary Review, April, 1889.

"The College appears to have been designed on the model of Bedford College, London, which is now recognised by the London University, and which is in receipt of an annual grant of public money, to the amount of £1,200." And there is at page fifty this remark: "The existing women's Colleges might easily be converted into Residential Halls, in connection with the University of Dublin or with the constituent Colleges in Dublin and Belfast under the reorganised Royal University." And a little lower down there is this: "If the Degrees of the University of Dublin should be opened to women," (they were not at that time), "the case of Alexandra College would present no special difficulty, as most of the students would probably graduate at that University." I was myself—and others, too, I believe—hopeful that when women were admitted to degrees, something like what was adumbrated by the Robertson Commission might be carried into effect, and that the position of women's Colleges might be recognised. I do not suggest that all women students should be compelled to connect themselves with Colleges, for I think that those who chose to avail themselves of the privileges given of coming into Trinity College on a perfect equality with men students, and of attending Lectures with them—the Tutorial Lectures as well as the Honour Lectures—should be permitted to do so. At the same time I am aware—I know, from information which I thoroughly accept—that parents in some instances rightly or wrongly, do not approve of that as the best form of University education for their girls. I know myself of instances—and I have information which I accept as to other instances—where that is the case. Of course that would not be known to persons who are engaged in working under the existing system, it would not come to their knowledge naturally; but it is a fact. And I think that something should be done, both in the interests of Trinity College and in the interests of women's education, to meet that want. I have mentioned Alexandra College because it has always had a very special connection with Trinity College. Though unfortunately its students were not admitted to degrees in the University of Dublin, and though they had to obtain them at the Royal University, there was an intimate connection; the Provost of Trinity College was always a member of the Governing Body of Alexandra College, several of the Fellows delivered lectures there and were members of the Governing Body, and there was an intimate connection which I think might have been utilised. There was a proposal made by Trinity College to the effect that if a certain number of students could be formed into a class at Alexandra College the Board would send a lecturer from Trinity College to deliver lectures in Alexandra College. But that fell to the ground, and I quite realise that there would be difficulties in carrying out that particular mode of recognising lectures given in Alexandra College. I quite accept the position taken up by the Board, that there would be great difficulties in the way. The difficulty seems to be that it would tend to disarrange the tutorial arrangements in Trinity College. It would be very desirable if it could be carried into effect, but there was some suggestion that it was doubtful whether a sufficient number of students could be found.

CHAIRMAN.—I think on one occasion Alexandra College got a class of eight, and applied to Trinity College for some accommodation, and they were unable to furnish it, as they were already too much occupied.

2478. MR. KELLEHER.—Our men would not go up—there would be great loss of time in going up there?—That is what I meant by saying that it disarranged the tutorial system here.

2479. CHAIRMAN.—Sir Arthur Rücker put forward a very strong observation in support of the view you are taking—namely, that in London there are no less than three large Colleges open exclusively to women, which he considered showed the existence of a class of parents who desire separate University education for their daughters; and he went on to suggest that a scheme like that, recognising not the institution, but particular lecturers in it, might meet the difficulty here in Dublin?—Well, I am happy to find that I have the support of so high an authority as Sir Arthur Rücker for the very suggestion that I was about to make. I was, of course, not aware to the full extent of the arrangements made by the University of London, but I was aware that they did recognise Bedford College.

2480. They recognise institutions—that is one thing; and they also recognise recognised teachers in unrecognised institutions; and Sir Arthur Rücker suggested that that might solve the difficulty here also?—What I was about to suggest was precisely that. I was not about to suggest anything approaching to recognition or affiliation of the College, but it had occurred to me that certain Courses might be taken in Alexandra College, provided that the Lecturers in those Courses were accredited and approved by the Governing Body of Trinity College.

2481. I think the conditions laid down by the University of London are, that the teacher must be in a public institution, that the Senate must be satisfied of their competence, and that they must have adequate equipment for what they are teaching?—I mentioned Alexandra College, but there may be now, or in the future, other Colleges in Dublin to which such recognition should also be extended—necessarily it must be for Colleges in the University town. I might mention that Alexandra College was established before Newnham or Girton, chronologically, and it has developed wonderfully. I hope that now, or at some future time, some of the members of the Commission will visit it.

2482. Several of us have already visited it?—I am very glad to hear that. I have been a member of the Board for about twenty years, and certainly the development of that institution—due largely, I am bound to say, to the ability and zeal of the Lady Principal—has been most remarkable; the change, even in the physical appearance of the buildings, is obvious to anybody walking through the street. It has developed into a remarkably successful institution. As I was saying, there are other Colleges in Dublin—there is St. Mary's College, a Roman Catholic institution, and there is also a Presbyterian institution, and I think that if they had accredited teachers who were approved by the Board of Trinity College or the Senate, their courses also should be recognised. Though I have specially mentioned Alexandra College, I merely take it as a type, and as being one that is now in a condition for recognition in that way; but my suggestion is of quite a general character. I know there are objections which have been raised. One objection that came to my knowledge was that if you go so far you must recognise other Colleges also in other towns. Well, there is a College in Belfast—a very successful College—but I think such a suggestion as that is quite out of the question, Oxford and Cambridge do not recognise outside institutions in that way. A suggestion has been made that a Hostel, or House of Residence, should be provided for the women students of Trinity College. I think that is an admirable suggestion. I may perhaps mention in this connection an incident in our history, and as I am familiar with the details, and as there has been some misunderstanding about it, I may be allowed to explain the circumstances. When women were admitted to degrees in Trinity College, it came to the knowledge of the Board that a certain number of women students educated in Ireland had been unable to obtain University education in Trinity College, and had gone to Oxford and Cambridge, and though they had not obtained degrees they had obtained an academic status which, had they been of the other sex, would have entitled them to degrees. For the purpose of providing for that class, which was a limited class—I think there were about twenty or thirty of them—this resolution was passed:—"That those women educated in Oxford or Cambridge would be treated up to Michaelmas Term, 1907, as if they had been admitted to the academic status in those Universities corresponding to their educational exercises." As Vice-Chancellor of the University, I wrote to the Vice-Chancellors of Oxford and of Cambridge, and explained the reason why this had been done. I explained the position of the students which I have mentioned—I need not repeat what I have said before—and that it was a provisional and terminable arrangement, because after Michaelmas Term, 1907, it would be possible for all women students to obtain the degrees of the University of Dublin. I received letters—courteous letters, I need hardly say—from the Vice-Chancellors of those Universities. But (and I mention this because I have perfect knowledge of all the circumstances from the commencement) although these twenty or twenty-five women students were present to our minds, and their case was mentioned in my letters, the Resolution had a most unexpected result. For this limited period it had the effect of opening what I may call

quasi ad eundem degrees—not exactly *ad eundem gradum*, but *quasi ad eundem*—to a vast number of possible graduates in the University of Dublin, and to our great astonishment—I do not say they were not very welcome—a large number of ladies, many of them engaged in teaching, who naturally regarded the degree of this University as a great advantage to them in their profession, availed themselves of this privilege, as they were fully entitled to do. And the result has been that a considerable sum has been received in respect of fees for these degrees. Now, a portion of that sum goes to the tutors, and that is quite recognised; but after deducting the portion that goes to the tutors, there remains a very substantial sum, and I have always felt, and expressed the opinion—and I know it is shared by many and that it has been practically recognised by the Board to a considerable extent—that the higher education of women has a very special claim upon that quite unexpected sum. I wish to emphasise its unexpectedness, because, as I say, I have knowledge of the matter from the commencement, and it has been suggested, though not in any very important quarter, that all this had been done for the sake of the fees. Nothing could be further from the truth; it came about in the way that I have explained, and it had that very unexpected result. I had the privilege, as Vice-Chancellor, of conferring in one day no less than eighty-four degrees upon women graduates.

2483. You have given a great deal of happiness?—Therefore there is a sum of money now available—from which, of course, should be deducted what is due to the tutors for fees, but upon the balance of which women students may be said to have a claim and which would go towards providing the suggested Hostel. I do not think that I need occupy the attention of the Commission at any great length upon the subject of the Law School. A Committee was appointed a short time ago by the Board to investigate the question of the Law School. The members of that Committee were Lord Justice FitzGibbon, Mr. Serjeant Jellet, who was for years the respected leader of the Chancery Bar, and who has taken, as the Chief Baron knows very well, a very keen interest in legal education in Ireland for many years. He is Chairman of the Education Committee. They asked me as Vice-Chancellor to act as Chairman, and the present Provost was also an active member, and we had also great assistance from Mr. Russell—and I am bound to say that though I grudge the devotion of a great mathematician like Mr. Russell to the service of the Law School, yet the reform of that School is largely due to the energy and zeal of Mr. Russell. I would like to put in the Reports of that Committee.* (*Handing in the same.*)

2484. LORD CHIEF BARON.—I think it would be very well that we should have that, because we had not time to go into the question of the Law School with Lord Justice FitzGibbon yesterday, except to a very limited extent?—I have handed in the Report upon the Law School, and I may mention shortly the general outline of what we believe to be reforms. You will find the details very clearly stated in the Paper sent in by the Registrar, Mr. Russell, but the most important change that we made was the institution of an Honour Course and of a Moderatorship Course in Law and cognate subjects. In doing so we followed the example of Oxford and Cambridge, where there are Schools of Law and Honour Courses; and you will also find in the Report a carefully-drawn statement of what was done in the American Universities. A Paper has been sent in by the Regius Professor of Law, Dr. Leech, who was a distinguished student of Trinity College, and who afterwards went to Cambridge. He was in a minority, and although he argues with ability in favour of the view that he took, having regard to the fact that the Committee appointed by the Board differed from him, as far as I am concerned I am disposed to leave the matter there. Our Report is before you. We thought it advisable to do in Trinity College what had been done in Oxford and Cambridge, and to establish a Law Honour degree. I agree with Professor Leech that it is not desirable that professional studies should be taken up at an early period of the University Course, and therefore we suggested—and the idea was carried out—that the study of Law should not be entered upon until the third year of the Courses. So far

as I am individually concerned, what pressed upon my mind more than anything was the hope that the establishment of a really satisfactory and attractive Law School in Trinity College might counteract a great evil which has been long present to my mind, and that is the diminution in the number of members of Universities who are called to the Bar in comparison with men who have not graduated.

2485. CHAIRMAN.—That state of things is increasing in Ireland, is it?—Oh, yes. I got the figures for the Committee, and I found that whereas in the decade 1851-1860, there were 88 per cent. graduates called to the Bar, in the decade 1891-1900, only 63 per cent. were graduates, and I may add that of that 63 per cent., though they were all graduates of a University, a considerable number were graduates of a University which is a non-teaching University, and although they had a University degree they had not the training, and the teaching, and the academic instruction, which they would have had had they been attending a teaching University. I do not agree with Professor Leech in thinking that what we have done will draw away from what I regard as the more important studies, a large proportion of able men. I do think the effect ought to be to attract to our University men who would otherwise perhaps not obtain the advantages of a University training. We had great assistance from Professor Bastable, Professor Baxter, and Professor Hart in carrying out the details of our scheme, with which I need not trouble the Commission unless they wish to ask me any questions. In reading Professor Leech's Statement, I was struck by a passage which I cannot allow to pass without comment. He says that in Classics the reputation of the Trinity College School has never stood, and does not now stand high. I would only remark that in the last twenty years the Professors in the Classical School in Trinity College included these names:—Palmer, Tyrrell, Mahaffy, Bury, and Purser. I pass from that subject with this remark.

2486. Mr. KELLEHER.—Is this in Professor Leech's statement?—In Professor Leech's. I think that now I have gone through all the subjects with which I intended to trouble you, but as I had occasion to study the University question as a member of the Robertson Commission, I should like to read you a short passage from the Report of that Commission. The Report does not, of course, include Trinity College in any of its recommendations, but it was quite obvious in the course of our inquiry that the position of Trinity College would have to be inquired into to a certain extent, in order to see to what extent, if any, we could go into the subject, and for the purpose of placing it on one side; and I would ask your attention to some observations on page thirty-one of the Report, which I wish to adopt as part of my evidence, and which is more important than any evidence that I could give, because it represents the joint opinion of that Commission:—"When Trinity College was founded by Royal Charter in the year 1591 as *Collegium mater Universitatis*, it is probable that the kind of University present to the minds of the founders was that with which they were familiar at Oxford and Cambridge, rather than the University, or Corporation, of a single College, better known on the Continent. The Charter of James I., which conferred on the College the status of a University (*dictum collegium sit et habeatur Universitas*) contemplated the establishment of other Colleges or halls within the University, and evidence of a similar intention is to be found so recently as the year 1793. This intention, however, was never carried into effect. The University of Dublin, as such, never received formal incorporation. The Charter of James I., already quoted, vested the power of electing Parliamentary representatives in the members of the Corporation of the College (*prae-fatis praeposito sociis, et scholaribus, dicti collegii*) by whom the franchise was exercised until the passing of the Reform Act of 1832. This statute, while it used the phrase 'University of Dublin,' overlooked the distinction between a University and a College, inasmuch as it included in the constituency persons obtaining 'a Scholarship or Fellowship in the said University.' There are Professors who are styled as of the University, but their salaries are provided out of the funds of the College, by the Governing Body of which they were, until recently, appointed. The University, as such, is possessed of no property. The Senate of the University is presided over by the University Caput, consisting of the Chan-

DUBLIN.

Hon.
Mr. Justice
Madden, LL.B.

cellor or Vice-Chancellor of the University, the Provost of Trinity College, and a University officer called the Senior Master non-regent. The Chancellor is a University officer, but he was elected by the Governing Body of the College until the year 1857, when the Senate was incorporated by Letters Patent. And although Degrees are conferred in the name of the University, the effective power of granting them remains in the College, under the words of the Letters Patent of 13 Charles I., *graduumque collationes definiant et concludant*, and the provisions of the Letters Patent of 1857. The Senate, even since its incorporation, possesses no power of initiative. It can only deal with a 'grace' coming before it from the Board of Trinity College, by either rejecting it, or accepting it without amendment. The union between the College and the University was rendered more close by the establishment of an Academic Council in the year 1874. This body, which is representative of Graduates and Professors of the University, as well as of Fellows of Trinity College, shares certain duties of the Board in regard to the regulation of studies and appointment of Professors, in a manner which is possible only so long as the present relations between the College and the University continue to exist. The relative positions of the College and the University appear to have been stated with accuracy by Sir Joseph Napier in the paper already referred to, when he described the latter as 'distinct from, though dependent on, its mater, the College.' Regarded from the point of view of form, the distinction is apparent; but if we look at the reality of things the dependence of the University upon the College becomes a matter of substance. This practical view was present in the mind of the Master of the Rolls when he spoke of 'Trinity College and its University of Dublin, inseparably and indistinguishably blended with it.' The various schemes which have been suggested for establishing a College or Colleges within 'the University of Dublin' differ widely in detail, but they possess one feature in common with the Irish University Bill introduced in the year 1873. They all involve the abolition of the University as it has existed for more than three centuries, in connection with and dependent upon Trinity College, and the establishment in its place of a new University of a different type. The use of the same name cannot disguise the fact that the old University and the new must necessarily be different in constitution, in government, and in the relation of College to University." I have read that portion of the Report, because it has the authority of all the members of the Commission. The reference to the year 1793 is of some interest. The Catholic Relief Act of that year contemplated the establishment in the University of Dublin of a College, but an open College; under the terms it could not be strictly a Roman Catholic College. I have tried to trace the history of that policy, and it is very difficult to follow, but the main facts are quite plain. The policy was abandoned, because in the year 1794 the King's Letter passed, admitting Catholics to the University of Dublin, and in the next year, 1795, an Act was passed appointing a Board of Trustees for the purpose of the education (the exact words are somewhat interesting) "only of persons professing the Roman Catholic religion." The college was not to be founded as a seminary, it was founded as an institution for the education of Roman Catholic students generally. However, in course of time—I need not go into that matter—it became a Divinity School, so that the policy which was entertained for a time in 1793 was never carried into effect. Those, Mr. Chairman, are all the subjects, I think, that I intended to bring before you.

2487. Sir THOMAS RALEIGH.—You suggest a Board of nine, containing only three Professors, and you would impose upon that Board the double responsibility of maintaining the character of the College and also of developing the organisation of the University—all that varied organisation which a modern University requires. Do you think that the Board you suggest is equal to that double responsibility?—I think the Board that I suggest would be. First of all (although I do not think this is a complete answer to your question), the Board has performed up to the present time with a certain amount of success that double duty—that is, the Provost and Senior Fellows. I think the suggested Governing Body would be a distinct improvement, but I quite recognise that the Governing Body by itself might not be quite equal to the task. Therefore I venture to suggest the development of the Faculties and that the Board should act in consultation with the Faculties of Arts, Science, Law, Divinity, Engineering, and Medicine—these are

the recognised Faculties. I have tried to avoid going into details as much as I can, for two reasons—first of all, because it is the last day of your sittings here, and I did not want to occupy unreasonably the time of the Commission, and, in the second place, because I look to this Commission, with its very great knowledge of University matters, to assist us in such questions of detail as developing the Faculties in the way in which they should be developed; and I think that with the assistance of the Faculties the Governing Body would be equal to the task.

2487A. You realise, of course, that the University of Dublin has to keep pace with the Universities in other parts of the United Kingdom, and you are probably aware that the Universities in other parts of the United Kingdom have a different form of government, and one which is, perhaps, more adapted for the organisation of University work than the one which you propose?—I am aware that it is necessary, in a University which is composed of several Colleges, that the Governing Body should be of a totally different kind; but I think that for the government of a single College University a representative body, such as I suggest, in consultation with the Faculties, should be sufficient, because no questions can arise here as between different Colleges; there is no organisation here of the University as distinct from the College; everybody talks of "Trinity College, Dublin," and if a man is asked "What is your Degree?" he generally replies, "My degree is so and so, T.C.D."

2488. You assume the continuance of Dublin University as a University of one College?—I do, and I most earnestly hope that my assumption may be realised. I would only say upon that subject:—There are very few institutions in Ireland that have been completely successful, and I do hope and pray that nothing will be done to sacrifice an assured success in favour of a doubtful experiment. But I have confined myself to the question of internal reform, because there I am most hopeful of assistance from this Commission.

2489. Dr. JACKSON.—I should like to ask you one or two questions from very much the same point of view as that of Sir Thomas Raleigh. In the first place, I understand that you regard the Provost, Fellows, and Scholars as a Corporation?—Yes.

2490. I am not quite clear whether you regard the Provost, Fellows, and Professors as a Corporation?—No, I do not; they are not a Corporation.

2491. But, though not a Corporation, they are a very important body?—I agree.

2492. A body which includes exceedingly important functionaries who are not included in the College itself—I mean, of course, the Professors?—I agree.

2493. Is it not necessary that those important Professors should have a substantial position in the government of the University?—I entirely agree, and it was from that point of view that I advocated their admission to the Governing Body, though not technically—I think it is really more a matter of technicality than of substance—incorporated with the Provost, Fellows, and Scholars. But I am strongly in favour of their admission to the Governing Body. The share which they should have is a matter on which I think we may hope for assistance from this Commission, but that they should be admitted to a share I am quite clear.

2494. But would there not be a certain loss to the Collegiate corporate body if persons were introduced from without to assist in the doing of their private business?—You can hardly call it private business—it is the government of the College. I quite appreciate, if I may say so, your point of view, and I think the counsel of perfection might be that the Governing Body and the Corporation should be identical—that is the counsel of perfection perhaps—but having regard to the development of the history of the College, and of this ancient Corporation, I think as a practical man, your views would best be met by the admission to the Governing Body of representatives of the Professoriate rather than by their admission to the Corporation. I think the practical result would be the same, and I believe the latter plan would be easier to carry out.

2495. Then I noticed with interest your recommendation of Boards of Faculties. I had been feeling that the introduction of Boards of Faculties was absolutely necessary. But would it not be necessary to have also a General Board of Faculties to co-ordinate the work done by the special Boards of

DUBLIN.
 Oct. 28, 1906.
 The Right
 Hon.
 Mr Justice
 Madden, LL.D.

Faculties, and would not such a General Board be your Academic Council, strengthened?—I suggest that by means of the developed Faculties the Academic Council would become unnecessary.

2496. I should have thought that you would want a body which unified the work of the Special Boards of Faculties.—In all these matters I would defer to the great experience you have acquired in the sister University of Cambridge, and I am far from saying that that is not an admirable suggestion. It is a development of the idea that I was suggesting that the Faculties have been ignored up to the present; and no objection to your proposition occurs to my mind.

2497. I had supposed that possibly your answer would be that your Governing Body of nine would be able to do the work of co-ordinating the recommendations of the specific Boards of Faculties.—That was the reason why I thought that the Governing Body and the Faculties might work together; but I think it would be a very interesting matter for the Commission, who have such special knowledge of University work, to consider whether in addition to that, there might not be a co-ordinating Board.

2498. Mr. BUTCHER.—We proposed something of that sort on the Robertson Commission—a Board of General Studies and also Boards of Special Studies?—No objection occurs to my mind. When I said that the Academic Council was unnecessary, you, Professor Jackson, will quite understand the very great distinction between the co-ordinating Board which you suggest and the present Academic Council.

2499. Dr. JACKSON.—No, I do not.—The present Academic Council is not a Board of representative Faculties at all; you propose a Board of representative Faculties. I see there is a great deal in that, proposal and I suggest nothing against it; but I can only remark that it is a very different thing. The Academic Council is representative of four bodies—the Professors, the Senior Fellows, the Junior Fellows, and the Senate.

2500. I quite understand now; I did not, before, understand exactly.—But what you suggest is, if you will allow me to say so, a most valuable proposition.

2501. I suggest it, because I am very conscious of the complications of science and learning at the present time; specialisation in science and learning makes it necessary to have not only special Boards, but also a General Board of Studies, in which the work of the various departments can be co-ordinated—at least, that is my experience. Probably Sir Thomas Raleigh knows more about it than I do. Then, again, I should have doubted whether there was not a good deal of work to be done by the Governing Body of Trinity College which would hardly come within the purview of the Professors—domestic matters.—Certainly, administration and finance.

2502. And I should have thought also that, although there is a great deal to be said for having a small body of nine, there is a considerable number of departments in the College which have to be represented, and that out of those nine places you could hardly spare three for Professors from without, who would hardly take a share in the business of the house or family.—I am not at all wedded to the number, but somehow or other, from classical associations perhaps, the number nine suggests itself to one's mind. But there is a great deal in what you say. Does not experience, though, rather lead to the conclusion that a small body is more effective than a large one?

2503. I think so, too, but I only want to suggest that there is plenty of work to be done by an Academic Body, and plenty of work to be done by a Collegiate Body, and that it is unfortunate if an appreciable fraction of a Board is not really interested in the work before them.—I entirely endorse what you say. Of course the Governing Body, as you remind us, will have a great many duties quite unconnected with the teaching. The financial arrangements of the College are a large matter, and the management of the estates of the College, which now devolve upon the Bursar, occupy his time very considerably.

2504. But I presume that the business done by the Bursar has to be reviewed by the Governing Body?—The Bursar is a member of the Board.

2505. But he must report to the Board, I presume?—Oh, yes, he does it as a member of the Board, subject to their control.

2506. Then there is one small matter about which I should like to ask you. I believe that at present if a member of the Governing Body is absent, it is

necessary that somebody should take his place?—Yes, the Senior of the Junior Fellows.

2507. Do you think that a good arrangement?—I think that would fall with the existing arrangement, and I think it only illustrates the deficiency of the present arrangement.

2508. To me the fact is interesting, because I have worked under exactly the same system at the sister College.—That illustrates what I have brought before you—that Trinity College, Cambridge, is our elder sister.

2509. Now, I will pass to something else. May I ask whether you do not think it would be necessary to make an absolutely new code of statutes?—Oh, I think so.

2510. At present, as I understand, you are working with statutes which go back to the time of Elizabeth, cured by Charters and King's Letters?—That is so; our Charter goes back to Elizabeth, but the practical working code, for all practical purposes, starts with the Laudian Statutes, which, as I told the Commission, were really founded upon Sir William Temple's, revised by that remarkable man, Bishop Bedell.

2511. Still, they are old?—They are old, but allow me to say that from time to time they have been revised. I did not trouble you with the details, but they have from time to time been brought up-to-date in many particulars. But they require codification, undoubtedly.

2512. Could the codification of the statutes be done by King's Letters?—Oh, yes, certainly; the statutes are the creatures of King's Letters.

2513. If the society were to be invited to suggest statutes, which members of the society would take part in the work?—I am glad you have asked me that question. I am pretty familiar with the subject, and I observe that throughout the letters patent are granted with the *consensus* of the Provost, Fellows, and Scholars—well, of course, the Scholars are never consulted—and that goes back to the Charter of Elizabeth; then it was the Provost and Fellows on behalf of the Corporation who had charge of the Corporation; but when the distinction between Senior and Junior Fellows was established the body who would apply for a King's Letter appears to have been what we now call the Board.

2514. CHAIRMAN.—Does it not go back to the Charter of Charles I. rather than to that of Elizabeth? The Elizabethan Statutes gave the power to the Corporation?—I know, but what I mean by the use of the seal is that the provisions for the use of the Corporate Seal go back to the Charter of Elizabeth.

2515. I mean about the consent and assent?—Yes, that is quite right. What I mean to convey is this—that so far as the use of the seal is concerned we go back to Elizabeth, but it was quite unnecessary to apply to the Crown in the interval between the Charter of Elizabeth and the Laudian Charter for Letters, because the College was autonomous; it made its own statutes.

2516. LORD CHIEF BARON.—It is not restricted to Seniors?—No.

2517. Dr. JACKSON.—Under the statutes of the present time it would be the Board which would alone have a legal status in the matter?—Yes, as representing the Corporation.

2518. CHAIRMAN.—One moment—surely the expression “with the assent” of all the Fellows—the Provost, Fellows and Scholars—cannot be confined to the Board?—Not in that form, but I have no doubt whatever that the mode in which consent was always attested was by affixing the seal of the Corporation to the Petition. The seal of the Corporation was, under the Charter of Elizabeth, affixed to any document by a majority of the Provost and Fellows. However, if you would like me to make inquiry on the subject, I will have those petitions looked into; but I am certain that neither Fellows nor Scholars outside the Board were consulted.

2519. LORD CHIEF BARON.—There are certainly Queen's Letters which purport to have been granted on the petition of the Provost and Fellows?—I do not think so, although I know the documents which present to your mind. I should be very glad if the Commission would like me to do so, to look into this more fully. I will have these petitions looked at, but I have no doubt whatever the result will be that my impression will be confirmed that the Corporate act was always evidenced by the affixing of the Corporate Seal.

2520. Dr. JACKSON.—Surely one is right in assuming that the "Scholars" are children not yet of age, and not entitled to a say in these matters?—I think that is so. The Corporation consisted of the Provost, Fellows and Scholars from the commencement, but the Corporate act was evidenced by the fixing of the Corporate Seal. The Scholars, perhaps for the reason that Dr. Jackson mentioned, were never considered, but we find that it was the Provost and Fellows who had charge of the seal, and that the Scholars never had anything to do with the use of the Corporate Seal, perhaps for the reason that they were supposed to be, and were, as a matter of fact, minors. A boy might enter the College at twelve, and become a Scholar at fourteen, and so the Scholars were omitted altogether. But it can hardly be said now that the Junior Fellows have not arrived at ages of discretion, when I mention that the oldest of them attained his Fellowship thirty-six years ago. They were originally, and always remained, members of the Corporation, but dropped out of the Governing Body. If you would like a considered paper on this subject, if it becomes of importance, I would submit it with pleasure; I would look up the petitions, and send you the results of my investigations in the matter. I believe you will find the facts to be as I say.

2521. It is a matter of very considerable importance, because, surely all the Fellows of the Society ought to have their share in questions of legislation.—I think so, and that is one reason I say that the separation between Senior and Junior Fellows has now become obsolete and unsustainable.

2522. Yes, but we were then talking about the administration of College affairs. What I want to ask you is whether you do not think it of the very greatest importance that all the full members of the house, Junior as well as Senior Fellows, should take their part in anything that concerns legislation?—I think it ought to be so; but would you extend that to the Scholars of the house?

2523. No; they seem to me to be not yet of age.—But that is really the ground of my objection to the existing system—that I think it is an obsolete arrangement that where there are twenty-nine Junior Fellows, some of whom attained Fellowship many years ago, and seven Senior Fellows, the institution should be represented by the seven oldest; I think it is indefensible, and I entirely go with you.

2524. I am raising the question at this point because it seems to me on the one hand that, if there should be considerable reforms made in Trinity College, the Junior Fellows ought to have the power of making their suggestions, and not the Senior Fellows only, and therefore I would suggest that this particular question—the question of the Governing Body, ought perhaps to take precedence of everything else.—I have given it precedence, and I venture to say that if you give us a thoroughly satisfactory Governing Body, most of the reforms will follow; I should mention that I am aware that the Junior Fellows—a member of the Commission, Mr. Kelleher, will give you fuller information upon that subject—but I believe that the Junior Fellows are under the existing system consulted frequently by the Board upon various subjects, but at the same time the Board is not bound to follow their advice, and I entirely agree with you that, although technically the Board may have a right in regard to these important reforms to petition and to act on behalf of the Corporation, it would be very desirable, and a thing that the Commission might suggest, that they should take the opinion of the Junior Fellows, because they have the future of the College in their charge—they have the future of University education, so far as concerns the University of Dublin, committed to their care.

2525. I am afraid I was thinking of something more than that—not merely of our inviting the Governing Body to consult the Junior Fellows; I am suggesting that it might be desirable that full powers of legislation should be conferred upon the whole society.—I agree. That is what I have suggested as regards the Governing Body.

2526. So that the Junior Fellows should have the right to say their say in all such matters?—I entirely agree.

2527. I am sorry to have been so long, but I must just say a word about the Fellowship system. I have sometimes thought of a rather different arrangement, by which the Governing Body should have the power of electing to Fellowships, without examination, Professors.—Yes, but the Professors are appointed now

—Professors as distinguished from Fellows—by the Academic Council with the approval of the Board.

2528. I am wondering whether it might not be advantageous for the Governing Body to have the power of strengthening the society by election to Fellowships either of Professors or of other persons who might be wanted for the service of the College.—I entirely agree, and that is not at all inconsistent with my suggestion that the Corporation should continue to be the Provost, Fellows, and Scholars.

2529. Not in the least. But I do not think that you have quite definitely propounded your view.—I did not definitely propound that view, but I know it has been propounded, and I entirely agree with it. But I was dealing with the ordinary process—the ordinary and normal process of electing to Fellowships, and I suggested that that should be upon the result of the Moderatorship Examination; but that is quite consistent with your suggestion, and also consistent with the retention of the present Corporation.

2530. Quite. I wanted to make the suggestion, inasmuch as we have found the power exceedingly valuable at the sister College. Then as to the Provisional Fellowships, I should have thought there was something to be said for a limitation, not perhaps of age, but of standing. What would you think of that?—Would you kindly amplify that a little?

2531. For instance, that a man should not be permitted to be a candidate for a Fellowship after a given number of years from the time that he graduated?—Yes, I entirely agree with that, but I thought that this result would be worked out by selecting as the result of the Moderatorship Examination the best men. You would exclude then the man who presented himself at the Moderatorship Examination at an over age.

2532. No—I am afraid I have not put my meaning clearly. What is the number of years between a Moderatorship Examination and the Master's Degree?—Three years.

2533. Well, how would it be if a man of M.A. standing were to be excluded from competing for one of these Fellowships given on promise, in order to prevent him from staying about, waiting and hoping?—I quite agree, now that I see your point.

2534. If the College had also the power of choosing an older man, or a man of superior standing, in another way, there would not be any serious loss in that limitation?—Well, my objection to the limitation would be entirely removed by the adoption of your suggestion—that the limitation should only apply to the normal mode of election of Fellows; I think it would be useful there; but the objections to it would be entirely removed by what you suggest—that there should be an abnormal and exceptional power of election. Now that I understand your suggestion, I am entirely at one with you.

2535. That is why I was careful to raise the question about abnormal election.—I think it a very important one.

2536. Mr. BUTCHER.—I shall try to put my questions very briefly, as I think most of the ground has been already covered. Just a word about the Senate. You deprecate any change which would give the Senate any substantial power in the administration of the University?—I think it is unnecessary, and I think it would be inconvenient.

2537. The only question I want to ask you is this—whether a suggestion of this kind would meet with your approval: that the Board or the Governing Body of the future shall annually report to the Senate as to academic work and progress, and also whether it should present an audited financial statement?—I desire to speak of the Senate with all respect, as representing the University for the purpose of conferring degrees, but for the purpose which you mention I think it would be of no practical use.

2538. It is given in other Universities—an audited financial statement?—Are those one-College Universities?

2539. Perhaps not?—That is the whole difference.

2540. All the Universities of Scotland, which are single-College Universities, do it?—What kind of body is the Senate in Scotland?

2541. It has no powers; it is merely a deliberative body, and it can make recommendations to the Governing Body, but it has absolutely no powers?—I think myself that recommendations to the Governing Body would come with much greater force from the Faculties, and I do not regard that suggestion with very much favour.

DUBLIN.

DUBLIN.
Oct. 23, 1906.
The Right
Hon.
Mr. Justice
Madden, LL.D.

2542. Then upon another point—you are also not in favour of making all the Professors Fellows?—Well, I think it is rather more a practical difficulty than anything else. I think you get practically the same result by giving them representation.

2543. On the Governing Body?—On the Governing Body. And you do not encounter so much opposition by this course. I am all for proceeding in these University reforms, along the line of least resistance, having regard to the great difficulties surrounding us wherever we move, and I think there would be more difficulty in carrying the one than the other.

2544. Are you in favour of Fellowships being assigned to certain Chairs—not to all Chairs but to certain Chairs?—I do not see any objection to the development of Professor Jackson's suggestion in that direction—it is not inconsistent with the continuance of the existing Corporation that these Professors should become Fellows, and I see no objection to that.

2545. To pass on to the larger question, you have made it quite plain that you are not in favour of the introduction of a second College inside the University of Dublin?—That is so.

2546. Now, I would like to ask you whether the objection holds equally, or even more strongly with regard to a proposal which is in the air—which has indeed at one time been definitely put forward—that the University of Dublin should become a federal University, embracing not two Colleges only, but the existing College of Trinity, a new College to be established in Dublin, and also the Colleges at Belfast, Cork, and Galway—or at least perhaps not Galway, but anyhow Belfast and Cork?—Yes, I think that introduces still more numerous elements of disorganisation and difficulty in the working of the system; and as you have asked me this question, I may say that, as you know, we investigated very carefully the subject of University education outside Trinity College as members of the Robertson Commission. The expression has often been used, "Give Ireland a national University." Well, I think that word "national" requires a good deal of explanation. If it means "a University open to every person in the nation who wishes to avail himself of the education of the University," I think it is quite right, and I am entirely in sympathy with most of the suggestions that are put forward to make it easier for each member of the community, no matter what his faith may be, to enter the University of Dublin. In that sense it should be "national." But if it means that there should be only one University for the nation, I do not think I need, before a Commission like this, remark that such a proposal would be received with horror in England;—that you should have only one national University in England—that Birmingham, Leeds, Oxford, Cambridge, and the rest should all be fused into one national institution, with the suggestion that that would be for the benefit of the country. And the same remark applies to America, or to Germany. As I read the history of Europe, wherever there has been a great intellectual movement, it has sprung out of a number of Universities, and not out of a single University. I believe the suggestion of a single University for the whole of Ireland to be the most disastrous proposal that could be made with regard to education. I think Trinity College ought to be (as it is) open to every member of the community who wishes to avail himself of it—in that sense I agree that it should be "national." And there is another sense in which I think the University should be "national." I think it should give especial attention to the history of the literature of the country, and to the study of its ancient language. Adopting the term "national," it should be national in that sense. I have observed with pleasure that Dean Bernard has made the suggestion in his printed evidence that there should be a separate Moderatorship Course specially devoted to Irish studies. A great number of the students may not have the time, the aptitude, or the desire, to study the Irish language, but I think that in our Irish University students should be encouraged to study the history of their own country, and the literary history of their own country. It is much more easy to do so now than when I was in Trinity College, because we have had recently a number of very interesting contributions (one by a member of your Commission) to the history of Ireland and of Irish literature, and I am in entire accord with that suggestion. I may mention (it will interest one member, at all events, of the Commission), that in Bishop Bedell's Code of Laws there

is a special provision about the "natives." There were thirty scholars of the House who were "natives"—I never could find out exactly what the qualification was—but they were students in the University of Dublin. You would suppose at first sight that they would come here to study English, but they came to be taught Irish. However, that is by the way.

2547. Just to come back to the question of resolving the University of Dublin into a number of Colleges, and making it a federal University, with a number of constituent Colleges, are you inclined to think that the difficulty of working such an arrangement—a University with more than one College—would be increased the greater the number of heterogeneous Colleges within the system?—I think so, and also there would be the danger, if you introduced a number of Colleges of different types, with different standards, of lowering the general standard of the University.

2548. And even if you were able to take measures, by the appointment of University Examiners, to secure uniformity of standard, I presume the difficulty of uniting a University consisting of Colleges, some new, some old, some large, some small, which were moreover, in religious tone and complexion, extremely heterogeneous, would be enormous?—I entirely agree. I am obliged to you for introducing this subject. I have not come here to discuss the general question of University education in Ireland; but I should not like to leave the Commission without expressing my earnest hope that the general question may be settled. I have been a careful observer for a great many years of education in this country, and I know that a large proportion of the young men of this country have not availed themselves of the existing provisions for University education, with the result that a number—the number is exaggerated sometimes, but a considerable number—of young men who might be educated graduates of a teaching University have not had that privilege. I am not going to take up the time of the Commission by stating how I have come to realise that fact, but my view is this: I am myself attached to a system of mixed education, but I recognise that there are others who object to it on conscientious grounds. I have no right to quarrel with them for that, and if they will not be educated according to my views, I very much prefer that they should be educated according to the views which they adopt than that they should not be educated at all. Therefore I sincerely hope the question may be settled. On this subject I see no reason to change the opinion which I expressed as a member of the Robertson Commission. I may add that I do not think it is purely a religious question, because I think that training of a different type from that afforded by Trinity College is required by a large number of young men in Ireland, to make them good mechanical engineers, and to fit them for various occupations of that kind; and I would venture to bring before the Commission a valuable pamphlet written by the Roman Catholic Archbishop of Limerick some time ago on the necessity which exists for a University of a more democratic character. The want has been felt, and supplied in England.

2549. Dr. DOUGLAS HYDE.—I wanted to ask you just one question about the Senate. You propose to give the Senate no voice upon the Governing Body; but in view of the fact that the Senate has already a very large voice upon the Academic Council, appointing, as it does, four members to that body, would you not be disfranchising the Senate?—You would, in one sense, but I regard that Council as really a provisional measure; I do not think it a counsel of perfection at all, and I think its useful purposes would be better served by the Faculties.

2550. The Senate would not object to having its powers taken from it?—I do not think so.

2551. Do you not think that it would be a good thing if the University of Dublin were brought more into contact with the outside world. It has always been very far from it, and I thought the Senate was a kind of means, poor though it was, of bringing it into that contact?—I quite sympathise with you, Dr. Hyde—you probably mean by University Extension Lectures, or something of that kind.

2552. Yes?—I do not think you could work it by means of the Senate, but I have often thought of something of the kind, and I think it would be a very valuable thing if it could be done. I have

suggested that very point of University Extension Lectures, but I have always been met with the difficulty of the unsettled general question.

2553. Have you noticed that the upper classes are sending their sons less and less to Trinity College?—Indeed I have, and I have noticed it with great regret. In the eighteenth century Trinity College was a great school for the whole country, including the classes to which you refer. What would the eighteenth century have been without the names of Swift, Berkeley, Grattan, Molyneux, Flood, Goldsmith, Burke, Sheridan—I mention only a few names at random, but the list might be continued indefinitely. Trinity College, in those days, educated Ireland, as a whole, in a way in which I am sorry to say it does not now, although it became in the nineteenth century a greater seat of learning. As regards the upper classes you have mentioned, often their boys are sent to English schools, they make associations there, and they press their parents to let them go to Oxford and Cambridge with their associates. I do not see any way really of altering that state of things.

2554. Has Trinity College, as Dr. Traill suggested in his evidence, practically educated only one portion of the nation? Dr. Traill said that there are two nations in Ireland, and Trinity College educates one?—I do not like to make distinctions if I can help it. I should like Trinity College to educate every member of the nation—using the term in the sense you do—that wished to enter, and found it suitable to his requirements; but I quite recognise that there are a great many who do not wish to enter, and that there are others who require an education of a different kind from that which Trinity College affords.

2555. The point I wish to make is that the education given in Trinity College is exactly the same as that given at Oxford or at Cambridge?—Yes, Certainly; and I may say that *ad eundem* associations have existed from very early times with Cambridge. I think I mentioned this before.

2556. And consequently the upper classes who can afford to do so prefer to send their sons to headquarters, where they receive just the same kind of education as they would receive at Trinity College?—In my opinion those parents make a very great mistake. I am not talking of Oxford or Cambridge for England, but of Trinity College for Ireland, and my observation is that if a young man is to spend his life in Ireland it is far better that he should be sent to Trinity College than to Oxford or Cambridge; and I wish I could convince those to whom you refer that this is so.

2557. LORD CHIEF BARON.—The statistics of the success of the Trinity College students in after life prove that?—Certainly.

2558. DR. DOUGLAS HYDE.—You do not think that the parents of Irish students would have less difficulty in securing openings for their sons by sending them to English Colleges?—I do not think so. You get the same type of education in Trinity College, and, as the Chief Baron has suggested, I think the statistics go to prove what I have said.

2559. I observe that you suggested that the students of Trinity College should be taught something about the literature of their own country?—Oh, yes; I think so myself; but I do not know how far that would appeal to that class of parents, because I regret to see that there is generally a want of interest in the history of Ireland; but I think that there would be an improvement if studies of the kind suggested by Dean Bernard were encouraged.

2560. DR. COFFEY.—Figures have been sent in to the Commission as to the annual number of students presenting themselves for degrees in Moderatorships during the six years, 1900-1 to 1905-6?—Yes.

2561. As Mathematics and Classics are the principal subjects for Fellowship examination, I should like to ask whether you see any difficulty in departing from the existing system of election to Fellowship by examination if the number of students who come forward in those Moderatorship subjects should not be largely increased, for I have noticed in the returns that the average annual number in Mathematics for Moderatorships is 4:84?—I do not think that the number, exactly, that would present themselves for Moderatorships in Classics or Mathematics is so very important. You see you do not want a great number—there would be only one in every year at the outside, and I think, though the number may fluctuate (not very much) one year as compared with another, you are not bound to elect from any particular order; there would always be a sufficient number eligible in Classics and Mathematics.

2562. It has been suggested that the Provisional Fellowships should be two each year?—Yes. I suppose that would be the result. You will certainly, as far as my experience of the University goes, be able to keep up the standard very high.

2563. What has occurred to me is this—might it not be easier to settle, as between such a small number of candidates by such an independent test as examination, than to have power reserved to the Board, whatever it may be, to select one from the number I have mentioned?—Well, that does not occur to me as an objection to the selection scheme. Examination of course, we all agree, has some merits, but I think the advantages are too dearly purchased. The system of examination certainly has some advantages.

2564. DR. JACKSON.—I suppose that you would not be unwilling to have a system of dissertation as a test of originality?—Oh, yes, I think that is quite a different thing from a system of examination. I do not know to what extent that is adopted, but I believe it is to a certain extent adopted, in Cambridge.

2565. To more than "a certain extent": elections are made for the most part in that way—at any rate, with us at Trinity?—Quite so.

2566. CHAIRMAN.—If I rightly understood Professor Jackson's questions he contemplated two Governing Bodies, one for the University and one for the College. I was not quite sure whether, in giving your approval of the view propounded by Professor Jackson, you perfectly grasped that?—I did not understand that, and I do not think that it should be necessary to have two Governing Bodies.

2567. DR. JACKSON.—I quite understood that you disapproved of my suggestion of two Governing Bodies, and that you were always thinking of the Governing Body of the College.—I think I can shortly make quite clear what I thought valuable in your suggestion—that is to say that the Governing Body of the institution should be such as was suggested, but that the Governing Body should be in contact with the Faculties.

2568. CHAIRMAN.—I think I quite understood that, but I was not quite clear as to whether you adopted, or did not adopt, Professor Jackson's suggestion about two Governing Bodies?—No, I adopted the suggestion of one Governing Body, with a Board of Faculties which should assist the Governing Body; and I could see no objection to his suggestion that the Faculties should have a body which should be in communication with the Governing Body in a representative capacity.

2569. DR. DOUGLAS HYDE.—One question about the lady students at Alexandra College. Do you mean that in cases where parents objected to their girls going to Trinity they might go and take a course in Alexandra College instead?—No; I did not mean that the parents should be consulted on the matter, but, recognising what I know is a fact—that a great many parents would like their daughters to be in a women's College, I thought it would be desirable, not only in the interest of the women students, but in the interest of the University, to have accredited courses of lectures in a College such as Alexandra College used in that way.

2570. But you do not mean that a lady entering Trinity College should not take her course with the men?—Most certainly not, and I quite recognise that a great many of the parents would prefer that they should; they have no such objection as we have been speaking of.

2571. CHAIRMAN.—It is only an alternative scheme?—That is all.

The witness withdrew.

DUBLIN
Oct. 23, 1906
The Right
Hon.
Mr. Justice
Madden, LL.D.

DUBLIN.

After a short adjournment.

Oct. 23, 1906

Robert James
M'Mordie,
Esq., M.A.

ROBERT JAMES M'MORDIE, Esq., M.A., Representative of the "Education Reform Association," Belfast, called in and examined.

2572. CHAIRMAN.—You appear I think on behalf of an Association which is known as the Education Reform Association?—Yes.

2573. That chiefly resides at Belfast, I think?—Yes, and the surrounding district.

2574. The headquarters of the Association are at Belfast?—Yes.

2575. You have been good enough to hand in an abstract of your evidence: do you think we might take that as the basis of your case?—No, because since I have seen this report I have had occasion to revise my evidence.

2576. I venture to suggest that the first part might be omitted, as it is rather outside the subject of our inquiry?—I want to say at the outset that I have been going into the question of the accounts,* and it took me more than a month to find out what I wanted. The giving of one large item as income from "old Crown" estates is not, I consider, proper accounting. That might come under three or four heads; there might have been a grant from Queen Elizabeth and another from Charles I., and these should be separately set out, to know who they are. There is nothing here, for instance, about the Erasmus Smith money. It ought to be set out under two, three, four, five, or six different heads. That is not a proper account—income from Crown estates, £36,700.

2577. I understand your observation?—The next is possibly of more consequence. In the salaries of Senior Fellows there comes an item for decrementals, whatever that means. I could understand an incremental increasing a man's salary, but not a "decremental."

2578. It is an old name?—But it is not a dictionary word.

2579. The explanation has been offered to us?—What is it?

2580. I am not prepared to explain it to you. You are not come here to examine us, but to give evidence?—It is stated here, and has been for many years, that there is a large amount of residue, after all expenses are paid, which these men, in a position of trust, divide among themselves, and that is called amongst the students a "scramble for coppers." If that is a part of the estate which is divided, it is a matter for as serious attention as the old business of their keeping the fines paid on granting leases. That is, if it arises in that way—if not, my remark goes for nothing. The residue of the trust estate left over they divide among themselves. I can hand you, sir, a paper giving the number of paragraphs to which I am referring, which will make it easier of reference.

2581. You are referring to "Reform of Government," I suppose?—I had a note that I wanted to deal with the proposals of the Senior Fellows. The government of the College—their Provost and Senior Fellows—costs £11,424. Allowing a reasonable salary for the Provost, there remains £10,000 per annum paid to men as a reward for studying books till they reach the age of twenty-five or thirty. They do no teaching. The Junior Fellows, as Tutors, do not teach, they merely advise students. They give no return either for their salary. They probably earn the £4,669, which appears in Table V., page 9,† but they receive out of fees paid by students, for which they make no return, a sum of £12,800, so that £22,800 out of a gross income of £68,600, is wasted. The pass students pay their tutors and grinders sums sufficient in the aggregate to pay a full professorial staff. Young men here pay as much as £30 a year for work that they could easily and nicely do under a Professor. Under the title "Salaries of Students" is included about £1,000 for post-graduates' rewards. This, added to the £22,800, would give an ample amount to provide for adequate science teaching and for research work. The College at present expends nothing on research. I believe a start has been made, but it is very recently if it has. The only money paid for genuine research is £300 per annum—£200 for the Stewart Medical Travelling Scholarships, and £100 for the "Helen Blake" research in Irish

History. Both these are private endowments, so the College and University give nothing.

2582. Yes?—The State therefore pays £23,000 per annum, for which no return is made, for the maintenance of a semi-monastic body of men, who have won for their College the title of "The Silent Sister." That is how it is known at Oxford and Cambridge. The Senior Fellows who have submitted statements have made no suggestions to assist the Commission, except some in the matter of some recommendations for slightly altering the *personnel* of the Board, which are of no value. They wish the present conditions to remain. The Junior Fellows wish to have a share in the government. But although two join in a statement from the Science side which is of value, seven have joined Dr. Starkie, an ex-Fellow, in making suggestions which, if adopted, would soon, in my opinion, make the College and University as denominational as the Royal University. There is much necessity of reform in connection with Junior Fellowships and Studentships. A Senior Fellow claims the right, which he sometimes exercises, of giving marks "according to his impression of the student." That is, they may give, say, ten as full marks to a favourite student, and one or nought to a student whose answering is as good or better than the other. In the case of another College examination, where the reward must follow the highest marks, a Senior Fellow, if he is an Examiner, claims the same right, and sometimes exercises it. That is, he is not bound to mark according to answers at all, but in making his return to the Board he may give his marks "according to his impressions" of the students. The Board regularly grant some exhibitions without examination and without giving reasons. Poverty is an indispensable qualification for a candidate for a Sizarship. But the only evidence required is a declaration by the candidate, sent to the Senior Lecturer. There is no proper investigation. These anomalies in administration are, no doubt, a survival from the period of a single denominational control, and I urge that they furnish quite as important evidence to discredit denominational control as is furnished by the pocketing of the fines on leases prior to 1850. No such irregularities could be found in connection with undenominational institutions. The anomalies, taken in connection with the facts (1) that changes of constitution would likely result from the present investigation, and (2) that no recommendations as to changes have been made by the Governing Body, suggest as at least possible that private negotiations in the direction of a mixed Church control have already taken place, and that evidence will be mutually arranged to lead the Commission in that direction. As a matter of fact I know there have been such negotiation nearly three years ago. Sir Antony MacDonnell was in Belfast over two years ago discussing the question of alterations in the College and University with two prominent Presbyterians, one of whom (Rev. Dr. M'Dermott) has already given evidence, while the other is a member of the Privy Council. I suggest that if the Commission desire that public respect shall attach to its proceedings, the Provost and others should be examined on this point, and further, that those who, like the Education Reform Association and myself, are taking an independent position, should, by the publication of the proceedings of the Commission, be placed in a position to deal with the evidence presented on behalf of the College and University and on behalf of the various Church organisations. Science even to the present day has been neglected. The amount which has been annually spent on science should be ascertained. The want of provision for the Science side in Trinity College may not be in any degree the result of deliberate intent. The College, setting itself to prepare men for the clerical profession, followed tradition in giving very full attention to dead languages. So I make no charge. But with regard to other institutions it is different. I urge that the Commission should not only recommend the making of ample provision for the teaching of Science, but should do it in such a way as to prevent the occurring of what has occurred in connection

* A memorandum by the Provost of Trinity College with reference to certain observations in Mr. M'Mordie's evidence is printed at page 496

† Appendix to First Report (Cd. 3176) page 9.

with the other educational systems in Ireland, the deliberate crushing of Science by indirect methods. In giving the facts with regard to each, I suggest that they are not accidental occurrences, but are the outcome of uncontrolled effort on the part of Church representatives who constitute the Boards. As to the Royal University—

2583. I think we had better not go into the history of the Royal University?—It is not the history. I want to show you that express precautions are necessary if the same thing is not to be done here. The University grants a B.Sc., like the London University, but under different conditions. It does not grant the B.Sc. to any but those who have already taken the B.A. degree. A Bachelor of Arts may obtain either an M.A. or a B.Sc. by another year's study. Apart from that deterrent, the course is severe in the Science subjects. An illustration of this is afforded by the fact that the Professors on the Literature side in Q.C.B. have only two or three hours' work daily, while the Professor, say of Physics, has a long, hard day's work. Very few can afford the time, and those who are proceeding to the clerical profession must avoid it, as it would practically extend their course to seven years. On the other hand, the reading for the M.A. degree can be easily done without interfering with their professional studies. Why should the B.Sc. be barred in that roundabout way? It should be a degree given on the same lines as in London. A young man of limited time and limited means cannot add a year to his three years' Arts course. The way science is crushed in the intermediate schools is a little more remarkable. Under the two heads of Natural Philosophy and Chemistry, for the ten years from 1889 to 1897, the number of lads going in for that subject—

2584. I think we must not go into too great detail about this?—It is to show how they are crushing Science.

2585. We are not concerned with what they have done in the Royal University?—It is being done here also.

2586. Show us that, and it will be important?—All Crown appointments in Ireland are made in obedience to Church nomination. I know of only one case in the last twenty years where the Church command was not obeyed. There was one case in the Royal University, and only one. It is universal. The whole of the National Board, the whole of the Intermediate Board, thirty out of thirty-six on the Royal University—the Church names the men, and the Crown appoints them. I am not objecting to clergymen having a voice, but it is done officially by the Church. The numbers of students in the intermediate examinations in Science have dropped every year; in Natural Philosophy, for instance, in the nine years from 1889 to 1897, the numbers were respectively 2,849, 2,135, 1,864, 1,408, 1,397, 1,277, 1,338, 700, and 592; and on looking at the report for 1904 I find that in that year the number had further fallen to 360. In the same way Chemistry runs down from 1,407 in 1889 to 278 in 1904. The way that is arrived at is by giving low marks in Science subjects, and high marks in Literary subjects. The total number of boys presenting themselves in 1904 in all grades were:—Latin, 3,203; French, 5,773; German, 189; Irish, 2,043; Physics, 360; Chemistry, 278; Mechanics, 22; Botany, 0; Drawing, 47; Physiology and Hygiene (which one would think the most important of the lot), 14. Returns as to marks for each subject should be obtained from the Intermediate Board. It is remarkable, considering the needs of the country, that Greek should receive 1,200 marks as compared with 200 for Mechanics. In the Preparatory Grades 6,000 are allotted to languages, 1,800 to Mathematics, 300 to Drawing, but not one mark to Science subjects.

2587. Really I do not think you ought to go into this?—I want to show you that there is a steady killing of Science going on.

2588. We are not now concerned with that, and we must confine ourselves to the questions which are before us?—I am giving you my reasons for saying that they are killing Science. If you will allow me to proceed a few lines further in my statement, I will show you what is being done in the Primary Schools with regard to Science teaching, and then I shall have finished what I have to say on this point.

2589. Our inquiry has nothing to do with the Primary Schools—you are travelling altogether out-

side the scope of our Commission, but go on?—The Primary Schools educate the students who afterwards will enter the Universities, and I want to show how the system of education adopted in the Primary Schools is killing Science. The only rule in Arithmetic which really touches Science, the rule of proportion, is eliminated, and not taught in the Primary Schools. Listen to this. It is an extract from the instructions given to the teachers in the Primary Schools:—

"Page 26.—Numeration in tens. Continue the counting beyond ten in the form of 'one bundle and one stick,' &c., up to two bundles. Do the same in the form of 'ten and one,' &c., up to two tens. Introduce the names (i.e., sixteen, &c.), as a shorter way of saying 'ten and six' (eleven and twelve are exceptions).

"Exercises—(1.) Adding five sticks to a bundle and three gives a bundle and eight sticks, because five sticks and three sticks make eight sticks. (2.) Adding five to ten and three gives ten and eight. (3.) Adding five to thirteen gives eighteen.

"(1.) Eight sticks and seven sticks are fifteen sticks, because eight sticks and two make one bundle, and two sticks from seven leaves five. (2.) Eight and seven are the same as ten and five, because eight and two are ten, and two from seven leaves five. (3.) Therefore, eight and seven are fifteen.

"The result of each step should be repeated four or five times, &c."

That is a specimen of the "Science Teaching" given in the Primary Schools. My point is that children taught on that system could never do anything at College.

2590. We have nothing to do with that; we are not inquiring into the system of education at the Primary Schools?—My point is, the students taught on such a system as that could never do anything at College. The Queen's University and Colleges failed to cure the mischief resulting from the suppression of Science in the schools, for although the University machinery was admirable, and although the College Professors did their work loyally and well, and although Science received greater encouragement in the University, the Science programme was not comprehensive enough, owing, of course, to the ideas of the man trained in the old Universities being influential when the University was founded. The undenominational character of this University and its colleges, and the fact that no sectarian animosities ever manifested themselves, caused the abolition of the University and the establishing of the Royal under complete Church control. Thirty of the thirty-six Senators are nominated by the Churches in certain proportions, and hold office for life. The graduates elect six, who have practically no influence, as the Church nominees working in harmony constitute an overwhelming majority. These six are the only men in Ireland who have by right or by election any control in any department of education. On the question of the reform of the government of Dublin University, I wish to say that a single University can meet the needs of Ireland. It should be governed wholly by its graduates who have been students of affiliated Colleges. No University can discharge its duties which takes cognisance of any political aims or aspirations, whether sectional or national, or which is obliged to give any recognition in its constitution or its work to the religious opinions of students. Students have at least as good opportunity for attending to religious studies and observances as have young men in offices or warehouses. The attitude of the Churches towards secular education is accurately indicated by two assertions which enjoy a free church currency:—(a) Secular instruction is for time; religious instruction is for eternity. (b) A man who receives secular education without religious education is an educated devil. The first assertion is represented in practice. Clergymen claiming to be the worthy controllers of religious instruction assume the same relation to teacher and to secular subjects that eternity has to time. They will assume the same position with regard to examinations as tests of knowledge, secular education will be injured, and eventually the students who seem to them to be best in religious education will in examinations be placed above those who excel in secular subjects. The second Statement has been made by a distinguished English Churchman, and practically similar statements have been made in Ireland. Little comment is required. Assuming a man

Esq., M.A.

to be a devil, his persecution and his killing become a matter of religious duty whether in Europe, Africa, or China. In any reconstruction of Dublin University it is not likely to be urged that the government should remain in the hands of the oldest students. The fact that men are over seventy years old should be taken rather as a disqualifying condition. Young teachers usually admit that their contact with those who are inferior in age or knowledge cultivates a habit of mind which rather unfits them for a superior control and renders them rigid, probably dictatorial, and always averse to criticism. So that while the teachers in the Colleges might reasonably have a representation on a Governing Body the latter should be quite beyond their control. If the Governing Body be chosen from or by various other bodies, even by open election, there is always an opportunity afforded for candidates appealing to the electing bodies on side issues, and through this, or through wirepulling, a great risk would be introduced of the Governing Body not being really representative of the graduates at large. Church organisations will favour this mode of election rather than a direct election by all those who are interested. There remain two methods of selecting Governing Body—Crown nomination and election by the graduates. As already pointed out, Crown nomination in Ireland has ceased to be independent. It is invariably made in pursuance of Church nomination. If it were not so it would be made in accordance with the varying exigencies of political parties. Fitness for the office would receive very partial consideration, and the immorality too frequently associated with political struggles would be reflected in the appointments to the loss of prestige of the Governing Body and to the degradation of education. The graduates should elect the Governing Body. But while it is hoped there will always be a large body of graduates who have not been students at an affiliated College, it would not be reasonable that these should have power to elect a body whose most important functions would lie in the controlling of the Colleges and the system of education there conducted. If Dublin University is to be converted mainly into a teaching University the three Queen's Colleges should be affiliated and the graduates of Queen's and Royal Universities be made graduates of Dublin University. This would secure a large electoral body. But as Trinity College has mainly devoted its attention and its resources to preparing students for the ministry, and as Queen's College, Belfast, has been very largely used for a similar object, the literature side would have a voice in the election quite out of proportion to its importance. If Science is to receive the attention which modern requirements demand the Science graduates should elect half, if not two-thirds, the Literature graduates one-third, and the Law one-sixth. The University and College moneys should be divided in like proportions at the end of fixed periods as should seem desirable in view of the numbers on each side. Each section should control the examinations and the money on its own side. If Universities and Colleges were placed on a firm undenominational basis there would be no friction whatever between various sects and parties. There never was a trace of friction in connection with Queen's University or in the Queen's Colleges, where students of all denominations met with much advantage instead of injury. Friction, jealousy, and ill-feeling will be engendered if students are separated. This has been illustrated not only in the Royal University, but in connection with Primary Schools. Children who were on most friendly terms in mixed schools have begun to stone each other when they were divided into denominational schools. The Educational Reform Association is opposed to the affiliation of any denominational colleges in the University, and to representation being given to Church organisations on Governing Bodies. There is no evidence of any value that any considerable number of young people of any denomination have any objection to associate with those of any other denominations in College or University. There is much evidence to the contrary. It has been possible to secure signatures to written statements, but it is astonishing, even to those who favour undenominational Colleges, how few these have been. Sir Thomas Wyse, the founder, not only of the mixed system under the National Board, but of the Queen's University, was a Roman Catholic, and he had the support and countenance of all the Roman Catholic Bishops, with one exception. If, however, the Commissioners entertain an application from the clergy of any

Church for separate treatment it should be dealt with as follows:—On the patent grounds that those claiming exceptional treatment would use their position on a Governing Body to undermine and destroy the interests which they oppose. The Roman Catholic graduates should be asked to vote for or against a denominational college to be affiliated with Dublin University, and to state whether they wish to elect a Governing Body for the College or to leave its government to the Hierarchy of their Church. In the event of such a college being established by the State it could constitute a fifth College in the University. But no consideration should be given to any such claim till the Hierarchy invest in Trustees for the benefit of secular education in such College and to be administered with the State grants by the University the £250,000 collected up to 1870 for the founding of a Roman Catholic University. This money with compound interest, no account having ever been given, would now amount to about £1,500,000. The State has already given large endowments to Maynooth—sufficient for the annual supply of one hundred clergymen beyond the number required by Ireland. None of that money would be required there. The scheme printed in Statement III. by Dr. Starkie, twelve Junior Fellows and eight Professors would, if adopted, lead very speedily to the denominationalising of the College under a mixed system, involving great injury to the country. The complicated nature of this scheme is very peculiar. The special recognition of one Church organisation would necessarily lead to further recognition in the all-important question of examining, no reference to which is made in the scheme. It may be assumed that a Church organisation seeking to obtain a full share in the control of the College will, through their members who may be examiners, give marks as the result of their "impression of the student" system with even less regard to his actual knowledge than is displayed by the existing Senior Fellows. Respect for examinations conducted by existing Church controlled Boards is practically extinct. I give the following as illustrations: An examiner in the Royal University farmed a class for a University examination and so crammed it that every member was able to answer every question on his examination paper. The matter was accidentally discovered, and it was too flagrant to be overlooked. The Senate, however, merely rebuked the examiner. I can quote another more flagrant case in a Church controlled examination not connected with a University, and I can give proof of an examination paper being in the hands of a pupil in a religious school weeks before the date of an examination under the Intermediate Board. That was a printed paper. I further refer to the action of the Church authorities in connection with Maynooth, which was founded for the education of the Roman Catholic youth of Ireland about 1795. The prominent lay Roman Catholics of that date made a formal protest, which had no effect. Within ten years the institution was converted into a purely Theological College. The Bishops have devoted to some other object the moneys collected from their people for a Catholic University up to 1870. Since then other moneys have been misapplied. A Commission sat in 1885 to deal with the endowments of endowed schools. Roman Catholics are not permitted by their clergy to take advantage of them, and the Commissioners complied with the Bishops' requests to hand them shares of endowments. That Commission gave the Bishop of Clogher half the income of Portora School, Enniskillen, about £1,200 a year, for the Intermediate education of the Roman Catholics of Enniskillen and the neighbourhood, this being the reason and purpose of the grant. This money has, however, been spent in a Seminary in Monaghan (thirty miles away and in another county and a town of less than half the inhabitants) for the education of youths preparing for the priesthood. The Roman Catholic laity of Enniskillen have so far taken no action. Then there was the Rainey bequest—

2591. CHAIRMAN.—We cannot go into these bequests. We cannot try the case of all the endowments in Ireland?—I am going into the general point of moneys given for endowment of denominational education. They will be all misapplied if they get the chance.

2592. You must see that we cannot try these cases. We are inquiring into the College, purely?—

LORD CHIEF BARON.—A great deal of this is quite irrelevant.

2593. CHAIRMAN.—We cannot occupy our time with it. Make a general statement of your opinion that funds have been misapplied. That is enough?—I will give the names, if you require names, and mention the cases in which moneys have been misapplied.

2594. Simply say that money has been misapplied. It is quite useless to go into these details?—I want to show that money will be misapplied by Church authorities whenever they get a chance.

2595. I am of opinion that human nature is not so bad as that?—I am not dealing with human nature. I am dealing with Church bodies, Church organisations. I remember a Trinity youth about to enter for his "Little Go" coming back to a preparatory school to prepare for it. I had charge of his Mathematics. He was barely up to matriculation form, but when I told him he could not expect to pass he said there was no doubt he would pass, and he did pass. The control of Dublin University by Trinity College has led to undue cramming for University and College examinations, and to a very low standard for passes. The Queen's University system was perfect, each student being examined by each of the three College Professors. This made each Professor most careful both in teaching and examining. If a denominational College be affiliated great precautions will be required to minimise the risks of unfair examining. The Queen's University system would meet the case approximately, provided that the examiners had the papers printed in the Examination Hall immediately before the examination. Facts could be adduced to show the necessity for this. The appointment of outside examiners would be quite unnecessary, and would very likely lead to friction. The University should continue to grant Bachelor Degrees to others than those attending affiliated Colleges. If the latter wish to make the distinction they can indicate their College as well as the Degree as is now done by graduates of some Universities—or the Master's Degree can be conferred without examination to Bachelors of the latter class. As regards the Arts Degree, it is not of great consequence whether or not they are confined to College students, but every encouragement should be given to studies in Science by the offer of a Degree. All male teachers in Primary Schools should be obliged to have their B.Sc. At present if a teacher attempt to take a Degree he is likely to be prevented by the clergyman who is his manager. The Science course, as well as the Science examinations, should include practical as well as theoretical work. There should be laboratories, with all reasonable facilities afforded, furnished at important centres. Ten, at least, would be required at the outset, but the number would have to be increased. There are laboratories at present all over Germany supplied by the Government. There ought also to be an extensive system of local examinations for those not connected with the Colleges. Large sums are at present expended on Science teaching, the great bulk of which is wasted. All existing arrangements are incomplete, and, in part, mutually obstructive. Unity and efficiency could be secured only by their culminating in a University. Notwithstanding that large sums of money have been contributed by the State, and that education in Science seems to get much attention, the various Boards already mentioned impose a weighty handicap on Science studies by the various indirect methods to which I have referred. As to the Colleges, each affiliated College should be governed by a Council constituted as follows:—Two-thirds elected by those who have been students of the College during the greater part of their undergraduate course (this to include

one member to be elected from and by the teaching staff), and one-third elected by the public bodies in the district. The Divinity School in Trinity College should be transferred, with its private endowments, to the control of the Church with which it is connected, and granted power to confer Theological Degrees. The University and College should be conducted on business lines. The taxpayer is entitled to know how his money is expended, and the Commission should report as to the money required under each head:—(1.) The number of Professors and assistants required for the teaching of, say, fifty students, matriculated each year and became equally divided, Literature side and Science side. The Professorial system is much the best for pass students. The regular attendance on lectures is a training in itself, and it promotes industry among students who must keep abreast of their class and who might otherwise postpone their work and cram with grinders for a short time before the examinations. On this matter, Professor Dill, of Belfast, and Professor Morton could give valuable evidence. If there be tutorial teaching the difference in cost should be paid by those who take advantage of it. (2.) Cost for like teaching and supervision of practical work in summer classes and cost of material, as distinct from permanent equipment. (3.) Like returns should be obtained for the Medical side; and (4.) for the business management of a College under a Registrar and Bursar. (5.) The average amount of fees paid in Arts course, Medical course, etc. (a.) at T.C.D., and (b.) at Queen's College, Belfast. (6.) Amount of Scholarships and other prizes paid to undergraduates in each year in each course, and the ratio of the total to the total number of students of that year. The students here get very little, too little, in the way of prizes. At Belfast they possibly get too much. These and other like returns would enable the Government, and the taxpayers whom they represent, to consider intelligently the question of the proper application of existing grants, and the most desirable application of future grants. Grants will be reluctantly given if they are to be expended virtually as life pensions to students who have excelled in studies. Grants will be freely given if there are guarantees that they will be expended in promoting education in the Physical Sciences, for money freely expended in that way would bring to the State a greater direct return than any business investment of the like amount. The pursuit of studies in Literature beyond an undergraduate course may be of much service to the individual, but it brings no direct return to the taxpayer. Owing to the essential dependence of progress in manufactures and commerce on the high culture of the Mathematical and Physical Sciences, the State grants for Science should be large, alike to encourage Collegiate and Laboratory undergraduate studies, and to promote post-graduate investigation. With due encouragement, Ireland, North and South, could furnish a large number of men who could compete successfully with the trained scientists of Germany. The field for investigation is still extensive beyond the reach of imagination, but Ireland cannot do its part, unless Dublin University and its Colleges be provided with ample funds and under the vigorous guidance of freely elected representative men, be secured against the insidious workings of Church organisations, which, for nearly half a century, have dominated and injured all branches of secular education. There is scarcely a person outside the clergy who control religious bodies in Ireland who desires a denominational College; it is quite the reverse.

The Witness withdrew.

EDWARD P. CULVERWELL, Esq., M.A., F.T.C.D., recalled and further examined.

2596. CHAIRMAN.—We are not quite sure whether you had finished all you had to say to us by way of explanation. I may say, speaking for myself, that I think I fully understood your evidence?—There is one thing I would like to say, in the nature of a personal explanation, arising out of my morning's examination, which to save time I did not then make—I refer to the Chairman's saying to-day that the Commission would have heard anything further from me on Wednesday—I should like to explain why I thought that I was not at liberty to do so. The first question was whether I had prepared any written Statement, and when I replied that I had

not, I understood that I was not given any opportunity of making a *viva voce* Statement such as I made this morning, for I was at once questioned and understood that I was only at liberty to answer, and, therefore, I fear I answered the questions put to me in an unconnected way, because I was most anxious to get in some at least of the points I wanted to make, and which, as I understood, I could only bring before your notice in that way. Thus, at the end of the examination of Wednesday I waited for more questions, and withdrew when none were put to me.

2597. If you have any point you wish to add, we

will hear it now, but we do not want to go over the points you have already made. It seemed to us to be very complete.—There are several points I might have dealt with, for instance, the general effect on other Universities of the country of such a scheme as is now proposed, and the way in which it bears on the question of University education generally. I think it would be better if I devoted what time there is to answering questions; I understood I was recalled for that purpose; if there are none perhaps I had better restrain myself to one or two points. I desire to add to what I said this morning in reference to the *bona fides* of our scheme, and I believe that if that were recognised elsewhere as fully as the Commissioners themselves recognised it this morning, we might be able to come to an agreement; and I would call your attention to a quotation from the Statement of the Catholic Bishops showing that they had not then considered any Statement from us, as evidencing a genuine attempt to come to a solution of the question. If this Commission could by any means satisfy the Catholic Archbishops and Bishops that we were really anxious to come to a solution,

I think it would at all events show we were not to be looked on from the point of view taken by the Bishops when they say (page 81 of the First Report): —“These considerations point to the conclusion that under the most favourable circumstances the Catholics could never hope to be more in Trinity College than a helpless minority—a state of things which would probably be regarded with great equanimity by the persons who desire this solution of the Irish University question.” The Commission may accept the assurance that it would not be viewed with equanimity by us. If the Commission will indicate any head upon which I may be able to give further information, I will try to do so. I may add that the scheme literally bristles with difficult considerations, and we have asked ourselves a great number of questions with regard to it.

CHAIRMAN.—I think we will take it that at present we have no desire to go further into the matter. We thank you for your attendance and for the information you have afforded us.

The witness withdrew.

The Commission adjourned.

EIGHTH DAY.

WEDNESDAY, NOVEMBER 7TH, 1906,

AT 10.45 O'CLOCK, A.M.,

At the Royal Commissions House, 5, Old Palace Yard, Westminster, London, S.W.

Present:—The Right Hon. Sir EDWARD FRY, P.C., D.C.L., LL.D., F.R.S., F.B.A. (Chairman); The Right Hon. C. PALLES, P.C., LL.D., Lord Chief Baron of the Exchequer in Ireland; Sir THOMAS RALEIGH, M.A., D.C.L., K.C.S.I.; Sir ARTHUR RÜCKER, M.A., D.Sc., LL.D., F.R.S.; HENRY JACKSON, Esq., D.LITT., LL.D.; S. H. BUTCHER, Esq., M.A., LL.D., D.LITT., M.P.; DOUGLAS HYDE, Esq., LL.D.; DENIS J. COFFEY, Esq., M.A., M.B., F.R.U.I.; S. B. KELLEHER, Esq., M.A., F.T.C.D.;

and J. D. DALY, Esq., M.A., Secretary.

The Reverend J. P. MAHAFFY, D.D., D.C.L., S.F.T.C.D., Senior Lecturer, Trinity College, Dublin, called in and examined.

2598. CHAIRMAN.—You have been kind enough to come here and help us to-day. You are, as we all know, Senior Lecturer in Trinity College?—Yes.

2599. I think you have been connected with Trinity College all your life?—Yes.

2600. There are some points which have been made about Trinity College which I think you will be able to speak upon with authority. It has been suggested, among other things, that the standard of examinations is somewhat too low; that students are allowed to pass with a very small percentage of the total number of marks. It is said that some students have passed upon 7 per cent?—I am not aware that that is true. There are two sorts of examinations; there is the matriculation examination and the term examination. The matriculation examination is an examination which means two quite different things. It means, in the first place, whether a student is good enough to come into the College and get taught. That is merely for the benefit of the College. There is also a matriculation examination which other bodies accept and they do say to us, "We will accept your matriculation examination." When I became Senior Lecturer, I found that these two were held at the same time, and that the standard for the one was a wholly different thing from the standard of the other. There are many cases of students who have gone to school late, and to very bad schools, and who come to the age of sixteen or seventeen, and it will happen that their parents are perhaps going to India. They want to get the locus of the College and to get taught. The tutor looks into the case, and talks to me about it. We agree that the examination does not come up to the standard that can properly be accepted, and we therefore give him a document. I devised two forms, one of which said, "*Examinatione publica habita*, and the other, "*Examinatione habita*." We made out these two forms, and we expected that public bodies would accept the one and not the other; but I found that the majority of Registrars in other places, who looked after these things, being unable to translate the Latin, could not make out the difference between the two. Hence I devised, as my own plan, two forms; what are called respectively a small certificate and a large certificate. I hand them up to you, and you will see that in case they should not be able to read Latin there is an English stamp, a red one, put on. If you will look at the two you will see that they differ. The little one is *Examinatione habita*, and the big one *Examinatione publica habita*.

2601. Then, of course, if the attention of the Registrars was not drawn to the two forms, they might well accept the one, not knowing that there were two forms?—Yes; and so we have done that.

2602. I must apologise; I made a mistake in suggesting that students had passed on 7 per cent. My attention has been called again to the passage, and I find I have made a mistake. But at any rate there

are suggestions that the standard of examination is low?—Yes. I shall not deny that there are cases of students being allowed to enter on the Small Certificate; their average is bad. They enter under protest; they must get special teaching, and if they do not pass the examination they lose their money and time and in the great majority of cases that has turned out a satisfactory experiment. I could quote a number of cases of boys who came up with bad promise, and turned out satisfactory afterwards.

2603. Bad promise and good performance?—Yes. That is my answer to that difficulty.

2604. Then with regard to the other examination; do you think the standard too low?—No, indeed it is not. Beyond that I devised another way out of the difficulty. Our examinations are more diverse—the subjects are more diverse than they are in other Universities. We make the man answer, for example, in Mechanics, in Algebra, in Trigonometry, in Euclid, in two modern languages, and in English Composition. That involves very large knowledge, and it is quite possible that in one of those subjects he may fail. Formerly he used to be stopped, and I have now introduced this plan, which I think works very well—that if they fail only in one subject I allow them to come up again in a month.

2605. Is that what we have heard of as the *post mortem* examination?—Yes, and if you take the evidence of a dozen tutors they will say that it has worked satisfactorily. There are cases where a boy may lose a whole year. There were cases, when I was a tutor, where a boy lost a whole year by getting beaten in one subject, and he was put back for twelve months. I thought that was a hardship, and I thought that the standard of examination would be raised rather than lowered if we insisted upon his passing in one of the subjects—say Classics. If he does not and is considered unsatisfactory, he loses the examination. We had an examination last week, on Saturday; it is the tail of the year, and they come rather badly out of that. There were twenty-eight candidates and twelve were stopped.

2606. Did you give them a second chance?—No, not those. I do not believe any one of them will get a second chance, because they were generally low. If they had got, say 50 per cent. generally, and had failed in one thing we should consider it. There may be one perhaps.

2607. Another suggestion has been made to us, that the examinations occupy too much time in proportion to the teaching of the University. I think it was said it was something like one month to six weeks?—Of each term occupied by examinations, do you mean?

2608. Yes?—Well, we consider that the examinations are highly necessary as a test of the attention of the students to the teaching. The examination takes up the subjects in which the student has been lectured in the previous term. There is an interval of six

weeks or so, and he is supposed to have carefully prepared during that time. We find it is extremely important.

2609. You do not think that there is any real defect in that respect?—I cannot think so.

2610. Another suggestion has been made with regard to the arrangements of the College buildings. It is said that the sanitary arrangements and the arrangements for lighting, and so forth, are very defective, and that that keeps students away. Do you think there is anything in that?—No. We think one of the real causes why we have never had an epidemic is that there has never been a system of water-closets throughout the whole College, and it is well known that outbreaks of typhoid, and so on, are generally traceable to drainage systems.

2611. Have you never had typhoid in the College?—Only solitary cases; never an epidemic; and I would only point out that the arrangements at Queen's College, Oxford, to which I belong, are very much more primitive than they are in Dublin.

2612. Then, you have been good enough to prepare us a Memorandum on the subject of the College fees.* I do not know whether you have seen at all the paper§ that your colleague, Dr. Gray, has prepared on that subject?—No.

2613. He has suggested that the number of students admitted would be increased if the fees were diminished, especially the original fee of fifteen guineas?—I do not believe that would be so. I believe that if we lowered the entrance fee we should not get one more student; that is my deliberate opinion, and the paper that I sent to you tends to show that. There are practically forty Exhibitions a boy can compete for for nothing, or for the fee of £1, and I expected myself a large increase owing to that being decreased, but I have been disappointed.

2614. A number of Scholarships are open to all denominations, I understand?—Oh, yes, and there are a number of advantages given to Roman Catholics.

2615. And yet they are not largely availed of?—No.

2616. You think that practically the College has tapped all its sources of support?—Exactly; unless we can reach a new *stratum* altogether I think we have tapped all the available sources completely, and that the classes that come to us are not deterred by the initial fee. I made the experiment myself, and the experiment has failed.

2617. LORD CHIEF BARON.—The successful candidates for these Scholarships do not appear to have been mentioned in the Calendar. Do you think we would be able to get a list of the successful candidates?—I think so, for the previous year; yes.

2618. For every year?—Yes; I think so. We have not published a list in the papers when they have been elected, because there have been the most desperate attacks made upon them when it has been found out.

2619. If you think there would be any irritation caused by giving the details I would not ask you to do so for one moment?—I can furnish you with the names, but that is the reason they have not been published—because there is a certain amount of terrorism.

LORD CHIEF BARON.—I have nothing else to ask you.

2620. SIR THOMAS RALEIGH.—There is just one question I should like to ask you. What exactly is the distinction between a public examination and an examination not public?—Formerly there were what were called private entrances—that is to say that the tutors used to look at a boy and see what he knew; then he would come up to the Senior Lecturer; I think it better that they should all be put into the same hall and examined together, and that those who do not reach a certain standard should only get credit for private examination, and not utilise it for any public purpose.

2621. SIR ARTHUR RÜCKER.—In those examinations, speaking generally, what is the standard of pass marks?—33 per cent.

2622. That is the usual thing?—Yes; in all the subjects taken all round; but a cypher, or two cyphers stop them; we examine both on paper and *viva voce* in each subject so far as possible, and cyphers in two subjects will stop a man at once, no matter what he gets in the rest of the examination.

2623. The 33 per cent. is taken on the total marks in the examination; it is not 33 per cent on each subject?—No; not necessarily. If he gets much below 30 per cent. in any subject he is either warned or stopped.

* See page 347.

2624. How long are the terms—how many weeks?—From the 10th January to the 25th March.

2625. About ten weeks?—Yes, about ten weeks.

2626. How much out of that do you think is taken up by examination?—Nearly three weeks, I think.

2627. About three weeks out of ten?—Yes. There are nearly eight weeks' lectures, and the rest is for examinations.

2628. The whole College being examined then?—No. A good many do not come in for each examination; at the Little-Go, the whole Little-Go class come in, but there is only a certain proportion of men being examined.

2629. No single man is stopped, as it were, for the whole three weeks out of the ten for examination purposes?—No; certainly not.

2630. It merely means that examinations of some sort or another are going on for three weeks?—Yes; and some of the staff are very busy with the teaching during that time.

2631. During that time, for instance, are the Science candidates admitted to the laboratories?—Oh, yes.

2632. The laboratories are not closed?—No, the laboratories are not closed at all; even during a large part of the summer vacation the laboratories are open.

2633. Do practical scientific examinations form part of these examinations?—Experimental Science, yes, certainly; it is coming more and more forward, and now it is counted as a subject—as an alternative with languages—and they are examined both *viva voce* and on paper by the Professor of Experimental Physics.

2634. Do such examinations form any part of matriculation?—No; not yet.

2635. DR. JACKSON.—I should like to ask you some questions about the examinations and the teaching. You have already mentioned the examination for Matriculation. What sort of subjects come into the Matriculation examination?—We let them take any two Greek or Latin books they like—say books of Virgil for one, and a book of Livy for another Latin book, and perhaps a Greek play for one Greek book.

2636. Are they examined in Mathematics?—Yes; both on paper and *viva voce* in Euclid, and a paper in Algebra.

2637. Any other subjects?—Yes; a paper in Modern History and Geography, and they have a bit of Latin Prose to do, and an English Essay to write.

2638. You have mentioned previously the Little-Go: at what time is it taken, and what are the subjects?—At the end of the second College year. A man may enter late in the first year, and pass the necessary examination. It is practically the fourth term he has to pass; it is really the sixth term of his course, but the fourth he has to pass.

2639. I do not understand the relation to the previous examination of the terminal examinations of which mention has been made.—We have three examinations per annum, as you know. At the end of each term they read up in subjects for the next examination.

2640. Is the terminal examination an examination in the lecture subjects of the preceding term?—Yes.

2641. Those subjects are resumed at the end of the second year in the previous examination?—Yes; certainly.

2642. Do all the students take previous examination—honour students and pass students?—Yes; they must do so.

2643. Then, later, is there any final graduating examination?—Yes; there is a degree examination. There the honour students and the pass students do not meet, because the honour students are allowed to take a degree in one subject, but all the pass students have to go in for the ordinary degree examination.

2644. Then you have in the ninth term besides the final examination a terminal examination: or is that dispensed with?—No; the examination is the last term.

2645. In the Previous Examination you have, I suppose, Classics and Mathematics?—Yes, and some Logic.

2646. And in the final graduating examination for pass men, what have you?—Astronomy, Ethics, Mathematics, Physics, two Modern Languages, Latin, and English Composition.

2647. All those subjects having been taken for the terminal examinations in a preliminary way?—Yes.

2648. That sounds a very complete system of examination for the pass men. Do you find that it gives good results?—Very. The head men in the First Class at the pass examination are called the Responsencies, and they have thirteen marks to answer in.

§ See page 345.

I consider answering very highly in six subjects is better than getting a low honour degree in Classics or Mathematics. The general knowledge is an excellent education. I can give a practical example of a son of my own who passed that examination as a Classic; he was a Classical and Literary man, and he went away to the South Sea Islands, and the first thing he had to do was to learn to navigate a sailing boat, and the knowledge of Astronomy that he had got with his degree enabled him to do it in a day.

2649-50. You have a considerable knowledge of the University of Cambridge, where I am sorry to say, our pass examinations are not good. Do you happen to have formed any opinion as to the difference between your pass examinations and ours?—I cannot offer an opinion; I do not know the Cambridge examinations well enough.

2651. What is the Scholarship examination, and when does it come?—It comes at a fixed time of the year, that is to say, in late spring, about Ascension Day; but there is no limit to what classes may compete; anyone of any standing is allowed to compete for it.

2652. And there, too, I suppose, the subjects are Classics and Mathematics: or is there anything else?—Yes; in the old times they went over the work for them in the first eight terms. That was the old theory of Classical Scholarships. We have abandoned that, and we now give a special Scholarship in Experimental Science; that we have only lately introduced. Classics, Mathematics, and Experimental Science are three subjects now.

2653. And the Moderatorship examination; is that an honour final examination?—Yes.

2654. Resembling what at Cambridge we call a Tripos?—Certainly.

2655. Could you explain to me how your Moderatorship examination compares with our Honour examination at Cambridge?—I should say, very favourably. I directed them to send you the papers.

2656. Perhaps I can put my question rather more definitely by reference to the papers which you have handed to us. I notice that in your statement under E about the students—That is not mine.

2657. Is not that yours?—Oh, no; I have made no statement.

2658. CHAIRMAN.—Except with regard to fees?—Yes.

2659. Dr. JACKSON.—I beg your pardon. Here is a statement* showing the annual number of students graduating in Honours, Moderatorships, and Respondencies.—Yes, I did say something about that.

2660. In Moderatorships and Respondencies it gives 55 for honours and 112.67 for pass?—Yes.

2661. Do you consider that fifty-five is as many honour students as you would expect to have?—Certainly. I was surprised at the number when I totted it up.

2662. These Honour examinations are in Classics, Mathematics, and Experimental Science?—History and Modern Literature, about eight of them, and we count in the honours after First Class examinations. The Respondencies. There are a few of those, and we count those in; we call that an Honour Degree also.

2663. Do you find that there has been a large increase in the number of men who take honours in consequence of the introduction of modern subjects?—Yes, there has been a considerable increase, and there is another cause of increase—that recently, owing to some financial changes, we give prizes running from £20 to £40 to people who get gold medals in Moderatorships; they get prizes of £30 or £40 in addition to the medal.

2664. The Gold Medal—is that what would be called in England First Class?—Yes.

2665. And the Silver Medal is Second Class?—Yes.

2666. I should rather fancy from your numbers that you have succeeded in abolishing our Third Class, which is, perhaps, a good thing.—Sometimes, but very rarely, when a man has not reached the condition of a Silver Medal, but has answered respectably, we allow him his degree, but put him in the Second Class.

2667. It seems to me that you have got a very high standard for your honour examination?—I think so—very high. You saw the Classical papers?

2668. Yes. There is one more question that I should like to put to you with reference to these statistics. I think I gathered that in the College

there are at the present time about 1,250 students?—All told?

2669. All told?—Counting graduates in the schools and that, yes—not undergraduates, but all told.

2670. What is the number of undergraduates?—I suppose, about a thousand—I should think so.

2671. That being so, is not 168 rather a small number of graduates for the year?—That may be so; but I may be wrong. I am only guessing; there are, perhaps, more.

2672. But these statistics are apparently accurate. The number of graduates is 168?—Oh, yes; that is quite accurate—in the one year.

2673. Next, I should like to put two or three questions about the teaching? Who are the tutors? Are they certain selected Junior Fellows, or are all the Junior Fellows tutors?—All the Junior Fellows who are not Professors.

2674. Are Tutors?—Yes.

2675. Just exactly as it was at Cambridge, say, 150 years ago?—Yes.

2676. As a matter of fact, how many of the Fellows are habitually acting as Tutors?—Seventeen, I think—Mr. Kelleher would know.

2677. Mr. KELLEHER.—Eighteen?—I thought I had made a pretty good guess.

2678. Dr. JACKSON.—Does the undergraduate choose his own tutor?—Yes.

2679. That being so, I presume that some tutors have many pupils, and some have very few?—Certainly.

2680. To what extent does the number of pupils affect the tutor's stipend?—The most he gets in addition if he has a very full chamber is £120 a year more. The Tutor gets about £1 a year, and, then, he is limited as regards number; he is not allowed to take all the pupils that come to him.

Dr. JACKSON.—What is the limit of number?—

Mr. KELLEHER.—About twenty-two, I think; it varies in each year.

2681. Dr. JACKSON.—That means, I suppose, that he may have sixty to seventy?—He may have up to a hundred.

2682. Some of the pupils will be staying on for the fourth year?—It will go up to more than 100, certainly.

2683. What are the tutor's functions *qua* tutor. I suppose he is always a lecturer?—He is always a lecturer. The first duty that lies before him is that he must lecture at least two hours a day in term.

2684. Then, as a tutor, what are his functions?—He has to see his pupils when they want him on difficulties. He has to advise them on what examinations they are to pass, and he has to see that their fees are paid—general supervision, but not private teaching in the evenings, as is the case at Oxford, and probably Cambridge, too.

2685. That is to say, he is the director of studies, but not a class-taker?—No, not a class-taker.

2686. Is any class-taking done in Trinity College?—Private-class taking?

2687. I mean College teaching additional to the formal lectures?—Outside the two hours?

2688. Yes; would a tutor occasionally give his pupils, or, rather, would a lecturer give his pupils, written work to do, and, look it over with them?—Yes. When I used to lecture pass men I used often to give them English composition to write, and those compositions they read out in class afterwards. Every week, in fact, it is supervised by the lecturer, and I suppose in Mathematics they sometimes get easy problems to solve—in the Honours Classes, certainly, I think.

2689. What are the tutor's social relations with his pupils?—Very friendly.

2690. Does he have opportunities of seeing them in a friendly way apart from business?—Certainly. They used to say of me when I was a tutor in College that you could drop me down anywhere in Ireland and I should not be more than three miles from my dinner. I had so many followers and relations and friends of pupils that I was known everywhere, and made at home everywhere all over the country.

2691. Can you tell me what is the usual estimate of the cost of living for undergraduates and pupils of different sorts?—Oh, yes; a student living very economically might do it a little under £100 a year—say, £80 a year; and a student who wanted to live better might spend up to, say, £120 or £130 per annum.

S.F.T.C.D.

2692. Have you any who are more expensive than that? I suppose you must have?—Oh, certainly, a great deal. There is a boy now who has a fine motor car that runs away with most of that money.

2693. Does the teaching provided by the College suffice for the Honours student—say, First Grade, Second Grade, and Third Grade?—Yes, theoretically it does, and for a very good man I think that is the case, but a good many of them have the habit of going to a private coach for some weeks before the examination, because it is a competitive examination, and they want to stand as high as possible.

2694. Does the College teaching suffice for a well prepared pass man?—Quite. A very bad one sometimes has to go to a coach.

2695. Naturally. Of course, the bad pass man, wants that sort of special teaching?—That is so.

2696. Are many men dependent upon the unofficial teachers?—We have no return on that; I really cannot answer that question; I should say a fair number.

2697. Then, I should like to turn to C on this paper—the teachers*. What amount of work is normally expected *per diem* and in the course of the year from Professors, whether Fellows or not?—That varies immensely; there are some Professors that have very few hours to give; in fact, some Professors only get £100 a year, and upon that, along with a Tutorship or Fellowship, they cannot be expected to give an immense quantity of teaching for that. There are some Professors who are supposed on that plan to do their own work, and who give very few lectures. There are some, like the Professor of Physics, who spends the whole day in his laboratories, working the whole time, so that you have every variation, from a very small amount, to a man's whole time.

2698. You have already told us that the tutors are expected to give two lectures a day?—Yes.

2699. What sort of lectures are they? Pass lectures?—Pass lectures, or there may be Honour lectures if a tutor is appointed. One of the two would be an Honours lecture; the other a Pass lecture.

2700. Would both these lectures be formal lectures?—No; neither of them is what would be called formal lectures; they are catechetical.

2701. What are the numbers of students in the classes?—They vary very much in number, especially among the senior students. Sometimes they are up to forty, but we do not like classes so big as that; but they come down to ten, or even less in special subjects. There were only five in some senior classes last year, but the average was about fifteen.

2702. I confess that when I heard of two lectures a day it seemed to me a heavy demand on a man's time and energy, but I was thinking of formal lectures. I suppose it is the informality which makes it possible to expect so much in the way of oral teaching?—Take a Pass lecturer; he gives a boy so much to read, and then puts him on to translate and explain it; and, I suppose, it is done in the same way with the Mathematical lecturers—it is not at all formal.

2703. Are the pass lectures supplemented by any written exercises done by the men?—Yes, in composition on the Classic side, and, I think, also in Mathematics.

2704. And those exercises are commented upon in the class when the pupil returns?—Yes.

2705. I should like next to put one or two questions about the Fellowship Examination. Are you satisfied with the present mode of electing Fellows?—No, certainly not.

2706. Do you think that it would be desirable that the College should have the power of electing for its service without examination?—I do.

2707. Do you think that in so far as men are elected on promise the use of dissertations would be good as a test of initiative power and originality?—Certainly.

2708. Do you think it desirable that there should be a limit of age or of standing for the competitions on promise?—Certainly—in fact, altogether. Our experience is that it is not good for the College to get a middle-aged man who has lost his vigour.

2709. And, finally, on this subject, do you think it desirable that the College should have the power of electing on promise in subjects other than those which you recognise at present?—Certainly. I should like to add about the Fellowship examination, that there are three things you test, or ought to test, by that examination:—In the first place, whether there is learning—whether you have a learned man or not; in the

next place, whether he is an original man or not; and, thirdly, whether he is a good teacher or not. Now, the examination only provides for one—learning. He may be neither original nor a good teacher; we have no means of knowing when we elect him. That is the main objection I have to the Fellowship examination.

2710. Do you think it would be a good thing to have the power of electing some men to teach, and other men to study?—Certainly, you must have both.

2711. Of course, I hold that the two things should go together, but there are exceptional cases?—Yes, but we must have both the material to teach a large number of students—that is our first business; and, secondly, we must raise the reputation of our College by producing books and so on; we must have books.

2712. Finally, I should like to ask you a couple of questions about the library. To what extent do you use your copyright privilege of obtaining copies of all books published in Britain?—We have an agent in London, who is also the agent for Cambridge and Oxford (Mr. Eccles); he sends to us all the things he sends to Cambridge and Oxford. These are all taken care of and catalogued, except novels; we do not catalogue with any degree of care novels. They are put by.

2713. The instructions you give to Mr. Eccles are to send all that are sent to Oxford and Cambridge?—Yes.

2714. What do you think of the proposal which has been made to the Commissioners—that the privilege should be transferred to the National Library?—It would be of great damage to the College—a great injury—that this great library, which is now one of the great libraries, I may say, of Europe, should cease to have that privilege. I think it would be disastrous to the College.

2715. Mr. BUTCHER.—To go back for a moment to the fees. In the paper§ which we have from Dr. Gray, he says in regard to the entrance fee, it is the payment which bears most heavily on the student, and more than any other deters men from entering, and thus keeps down our numbers. You do not agree with that, I observe in your paper?—I contradict it flatly. We have made experiments, and those experiments show that that is not the case.

2716. I was going to ask if you think the experiments have been carried on for a sufficient number of years to lead to a satisfactory result?—I think so; I think we should have seen an increase by this time, if there was going to be one.

2717. How many years have you been Senior Lecturer?—Four.

2718. I think you speak of the Nutting Exhibitions. How many years have they been in existence?—This is the second year.

2719. It is really only a two years' experience?—But still we are going back four years. They have been allowed to come up for Junior Exhibitions at a fee of £1, and if they get a Junior Exhibition, the Junior Exhibition pays for the entrance fee.

2720. Dr. Gray's suggestion is that there should be no less than forty-eight new exhibitions, instituted junior and senior, and he suggests the source from which these payments should come. Do you think forty-eight new exhibitions would be too much—would it be simply offering a bribe for unprepared students?—Certainly, you would not get any more; it is no use; I am convinced it is no use offering those bribes.

2721. His suggestion is that the entrance fee should be reduced from £15 to £10. £15 does strike an outsider as a very heavy fee?—No doubt, and it so struck me, too, and when I made the experiment I hoped for a much larger number, but I was disappointed.

2722. Another question of another sort; is it the case that you can take your degree in three years, though four years is the normal period?—Yes.

2723. Now, if you take your degree in three years, have you to pay the full fees for the four years?—Certainly.

2724. Do you think that is at all a hardship?—No, I do not think it is a hardship. It is done by a man coming in at the end of the first year and passing the last of the examinations of the first year, and that allows him to come up into the second year.

2725. Still, he has not got his equivalent in tutorial teaching for that last year?—No, he has not, but if you lower the thing, then I suppose the great

* See page 339.

§ See page 345.

majority would do it in three years, and we would lose 25 per cent. of the fees of the students.

2726. Yes, but if you kept up your standard sufficiently, I suppose the three years' course, if it be of a high standard, ought to be a sufficient time, ought it not?—I do not think so.

2727. Do the majority take the four years?—Oh, yes, the great majority.

2728. You mentioned a double standard that you have at your entrance examination, the double standard being intended, as I understand, to provide for the requirements of those who come up not so well prepared. Has it ever occurred to you to take this solution which has been accepted in Scotland—that those who are not qualified to pass the regular entrance examination may yet attend the University, attend lectures, but not count the time of attendance for their graduation course until they have passed the full entrance examination?—No, it has not occurred to me to do that; I do not know whether I have any power to do that as Senior Lecturer.

2729. I suppose not; I was only thinking whether the College had done it. You see here you have made a difference between public and private examination; there the old distinction was between public students and private students—the public students attending the regular course for graduation, and the private students merely attending for their education?—If you look into the history of the College which I have written, you will see there was a time when the College kept a schoolmaster who used to teach the boys who were too ignorant in the College.

2730. This problem came before the Commission I referred to in Scotland, and their solution was that those not able to pass the proper entrance examination, should attend, but not count that period of attendance for the degree?—We have not done that.

2731. In the entrance examination you do not, I think, include any modern language or science?—Now, yes.

2732. You do?—Yes; it has become optional, and you may take French or German instead of Greek.

2733. Is natural science optional?—Not yet.

2734. Is it taken at all?—It is.

2735. Are you in favour of introducing it, or not?—I am against it.

2736. What do you think about it—I mean, what are your grounds?—As far as I know, in that stage it is not an education.

2737. These examinations are partly oral and partly written—how much does the oral work count, in the Pass and Honours respectively?—In the Pass the *viva voce* and the paper marks are of the same weight; in the Honours examination the *viva voce* counts much less—20 per cent., I should think, or 25 per cent. I really have not the figures—but they are only low marks.

2738. You attach importance to the *viva voce*?—The greatest, especially at Fellowship. I look upon it as a most important thing. I have been for the last thirty years examining in Philosophy at Fellowship, and I look upon the *viva voce* in Philosophy as the perfect means of finding out the best men.

2739. Are there any other subjects which you would add in which it is of value?—I think in Classics.

2740. For translation?—Oh, yes, I think so; and History.

2741. History, I have no doubt?—In my experience during thirty years, there have not been three cases in which the candidate best in the *viva voce* for Fellowship was not also the best on the paper.

2742. Do you appoint special Honours Lecturers in the year?—Yes.

2743. And they do no Pass work?—They do one hour Pass work, and one hour in Honours.

2744. And how many Honours Lecturers are there in Classics?—Three, and two Professors—Greek and Latin.

2745. The Honour examinations, are they conducted only by the Honours Lecturers?—Chiefly, but also the higher ones always bring in Professors, but generally the Honours Lecturers are also examiners. We suggest that the teacher is the right man to examine; we hold that very strongly.

2746. Is it not the case that, when you get up to a certain place among the Junior Fellows, you are disqualified for lecturing in Honours, and that you fall back into the position of a Pass Lecturer?—Yes, after a long time. There are two people called Senior Tutors at the top of the Junior Fellows. When I

became one of those I used to lecture none but Pass men.

2747. That is a rather curious arrangement, is not it?—But I think it excellent, because there is no lecturer so patient with an ignorant boy as an elderly man.

2748. I think I have a recollection—am I correct—of Professor Tyrrell arriving at a point, when he was still a Junior Fellow, at which seniority and income disqualified him from taking any class in Classics?—Disqualified, because with the low salaries attached to those, they are naturally given to young men, and he having a good income without it. I used to get myself intellectual amusement from lecturing to poor young boys who came in knowing very little indeed. I thought probably I was doing more good to them than I should do to an Honour class.

2749. No doubt you did great good to them, but was it not a pity that you had not an opportunity of doing good to the Honour men, too?—There were plenty of men better than myself to do that.

2750. But would not you be tired of teaching Pass men if you were tired of teaching Honour men?—No, because that is only amusement. You know the business; you have not to prepare beforehand; you come in knowing all about the thing; it is merely an hour's work, and you do not want any preparation.

2751. Dr. DOUGLAS HYNNE.—Professor Jackson was asking you about the various classes of students with regard to their life. When I was at Trinity College you had the *filius nobilis*: is he still there?—He might be there theoretically, but not practically.

2752. In point of fact, the *filius nobilis* does not go as *filius nobilis* any longer—or does he go at all?—Sometimes he does.

2753. Have you any sons of noblemen at the present moment?—Quite lately we had. Lord Henniker's son. Now and then they come, and they are generally entered as Fellow Commoners, but not always.

2754. Can you account for the fact at all of the upper classes in Ireland not sending their sons, as they ought, to Trinity College?—I do not know, because I know that very few of them go to Oxford and Cambridge; they do not seem to go anywhere.

2755. That is very remarkable, is it not?—Yes.

2756. You think that Trinity College has tapped now every stratum that is possible for it to tap in the way of procuring students?—Oh, no, not every stratum that is possible.

2757. Under present circumstances, I mean?—Oh, yes; of course you might make alterations that would tap a considerable stratum.

2758. Would it be possible to tap that upper stratum at all?—Well, I should say that the partial robbery of their land would induce a good many to get their sons educated.

2759. In appointing to Professorships in Trinity College, I think the Council nominates and the Board confirms?—Yes.

2760. Does either the Council or the Board ever associate with themselves outside specialists in making those appointments?—No.

2761. I think they do that in Cambridge, if not at Oxford?—We have between the Board and the Council specialists on most subjects.

2762. But they never associate outside specialists?—No, we have not done that.

2763. Do you think it would be an improvement to do that—would it not tend to make Trinity College rather less of what its enemies might call a close corporation?—Perhaps so.

2764. Then with regard to the Library, do you think it would be a great misfortune to the College if the Library was handed over to any other body?—I think so.

2765. Could any scheme be devised by which students who were not in Trinity College could have the use of the Library and the books?—A great many have; any respectable person going there and saying, "I want to read in the Library," signs a form of declaration, and thereupon goes into the Library and reads there. For example, I suppose there is not a day in the year when there are not six, eight or ten Roman Catholic priests reading in the Library. They may all come. Archbishop Walsh sends them to me, and there is no difficulty. Any student wanting to read in the Library gets there.

2766. Just another question: is Latin necessary at every examination in Trinity College now, or does the time come in the examinations when you may sub-

stitute French or German?—Yes, at the end of the course now you may substitute French or German in the last year of the course.

2767. The last year?—Yes.

2768. Dr. COFFEY.—Just one or two questions: do you know if many of those who enter the College fail to take the degree?—Oh, I think it is very hard to say "fail," because there are a certain number who go up to the Little-go for military and other such purposes; but of course there are a certain proportion who fail to take the degree, the number taking the degree being less than the number who matriculate, of course.

2769. The reason I ask is because in the Blue Book there are certain figures for the years 1901 to 1906 of those who graduate, but we have not got the figures for the preceding five years of those who enter the College. But taking the average for the ten years preceding, the average of those who entered would seem to be much higher?—It is much higher. There are a certain number who fail; a few die or go away; a certain number get appointments or places and go away. There are a certain number that go in for military purposes. The Little-go is enough for them, and there are all the chances of life, in fact.

2770. In reference to the Moderatorships, you have told us the standard is high in Classics and Mathematics, but could you give us some idea as to what the standard is in the other subjects, such as Natural Science—I mean, is there a fixed standard of marks for Moderatorships?—Oh, yes, there is, and as far as we can make it on the same sort of level.

2771. CHAIRMAN.—That appears in the Calendar, does not it?—Oh, yes.

Dr. COFFEY.—For the Moderatorships?

2772. CHAIRMAN.—I think they all are Moderatorships—is not that so?—Oh, yes; we try to get the same standard for all. It cannot be said of us that one class of Moderatorship is easier to get than another.

2773. Dr. COFFEY.—You have explained that it has not been found possible to largely increase the number of students by offering Exhibitions?—Yes.

2774. Have you thought of what might be the cause of that, because the exhibitions ought to be attractive to clever students?—As has been said before, we have tapped the whole of the classes that want to come to Trinity College.

2775. Is there nothing in the Academic course itself or in the curriculum which makes it unattractive to those who do not take certain lines, such as Classics or Mathematics?—Yes, the ordinary examinations are thought to be too difficult.

2776. I do not mean that, but are not the valuable prizes of the College, the Scholarships, the Sizarships, and, of course, also the Fellowships, mainly obtained on Classics and Mathematics?—They have been, but now we are beginning to mend that. We have Experimental Science and other Schools, and History, and so on, in the higher examinations. Of course, being an ancient institution, and starting with Classics and Mathematics, we are only gradually modifying the curriculum.

2777. What I had in my mind is this, that if the principal prizes of the College are to be obtained in Classics and Mathematics, and there are, I believe, a great many prizes in Classics and Mathematics, then in the case of the Intermediate boy who is not strong in Classics but may be well up in Modern Languages or something else, and similarly the case of a boy who is not strong in Mathematics but may be well up, say, in Modern Languages and Physics, there is not after all such attraction for him in the College, though, of course, he may obtain a considerable degree of success?—Well, they have instituted a system of Scholarships on the Intermediate, and in those we have elected a great many who only go in for Experimental Science and, say, Irish, but I confess those boys who have come in have a great difficulty in passing ordinary examinations.

2778. But does the College provide for such a number of prizes, parallel with those in Classics and Mathematics?—Yes, but to a much smaller extent.

2779. Then, in reference to the Nutting Scholarships—do you know if the proportion of Catholics who have taken those is high?—About fifty per cent. I have managed the thing myself for the last two years, and it is not infrequent to have a boy who has obtained a Nutting Scholarship writing two or three

days afterwards and saying that he cannot take it. That has happened several times.

2780. There is just one point which has occurred to me: I do not know if it has come under your own observation, but it seems to me there is a certain difficulty in ascertaining what is the total number of students in the College at present. We have in the Blue Book the number of students in the year 1906 given as 1,114; another return is that on July 1st, 1906, there were 965 students. The Provost explained the small number on the 1st July as chiefly due to the fact that one class had gone off the books, and another had come on. Then we get another return on the 1st May same year giving the number at 1,250?—That is the subsequent 1st May; there has been a rise in the numbers, and the real number is disturbed by those strange women who come over and take degrees; those are on the books for six months.

2781. That would account for the difference?—That accounts for the oscillation, for which I am very sorry.

2782. Mr. KELLEHER.—With reference to the suggestion made by Mr. Butcher that a Fellow after a certain time is disqualified from acting as Honour Lecturer; that applies only, I presume, to the Bursar and Senior Fellows; there is nothing to disqualify the Senior Tutors?—No.

2783. One of the Senior Tutors was appointed this year to give Honour lectures?—Yes.

2784. CHAIRMAN.—There are one or two questions which I should like to add. The Professorships are for the most part tenable *ad vitam aut culpam*?—No, I think not—very few; the great majority are seven years or five years.

2785. But some are tenable for life or till fault?—Yes.

2786. Which form of appointment do you think is better?—When you have a respectable Governing Body of a certain age that does not commit any violence, then I think the seven years is very much the better; but if you had a young and skittish Governing Body elected for three years, then I think the Professors might look out. There is no such thing known with us as a man being dismissed without the gravest reasons at the end of the seven years or the five years. There have been in the Scottish Universities cases of men being removed for something short of *culpa*, and re-instated by the Crown.

2787. Mr. BUTCHER.—That is a single instance, is it not—it is a very rare case, at all events?—I happen to know about that.

2788. CHAIRMAN.—Therefore, if the Governing Body were largely modified so as to admit Junior Fellows, you would feel a good deal of hesitation in allowing the form of election to stand as it does?—Yes, but I also think that the present form of appointment is a long way the best, because it tends to make a man look after his business.

2789. Supposing the Governing Body were altered by admitting certain elected members, you would do it with a good deal of hesitation?—I do not know what may happen then; I do not like to look forward to that at all.

2790. Have you any opinion as to the question of the admission of a certain number of Professors who are not Fellows to the Governing Body? There is a considerable body of Professors who are not Fellows?—Yes.

2791. I suppose an increasing body?—Yes, perhaps so.

2792. What do you say to their present position without a voice in the Governing Body—at least without a direct voice?—I think Professors who are the heads of Faculties might fairly be made members of the corporation, but with regard to the younger ones, who come in and many of whom do not intend to stay there for their lives, I do not think they have much claim.

2793. But, taking Professors who give their whole time, you would admit them and give them a Fellowship?—A Fellowship, yes; that would be the best way of doing it.

2794. Mr. KELLEHER.—Do you mean that every Professor who gives his whole time to the College might be admitted immediately a member of the corporation?—No; there should be a careful selection.

2795. CHAIRMAN.—What you would do would be to give a certain number of Fellowships to the Professors?—The Senior Professors might be elected

Honorary Fellows; I think it might be done in that way.

2796. But would not the better way be to dedicate a certain number of Fellowships to the Professorships. What strikes me is this—that you may probably, in the course of the development of your College, be called upon to found additional Professorships—you might be willing to do that, and not at the same time be willing to increase the number of Professor-Fellows?—I think the Heads of the Departments—men who have been tried, and have lived in the place and have known it for some years—might have a very fair claim to be made Fellows.

2797. But you would not give even the power of electing on to the Governing Body to the other Professors?—No.

2798. LORD CHIEF BARON.—I suppose before you elected a Professor a Fellow, you would like to be satisfied that he intended to devote his life to the business of the College?—Certainly; that would be essential.

2799. SIR THOMAS RALEIGH.—Do I understand you to say that you do not wish to contemplate any change in the constitution by which the present power of the Board would be taken away or shared with the general body of Fellows?—If anyone will show me a reformed system which is likely to be anything like as good—I will not say better—I should be willing to adopt it, but all the proposals appear to me so perfectly rotten that they had better be left alone.

2800. You have not seen a plan which you considered perfect yet?—No; I have seen a great many plans, and each one appears worse than the other.

2801. SIR ARTHUR RÜCKER.—What is the average age of a student upon entry for Matriculation?—There is a question where great mistakes are possible. Sometimes a man of fifty will enter, and you cannot get a boy of ten years the other side of his birth; therefore, the average of ages would be false; but really, taking those abnormal cases away, the average is about eighteen.

2802. You do not think that by that time a boy can properly be examined in Science?—No; in the first place the Schools in Ireland hitherto have had no proper teaching in Science—that is number one; and number two is this, that as far as theory and education goes, that kind of special observation and experimenting is not the best thing for a boy to do when young.

2803. You have an Engineering School?—We have.

2804. Do you happen to have seen the recent Report of the Institution of Civil Engineers on the Education of Engineers?—No, I have not seen that.

2805. They say a man ought to specialise at seventeen?—I do not agree with that.

2806. You would be prepared to take the risk of that?—Yes.

2807. And take the risk of the establishment of another College or University in Dublin which took an opposite view?—Quite.

The witness withdrew.

E. J. McWEENEY, Esq., M.A., M.D. (R.U.I.), F.R.C.P.I., Representative of the Catholic University School of Medicine, called in and examined.

2808. CHAIRMAN.—You are concerned, I think, with the Catholic University Medical School, are you not?—Yes.

2809. That institution has, I understand, a Charter?—It has.

2810. A Charter from the Crown?—A Charter from the Crown under the Educational Endowments Commission.

2811. You have been good enough to prepare a paper setting forth the views which you wish to present to us on behalf of that School?—I have.

2812. I do not know whether you think the most convenient way of putting your evidence before us will be to read that paper to us?—I am quite in the hands of the Commission.

2813. I think that will probably be the best way of putting before us what you wish to say, and then if any questions occur to the Commissioners upon it they can put them to you?—Shall I read it now?

2814. If you please?—I appear on behalf of the Faculty of the Catholic University Medical School in response to an invitation sent to our Registrar by the Secretary of the Royal Commission. Our *locus standi* is that of an educational body certain to be affected by any solution of the Irish University problem, which the Commissioners may decide upon recommending in connection with an altered Constitution of the University of Dublin. We consider that the question, "What is to become of the Catholic University School of Medicine?" is one of the most important that will have to be settled by the Commission in any solution of the University problem, which they may propose. When reporting in favour of the establishment of a new Catholic College in Dublin, the Robertson Commission expressly recommended that the Catholic University Medical School should form part of it. Foreseeing the possibility that a new College may be founded within Dublin University as the result of your inquiry, we now appear to uphold the recommendation of the Robertson Commission, and to protest against the amalgamation of our Medical School with that of T.O.D. Inasmuch as certain of the statements submitted to you have suggested such amalgamation, we deem it incumbent upon us to come forward with a short statement of our views. We hope to convince you that our School supplies ample material for the construction of the Medical Faculty of any new College, founded in connection with Dublin University, and that its history and career afford ample justification for its continued existence as a separate and distinct entity.

2815. Let me interpose there one question. You say there that your School supplies ample material for the construction of the Medical Faculty of any new College founded in connection with Dublin University. Would not that apply equally to a new College founded in connection with the Royal University?—Most decidedly; but that is already covered by the recommendation of the Robertson Commission. The history of our School has been fully set forth by our lamented Rector, Monsignor Molloy, in his evidence before the former Commission, and the following references to it are made merely with the object of at once facilitating comprehension of the present state of its affairs. Founded in 1885 by the Irish Catholic Bishops as part of the Catholic University system it received a Charter under the Irish Educational Endowments Commission in the year 1892. The object of this Charter was to confer upon the School a separate corporate existence. The actual amount of the endowment of which it disposes under this scheme is £55 a year, which is devoted to prizes for the students. The Professors and Teachers at the School have no salary, except such as some of them receive from the Royal University in their capacity as Fellows or Examiners—salaries, which, in the case of the Medical Fellows do not amount in any one instance to more than £150 a year, and in that of the Examiners to £100 a year. The total amount of these payments is £860 a year. I may remark incidentally that these salaries are paid for the conduct of the examinations in the Royal University, and are by no means excessive for the amount of expert work so done. In their capacity as teachers in the Medical School, our Professors receive no salary whatever. Their only emoluments are the students' fees. Even these they do not receive in their entirety, for the maintenance of the school is a charge that has first to be defrayed. After this has been met by deductions from the fees, the working expenses of each individual department fall entirely on the Professor. Take my own case for example. I have to supply the fluids used for preserving specimens (alcohol and formaline) all chemicals, stains, perishable glass apparatus, experimental animals, and all my own specimens, both naked-eye and microscopic. I have to pay the wages of a trained and an untrained porter, and to buy all my home and foreign periodical literature. When these expenses have been deducted from the students' fees, the sum remaining would be utterly inadequate to support existence. To devote the remainder of one's time to unremunera-

tive research work is, of course, under the circumstances an impossibility; yet, I think I may claim that, considering the disadvantageous circumstances under which they have been placed, the amount of original observation recorded by Professors of the School compares not unfavourably with the work done by the Professors at other Medical Schools in Ireland, all of which have had at some time or other an endowment from public sources.*

2816. I suppose the Professors of this School are, many of them at any rate, practising medical men, are they not?—No, only the holders of what I may call the practical Chairs—that is to say Medicine, Surgery, and Obstetrics. The holders of the Scientific Chairs of the School—abstract subjects such as Anatomy, Physiology, and my own subjects—are non-practitioners.

2817. I suppose the practitioners derive indirectly very considerable benefit from the School, because the students are apt to resort to them as consulting medical men afterwards?—Yes, I think so, because a student would very naturally call his own Professor into consultation. Having regard to the large expenditure now considered necessary for the teaching of scientific subjects, it might well appear impossible for a Medical School to exist under such impoverished conditions, and it could have surprised no one, if the School had proved an abject failure. The fact is, however, that the School has not only existed, but has increased in the number of its students to such an extent that for the past eight or ten years it is the largest Medical School in Ireland. The subjoined tables in continuation of those given in Dr. Molloy's evidence above referred to, substantiate the statements I make.† There is no indication of any falling off in our numbers this year, quite the reverse, they are apparently going to be larger than ever. I am informed by our Registrar that up to yesterday we had already entered no less than sixty-eight new students this session. This we believe to be far in excess of the fresh entries in any other Irish Medical School—a number already equal to our total number of entries for last year, although we have still three weeks available for new men to come in. Not only in the number of our students, but in the distinctions they have gained at the Royal University, our School has held its own and our men have secured their full share of prizes, and more than their full share of those of the higher and more valuable order. We would draw particular attention to the fact that it is in Biology—

2818. One moment. You have put in an appendix which I think is a comparison of your Medical School with that of Belfast. I think that is going a little far afield, is it not?—Appendix No. 3 you are speaking of?

2819. Yes. That I think is a comparison over a number of years of your Medical School with that of Belfast. Do you think it is necessary to go into that?—Not necessarily. I merely put it in.

2820. You do not wish to have it printed?—Oh, yes; it has been accurately made out.

2821. I do not doubt that, but, what I suggest to you is that a comparison between Belfast and your School is perhaps a little far afield for us who are considering the University of Dublin?—Yes. Well, the point I was endeavouring to make was the efficiency of our School as a teaching instrument.

2822. You see we should have to consider what the numbers in Belfast were, and so on. However, we will consider later as to inserting that.

2823. LORD CHIEF BARON.—Are you considering the honours and prizes obtained by members of your School as compared with similar honours and prizes obtained by the Belfast College?—Quite so; it shows both our School and the Belfast Queen's College.

2824. CHAIRMAN.—But until we know what Belfast is?—When I drew up the table I was not aware at what precise stage you had arrived in your inquiry, and I did not think it necessary to bring in the other Queen's Colleges, because, practically, they do not come into the matter at all; they have hardly gained any prizes at all in the Royal University. We would draw particular attention to the fact that it is in Biology (the supposed battle-ground between religion and science), that our students have more especially distinguished themselves. Then I have an Appendix there which I have not yet put in.

* The witness put in a list of scientific publications by members of the Teaching Staff of the School.

† The tables referred to showed the number of students at the C. U. School of Medicine each year from 1901, as compared with those attending the other Medical Schools in Ireland.

2825. I think we may take it you have stated that?—Yes. Be it remembered further that these results are achieved with only half our students. The other half do not go up for the "Royal" at all, but take the licence of the conjoint Colleges. Although the "Royal" examinations are as a whole more difficult than those of the conjoint Colleges, it does not follow that all our best men go for the "Royal." On the contrary, some of our very ablest students are deterred by economic reasons from taking the Royal University course on account of the extra year it is considered to involve. The Belfast Queen's College send up more men to the "Royal" than we do.

2826. LORD CHIEF BARON.—That gives an opportunity of comparing?—Yes. Nearly 50 per cent. of our men take the Licence of the Conjoint Colleges, whereas the vast majority of the Belfast men go up to the Royal University. I have now, I think, given grounds for holding that the Catholic University Medical School is a success according to the standards available in such cases. The question now arises—to what circumstances is success achieved under such unfavourable circumstances attributable. More especially worthy of examination does the question become, when we reflect that attempts on the part of the State to popularise technical and scientific education amongst the Catholic population of Ireland have not hitherto been attended with much success—witness the career of the Royal College of Science before it was taken over by the Department of Agriculture, and that of the Queen's Colleges in Cork and Galway. These attempts, though backed by State endowments, have failed to attract the Catholic population to the extent that was hoped for. Our School, though devoid of such endowment, has been pre-eminently successful in that respect. Why? Various explanations have been put forward by those, who for one reason or another look upon our success with disfavour. One is that we have so large a representation on the Examining Board of the Royal University that we are able to give undue support to our students—to warp the examinations and render them unfair in the interests of our candidates. That was the view held by the late Dr. McKeown, and put forward by him with much ingenuity and persistence before the Robertson Commission. Another explanation that has been put forward is that students are compelled against their will to come to our School, because the popular bodies, in whose hands the election of dispensary doctors is vested under the Local Government Act of 1898, will appoint only men from our School. Dr. McKeown's explanation was completely refuted in the evidence of our late Registrar, Dr. Birmingham, before the Robertson Commission. Since then the very plan suggested by Dr. McKeown, viz.: the employment of extern examiners has been adopted and dropped again without substantial alteration of the result.

2827. CHAIRMAN.—For how long did they try it?—I think for three or four years—I do not recollect whether it was three or four.

2828. Why did you drop it?—That I do not know. The Senate dropped it, and I am not a member of the Senate. I do not know what reasons actuated them in dropping it. They gave it a trial for three or four years. At present we have two Queen's College Examiners to one of ours on the Boards of Anatomy, Physiology, Chemistry, Medicine, Surgery and Pathology. With regard to the second explanation, we would point out that the increase in the number of our students ante-dates the Local Government Bill of 1898 by many years. So far back as 1887 or 1888 our competition had already become so severe as to cause two of the Medical Schools then existing in Dublin—the Carmichael and the Ledwich—to close their doors. The cause which we suggest as the real one is that, whereas other such institutions in Ireland have been more or less out of touch with their environment, our School harmonises with the needs, aspirations and ideals of the Irish Catholic population. Its teachers are looked upon with confidence by clergy and laity alike. Although we have been since our foundation more or less under episcopal authority, that authority has never once interfered with, or sought to exercise any control over our teaching. Starting from the pre-supposition that there can be no real conflict between religious and scientific truth, we, in our capacity as teachers and investigators know that we have the fullest liberty

to teach the ascertained facts and well-grounded theories of our respective departments of knowledge. It may here be noted that in actual practice the points of contact between Catholic dogma and science teaching are in reality few and far between. The tendency of a certain school of thought is to make them appear as numerous and friction-producing as possible. Moreover, the history and the vicissitudes of speculative theories show that the fanatical zeal with which they are forced upon the acceptance of the public has, too often for its object, not so much the establishment of scientific truth as the overthrow of religious conviction. The intellectual danger so produced—a real one for shallow and half-instructed minds—is not incurred by students at our Medical School. In such a School as ours there will be as a matter of course a sympathy between teacher and student, which removes any possible misconception from the student's mind when the teacher has to enter upon speculative questions, and should an occasion arise for consultation with reference to the bearing on religion or the philosophic drift of such speculative questions, the student is satisfied that the Professor can enter into his point of view more fully and freely than if a difference of religion existed between them. As a lay Catholic I can say, that in my opinion the whole strength of the case for higher Catholic education lies in this community of feeling, and the case is rendered all the stronger by the anti-Catholic prejudice which has more or less characterised the institutions hitherto set up by Government for the higher education of the people of Ireland. In a word, we claim to be an association of Catholic teachers and scientists, working in the midst of a Catholic population, providing that population with a scientific training, and only awaiting the fuller development of our material resources in order to engage in original research ourselves, and to place our pupils in the position of being able to do the same. The Catholic Celtic population of Ireland has, we consider, a marked intellectual bent—a leaning towards the professional as distinguished from the purely commercial mode of life. This tends to attract an unusually large proportion of them towards the medical profession. The occupants of the scientific Chairs at our school can also bear testimony to the eagerness with which many of our students acquire the higher parts of our respective subjects. The proof of this lies in the several Travelling Scholarships and Studentships which they have gained at the Royal University, and of which a list is appended. Under existing circumstances all we can do is to lead those enthusiastic students to the threshold of original research. Owing to the economic conditions we can, at present, do no more. The extraordinary and unheard of condition of things in Ireland is that we have at the Royal University a splendid collection of instruments, apparatus and laboratories, which may not be used at all for teaching, and, for research, only by very few persons and under very special conditions, whilst our Medical School, which is the only institution in a position to afford the Catholic population of Ireland the scientific teaching and opportunities for original work that are so badly needed, has to labour in a state of overcrowding, impoverishment and almost dilapidation. We would point out, moreover, that we have ever shown ourselves alive—more so in fact, I may say, than our competitors—to the most recent developments of Medical Science. We were the first Medical School in Ireland to create (in 1891) a separate Chair of Pathology and Bacteriology and a Public Health Laboratory; and it is largely owing to the exertions of our Professor of Hygiene that the General Medical Council has been brought to recognise the importance of lectures on Sanitary Science as part of the medical curriculum. To sum up, we consider that from the number of our students, the success with which we teach them, the personality of our staff, and the sympathetic relation in which we stand to the Catholic population of Ireland, our School is likely to prove one of the most attractive and promising features of any new College that may be founded in pursuance of your recommendations. Should it be objected that the existence of two Medical Schools in the same city and connected with the same University is anomalous, we would direct attention to the fact that the Executive Commission which a few years ago dealt with the Scottish Universities, in its final re-

port (1900) maintained the existence of the Edinburgh Extra-Mural Schools, although no question of dual colleges or of religious atmosphere entered into their purview, and they did so on the ground that the additional facilities afforded by rival medical schools tended to the advancement of education. For the teaching of the average student, moreover, classes of moderate dimensions are most appropriate. He has a better chance of securing his fair share of attention from professor or demonstrator when the classes do not exceed certain dimensions, and we think that the claims of the ordinary student should be paramount. We are of opinion that the size of the classes that would be created by fusion of the two largest Medical Schools in Ireland would be unwieldy and unfavourable to the teaching of the average student. We think, moreover, that rivalry between Medical Schools, not so much in the mere passing of examinations as in the competition for special prizes, such as Research Fellowships, Travelling Scholarships, and the like is healthy, deserves to be encouraged, and tends to increase the quantity and quality of their intellectual output. If it be objected that the existence of two Medical Schools involves the duplication of scientific apparatus, we reply that in a country like Ireland, which has so long suffered from a dearth of such equipment, the provision of an abundance of scientific resources is a commendable measure. Moreover, the duplication is already an accomplished fact, which cannot now be undone. The Royal University possesses a splendid collection of apparatus suitable for teaching and research, which has been provided at a cost of a large sum of public money, and which would go a long way, in conjunction with the material already in our possession, towards the complete equipment of a separate Medical School for any new College to be founded in Dublin. In this connection we may state that our stock of scientific apparatus has quite recently been greatly enriched through the bequest to us by the late Dr. Molloy of his large collection of physical instruments. It will thus be seen that the continuance of our Medical School as a separate entity need not involve any large expenditure of public money. What we really need is a better site, better buildings, commodious lecture halls and laboratories well adapted to their purpose. These once provided, we feel sure that our separate existence cannot fail to be of lasting benefit by the healthy rivalry and keen competition which is certain to spring up between it and the Medical School of Trinity College; and that the career of usefulness which has been ours in the past will be continued and extended in the future.

2829. You say the Royal University has a large quantity of apparatus and every facility for teaching and for research. Is that made any use of at all at present?—No.

2830. It is merely kept locked up?—It is merely kept locked up. A few men have access to it. One of the Fellows, Professor M'Clelland, goes there, and does capital work upon radium. The Curator, Dr. Adeney, the gentleman who has charge of the apparatus, also does much original work himself, but over and above that, so far as I am aware, no work whatever is permitted to be done there.

2831. Is it scientific apparatus of a general character?—Yes, physical, chemical, and bacteriological.

2832. Both physical and physiological?—Yes.

2833. And it is not availed of?—It is only used twice or three times a year for the purposes of examinations.

2834. And in your view this apparatus would be available for the College?—It would be available for the new College.

2835. LORD CHIEF BARON.—Just one or two questions. With regard to this scientific apparatus, what would be the cost of efficient apparatus for your school, roughly?—I am afraid I could not give a figure.

2836. Give it as near as you can?—I do not think my mandate carries me that far; it is a subject I have not thought about.

2837. You come here for the purpose of supporting the view that your school should not, under any arrangement that we suggest, be amalgamated with the Medical School of Trinity College?—That is absolutely so.

2838. Assume, now, that your School is part of another College which is affiliated to the University of Dublin. Have you considered what should be the

relations between the University of Dublin and your School of Medicine? I will not ask you if you have not considered it?—I find it rather difficult to answer that. I certainly have considered the question, but I find it extremely difficult to crystallize in a few words the results of my consideration.

2839. It is a very important question for us here. Do you contemplate, for instance, that there should be University examinations, as distinct from College examinations, which would be undergone by all the students of both Colleges—that is, of the new College and of Trinity College—so that there would be an opportunity of testing the comparative merits of the students of the two Colleges?—Well, my idea rather was that each College should have its own standard, there being some mechanism by which the standard should not fall below a certain level, but that standard once maintained, my idea was that each College should hold its examinations separately. I thought that there should be Prizes, Research Fellowships, Travelling Scholarships, and so on, which might be competed for in common by the students of the two Colleges.

2840. Of course that would be at the University examinations?—That would be at the University examination as distinct from the Collegiate one.

2841. Do you think that competition between students of two schools as a general rule is likely to be attended with advantage?—I do not think competition between average students for what I might call ordinary exhibitions and prizes is really a thing to be cultivated.

2842. I am not speaking of small matters at all. Take the Degree Examination—do you think there would be any advantage in competition in it between the students of the two Colleges?—No; I rather lean to graduation out of one College by means of examinations held within the walls of that College.

2843. Sir THOMAS RALEIGH.—Is your College open to Protestant students?—Oh, yes, and we have had a good many. Some of the most distinguished of our students have been Protestants. Curiously enough, several daughters of Protestant clergymen have flocked to our school before Trinity College opened its doors to them.

2844. Have you ever had a Protestant teacher?—Oh, yes, we have had a succession of them. The Chair of Experimental Physics has been occupied by three Protestants in succession.

2845. CHAIRMAN.—Supposing the Protestant Professors became more numerous than the Roman Catholics, would that be more satisfactory to you?—Well, to me, personally, it would certainly not be satisfactory. It would depend, of course, very largely upon the exact type of Protestant Professors they were.

2846. It would not be considered safe would it?—What I tried to bring out in the Report was that a certain sort of intellectual sympathy is the keynote of our School, and if the majority of the Professors were Protestants I rather think that that sympathy would no longer continue to characterise it.

2847. It was because you brought that out that I supposed your answer would be no?—Yes. However, my personal experience of our Protestant teachers has always been favourable; I have never known them to interfere with the religious beliefs of the students.

2848. LORD CHIEF BARON.—You have never known any difficulty to arise by reason of investigation not being allowed to go beyond a certain point?—Oh, no, not at all.

2849. Now, are you aware of this? There was a great deal of evidence given before us upon the doctrines of the Catholic Church; are you aware that according to the doctrines of the Catholic Church investigation can go to any length whatever?—Of course I am.

2850. And that the only matter that is interfered with is teaching as distinct from investigation?—What is interfered with, as I understand, is the drawing of very large speculative deductions, the foundation of a sort of inverted cone of theory and speculation upon a relatively small basis of observed fact, and then the utilisation of that for the purpose of upsetting the religious convictions of students and young, half-educated people who are not clever enough to see the difference between fact and inference.

2851. They do, I believe, prohibit the teaching of doctrines contrary to revealed religion?—Certainly.

2852. But they do not interfere with investigation, no matter to what length it may be carried?—No, be-

cause the facts proved by investigation cannot possibly conflict with religious truth; you cannot have one form of truth conflicting with another.

2853. You have been Professor of Biology, have you not?—I have taken a very deep interest in Biology for many years. Originally my special subject was Cryptogamic Botany, but, as a matter of fact, the subjects of my Professorship are Bacteriology and Pathology.

2854. How many years have you been engaged in the study of those subjects?—Ever since I was twenty years of age.

2855. And how long ago is that?—Twenty-one years ago.

2856. During those twenty-one years have you ever found the slightest interference with your teaching by any Catholic doctrine?—Not the slightest—in fact I never came in contact with Catholic dogma.

2857. Sir ARTHUR RÜCKER.—First with regard to the apparatus in the possession of the Royal University—that, you say, is used for examination purposes?—Yes.

2858. How many candidates are examined in an examination at the same time—do you know at all?—It depends very much upon the grade of the examination; the lower examinations, the earlier examinations, are attended by a very large number of students, but they get gradually weeded out as they go higher, until finally, at the Medical Studentship, which is the equivalent of the Medical Research Fellowship in English Colleges, there are only one or two.

2859. Take Physics; how many candidates would there be in the Intermediate?—You mean in its homologue in the Royal?

2860. Yes?—I suppose there would be twenty or thirty at a time, but I really could not be sure; it is rather outside my department.

2861. Of course, if the University grew at all the number would probably increase?—Well, presumably if the number of students presenting themselves for the examination increased I take it a larger number would have to be examined, but on the other hand it is not necessary to take all the students who are up for examination contemporaneously—the examination can be spread over a number of days.

2862. That is so everywhere, of course. But now, if for the purpose of carrying on its work as an educational institution the School was dependent upon this apparatus for its laboratory work, would it be convenient to take out of the laboratory, for the number of days required for examination purposes, the apparatus necessary for twenty students?—I think so. I rather thought it was done in the English Universities.

2863. It is not done in London, which is the nearest analogy to your case. We have a large quantity of apparatus, which is used for the purposes of examination only?—But I did not quite understand that it was proposed to found a new College on the lines of the London University, nor that those lines were unanimously admitted to be the best.

2864. I am speaking of the London University as a University, and when we examine the students in our own laboratory we have to provide a separate set of apparatus?—No doubt if a new College was set up for that purpose some funds would be available, or would be found, for such provision. I think that is extremely probable, but until I know to what extent the apparatus is duplicated in the Royal University—how many sets of each sort we have—I could not say to what extent that might be necessary.

2865. CHAIRMAN.—Have you considered whether the apparatus of the Royal College of Science would be available for your staff?—The Royal College of Science has now passed into the domain of the Department of Agriculture, and by so doing has passed outside our scope.

2866. But supposing arrangements were made that the apparatus and equipment of that College were made available for your School, and for any other College which might be established, would not that be useful?—I have no doubt it would.

2867. And would not that be a feasible arrangement?—As regards its feasibility I prefer to express no opinion whatever.

2868. Sir ARTHUR RÜCKER.—Now to come back to the relations between the University and the College, I understand you to say that you think there ought to be a College degree and that the College students ought to be examined by the College?—Quite so.

2869. For that would you allow the teachers of the different Colleges in the University to share in the examination of each College, or would you have teachers in each College examining their own students only?—That is a question the answer to which would have to be carefully thought out. On the whole I think that a man ought to be examined by his teachers, but that there ought always to be present, and participating in the examination, an external man, an independent outside authority. Whether that outside authority should be drawn from the other College or from totally outside sources is a thing that I have not thought out.

2870. But you would admit an external examiner of some sort?—Most decidedly.

2871. Now, with regard to the teaching in the College, would you allow the University any share whatever in deciding upon that?—Do you refer to the standard of the teaching?

2872. No; to the actual courses. We will take the courses of study the students have to go through; attending certain lectures. Would you give the University any share in deciding what those courses should be?—I think it is important that each individual College should, have, as far as possible, its own personality preserved to it, and that that should be given as much effect to as possible, but I would not deny to the University some control over the arrangement and scope of the courses.

2873. Would you be satisfied with the arrangement that the College should submit its courses of study to the University, and that they should have to be approved before they counted for a degree?—Yes; I think some sort of Board of Studies should be formed.

2874. By the University?—By the University.

2875. And consisting of representatives of the different Colleges, assuming there to be more than one?—I rather think so; yes; I think I should be in favour of that.

2876. Then, with regard to the teachers, would you propose that the College alone should appoint teachers, or that the University should have any share in recognising teachers who exercised University functions?—I think if a teacher exercised University functions certainly the University should have some voice in his appointment, but the College teachers I think should be appointed by the College itself.

2877. You distinguish between the University function and the College function of the teacher. If he is giving courses approved by the University how would you regard that?—I am afraid you are asking me things which I have not fully thought out, and with reference to which I have no mandate.

2878. Assuming for a moment that there are but two Colleges in the University of Dublin, you do not think the problem of the exact relationship of those Colleges to each other and the University has been thought out?—It has not been thought out by me. Had I known that you would have expected me to exercise a certain constructive faculty in this matter, I should have endeavoured to put my thoughts together in a more satisfactory way; but what I really came here to do, as representing the Medical School, is to raise our voice against being amalgamated with the Trinity College Medical School, and I am not sent here to precisely say anything else.

Sir ARTHUR RÜCKER.—I did not want to try to wring any evidence from you, but merely to know whether you had any to offer on the subject.

2879. Dr. DOUGLAS HYDE.—I take it that the Cecilia-street Medical School would not necessarily object to be incorporated in another University. Supposing that a University were established with what is called a Catholic atmosphere in Dublin, the Cecilia-street Medical School would not object to be incorporated in that?—Certainly not.

2880. Or supposing that a Second College were established in the University of Dublin, with this same Catholic atmosphere, I take it that Cecilia-street Medical School would not object to be incorporated in that either?—Certainly not.

2881. You only object to being incorporated in the University of Dublin as long as that University is a University containing only a single College?—We do not want to have our individuality sunk; we regard ourselves as a rather special, and, if I may say so, a rather favourable, product of certain circumstances, and we wish to be allowed to continue to do our work in our own way.

2882. CHAIRMAN.—To be allowed to live?—To be

allowed to live, and to conduct Medical instruction in the manner in which we understand it should be conducted.

2883. LORD CHIEF BARON.—And to develop along your own lines?—Yes; to use an expression which I believe is trite now—to work out our own intellectual salvation.

2884. CHAIRMAN.—I hope you will arrive at it?—We have certainly been hoping a long time now, but they say hope deferred maketh the heart sick, and our hearts are getting very sick.

2885. Dr. DOUGLAS HYDE.—Dr. O'Sullivan gave us some interesting evidence to the effect that Medical students turned out by the Dublin University cannot get places under the Poor Law with comfort or ease—in fact, that they do not get such places at all. That, I think, does not apply to the Cecilia Medical Students, does it?—Oh, no; the pendulum has certainly swung round now in our direction with regard to these popular appointments.

2886. And, no doubt, the knowledge that a particular student has been turned out by Cecilia-street is distinctly in his favour when the question of an appointment comes up?—Yes, certainly, that is the case now; but for a long time it was very much against him; such students found it almost impossible to get appointments. That was the case when I was a student myself.

2887. Do you mean to say that in the last twenty years it was nearly impossible for a Cecilia-street student to get such appointments?—Within the last twenty years a Catholic doctor could not get an appointment under the South Dublin Union, and he could not get a hospital appointment in Dublin; save for the Mater and St. Vincent's all the leading Dublin hospitals closed their doors to Catholic doctors; they could not get in.

2888. In the College of Physicians is it the same?—In the College of Physicians it is the same. Catholic doctors, myself included, have been pilled or black-balled again and again by the Protestant and Trinity College "ring" which dominates the place.

2889. I wanted to ask you this. The Medical student who graduates from Cecilia-street has a very real advantage in graduating from it, because he is open for public appointments which the Trinity College student is not open to, or does not get; is not that so?—There is no doubt whatever that the fact that a man comes from Cecilia-street is very much in his favour at the present time in all parts of Ireland, except, perhaps, the North-East, and there, I think, the Belfast College men would probably have sway.

2890. If the University question were settled tomorrow, and the ban were taken off Trinity College, to use another trite phrase, would not the Cecilia-street School suffer then from having to compete with medical men from other institutions who would then get places equally with their own students?—I do not think we rely for one moment on any such adventitious support as the public voice can give us; we are quite prepared to stand upon our own merits, the merits of our degrees and examinations; we are quite prepared to keep up the standard of the Royal University, which we believe to be a higher standard than that of Trinity College; and we do not ask for any support whatever from the country merely on the ground of our coming from a certain educational establishment.

2891. Then you would not think that the Cecilia-street Medical School would have a claim upon the State for compensation for what would be an undoubted loss to them?—Well, I am bound to say that although I did entertain a somewhat high idea of the claims we had upon the State, I did not think we could base one precisely upon that ground; but I am very much obliged for the suggestion, I may say.

2892. Then, in regard to your teaching, I think the Chief Baron asked you whether you ever at any time, or any of the other Professors of the Cecilia-street School of Medicine, came in contact with, shall we say, Catholic dogma, in a way to harass or hinder your teaching?—I have been first a student and afterwards a Professor in the Catholic University School of Medicine—I have been connected with that School since the year 1882—and I have never heard of such a case.

2893. Could you teach Darwinism if you so desired?—You could teach Darwinism certainly; that is a capital working hypothesis, and if you felt convinced of its truth, or considered it a good hypothesis, there is nothing to prevent your teaching it.

E. J.
McWeeney,
Esq. M.A.,
M.D. (R.U.I.),
F.R.C.P.I.

2894. Have you ever considered, or observed, that Irishmen have always distinguished themselves in Medicine? I was cataloguing Sir John Gilbert's books the other day, and I found from that that various medical books exist written by Irishmen in Latin and in other languages in various countries all over the world—in Poland, in Austria, and so on—and it struck me as an exemplification of the fact that the Irishman has a great tendency to gravitate towards the Medical profession?—I think so; I think they have a great leaning towards it.

Dr. DOUGLAS HYDE.—I found the same thing in America, where no less than five Dr. O'Sullivan's came to call upon me in one small town I was in.

2895. Dr. COFFEY.—Your experience of the connection of Colleges with a University has been mainly derived from your connection with the Royal University, has it not?—It has altogether.

2896. And in the Royal University the Colleges are separated by long distances; they are scattered through the provinces?—Yes.

2897. And there are difficulties in connection with the working of such Colleges in a common University?—Yes.

2898. If two Colleges in Dublin were joined in one University—the University of Dublin—do you think the difficulties would be diminished?—I really think they would.

2899. You think that the Federal system would be less objectionable in that direction than in the direction of Colleges scattered through the country at large?—I think it is more difficult to buckle together entities which are far apart than those which are close together.

2900. In connection with the question which the Chief Baron asked you about the University examinations, I think you said you had not considered the matter very fully—you had no scheme before you, in other words?—Yes.

2901. But, as a matter of fact, if you had two such Colleges working in the University of Dublin, do you think that there would be greater or less difficulty in conducting the Medical examinations by the University than in the case of the Royal University conducting its Medical examinations over all the Colleges connected with it?—I should think there would be less.

2902. And that a scheme which would permit the use of University examinations in such University might be quite a workable one?—I do not see why a workable scheme should not be constructed. The only thing is that I am not able at present on the spur of the moment to lay one before the Commission. I did not expect to be asked about it.

2903. The only other question I wish to ask you is this. You say that (as we know) you have been an extensive worker in Pathology. Have you in the course of your teaching ever found any difficulty in utilising the arguments for the evolution of forms in connection with any branch of your subject in which it entered into the subject?—I have never felt the slightest scruple in making use of every argument that makes for evolution, but at the same time I do not exactly approach the doctrine of evolution as being a very thoroughly convinced evolutionist myself. I passed through a stage of very great belief in evolution, and now my ideas have relapsed into a more fluid condition.

2904. Mr. KELLEHER.—Just one question. You said that of the number of students at your School only about half go up to the Royal University?—The number was only about 40 per cent. a few years ago, but now we are sending up about 50 per cent.

2905. That is for the Royal University?—Yes.

2906. If there were a second College, either in Dublin University or in the Royal University, the Medical course would be just as severe and the examinations as difficult as in the Royal University at present?—The Medical part of the examination would undoubtedly be just as difficult as at present; but I think that a drawback of the Royal University, which has hitherto kept a number of men from coming into it, could be avoided under a new system, and that drawback is the first University examination in Arts. I think that could be made less of a stumbling block than it is at present.

2907. But, of course, you would have an Arts examination in the new College?—Oh, yes. For instance, we might adopt your Trinity College system. We might allow the Arts and Medicine courses to run contemporaneously, and we might do as you do in

Trinity—we might give medical students certain facilities for passing the Arts examination. The Royal University affords no facilities whatever to its medical students. The first Arts examination is made as difficult for them as for the non-medical students.

2908. Do you think that if a new College were established all your students would go in for the degrees of that College? Would not a large number go up instead for the Licence of the Conjoint Board?—I am afraid I am not prepared to accept that proposition. I am inclined to think that a great many of our men who now go up for the Joint Colleges would go up for the new Degree from the fact of its novelty, and from the fact that they would wish to distinguish themselves.

2909. As to your desire to develop your own genius along your own special lines, I suppose that could be most easily affected if as little outside interference existed as possible?—Yes.

2910. And, therefore, it is rather in a College with University powers that that development would most readily take place?—Yes, I go with you there—I quite think so; I think it ought to be separate. My ideal of a settlement for us would be a separate University altogether, but if that cannot be granted then let our Medical School at any rate not have its individuality merged in another Institution.

2911. If that could not be granted immediately, do you think that, still remaining an ideal, it would remain something, at the same time, which would be worked for?—I do not really know; I could not prophesy as to that. We should have to see how the new system worked. Of course, we know the tendency for Colleges that have been buckled together in one University system, such as in the case of Manchester and Liverpool, is to come apart.

2912. LORD CHIEF BARON.—When they are in different localities?—Quite so: it would apply to Belfast and Cork rather than to our College and the Dublin University.

2913. Mr. KELLEHER.—But if the two Colleges were in Dublin, and the differences between the two Colleges were religious differences, do you not think that that would tend to drive the Colleges apart—that each would resent the interference of the other in its arrangement of courses?—I do not really think so; I honestly and with all my heart consider that the very first step towards the non-accentuation of religious differences in Ireland would be the spread of higher education amongst the Catholics and the satisfaction of their ideas. I believe that with the spread of Higher Education you would get much less religious antagonism than you have at present.

2914. If you had the two Colleges, each practically, but not altogether, autonomous, do you not think that the theoretical lack of complete self-government would act as an inducement to some who wish to have a freer spirit, to desire complete power of granting their own degrees—complete power of full development along their own lines, in fact?—I can only go so far as to say that it might.

2915. You have suggested that the only connection between these two colleges would be practically by a system of what might be called external examiners?—Well, I do not know that I quite suggest that that would be the only connection; I fancy there would be a common Board of Studies or a Common Board of some kind—a Board of Studies in the first instance, a Caput, a Senate, or whatever you like to call it.

2916. But there would be separate medical schools, for example?—Oh, there would be separate medical schools; that is certainly my idea.

2917. And I suppose separate engineering schools?—Well, you see we do not possess an engineering school of our own growth, and you do in Trinity College. It is quite possible we might come into your engineering school, but I do not know exactly how it would be worked out.

2918. But if your engineering students could come into our engineering school, does it not seem possible also that your medical students might come into our medical school?—Well, it would if we had no medical school of our own, in the same way that we have no engineering school of our own; but the existence of a successful medical school on our side, I think, does away with that possibility.

2919. But supposing your men, instead of becoming Cecilia-street medical men in the Royal University,

Dublin, became Cecilia-street medical men in Trinity College, Dublin, would not that enable you to bring your own atmosphere with you?—Cecilia-street men in Trinity College?

2920. Yes?—By that you mean two separate medical schools in one College?

2921. No, one medical school—two separate blocks of buildings if you like?—I do not think that would work very well, for several reasons. I take it the professors would have to have co-ordinate authority; would not that be the idea?

2922. That would be matter for subsequent arrangement?—Then you would have no head; you would have two equal and opposite forces, perhaps, pulling in opposite directions. You might have some friction between the different types of men who would be brought together.

Mr. KELLEHER.—I would pass from that—I do not wish to go into details. That is all I have to ask.

2923. CHAIRMAN.—I think I am right in assuming that you come here rather to ask for independence for your school than to express any opinion as between a College in the Royal University and a College in the University of Dublin?—That is so.

2924. You saw, I daresay, a very remarkable letter which was published by your distinguished colleague, Professor Molloy, shortly before his death?—Curiously enough, I have not seen it.

2925. You have not seen it?—No.

CHAIRMAN.—Then I will not ask you about it. We are very much obliged to you.

The witness withdrew.

After a short adjournment,

WILLIAM MAGENNIS, Esq., M.A., B.L., F.R.U.I. Representative of the Catholic Graduates' and Under-graduates' Association, called in and examined.

2926. CHAIRMAN.—You have come before us, I think, representing the Catholic Graduates and Under-graduates?—Yes.

2927. Who have formed themselves into an Association?—Yes.

2928. Do they consist of Graduates and Under-graduates of Trinity College, Dublin?—They are of all Universities, but chiefly of the Royal University.

2929. I think I gather from your statement that the rules of your Association debar you from declaring in favour of any of the three forms of settlement which have been suggested, but enable you to declare against mixed education?—They enable us to declare against any settlement which, according to the Catholic leaders of opinion, would not secure us educational equality; but we are—though as an Association bound not to advocate any one settlement—quite free as individuals to express our preferences.

2930. And do you come before us to express a preference?—I prefer, if you will permit me, to state the views about which we are absolutely unanimous.

2931. As I understand, the main objection of your Association is to mixed education; you say: "We desire to add that the Irish people are in the main devoted to denominational education; and that a mixed system of higher education is as unacceptable to our co-religionists in this country as the mixed system in elementary education which they have so long condemned and resisted"?—Well, the object, if I may explain it, of having that put in was to leave us free to point out to this Commission that not Catholics alone, but all our fellow-countrymen, Presbyterians and Episcopalian Protestants, are alike strong upon having what is in effect denominationalism: and we wished to have the opportunity of pointing out that we do not demand a sectarian university—that what we mean by denominationalism here is denominationalism in the sense in which we contend that it exists in Trinity College, Dublin, and its University.

2932. I suppose by denominationalism you mean this—the institution of Colleges which shall be practically under the control of the denomination in question?—Quite so.

2933. Even if you abolished tests for students and professors, you would still wish that the predominance of the professors should be of the religion in question?—As the Lord Chief Baron expressed it in his evidence before the Robertson Commission, there should be a tinge of Catholicism from the beginning—a distinct flavour.

2934. And any system of election of professors which might eventually do away with that tinge would not be acceptable?—I think that only in regard to some of the Chairs which might be connected with private endowment it need be thought absolutely necessary to consider the religion of the candidate.

2935. Yes, but supposing you had a College which was so constituted that there were no tests in it, either for the professorships or for the students, and that it might, although originally started with Catholic professors, ultimately become otherwise owing to a predominance of Protestants; that would not be satisfactory, would it?—We are prepared to take the risk of that; and, as a matter of fact, we have suffi-

cient faith in our own people, and in their capacities, to believe that, if it were given a trend in that direction, it would continue along that line.

2936. You would not object to a College the constitution of which might become entirely Protestant?—We would not demand any legal restriction.

2937. But would you not demand a predominance of Catholics on the Governing Body?—I think that in the commencement we should.

2938. It comes to this—if you started a College with a predominance of Catholics in the Governing Body and in the Professoriate, you would let it run its course?—Quite so, but I should like to know what its character would be if such a thing is to be brought into being.

2939. With regard to Trinity College, I think you are of opinion that it has been a failure?—Yes, from the point of view of the nation. We are prepared to admit that as a School of Mathematics and Classics it has done excellently well, and that in those respects it has served well the Episcopalian portion of our population, but we complain that in many respects, as an educational body, it does not serve the needs of the country; it is not satisfactory, and should not be regarded as satisfactory, to the Episcopalians themselves, and I propose, if I am permitted, to put before you a few points which have been made on behalf of Trinity College itself, which will corroborate what I have said.

2940. Are you referring to the Report of the Robertson Commission?—No, to the Appendix to the first Report of this Commission.

2941. You may assume that all that is within our knowledge?—But I thought it might bring out the fact that our criticisms are not dictated by religious animosity but are dictated by a desire for educational reform.

2942. You may refer us to the passages you speak of, but I do not think it is necessary that you should read them, because I need not tell you that we have already considered them very fully?—With regard to our charge that it has not provided for economic and social studies, I would draw your special attention to the complaint of Professor Bastable, who is an eminent economist. It occurs in his evidence, at page 41.*

2943. I think you need not trouble to read any of the passages, because you may assume that we are familiar with those documents which we ourselves have put into our Report?—As regards the non-provision of a School of Agriculture, which is really a detail of this complaint as to the insufficient provision for economic and social studies for the development of Ireland, we fail to find in the Statement put forward on behalf of Trinity College itself any reference to a Professor, or a School, of Agriculture. I am myself aware that some time in this year a man in County Meath—I believe his name is Barnes—was appointed Professor of Agriculture. He was a valuer to the Land Commission, and I only hope, for the sake of Irish Agriculture, that he may succeed in making his pupils bring up their land to the value which he used to place upon land.

2944. Is it not a fact that a Professor of Applied Chemistry was appointed in 1894?—Yes.

Magennis,
Esq. M.A.,
B.L., F.R.U.L.

2945. And that part of his duty was to teach Agricultural Chemistry?—Has he done so?

2946. I thought he had?—Of course what we understand by a School of Agriculture is something different from that. Our charge extends not merely to that School, but to others.

CHAIRMAN.—I believe it to be admitted that there is no School of Agriculture in the College. Perhaps Mr. Kelleher will be able to tell us.

Mr. KELLEHER.—I do not know. You will find, I believe, that a Professor was appointed this year, and that there is a School of Agriculture at present working now. I do not like to say these things off-hand, but I believe that is so.

LORD CHIEF BARON.—A sum of money was given by Mr. Ainsworth for that purpose, was there not?

2947. Mr. KELLEHER.—I do not know; I got a programme last week containing an announcement of the hours of the lectures in the School of Agriculture—

(Witness).—If I may do so, I should like to press the point that in the Return showing the details of expenditure and so on, there is no mention of such a thing.

2948. CHAIRMAN.—It was only established this year?—Quite so, but the University has been a long time in existence.

2949. But Schools of Agriculture were not thought of much in the Middle Ages, you know?—No doubt, but Trinity is a little too mediaeval. I think a little more interest might have been displayed at an earlier period of its history.

2950. The tendency, if late, is better than none, is it not?—Yes.

2951. Then you say there is a lack of organised faculties?—Yes,* and there is no School of Education.

2952. You know there is a Professor of Education?—Yes, and he admits here that he has nothing to report, because "the School is at present in its infancy."†

2953. But he does report something?—It is a report rather of what he hopes to accomplish than of what he has actually done. We believe that education in this country is in a very backward condition, largely because of the University question. We should like to have all the teachers in primary schools brought into connection with higher education, so that in those schools all would be in intimate contact with men who had received a University education—if possible we should like them to be graduates. And with regard to secondary education, as we have no training colleges of any sort, we think it is a very serious handicap to the development and expansion of the country. Now, with regard to the argument usually advanced against our claims in connection with Higher Education, that the country is a poor country, and that the majority of the poor are Catholic, and that on that account we have not such a strong claim to higher educational facilities as the proportion of our population would seem to imply, our contention is, looking round at all the other Universities, and at what in other countries these have done for their people, that though the son of the labourer need not receive a University education, he must receive the benefits of there being a proper University system in existence in the country. We see, for instance, in Austria, in Germany, and in Belgium the development of industries. We see the raising of the national life because of the provision made for education as a national concern. We think, therefore that the lack of a School of Education, even in the College which serves what is only one-eighth of the population, the Episcopalian Protestant population, is a serious defect, and we contend that unless our grievances in connection with Higher Education are remedied we shall continue to have inferior secondary schools—not absolutely inferior, but not so excellent as we conceive they might be made.

2954. Then you wish to say something about the Fellowship system, do you not?—Yes; I may say we are heartily in accord with those proposals put forward by the Reform Party in Trinity College. The idea that a man, merely because he has scored the highest number of marks in a competition, should become a Professor for ever and for ever is not defensible upon educational grounds. He becomes a Fellow, and in course of time develops into a Professor—there are many such men, of course, who make excellent Fellows and Professors. We object to the system, not to the individual. We notice, by the way, that if we re-

organise—properly re-organise—the Faculties, Divinity being a Faculty, there shall be on the Governing Body, either at the beginning or, ultimately, a gentleman who is there because of his religion. Furthermore, if it be, as I think it ought to be, the case in a College that the capacity of a man to be a teacher must be taken into account in electing him to a Fellowship, there will be a very serious difficulty in regard to Catholic candidates. What has hampered very much our work in what is called the Royal University, is the fact that there is so much outside animosity—there is such a readiness, I may put it briefly, to allege corruption in the awarding of prizes. Now, if Catholics were obliged, or if there were no other alternative for them, but to go into a single College, as the Reforming party propose, then I think we should have watchful, not to say rancorous criticism upon all appointments to Fellowships. I think everyone must see that that would be very detrimental to education, and would certainly not bring about that feeling of good will and all the other tranquil conditions of life in Ireland which some of us would like to see instituted. We complain that Trinity College, though in name a residential institution, confers degrees without examination. The Robertson Commission made it a serious charge against the Institution which is called the Royal University, that it lowered the value of University Degrees by granting them without examination. Now, Trinity College does that, and has done so. It is true that the percentage is very small, but we believe it would be to the advantage of education if we had residential institutions, so that Degrees should not be conferred unless the candidates had attended lectures—that they should have contact with the living mind of the Professor in regard to the subjects in which they had studied. In connection with the system which Mr. Culverwell has explained to be the system of conducting the work in Trinity College, I should like to say that there seems to be a large amount of what is called "grinding" there and that in a single-College University, even though we had a Catholic Professor of Metaphysics, say, or of Ethics, yet the students would undoubtedly be tempted—in fact I should go further and say almost by the circumstances invited—to put themselves in the hands of grinders so as to succeed at the Common Examination, and those safeguards that are supposed to be provided by the fact of there being a Catholic Professor in that subject would be in effect done away with. We do not like, I may also add, the conception of Philosophy which provides for all its wants by a single Professor. It may be, of course, pressing the interpretation of words too far, but it occurs to me that the proposal of dual Chairs contemplates a Catholic Professor of Philosophy, and a Non-Catholic Professor of Philosophy, and our experience, in so far as University College is concerned, leads us to believe that this subject cannot be adequately dealt with by even three Professors. In University College, small as it is, and with its opportunities of useful work very much restricted, we have three. I need hardly add that the subject of Philosophy is in Catholic eyes a very important one, next, I think, to Theology; and in connection with Theology I should be glad to have an opportunity of adding that we agree thoroughly with what was said by the Protestant Synod in their recommendations as to the need for the presence in a University Institution of a Faculty of Theology. It is of great importance—in fact of vital importance—to us that our clergy should be thoroughly educated, that there should be no facility for higher education open to the laity from which they should be debarred. It is sometimes said, or language is used which implies, that the clergy are interested in our higher education, but that the laity are not interested in theirs. I must respectfully contend that this is not the case. We are, and we ought to be, quite anxious for the Divinity students to have the most ample opportunities for becoming cultured men. As regards the allegation that friction would arise if there were two Catholic Colleges in a Common University such as the University of Dublin, whereas there would be none in the single College, we think that *a fortiori* if the Catholics are obliged to go into Trinity College, though they do not wish to do so, the friction will be still more intensified.

2955. There has been very little friction, has there, between the Protestant and Catholic students in

* Appendix to First Report (Cd. 3176), 1906, pages 26, 28.

† Ibid. page 78.

Trinity College?—But these are very few in numbers, and, besides, these students go in under conditions under which they are, and I believe ought to be, held in very friendly feeling by the Protestants there.

2956. Do you not think that if two Colleges were established, one Catholic and the other Protestant, in immediate proximity to one another, there might be considerable friction?—I do not think so.

2957. Do you not think that to continue to keep up the religious distinction between the two Colleges would have a very different effect to what would be the case if both were merged in one?—As a matter of fact, I may put it this way—Trinity College *qua* Trinity College has not made these offers to us. On the contrary, they come from a minority within the College; but supposing, for the sake of argument, that they did come from Trinity College unanimously, the Catholics, for many reasons, which, if permitted, I might give, do not wish, and do not see their way, to accept those proposals—

CHAIRMAN.—You may assume that we are familiar with the correspondence which has taken place upon the resolution of Trinity College, forwarded originally to Cardinal Cullen and afterwards to Cardinal Logue. We know they have not seen their way to accept the proposals. You may take it that we are familiar with all the history.

2958. LORD CHIEF BARON.—But that represents the clergy and not the laity, which, I believe, is what you are here to speak about?—I think I have good grounds for saying that, even if the clergy did accept those things, the large body of the Catholic laity would not go into Trinity College.

2959. CHAIRMAN.—You consider that they may be taken as one and the same?—I think so; we take up perhaps a more advanced position than the clergy.

2960. You do not agree with the opinions presented by Mr. Synnott and Mr. Fottrell?—I do not. As a matter of fact, there were a great many assumptions made in support of their case. They appeal to the example of the University of Bonn. Now, in all the argument with regard to Trinity College in relation to the Catholics the matter has been viewed abstractly. It is a fallacy to which the academic mind, I may say, is peculiarly liable, to study a thing out of relation to all the facts of the concrete case.

2961. That is rather hard upon the academic mind, is it not?—I believe that that is a common fallacy, and that the academic mind often shows that tendency.

2962. LORD CHIEF BARON.—The highest class of mind?—This is the defect of the quality.

2963. CHAIRMAN.—The abstract principle carried to its extreme?—Quite so. I think if, as in matters of political philosophy, we look at the concrete circumstances there is much in the practice and in the traditions of Trinity College that must be taken into account in considering how the Catholic laity of Ireland must view the proposals—I may appear to be arguing in favour of one of these systems more than another. Our Association, in order to have a common basis of agreement, have sunk individual preferences, put them aside, and we advocate equality for Catholics—Most of the arguments of the Professors are based upon the fallacy to which I have referred—such as those of Mr. Gwynn, for instance. These arguments, to all intents and purposes, propose to penalise us because we are Catholics. It is not clericalism we contend, but Catholicism, that questions with regard to faith and morals can be authoritatively settled and dealt with only by our Bishops. What Burke in one of his speeches calls legislating according to fears and conjectures makes itself very prominent here. These gentlemen are afraid that if the Bishops of our Church were defeated upon some appeal they would withdraw all the laity from the College. That is not an argument against the two College scheme; it is an argument against the Catholic system, if it is an argument at all, but it is really prophecy. As a matter of fact, one is at liberty to prophecy on the other side as a retort to it—"I do not believe a case would ever arise or could ever arise." In any case, if we are not to be allowed to have educational facilities merely because that claim is reserved for our Bishops, it amounts to this, that because we are Catholics we are to be penalised. We follow the Bishops, but not, as is often contended, like dumb driven cattle. We are Catholics; we understand what Catholic principles are; we assent to them, and we assent to all that is involved in the recognition of our Bishops as authoritative judges on these matters.

We, therefore, I may say, resent strongly the allegation that a Catholic who is obedient to his Church is a man wanting in enlightenment, and that no one is to be regarded as an enlightened Catholic unless he displays some hostility to the system both of belief and discipline in his own Church. I have already dealt with the question in a small way as to taking into account the proportion of Catholics in the total population. I think that both men and women should have every opportunity for culture, especially those who are going into the teaching profession; and so long as there are not institutions of a University character to which Catholics can resort and have the opportunities when they have gone there of getting the education they need, we feel that we have a grievance that urgently calls for legislation. Of course, I have not developed the details of my argument, because I wish to spare your time; but there is just one point more, if I may be permitted to dwell upon it, with regard to the staff. It has been said that even if we had a College we could not provide a professorial staff. Trinity College provides itself with a staff by examination from its own Graduates. I believe we could do likewise. As a matter of fact, although it appear to be (we may call it so) tainted evidence as coming from one of the staff of University College, I think we may venture to claim that in that College we have as regards mathematics, pure and applied, as regards science, and as regards some other subjects, quite as good a staff as any College anywhere.

2964. Are you yourself connected with the College?—I am a professor in University College, and that is why I say this looks rather an inside and special claim. Perhaps you will allow me to quote my own experience. When I went to University College first the staff there was made up of quite a large number of men who had been distinguished men in the English Universities. These men are now dead; they have passed away, but their places have been taken by their pupils. Now, it seems to me that if, in the course of time, Graduates of Trinity College may become Professors in the College and in the University of Dublin, there is no reason why it should be contended that men who have been trained by Professors and who have sat under Professors who were quite as distinguished as those at Trinity College, should be regarded as unfit.

2965. What number of students have you at the University College of Dublin?—240, all told.

2966. You have a staff of Professors?—Yes.

2967. How many Professors have you?—I should say that the Professors are mostly the Fellows of the Royal University.

2968. And receive salaries as Fellows?—Quite so. I think there are fifteen Fellow Professors.

2969. Does not that College form a sort of nucleus which it would be possible to increase and develop?—In respect of the material institution, no; but apart from its material character, I should say—yes. At the same time I do not come here to claim that the settlement of the University question should be made by something which would appear to be a concession of privileges to the men at University College.

2970. You are rather speaking now as an individual than representing the body of graduates. There is one question I should like to ask about the College. It has existed, has it not, ever since the time of Cardinal Newman?—Not as the University College, but as what was called the Catholic University.

2971. It is now known as University College?—Yes.

2972. And is in close connection with the Royal University?—Very close—so much so that we have a hybrid system in the Royal University. The Royal University is nominally an examining body, but so far as regards University College, Dublin, it is really a teaching body.

2973. Its Fellowships are held by Professors in the College?—Yes, and only so long as they are Professors. As a matter of fact, I have the honour to be a Professor of Mental Science, and as a Catholic teacher of Mental Philosophy I am paid by the State.

2974. And you receive that payment as a Fellow of the Royal University?—A large proportion of it as Professor of the University College, and a small proportion of it as Examiner of the Royal University.

2975. Does not the existence of that College suggest a mode of solving the difficulty by increasing and im-

proving that College rather than founding a new one ?—As a representative of the Association—

2976. I know that you are tongue-tied, but speak for yourself for a moment if you will, if I may suggest to you as a Professor of that College, because you are the first Professor of the College that we have had before us?—You would like me to say what I consider might be done?

2977. The question I put is this—Does not the idea of enlarging and developing the College seem to furnish an easy solution to the difficulty?—I believe the solution of the difficulty is very easy. I believe, furthermore, that whatever has been done in the way of creating a University institution, thanks to the existence of that College, could be utilised, and ought to be utilised—I go so far as that—in the settlement of the question, but at the present moment University College could not exist except through its connection with the Royal University.

2978. Quite so. Supposing you give it additional endowments and give it a local habitation?—And suppose, too, that we widen its constitution; that would be compatible with any one of three things (it seems to me)—namely, the creation of a University for Catholics or the creation of a second College in Dublin University, or—

2979. Not if it were connected with the Royal University?—Then the Royal University should cease to have its character of a hybrid institution.

2980. You know the report of the Robertson Commission?—Yes; I have studied it.

2981. It suggested a series of modifications in the constitution of the Royal University. Supposing that were carried into effect and the University College in Dublin were enlarged and developed, would not that meet the requirements of the case?—But at the present time, through the circumstances of the Royal University, which would remain after it had been converted into a teaching University, our freedom of development would be considerably hampered by the existence of the Senate dictating courses and prescribing books, and in fact, controlling the methods of examination as at the present time.

2982. You wish to be autonomous?—Quite so. We believe that so long as Queen's College, Belfast (which through historical circumstances—whether it was intended or not is another matter—is really a Presbyterian institution) is a constituent member of the Royal University, we could not have the advantages which we should have—I speak now for myself—in Dublin University.

2983. I do not quite see why not?—In the first place, in Dublin University, from the necessities of the case, there is such a pronounced Protestant character in Trinity College, that as a set-off to that, we should begin with a thoroughly Catholic tinge.

2984. I am assuming that this College that would be developed has what you call the Catholic tinge about it?—Quite so. Then, as members of the same University, we should share in the University prizes.

2985. Supposing the College of a Catholic tinge were connected with Dublin, you would still be subject to the control of the Governing Body of the University, if it was only partly constituted by your College, and you would not be autonomous. In the same way, if you are connected with the Royal, you would, no doubt, be subject to the Governing Body of the Royal, to a certain extent, with regard to the curricula; but why should it be worse to be connected with the Royal than with Dublin?—I should suggest this. The Royal University Senate is already in existence. It has already the claim of having worked very well, inside its limitations, for Catholics. If we begin by constituting a new College as a member of Dublin University, Dublin University, as it seems to me, is developed, not radically transformed; but you begin by making a new Governing Body, and it is much easier, *ab initio*, to make that a thorough educational body than it would be to alter what already exists.

2986. The University of Dublin exists already. You would have to alter that. Why is it easier to alter the University of Dublin than to alter the Royal University?—I look at this matter always with regard to the past history of the University, and I distinguish two kinds of prestige which it has. It has a prestige of long existence, which counts for a great deal civically. It has acquired that through position and its enormous revenues, and it possesses these, I may say, at the cost of the Catholic population of

Ireland. I think we have a right to some share in that.

2987. Really, you wish to get possession of some of the benefits of Dublin?—That is one consideration which ought to weigh with us.

2988. Surely it is more easy to modify a new institution, like the Royal, than it is to modify an institution like the University of Dublin, which has existed as an autonomous body for three hundred years?—But if you remember—*

2989. Is it not easier to modify a new body like that than an old body like Trinity College?—I do not think that it is a new body for the purpose of that argument.

2990. Surely the Royal is a comparatively new body?—But not for the purposes of that argument, because we are contending for equality. You cannot give us equality if we are to be forcibly linked to Queen's College, Belfast, in a composite system, while the Episcopalian Protestants of Ireland have their own College, with University powers. It seems to me that that would not be equality.

2991. I cannot see why the Presbyterians are more at variance with you than the Episcopalian Protestants?—Historically, the Presbyterians are much more at variance with us than the Episcopalian Protestants. Besides, if we accept as a final settlement—we may accept it as a partial beginning—if we are to accept as a final settlement the incorporation of our College with the Royal University, there is this to be said. First, we, the Catholic community, have disparaged before the public eyes the whole value, whatever it was, of the Degrees which that University conferred. We should then inherit the odium which we ourselves have been instrumental in breeding in regard to it. Furthermore, we should always feel that, side by side with us, there was a College exercising University privileges, whereas we were a mere constituent of a second University, of obviously inferior status, because of its newness, and because of its unfortunate recent history. I believe there would be no finality about the creation of a College for Catholics, no matter how richly endowed, if it were put into the Royal University.

2992. I suppose you must have a Governing Body for the University, must you not?—Yes.

2993. And Trinity College would elect a certain number on that Governing Body, I suppose?—Yes.

2994. You would obtain an equality for Catholics—an equal number?—Yes.

2995. However few the number of Catholic students might be in comparison?—Quite so.

2996. Would that be fair?—I think so, in view of the history. I always insist upon the point that we must look at the thing in its concrete fulness. We are here practically beginning our career in regard to Dublin University.

2997. Supposing you have a Governing Body constituted of half Catholics and half Protestants, how would you settle your curriculum as regards Philosophy?—I hope very easily; because, having distinct Colleges, each College would draw up its own course.

2998. And each College would examine separately, would it?—Yes, for certain examinations—the pass degrees.

2999. Then you would require a University to give a Degree not upon its own examinations, but upon the examinations of its constituted Colleges?—That objection would be readily got rid of by doing what has been done at the Royal University. I hope you will not consider it egotistical to mention my own case: in the examination for studentship I was examined by a body of four. One was Professor Thomas Finlay, of University College; one was Professor Dr. Park, of Queen's College, Belfast; one was Professor Beare, of Trinity College; and the fourth was Dr. Wilfred Ward, of England. I attach more value to my success in that examination because of that very fact. I see no difficulty at all in a College, no matter what the University be with which it is connected, awarding its own pass degrees.

3000. Does your experience in education work in Ireland lead you to think that a body constituted half of Protestants and half of Catholics would work well together?—It does, undoubtedly.

3001. It would work well?—It would work well. I have experience in the Royal University in the department, where the strain was most intense. We have to examine candidates in mental and moral

* Note by Witness.—The Act of Settlement, and the Catholic Relief Act (33 George III.), contemplated the erection of a Second College for Catholics.

science. Our Board is partly Presbyterian and Protestant and partly Catholic. We have, I think, we may fairly claim, prevented the existence of a deadlock, though many people prophetically expected that would occur almost from the beginning.

3002. The Governing Body of the Royal work smoothly?—I do not know about the Senate; I am not a member of it. We do not like the Senate system of government. If you allow me to go back upon one of your questions—I should not regard that mixed Governing Body of the Dublin University as the body that primarily would arrange the course. I see no difficulty in having a Board of Studies for each College, which would submit its proposals to what is the Governing Body of the University.

3003. Would you have two Boards of Studies?—Each College would have its own; and it would be for the University, *qua* University, to see that the level of education was kept up to the desirable pitch. We, I may add, are not afraid of any height. We have faith enough in our own people, and the powers of our own teachers. We think it would be good for Trinity College, in fact, to have our College side by side with it. There is a disadvantage to the Episcopalian population if we may express interest in their future as our fellow-countrymen—to our Episcopalian Protestants, to some extent, that if they are left in a University, which is really a College University, they have not the benefit of competition. The Senate system of the Royal University we do not like, because we are not free to select our own courses. There is a great deal of work which I object to in regard to Trinity College, of cramming done by grinders. The whole thing has reacted very injuriously on Queen's College, Belfast. As a matter of fact, there is a grinding establishment in Belfast which has a very large number of pupils attending it; and I am afraid, in University College, we are obliged, as Professors, to take up this attitude—I speak now for myself—when we lecture on a subject to the best of our abilities, and indicate reading which might be profitably done by the student, we do not take into account what is likely to be asked, on the express ground that we are not crammers, and our students suffer in the competition.

3004. LORD CHIEF BARON.—I see at the end of your paper an objection to the mixed system of education. I wish you to distinguish between a University and a College. Do you see any difficulty in there being a University that is altogether undenominational and at the same time having affiliated to that certain Colleges that have, to use your own expression, a tinge of denominationalism?—I see no difficulty.

3005. Therefore, the objection that you have mentioned in reference to mixed education would not apply to having the University of Dublin common to the two Colleges—the existing College and the new College?—Certainly not.

3006. Take this new College, and take it not at the present, but in twenty-five years to come, when a number of students will have passed through its courses. Would you have any objection to the Governing Body of that College being selected solely upon academic grounds?—I think we go further. I can speak for our body, and say we should like to have it selected upon those grounds after twenty-five years.

3007. Solely upon academic grounds?—Solely.

3007A. Take whatever would be the highest examination in the University to which it was attached, be it a Moderatorship examination or a Fellowship examination, would you have any objection to a provision that no person should be elected as a member of that Governing Body that had not received the highest honours in that highest examination?—I would not insist upon the point of "highest honours."

3008. Let me take it with regard to Trinity College, with which we are more acquainted. Would you have any objection that it should be a condition precedent to a person obtaining a seat on the Governing Body of the new College that his degree should be equal to the degree of a Senior Moderator in Trinity College?—That is, a First Honour Degree, is it not?

3009. It is; it is a first-class degree?—I scarcely know that we go so far as that. I think it would be sufficient that he was a Graduate of the University. I should add, however, that some members of our Association would like to have the new College, if such were created, in connection with local representative bodies. We should see no difficulty in having, say, two representatives of the local municipal authorities.

3010. You are not in favour, then, of the members of a Governing Body being elected solely upon the ground of academic merit?—Personally I am. I answered you yes, but I should have said on my own account individually.

3011. It is really your own opinion that I am asking, because I do not want to go into the opinions that you were sent here to represent. I take it that you stated this to Sir Edward Fry, but I wanted to try to get it from your own inner consciousness, and see if it agrees with mine. Do not you think academic merit is the chief factor to be considered in the constitution of a Governing Body?—I think so. As it is an academic Council, there should be an academic qualification.

3012. And could not a College itself say that one of the best modes of testing academic merit is by having passed with the highest honours in the examination of its own University?—Quite so; that would determine the highest qualification. The only thing that I stopped short of was that as between two, men, one of whom was a first-class honours man and the other a second-class honours man, there might be a question of capacity for government which I conceive might be possessed by the man who had an inferior honour to the other. I do not think that a mere passing of an examination with distinction is indicative of the possession of administrative capacity.

3013. I am asking of it only as a condition precedent. I do not say that he should be elected, that he should be a member of a Governing Body; but that no one should be a member of the Governing Body that had not passed that examination?—That had not passed that examination, I quite agree. That would be my own individual feeling.

3014. You have been asked some questions by the Chairman in reference to a greater number of the Professors or members of the Governing Body ultimately becoming Protestant?—Yes.

3015. If the nomination to the Governing Body was to depend largely upon academic merit, would you be quite prepared to accept that irrespective of religion altogether?—I understand that you speak now of what would be the case after twenty-five years.

3016. I do, entirely?—I would answer yes to that.

3017. That you would be prepared to accept that?—Quite. I have no fear that after twenty-five years the College would cease to lose the character it began with.

3018. I see that your Society was instituted not quite three years ago—1903?—Quite so.

3019. I suppose that since that time you have been able to ascertain pretty well the general feeling of lay Catholics in reference to higher education?—I may say I think I have. I have had communications from Graduates who refused to be members of our Association, and I am aware of what their feelings are. Some of them refused because we had Graduates of Trinity College on our Committee, and they feared that that indicated a desire to advocate going into Trinity College as it is. Others objected that as Fellows of the Royal University, including myself, figured prominently on the Committee it might develop into our being an Association for advocating attachment to the University—

3020. I do not think you appreciate my question. Have you generally become acquainted with the lay Catholic opinion upon this subject?—I believe so.

3021. Am I right in saying that there is an independent lay Catholic opinion, to a certain extent, independent of Catholic ecclesiastical opinion?—I believe it is independent, without putting in the qualification, "to a certain extent." I believe that those who are most interested—I mean interested in the sense of being enthusiastic about promoting a settlement—do so altogether without reference to the fact that the ecclesiastical leaders also desire it.

3022. It has been represented in the papers before us, that, to a certain extent, the lay Catholics are following the ecclesiastical lead. Are you yourself aware of that?—I am aware—

3023. That there is an independent opinion upon the part of lay Catholics?—Most certainly.

3024. I suppose you are not old enough to remember the meeting of 1870?—I am not, unfortunately.

3025. How far back does your recollection go?—I went to University College about 1884—

3026. Are you able to say that there has been a continuous and developing opinion of lay Catholics during that entire period?—I believe that in recent

B.L., F.R.U.I.

years, thanks largely to the inside acquaintance of so many Catholics with the Royal University, that the feeling has become very acute, and that even if our ecclesiastics were not anxious to alter the existing state of things, there is a general body of the laity who would insist upon fuller facilities being provided. I do not suggest any hostility or any friction of any kind between the Ecclesiastical leaders and our laity. I believe we are at one.

3027. What I mean to say is—are the two opinions independent, one is not simply following the other, it is an independent, reasoned opinion?—Quite so. I believe that even in the impossible event of the Catholic Ecclesiastics withdrawing from the University movement altogether, that the laity would persist in their demand. I am quite convinced that that is so.

3028. Assuming for a moment, as I think I can assume, that there must be an additional College founded of the character suggested by the Robertson Commission—without reference to the University with which it is to be affiliated—assuming that a College, with a tinge of Catholic opinion, is to be founded, and that the question is whether it is to be affiliated with the existing Royal University, or with the existing University of Dublin, can you say what is the opinion amongst lay Catholics as to which University it should be affiliated with?—So far as I am acquainted with lay opinion, I believe that the Royal University is viewed with strong dislike by the laity.

3029. Am I right in saying that they rather condemn it?—Undoubtedly; on the ground of its being what I called a little while ago a hybrid institution. It is a University and not a University. We feel particularly aggrieved from the fact that, as Catholics in the various Colleges that compete for its Degrees, and more especially in University College, we are forced into this thing. We feel, in fact, if I may use the illustration, like Siamese twins, one of whom is full of vitality and the other is paralysed, and we are obliged to move as one.

3030. Am I right in saying that, as far as we are aware of Catholic lay opinion, it will be satisfied only by the new College being affiliated with the University of Dublin?—I could not say "only" but I can say most certainly that it would be satisfied if it were affiliated to the University of Dublin. I am quite sure that we would all be unanimous in accepting that solution. I do not say that we all advocate it, but I am quite certain that all would assent to it.

3031. And would be satisfied with it as a final settlement to the question?—As a final settlement to the question once and for all.

3032. Are you aware that there is a great desire amongst lay Catholics to draw together as closely as they can the bond of friendship between Catholic youths and Protestant youths?—That is so.

3033. And are they of opinion that a scheme by which Catholic youths would be able to compete with Protestant youths would tend to assuage the present unpleasant feelings which exist between the youths of the separate religions?—It would put an end to all religious animosity, I believe, because it would allay the grievances from which a great deal of that animosity arises, and which inevitably exists, because we feel the grievance so keenly. We are shut out from the higher positions in our own country on the alleged grounds that there are no educated Catholics. We believe that what is meant in that case by "educated Catholics" are Catholics whose degrees are from the University of Dublin; in fact, I am of opinion that successive Chief Secretaries, in considering whether a Catholic candidate for a high position is sufficiently educated or not, look largely to whether he is a graduate of Dublin University or not. Being a graduate of Dublin University means being an educated Catholic to them for that purpose.

3034. Are you of opinion that the earlier the age at which Catholic youths become acquainted with Protestant youths, and become friends with them, the more these religious differences will be assuaged?—On the condition always that the ways in which they so become intimate were not conditions that really indicated a grievance on the part of Catholics.

3035. I am suggesting that the equality is perfect?—Oh! yes.

3036. That there was the one College with the Protestant tinge, and that there was the other College with a Catholic tinge, that the young men of seventeen and eighteen, the year after they entered those

Colleges, would meet one another at examinations, would meet one another in their games, and know one another in the same way as men in professional life know those in their own profession?—It is no part of the Catholic demand that we should be kept in separate camps, with no intercourse of any kind between the growing Protestant youths and the growing Catholic youths. We merely demand that a grievance which accentuates our religious differences should be removed. That being removed, we welcome this free intercourse which you have described.

3037. And you think it would be an advantage to the country as tending to assuage those dreadful religious differences which have been the curse of Ireland so long as anybody can remember?—Quite so; it would be a national gain, undoubtedly.

3038. One more question. If there were two Colleges in the University of Dublin, of course you would be of opinion that there should be some University prizes that would be common to both?—Quite so.

3039. And there you would have competition between the two Colleges?—Quite so, at that stage.

3040. Would not you be of opinion that, as in Oxford and Cambridge, there should be some University Lectures as distinct from College Lectures—University Lectures that the students could all attend in common?—The University being a place, as it is described, for religion, learning, and research, what I consider to be distinctive University work would be exactly as you describe.

3041. Therefore, although there might be something of a distinctive course in each College you would contemplate that ultimately at the degree there would be one common examination for the students of both Colleges?—For honour degrees and University prizes.

3042. In reference to the questions you have been asked by the Chairman as to the University examination in philosophy, taking it for granted that the two different systems in philosophy are taught, one the scholastic system and the other which, for distinction's sake I will call the modern system, do you see any difficulty in their being a University examination under those circumstances?—I think not. I see no difficulty even in University Lectures which might be attended.

3043. I will first refer to the University examinations, as that is said to be the difficulty upon this point. There is, as I know you are aware, in the Royal University a Studentship in Mental Science?—There is.

3044. And in the courses for that mental science you have two independent systems of philosophy, the scholastic system and the modern system?—We have, but I may add they are not examined with absolute separation—they are not in water-tight compartments.

3045. I am aware of that?—As a matter of fact no Catholic candidate ever approaches the examination for, say a studentship, who has not read himself up in modern philosophy.

3046. And no student in another College would approach it without having knowledge in both?—Unfortunately that is not so. In order to win one of these distinctions, and to secure a very high place in the competition, it is absolutely necessary for our students to be familiar with even the latest thought. I speak now of an examination like the Studentship or the Junior Fellowship examination. We are debarred, however, from asking a non-Catholic candidate any questions whatsoever with regard to even the history of mediæval thought, because it is no part of his course; he is not expected to take it.

3047. I pass now from the course in the Royal to a course there might be in the University of Dublin had it a second College. Without going into the distinction between the two courses of philosophy, if there be a distinction between them, is there any difficulty in a student defending one theory and opposing another in examination?—None whatever.

3048. And therefore, although there may be different spheres of thought, as there always must be in questions of philosophy, there is no difficulty in framing a proper competitive examination and ascertaining the merits of the men, no matter what their independent view may be?—Quite so. I contend that we have solved that difficulty in the Royal University. I believe we have done substantial justice. I know that in the higher examinations it has always been

admitted by all the examiners concerned that the best men win, as we say.

3049. Sir ARTHUR RÜCKER.—Taking up one or two points the Lord Chief Baron has referred to, supposing you got the two Colleges and University that you would establish, may I ask you to tell us how you would set about the task of arranging for teaching in addition to the College teaching?—Do you mean about manning the new College?

3050. No, about manning the University teaching as distinct from the College teaching?—I must say that I have not thought out that detail, but I should say that the governing body of the University, whatever it would be, should have the appointment of the Professors for the work, but of course, so far as I can see, there should be a consideration of the claims of the men who are members of the Colleges.

3051. You would select the University teachers out of the College teachers?—Not necessarily, but I should say that preference should be given, because I would allow in the Honours Examination the candidate to be examined by his own Professor.

3052. Let us, for the sake of simplicity, call the teacher in the College the tutor, and the University teacher the Professor. You would have him examined by his College tutor?—Yes, and have him examined in the presence of others.

3053. So that you would make the examination a College matter with an external examiner?—As far as regards pass degrees. Then in respect of University prizes, honours, degrees, and so on, I thought in order to enable the candidate to show himself to the best advantage he should be examined orally, as a direct examination at least, by his own tutor. In that way the tutor of each College would come into the University examination work.

3054. But again with the supervision of an external examiner?—Quite so, and therefore the University Professor would also, I should say, be a member of the Examining Board.

3055. Now let us take the case of a tutor of the College, assuming my nomenclature, being appointed a University Professor—we will say one of the men at Trinity College is appointed a University Professor. Do you think that then he ought to give up his tutorship?—I think it would be an advantage, but I must confess that I have not considered that.

3056. It would become very vital when we come to the point as to how the thing is to work, for this reason, that if you appoint a man in Trinity College as a Professor, if you have no external rooms provided for him, there might be objections to your students coming to hear his lectures at Trinity College?—Not at all. There is no Catholic objection to that. As a matter of fact in Germany it is very frequently done.

3057. Then may I put it generally that you regard the Professorial staff of the University as persons appointed partly from and partly not from the College as it is, and there should be free intercommunication between the Colleges?—I desire such intercommunication. I think that would be one advantage gained by the two Colleges. There is no reason why if one College had a very distinguished Professor in a subject who was commonly regarded as a better man than the Professor of the other College—I see no reason why for that subject the students on one College might not go to the other.

3058. You would not regard it as necessary to establish a neutral place, a house and buildings distinct from the College buildings in which University lectures should alone be given?—For the work of practical examinations—

3059. That is another matter. I am talking of teaching—I do not see any necessity for any institution other than the two Colleges.

3060. Let me put it quite frankly: how does that differ from mixed teaching?—It does not differ from mixed teaching. It is the type of mixed teaching which I may describe as the acceptable. It is not the mixed teaching which we could not accept. I purposely drew the Chairman's attention to this, that when we speak at the end of our Memorandum about denominational education it is to have an opportunity of making the distinction between denominationalism, which is sectarian and denominationalism, which may be legally or by the operation of law in denominationalism, I think that if our grievances were got rid of, if we had University Professors on certain subjects, as I have indicated there is no reason why a Catholic should not go to

a distinguished lecturer on Classics or Mathematics or a Protestant not go to certain lectures in our College.

3061. May I take one other point. You have not, I think, at the Catholic University a Physical Laboratory up to modern requirements?—We have not.

3062. And they have quite lately had provided a new Physical Laboratory at Trinity College?—In the past few years. It was not provided by the University itself, but by the generosity of outside donors.

3063. In the case of a subject like that, where very expensive appliances are required, would you be content that the bulk of the laboratory teaching in Physics should be done in Trinity College?—I think that if we had a College we ought for the sake of, let us call it convenience and appearance, to have whatever College equipment the other College has. If, however, you took special equipment from Trinity College as the possession of Trinity College, and treated it, say, like the Library of Trinity College, as a University possession, that would be another thing.

3064. That might be done at once by making the Trinity College Professor of Physics the University Professor of Physics?—No. I think it would be first done by making the private equipment of Trinity College the possession of the University as such.

3065. Provided those difficulties are got over, you would not object to the bulk of the teaching being given by a Protestant?—As a matter of fact, the Professor of Physics in University College, of whom we are very proud, is a Presbyterian.

3066. If it is necessary to duplicate all the teaching in the one College and the other, if you have a laboratory for one and another laboratory for the other of the same size, the expense would be enormous?—Undoubtedly.

3067. But you would be prepared to get over that by taking such subjects out of the College range and putting them within the University range?—I would not take any subject out of the College range; I would take the provision for the University teaching of the subject, such as these costly instruments, from ranking as the private possession of a College and make them University property. It would then be a matter of arrangement for lecture purposes as to where the University lectures should be given for the employment of those instruments.

3068. Do you mean that the instruments should be sent from one College to another?—No; I mean that the one staff should not be the staff for both Colleges. I do not conceive how that could be made to work.

3069. You think the teaching staff would have to be duplicated?—Yes, of the Colleges.

3070. Do you know a laboratory which is under the control of two different independent heads?—There is a small laboratory belonging to the Royal University.

3071. It must be a small one?—It is a small one, and that is part of our grievance. Professor M'Clelland, who is a very distinguished student of the Royal University, and a Presbyterian in religion—he is also a prize winner of Cambridge University for research—has made use of the laboratory at the Royal University buildings, and is at the present time doing research work there in conjunction with one of our recent most brilliant students, Mr. Hackett. That is a case of a laboratory which is University property, and yet, so far as regards the Colleges that are concerned in the employment of it, there are several.

3072. I take it you have already said that you hold that certain subjects should be taught by University officials as distinct from College officials?—Yes, but not in the sense that there should be no provision in the College itself for teaching the students of that College in those subjects. For instance, to take the subject in which I am most concerned, I should not allow at all that it would meet our case if there were a University Professor of Metaphysics and no College tutor of Metaphysics in the Catholic College. Common reference has been made to the University of Bonn. There there is a Professor of Theology who is a Catholic, a Professor of Theology who is a Protestant, and there is a Professor of Catholic Philosophy. In that case he is a University professor, but the students who attend his lectures come from a gymnasium or school in which they have been thoroughly prepared. I conceive, too, that in the case of our Catholic College, we should have an efficient staff of University lecturers, or tutors (as you call them for convenience) to whom

the men could go. I urged this difficulty. I suggested, as an argument against the single College University, that there would be recourse to grinders, and that in fact the men most susceptible to injurious influence would just be the men who would fall into the hands of the grinders, and while we should ostensibly have taken precautions for guarding the faith of our Catholic students, we should, by the operation of that system, be bringing them into the danger we are so careful to keep them from. I should, therefore, have a University Professor in Philosophy, but also claim to have a proper School of Philosophy in the Catholic College.

3073. In the case of a subject like philosophy, where elaborate appliances are not necessary, that, of course, is comparatively easy, but I want to get you to tell me your opinion about the scientific part, because that is the one I am most interested in. In the scientific side of University work, is it or is it not your claim that you should have two laboratories, practically identical, with two separate staffs?—I believe there should be two College staffs, because there are certain scientific subjects that I am rather anxious to have Catholic professors of.

3074. CHAIRMAN.—Two staffs and one laboratory?—That would be possible as I conceive it.*

3075. Dr. JACKSON.—I should like to ask what the subjects are in which you think it necessary to have a double arrangement?—There are medical and scientific subjects, subjects that constitute what we call the anthropological sciences. I think the danger is not so great now as it was some years ago, and I should be prepared to find that our authorities would not be so insistent to-day as they might have been, say, twenty or thirty years ago on that point.

3076. And you think it would be necessary to have a double arrangement in physics, biology, and metaphysics?—Certainly, I think so in metaphysics, but not in physics, but, of course, I cannot offer an authoritative opinion on that, I am not, unfortunately, a scientist. But, as regards biology, yes, because that is a subject which could be taught in such a way, just like metaphysics, as to undermine the student's religion.

3077. Sir ARTHUR RÜCKER.—And chemistry?—I do not think chemistry is at all controversial.

3078. Dr. JACKSON.—I confess I thought that there would be little difficulty in providing professorial lectures which would be approved by Roman Catholics and by Protestants alike, and that then the College would supply such special teaching as might be necessary. I gather that, in your opinion, in at least the subjects that you named, it would be necessary to have a double arrangement?—I think it would be desirable. But let me make this supposition. Suppose the Professor were not only a man of acknowledged ability and reputation, but also a Catholic, I do not see then that the duplication would be necessary, for, I surmise, the Protestants would not object to him because he was a Catholic, and the Catholics being satisfied with regard to his scientific attainments and abilities, could have no difficulty either.

3079. CHAIRMAN.—It would be a duplication if one of the professors was a Protestant, and not if he were a Catholic?—If it were possible to raise the religious difficulty, I think it would be unfortunate. Of course, as I said, I cannot speak authoritatively on that, because I have not a sufficiently intimate knowledge of the sciences to know precisely where they could be brought into collision with faith.

3080. Dr. DOUGLAS HYDE.—Would the Catholic Graduates' Association be better pleased to have a second College inside of Dublin University, or to see a separate University established in Dublin which they could attend?—You will observe that if I answer for the Catholic Graduates I make them do what they are forbidden to do in Dublin. They are in favour of any one of the various schemes that give us equality.

3081. You consider that a second College inside Dublin University would give you equality?—Yes, I do.

3082. You consider you would have complete equality if a new University were established affiliated with Cork?—I did not quite catch what this second scheme is.

3083. A separate University?—What we call a University for Catholics?

3084. I call it a national University?—A national University, if you like.

3085. The Catholic Graduates have never expressed

any preference for one over the other?—Quite so; but if there were a possibility that the dominant practicable scheme of the moment were one of these rather than the other, we prefer to give, so far as it is worth, our whole-hearted support to the realisation of that scheme.

3086. Whichever you think would go, in fact?—Yes.

3087. Why do you object so violently to the reformation of Trinity College that has been put forward by the reformers inside Trinity College?—The first thing is that it does not give us equality. We look, as I put it, to the concrete case. There is a great number of traditions in Trinity College. We hear from various authorities that the atmosphere of a College is provided by the students. I do not believe that that is so. I venture to express disagreement with that, because we have to look to what colours the student's mind itself as a factor; and I believe the existence of certain material things and the presence of a certain type of Professor and so on in an institution helps to create the atmosphere.

3088. You believe that either under a fresh National University or under a second College inside Dublin University the people who would attend that College would tend to produce a different type of educated man from that produced at present?—I believe so. As Dean Bernard says, our ideals would be different, but I think he means to imply that our educational ideals would be lower. I do not agree that that is so, while I do say that our ideals would be to a great extent different.

3089. In what way would the type of man that would be educated in this College differ from the type that is educated in Trinity College to-day?—I think, as you yourself called it a national institution, it would be more distinctively Irish.

3090. Would you be satisfied, for instance, with a University on whose medals the head of Queen Elizabeth was stamped as a College honour?—Do you mean would the students be willing to accept that medal?

3091. Yes?—They accept the current coin of the realm irrespective of what the superscription is.

3092. I understand that you object to appointing Fellows in any other way than by examination?—I am sorry if I gave that impression. On the contrary, I applaud the proposal to leave it open to have a man appointed not because of the mere score of marks that he has made, but with regard to his general merit.

3093. Then I misunderstood you?—I am afraid I gave you a wrong impression. What I did point out, was that were Catholics forced to go into a single College University of the kind proposed, and that this excellent reform accompanied their entrance, there would be room for just what I do not wish to see, allegations of corruption or unfairness in the selection of Fellows.

3094. I am afraid I did not understand you?—I meant that if those two reforms, which are proposed by one and the same body, that certain inducements should be held out to bring Catholics into Trinity College, Trinity College remaining the single College of the University, and along with that (what I heartily endorse) a better method of getting the professorial staff created for Trinity College itself, if both those things were done simultaneously, that this religious animosity, which we are so anxious to be rid of, all this conflict from bringing education into the cockpit of political and religious warfare, would be intensified.

3095. In a reformed Trinity you would have your Fellows elected by examination?—Not necessarily. I advocate what is put forward here on behalf of the reforming body. They should have either one or two processes, either by examination, if the Governing Body so choose, or by election. I object altogether to a man becoming a Professor for ever merely through having won a Fellowship. I would allow him to hold his Fellowship as it is suggested here for a certain number of years in which he would have ample opportunity of showing whether or not he was the stuff to make a Professor of. Once he had been appointed a Professor I would appoint him for life.

3096. With regard to fees, do you think the fees in the existing Trinity College are too high?—That is another of our objections to going into a single College University, because we wish to have what I may style for convenience a democratic institution, one for the people, and while I said that we do not contemplate extending University Degrees to the labourer's son, we do contemplate the extension of the

* Note by Witness—Two College Staffs; and for certain Special research work, one University Laboratory. See answer 3105.

benefits of there being University education in our country to the labourer's son. Furthermore, if he be possessed of exceptional genius and ability—and such cases occur—I do not see why he should be excluded from becoming a Fellow and ultimately a Professor of the University. The fee difficulty, therefore, is a very great one. Unless there were two Colleges we should not be at liberty to so adjust our fees as to give entrance to precisely the class of people we wish to benefit, such as primary and secondary school teachers.

3097. And after twenty-five years you would be quite satisfied to have a purely academic government of the College?—Quite so.

3098. With possibly the College being brought into contact with the local body by the appointment of the Mayor of the city or somebody of that sort?—I think a great many of our association are in favour of that. Personally, I think academic government for an academic institution would be quite acceptable.

3099. With, if possible, one or two men thrown in from the municipal institutions to keep the College in touch with the life of the city?—Quite so, but I think in the course of time members of the municipal authorities would have already got the advantage of our College.

3100. Dr. COFFEY.—Am I right in thinking that your view about the University in relation to the circumstances of the people in Ireland is something like this, that the fees might be low and the standard high?—Quite so.

3101. With reference to the question of duplication, would you exclude any branch of the curriculum from the scope of the teaching of the Catholic College?—Not from the scope of the teaching. On the contrary, we desire to have everything done. We desire scientific research, we desire the utmost freedom of speculation in the region of Metaphysics.

3102. I mean in the ordinary curriculum—you would not exclude any branch of Physics from the scope of education in the Catholic College?—Not at all.

3103. Would not that involve some provision for laboratory teaching?—It would undoubtedly.

3104. And if the College were not possessed of such laboratories, and if the subject were not studied in the College, would not that College be distinctly inferior as an educational institution to the other College?—Yes. It would be so placed as practically to be not a University College at all.

3105. Therefore, you think there ought to be laboratory work for all the subjects of the curriculum which required it as a matter of course?—Quite so, but I understood, if I may say so, with regard to the question that was put to me, that I was dealing with a very expensive type of equipment for promoting research. It seems to me there is no difficulty in making higher research of that kind a University matter, but as regards the equipment of the College I think unless the College were properly equipped with all those facilities that you now refer to it would certainly not be entitled to rank as a University College at all. May I say that that is our objection to one part of the Robertson's Commission Report, that whether rightly or wrongly we consider phrases in it indicated a desire to deprive the proposed College of the Faculty of Science, introducing instead of it the Faculty of the Royal College of Science. That is a portion of the Robertson Commission Report which gave great dissatisfaction to the Catholic laity. It may be that we misinterpreted the intention of the report, but the words lend themselves, I contend, to that interpretation. We consider that the College would not be a University College if it had no Faculty and adequate equipment for Science.

3106. You would have the College fully equipped from the point of view that every subject of the curriculum was taught in the College?—Yes, and could be taught up to the highest requisite level.

3107. Supposing that in any one College of the University a great provision had already been made for the equipment of a special branch of Science, do you see any objection to having that provision utilised by the University, that is, by all the Colleges of the University, for higher teaching?—Personally I should like to have the level of equipment in the sister College made the measure of what we should get, but I answered Sir Arthur Rücker if it were made a fatal difficulty against us so that we were to have nothing whatever in the nature of facilities because of expense,

we might make the concession that certain things should be University property.

3108. But might not the level be obtained in another way—might not you have another subject developed in the College, which would come as a rival?—If you had Physics specially well done in the older College, you might have another branch, say, a section of Biology, developed in the new, and in that way you would obtain without duplication, in the expensive meaning of the word, equality.

3109. It seems to me that you have hinted at something like that in your paper, because you say that the new College should be different in type from the existing College of Dublin University?—Yes.

3110. Could you give us some example of what you mean by different in type in that way?—We regard Trinity College as being up to the present largely what is called in a contemptuous sense, mediaeval. It teaches Classics and Mathematics; but it takes no account of the newer developments of thought; it has no regard to the needs of the nation outside of it. Its system of appointing Professors is a system of a close body, it is in fact cloistered from living communication with the nation outside except in so far as occasionally it becomes aware of this sufficiently to be hostile to it.

3111. But in relation to the scope of education and the special developments of education in the new College, would, for instance, your own subject of Philosophy be more favoured in a Catholic College than it has been in the Dublin University?—Undoubtedly. I have referred to that already. The absence of a Faculty of Philosophy is a thing which we cannot understand. There is—and it is from our point of view essentially remarkable—no Faculty of Philosophy organized in Trinity College. Philosophy, so far as I know, is a mere accessory there. The courses are antiquated. You have Stewart in Moral Philosophy. You have Locke on the Human Understanding, and you have a little book of Psychology. Anyone may be a Professor of the subject to-day, and anyone may be a Professor or Examiner in it tomorrow, whereas I say in so small a place, cramped as University College is, we work up Philosophy on a much larger scale, and we pursue the study of the subject with regard to all the latest developments of thought.

3112. In regard to the character and scope of philosophical teaching in University College, could you tell us if you have trained a number of graduates who are the class from which the staff of the College might be drawn in future years?—We have. We have men who, in competition with Protestants, have won Junior Fellowships and studentships and some of these men have gone after their graduation to German Universities and have attended courses there.

3113. Not to study Thomistic Philosophy?—Not at all, on the contrary. Our latest accession to the Junior Fellows has been for the last two years under Professor Windleband in Heidelberg, and he was at Bonn in the year before that, and there he had the advantage, I may add, of the German system that he was free to move about, to take one part of his course in one College, and another in another, and to get his degree at a third.

3114. So that it is likely that the new College would quickly obtain a large staff of teachers?—I believe the staff already exists. I refer not alone to those that are already in office, but to many others whom we cannot, because of our comparative absence of endowment, employ.

3115. Mr. KELLEHER.—I would like to ask the Professor one or two questions on a matter that he rather suggested than developed. Do I understand you to say that if the proposed reforms of Trinity College are carried out the people would not go?—I firmly believe that if they were the people would not go.

3116. That seems to point to the fact that there is something much stronger than the merely religious objection to Trinity College which prevents the people from going?—I have said that we must take the case not as an abstract question, but in all its concrete fullness. I believe that besides the religious difficulty there are other difficulties; there is the political and national sentiment. There is the desire for a collegiate institution in which Irishmen could be Irishmen, and in which all the ideals that are associated with their country in the past could find their fullest realisation.

3117. And in addition to that there is this question of fees?—Quite so. You will observe, therefore, that my case is not that there is no religious difficulty. It does not follow that because if the religious difficulty did not exist there would still be a university question, that therefore we have no feeling in religious matters. I do contend that if there were no religious question at all in this business there would still be a university demand.

3118. Then there are three questions, the religious question, the political question, and the question of fees?—I am afraid I could not reduce them to three, but if you like for the purposes of examination—

3119. At any rate there are those three. Is it possible to settle those questions separately—do not you think that as one of the heads of the reference to this Commission is to inquire as to how Trinity College can be made more useful to the country, we might have a modification of Trinity College by which Catholic sentiment might be consulted, which would enable those Catholics who at present object to Trinity College on Catholic grounds to come in; if we had a second something founded which would enable those who object to Trinity College not alone on religious, but political grounds, and if we were able to satisfy them with that second solution; and if by a third process we were able to settle with the people who could not afford to pay the fees of Trinity College, do not you think we might consider we had the whole question settled?—But you will observe there are very large assumptions in all that—firstly, that you can make Trinity College without a change in its University system, acceptable on the religious ground; secondly, that a vague institution which you describe as a something could be got that would satisfy the other demands. I must say it is like some difficulties about the Infinite—the difficulty has not been propounded in such a way that it can be met.

3120. If we could modify Trinity College in such a way as to make it acceptable to those people who object to it merely on religious grounds, would not that be advisable?—If you could, but that has not been done in any of the proposals I see here.

3121. Do you not think that could be done if there were a provision made for the religious exercises of the students?—*Witness*—What are you to do about the Divinity students? I must reiterate that we, as laymen, are vitally interested in the question of the higher education of our clergymen. Now it is for our clerical authorities to determine where and under what circumstances the education of the Divinity students should be given. We are aware, too, that the Catholic authorities have made this very difficulty. You must have the Catholic clergymen educated in a religious institution, religious in the sense that the institution is either Catholic or Protestant; and it has been pointed out in the papers sent in on behalf of the Committee of the Catholic Bishops that with the Catholic Divinity School and the Protestant Divinity School in Trinity College the place would be neither Catholic nor Protestant.

3122. I will make the matter a little more concrete. Suppose that Trinity College is modified along the lines that have been proposed by the Fellows, and the lines that have been accepted by a great number of Catholics in the country?—Excuse me, I am not inclined to grant that.

3123. I suppose it has been accepted by 400 or 500 Catholics, has it not?—I do not agree with that, because I know that some of the signatories to that have signed under a misconception of what the thing meant, and on representations which were not justified. I contend, in fact, that the signatures to that do not represent what they appear to represent.

3124. Suppose I go on to say that if we modify Trinity College along the lines laid out in that scheme and if, in addition, we were so to modify the Queen's College, Cork, as to give it University powers, and to affiliate with it in some way—I do not want to go into details—a Theological Faculty, do not you think we might get a solution of the University question in that manner?—Has not that been suggested before, and has it not been dealt with many years ago? Are we, in the name of removing our Catholic grievance, to be provided, for the large body of our people, with what would be a Provincial insti-

tution? Are the Protestants, in the name of Catholic equality, to enter into what I may call our inheritance, that is, to make our agitation for Catholic equality eventuate in a reform of Trinity College? That is precisely the reason why you will notice we have left out all mention of alterations in Trinity College here, because we refuse to become agencies for securing the reform of Trinity College at the expense of the advantages for the whole nation which we think we are entitled to claim.

3125. If it is found impossible for one reason or another to found in Dublin a University endowed on the same lavish scale as Trinity College?—Excuse me; we do not regard Trinity College as endowed on a lavish scale. We are quite prepared to support our Episcopalian fellow-countrymen in a demand for more endowment.

CHAIRMAN.—Mr. Kelleher will strike out the word "lavish."

3126. Mr. KELLEHER.—I will, with pleasure. I will not argue the question. (*To Witness*)—The question was that if it was found impossible to establish in Dublin a College on the same scale as Trinity College—that is your demand, is it not?—That is one of our demands.

3127. One of your demands is that this College should be in Dublin?—Yes.

3128. If reasons are given which make it impossible for Government to found in Dublin a College on the same scale as Trinity College, do you not then think it might be possible to find a solution by a slight modification of Trinity College, and by the creation of a University in Cork?—I do not, because our people stand solid—with so much solidarity with regard to this thing that we will not permit this agitation which was carried on under grievous disadvantage to ourselves for upwards of half a century, to be converted into a scheme for the betterment of Trinity College for those who, Episcopalian Protestants or Presbyterians, or what classes you suggest, are willing to go to it. I think our demand is not to be divided into sections such as you suggest; it is a national demand.

3129. It is no longer a religious demand?—It is a national demand, precisely as it is a religious demand.

3130. But you make it an essential condition of any solution that this College, which is to be created, should be founded in Dublin?—I have not claimed the endowment or creation of a single College at all, except in connection with Dublin University. In that event undoubtedly it should be in Dublin, and it should be on the same scale. It should be as a material object quite as indicative of status as Trinity College is.

3131. If you were given an undenominational College having University powers, would you be satisfied that that should be founded in some place at a suitable distance from Dublin?—I believe not.

3132. You would insist it should be founded in Dublin?—Yes. It would otherwise have an element of inferiority, or it would be what I have called "Provincial" from the very start. I think we stand together upon that point.

3133. LORD CHIEF BARON.—I want, in consequence of some of the questions asked you, to enquire whether you have formed any estimate in your mind as to the number of students such a College as you have sketched, that is, a College equal in dignity to Trinity College in the University of Dublin, would have when it was in full operation, say ten years hence?—Yes.

3134. Have you formed any estimate of the number of students? In your opinion would it be equal to the number of students at present in Trinity College?—I think that in, say, fifteen or twenty years it would undoubtedly be more; but I must confess that in the opening years I do not think it would.

3135. Of course, not in the opening years, but I mean in its full development?—Just so.

3136. May I just call your attention to some of the few sources from which students would be derived. I suppose you admit that the Catholic clergy cannot afford to be beneath the laity in education?—I do. I think it would be a very grave danger—

3137. Therefore I suppose that we could count upon a considerable body of the Catholic clergy of the highest education?—Quite so. I think the mistake is often made in looking only to Maynooth, for instance, whereas they would come from the religious Orders as well.

3138. Take the secular clergy. The Bishops have already signified their desire that every student who is allowed to enter Maynooth shall have matriculated in a University. At present it is the Royal. There is a large source of supply?—Yes.

3139. Then take the regular Orders. You are aware that in some of those one of the principal studies is that of Philosophy?—Quite so.

3140. It is so entirely connected with Theology that it must be so?—That is so.

3141. Do you think that we could count upon a supply from that source?—I am quite sure of it. Besides in connection with the development of the scientific teaching of education we would have the Christian Brothers, who are a very important body as regards primary education and as regards secondary education at the present moment. I think we could count upon all the brothers in that institution who are in the institution for no other purpose than to become teachers.

3142. At least, those of the highest intellect?—Quite so. As a matter of fact, it is a teaching Order altogether, and they contemplate permitting no member of the Order to engage in secondary school work who is not of the highest class.

3143. The next class that I was about to mention to you were the teachers in secondary schools. Are you yourself aware, as a matter of fact, that the greater number of our teachers in secondary schools are uneducated persons themselves?—That is true to a great extent, but I think that that can be exaggerated, because rightly or wrongly, the secondary schools of Ireland for Catholics are largely in the hands of religious Orders. Many of those religious Orders do give something of a training to their teachers, that is to say, not what I would desire them to have, but an approach towards it. At least, they get a superior education. Many of them go to the Continent; many of them hear lectures, therefore, and have been in the hands of competent teachers of the highest class.

3144. Are not there also a number of students in diocesan Colleges?—There are.

3145. Is there a diocesan College in every diocese in Ireland?—Yes; it is practically an intermediate school as well.

3146. But none of the teachers of those diocesan Colleges belong to the religious Orders?—No.

3147. Are you yourself aware that there is a lack of education in the persons who teach in these diocesan Colleges?—I am. I may go even farther. I had an opportunity at a meeting of the Catholic Truth Society at which Dr. O'Dwyer read a paper on University education, of complaining in the presence of an audience that included nearly all the Bishops, that, as an Examiner to the Intermediate Board, I found that we were at a very great disadvantage from the fact that our secondary school teachers were not trained teachers because of our lack of a University. I made that public as a matter of my own experience, and the statement was applauded; it was received sympathetically.

3148. I pass from the secondary teachers. As far as primary teachers are concerned, there are some training colleges, are there not?—There are, and they are not only denominational, but sectarian,—denominational in a most extreme sense.

3149. At those denominational Colleges they have not the advantage of Professors who are necessarily University gentlemen?—They have not.

3150. You have to add, then, to all of those the proportion of Catholics that you are aware are highest in the intermediate examinations, and enter the Royal University. You are aware that it represents a considerable proportion of those that enter the intermediate education grades and graduate in the Royal University?—Yes.

3151. Having regard to all those classes, have you any doubt that when this new College is in full operation the number of students will probably largely exceed that of those of Trinity College?—I have no doubt at all. I would add to the list that you have enumerated that I know from my own experience as a professor in one of the training colleges for the last seventeen years that many of the teachers who enter for a training have gone through the intermediate examinations. Indeed, I may say that I recognise them after the first four or six weeks by their superior development of intelligence. I believe that in the

interests of primary education opportunities ought to be afforded for teachers of this type who are in training as primary teachers to get the advantage of University lectures. I would add those to the estimate that you have indicated.

3152. CHAIRMAN.—You said, I think, that there is no Faculty of Philosophy in Trinity College?—No organised Faculty.

3153. I think you said that only two or three rather elementary books were called to the attention of the students?—That is in the ordinary undergraduate courses.

3154. Is that so? I look, for instance, at the Senior Freshman year, and there I find there are separate books for the Michaelmas Lectures and for the Hilary and the Trinity. Amongst them are Monck's Logic, Keynes' Formal Logic, Mill's Logic, Bacon, Novum Organum, Book I. and Book II., Aphorisms, I.-X., and Bacon, De Augmentis Scientiarum, Book V. For the Junior Sophister year there is a whole series of books. Hoffding's Psychology, Locke's Essay on the Human Understanding, Kant, Kritik of Pure Reason, Schwegler's History of Philosophy. There seem to be a considerable number of books?—May I reply to that that I really do not see any reason to modify my statement. I regard it as the History of Philosophy. Schwegler's History of Philosophy, and those are not altogether a system of philosophy.

3155. There are more than two or three books there?—Two or three, of course, is a phrase which means a comparatively small number. Will you allow me to point out that there is no indication of a system of philosophy being taught?

3156. But you rather under-rated, did you not, the number of books which are called to the attention of the students?—I indicated, undoubtedly, the standing of what ought to be a Faculty of Philosophy of a great University.

3157. Will you allow me to call your attention to the course for Senior Sophisters. Under the Michaelmas Lecture and Hilary Examination are Bishop Butler's Sermons, Butler's Essay on Virtue, Aristotle's Nicomachean Ethics, Aristotle's Terminology (to be known in the original), Zeller on the Stoics, and Mill's Utilitarianism. That only refers to the Sophisters. When you come to the Moderators, there the books mentioned are so numerous that I will not trouble to read them. Do not you think you rather under-estimated them?—My point is that there are books, but there is no philosophic system.

3158. That would be another point?—Ah! it is a serious point, because it means that the whole thing might be collectively grouped under the heading "History of Philosophy." I think that is a very serious disadvantage. Without stretching language in the least, one may say it is only the history of philosophy.

3159. You have expressed a strong opinion in favour of a union with the University of Dublin rather than the Royal University. I think Monsignor Molloy was Rector of the College that you are connected with?—With the Catholic University. May I explain that. When what used to be called in Newman's days the Catholic University became the University College. The late Dr. Molloy was Rector of the Catholic University, but Father Delany is President of University College.

3160. But that was not a chartered body?—It is chartered by the Pope.

3161. But not chartered by the Crown?—No. There are several Colleges. For instance, University College, Dublin, is one of the Colleges, and Maynooth College is the Theological College of the Catholic University. The late Monsignor Molloy was Rector of the Catholic University, but Father Delany is President of University College.

3162. Monsignor Molloy was a man of great influence in Catholic educational matters, was he not?—He had practically little or nothing to do with University College.

3163. Was your attention called to a letter which he published in one of the papers, in which he expressed a strong preference for union with the Royal University rather than Dublin University?—But that is not, I submit, with regard to the total merits of the scheme. It was with regard to which was the more feasible, the more likely of realisation.

3164. He dealt with it under two headings, the practical heading and also the educational heading, and

on both grounds he preferred the Royal—am I not right?—Yes, I believe, quite right; but still that is the opinion, and has the weight of one individual only.

3165. Just so, but I wished to draw your attention to it?—There is this to be said, if I might press the point. What was in favour of the scheme was the Robertson Commission Report, but that is with regard to a reconstituted Royal University, a teaching University, a very different thing from the Royal University as at present existing.

3166. Your objection to the reconstituted Royal University on the lines of the Robertson Report would not be so great as it is?—It would not be so great; the circumstances are so entirely different—

3167. As between a reconstituted Royal and a reconstituted Dublin, you, perhaps, have not much to choose?—So long as Queen's College, Belfast, is there as a constituent member of it, I think, we have a great deal to choose. If we could get rid of that, so that it could become the University for Ulster, then we should be left with a University which was practically a University for Catholics. I believe that was what was operative in the mind of gentlemen like the late Dr. Molloy, that they have here a nucleus of a system which would gradually develop into a University for Catholics. It is problematical if the Presbyterians would accept a University if by doing so they were to give us one; but here is a Commission sitting which allows an opportunity for a Report in favour of the two-College scheme quite as strong as the Report of the Robertson Enquiry.

3168. Dr. JACKSON.—When you complain that in Trinity College, Dublin, there is no organised system of Philosophy, do you mean that there is no authorised system of Philosophy?—I do not. I refer to the fact that there as with regard to other Faculties the Professorial staff is elected from the Fellows, and the Reform Party in Trinity College wish to have all their Faculties organised. In the case of Philosophy there is no provision, so far as I know, except that of one Professor. There is one Professor—I think, Professor Macran, who is what is called Professor of Logics and Ethics.

3169. Mr. KELLEHER.—There are three other lecturers besides the Professor?—But are they not in the nature of what we have in University College, of tutors who assist in the work?

3170. No; they are Fellows of the University and teachers. *Witness*—Are they recognised as Professors of Philosophy?

Mr. KELLEHER.—Our system is different from your system.

CHAIRMAN.—They are recognised as teachers.

3171. Mr. KELLEHER.—They are the Honour Lecturers.—Are they officials of the College or University?

3172. They are members of the Corporation; they are Fellows. There are three Fellows of Trinity College, Dublin, for the Honour Lectures, besides the Professor of Philosophy. A Fellow of the College takes precedence over a Professor of the University.—I know; I know the Professors wish to do away with that.

3173. Dr. JACKSON.—As regards the subjects which the Chairman enumerated, I notice that you seemed to object to the variety of them?—Not to the variety.

3174. The want of unity in the list?—Quite so.

3175. In fact, you desiderate a special system?—I remember that Dr. Starkie pressed it as a great disadvantage of the Royal University that those who come in on what we call course two, that is the course dealt with in the Queen's Colleges, have no system of Philosophy, whereas we, with course one, have a system of Aquinas.

3176. In short, you have a definite philosophy, and would naturally like that one system to be taught, while the Protestant foundation would naturally like to have freedom in the expression of philosophical opinion?—If you will permit me to say so, I see no antagonism between those two, because you will observe that they may teach according to Kant's system or the Hegelian system. What I object to is this, that mere history of Philosophy should absorb the whole ground of Philosophy. We, too, have the History of Philosophy as part of our course in which a man is obliged to know the varieties of thought and their development and their inter-connection. We teach according to certain principles, but there are many problems which were not dealt with in mediæval times which we deal with. I may add in this that in the Encyclical in which the late Pope recommended

to Catholic schools the study of Philosophy, what was expressly mentioned and recommended was "*secundum mentem Aquinatis*," and it was expressly mentioned that what had scholastically been taught or suggested or speculated rashly, without due grounds, was not to be taught, that is mere authority of Scholastic Philosophy, as mere authority was not to oppose speculation.

3177. Now, I want to ask you some questions about another matter. Do I understand you to hold that if there were to be a new College, it would necessarily represent, on its staff and in the scope of its work, all the subjects of academic study?—Quite so; yes.

3178. Then, I do not quite see how this new College would differ from a new University, because I should certainly have thought that the Colleges would naturally help one another and the University by doing something towards the sub-division of labour?—I may say they would. I am quite sure that in the development of the Colleges, as I tried to indicate, one College would be more frequented for one subject than another.

3179. But you think that every subject must be represented in both Colleges?—To begin with, because I think the specialisation and the advantage of one over the other should be left to natural evolution. If we begin with one or more left out we begin with an admitted inequality; we leave ourselves open to aspersions.

3180. In your own paper you note certain deficiencies in Trinity College. I should have thought it would have been obvious for a new College to take up one or other of those deficiencies, and that it should not be laid down as a principle that the new College had to repeat everything that was good in Trinity College, and that Trinity College was then to take up one of these subjects just because it had been added to the new College?—If our new College is so constituted in Dublin University, as a member of it, that we are free to expand with regard to these subjects; after all, except as a matter of patriotism, I do not see why we should interest ourselves in bringing Trinity College up to our level.

3181. I thought that you laid down this principle for yourself, and naturally it would apply also in the other case: that is to say, that if one College saw the other College strong in anything, it ought immediately to raise itself to the corresponding strength?—I do not think that we meant that. We drew attention to the national deficiencies of Trinity College. This was partly for argumentative purposes to show a reason why Trinity College does not satisfy the requirements of the nation at large. As I said we, except as a matter of patriotism and good feeling for our fellow-countrymen, have no interest in promoting developments for them except in so far as doing so secures the removal of our grievance in regard to education.

3182. I want to get quite clear about your views as to examinations. I think you were of opinion that a candidate for a Degree, or, I suppose, for any honour, should be examined by the teachers of his own College rather than by University authorities, who might, of course, belong to the other College?—I think that as regards pass degrees merely that each College might examine its own students, the examinations being conducted in the presence of what for that purpose I may call an external examiner. That might be if you like the Professor from the other College, or he might be an absolutely external examiner. As regards Honours Degrees, and University prizes, I think (it is a mere detail) that it would be advisable if the leading examination, the examination in chief, the direct examination, were conducted for the candidate by his own Professor, who knows what he has been studying and the line he has been following. But that this should be the sole examination that he should undergo I do not suggest.

3183. I want to know what this examination would be. Are you assuming it to be necessarily an oral examination?—Both oral and written—

3184. The written examination, then, would not be on papers set in common to the two Colleges?—So far as regards pass degrees no, not necessarily.

3185. In fact, there would be private examinations for each College, though the other College would know what was going on?—Quite so.

3186. I should think that that would be a very unsatisfactory way of testing the acquirements of the students in a University?—But I assume that the educational level of the University would be kept up to a

very high degree in both Colleges by the University authority.

3187. But I do not quite see how the level is to be kept up, if the examinations are to be separate?—It would not be wholly separate, because it is always within the competence of the external examiner (as in the case of the Medical examinations, for instance) to condemn the examination either as insufficient or otherwise. It is not a mere theoretical scheme, *in vacuo*; the arrangement is general with regard to Medical examinations under the supervision of the General Medical Council.

3188. It may be possible, perhaps, in pass examinations: but when you are going to do anything more, I should have thought it necessary to give each examiner full powers?—You mean by each examiner in this case—both the examiner of the College and the external examiner?

3189. I mean that an examiner must take a part of the examination and see the work of all the Colleges?—I have no objection to that whatever.

3190. And mark it?—If he pleases.

3191. Then, I am afraid I still do not understand your difficulty about grinders. Will you explain it once more?—This is what happens. Perhaps I will make my position clearer by giving a concrete case. As regards the Royal University examinations in the subject with which I am connected, we have the palpable fact that students go to grinders; they do not learn the subject. Certain things are "tipped," as it is called, to them—"You will be asked this; you are likely to be asked that." They are provided with ready made answers about those topics. If by any chance the examination covers that ground it will happen in many cases that the candidate is bound to pass. We have no means of preventing his passing even though we feel that there is this cramming at work. I think that that evil would arise and must arise in a case where, as happens in Trinity College, you have so much of this private teaching for an examination.

3192. I am afraid I do not see how this is going to be more prevalent under a changed system. I understand that somehow or other the grinding system seems to you to be an objection to the proposed changes. Or are you making these remarks independently of the proposed changes?—I think it would affect a single College University badly, because there you would always have the sole determining body in the work known beforehand. It would have a certain amount of permanence and continuity in it. I think not only would you have the cramming evil at work there, but you would always give rise to this outside criticism of imputing inferiority, corruption, and so on.

3193. When there are two Colleges, then, the grinding system would occasion talk on the part of one College against the other?—I do not think the evil would be so bad in the case of two Colleges. It was to obviate that evil that I suggested that the examinations should be conducted as I mentioned.

3194. Mr. KELLEHER.—You suggested at one time that the religious question was complicated by the question of grinders; I think you said that?—I did not mean to give that impression. What I said in this connection was that the reforms proposed by the reformers in Trinity College would give rise to that objection, because what they, as I think rightly, demand is that it should be within the College's competence to elect a candidate as a Fellow one who had not obtained the highest marks, but who had got qualifying marks, and

had published a book, and was known to be in his College work an excellent man. I say that if you introduce that desirable and admirable reform in the case of a one College University with the Catholics and Protestants in it competing, that the outside public will on occasion be too swift to impute dishonest motives, for it may happen that the Catholics would say—I make the odium belong to our side—that a Protestant has been appointed a Fellow though a Catholic got higher marks than he. All that Mr. Gwynn in his paper says about friction bringing education into a cockpit where it should not be, and all that he says with regard to that against a two College scheme, applies *a fortiori* to the one College scheme, for there public animosity would be still greater, and the desire to criticise and show up unfair treatment would be ever so much intensified.

3195. CHAIRMAN.—Do you think experience shows that that is the case?—Yes, I think so.

3196. Take Trinity College, with such an infusion as there is of Presbyterians and Protestants and Catholics in it, do you think that that feeling of hostility and jealousy exists?—No, because the circumstances are quite different. Those gentlemen, as I say, who go in there, go in of their own accord.

3197. Take the Colleges of Oxford and Cambridge, do you think that feeling exists there?—I am sure it does not; the circumstances are quite different.

3198. I do not see why this feeling should exist where there is a single College?—I am sorry I did not make my meaning sufficiently clear. If you will permit me, I should like to make my position a little clearer. I say that the case of the present Catholics in Trinity College is not an analogous case. The Catholics who go in there are welcomed; the Catholics who remain outside have no interest whatever in scrutinising what goes on there; they have no interest whatever in seeing to the promotion of such gentlemen, whereas, if by what would purport to be a legislative solution of our religious difficulties and disabilities, Catholics were obliged to go in to the single College University in order to get degrees and so on, then public attention would be focussed upon the work of the University, and allegations of unfair play would undoubtedly be made.

3199. I am sorry to hear it?—I believe that is so, whereas that rancour would be altogether done away with if we once felt that our grievances had been disposed of satisfactorily and permanently.

3200. Dr. CORREY.—In your statement you say:—"Thus a Junior Fellow who obtained his Fellowship by high marks in Mathematics may to-day be a Professor of Geometry and to-morrow examine candidates in the works of Locke." Is that what you refer to in the statement you make that there is no organised Faculty of Philosophy?—Quite so. It is not an organised, systematised arrangement. That is the kind of thing that is done in a secondary school where, on account of paucity of tutors or teachers, the one man has to teach a whole lot of subjects that are not cognate subjects.

3201. Do you mean there is no person on the College staff who is devoted solely to Philosophy?—Quite so, and whose whole purpose in being there, and whose whole aim in life, is to keep himself acquainted with the developments of Philosophic thought. It is not in his interest to devote himself to Philosophy. Therefore the College must suffer.

The Witness withdrew.

The Commission adjourned until the following morning.

NINTH DAY.

THURSDAY, NOVEMBER 8TH, 1906,

AT 10.45 O'CLOCK, A.M.,

At the Royal Commissions House, 5, Old Palace Yard, Westminster, London, S.W.

Present:—The Right Hon. Sir EDWARD FRY, P.C., D.C.L., LL.D., F.R.S., F.B.A. (Chairman); The Right Hon. C. PALLES, P.C., LL.D., Lord Chief Baron of the Exchequer in Ireland; Sir THOMAS RALEIGH, M.A., D.C.L., K.C.S.I.; Sir ARTHUR RÜCKER, M.A., D.S.C., LL.D., F.R.S.; HENRY JACKSON, Esq., D.LITT., LL.D.; S. H. BUTCHER, Esq., M.A., LL.D., D.LITT., M.P.; DOUGLAS HYDE, Esq., LL.D.; DENIS J. COFFEY, Esq., M.A., M.B., F.R.U.I.; S. B. KELLEHER, Esq., M.A., F.T.C.D.;

and J. D. DALY, Esq., M.A., Secretary.

H. BROUGHAM LEECH, Esq., LL.D., Regius Professor of Laws, called in and examined.§

LONDON.
Nov. 8, 1906.
H. Brougham
Leech, Esq.,
LL.D.

3202. CHAIRMAN.—I believe you are Regius Professor of Law in the University of Dublin?—Yes.

3203. How long have you held that office?—Since 1888.

3204. You have been good enough to give us a note of the subjects upon which you desire to speak to us?—Yes.

3205. Perhaps you will just address us upon the points which you wish to make. I might just remind you that we have had your paper fully before us, and we are quite familiar with that?—I wish first to refer to that, and to say that it contains a scheme which was based on the Parliamentary paper of 1889—that is paper No. 334. It appeared from that paper that the income of the College was £56,000. It turns out now (it was a great revelation and surprise to most of us connected with Trinity) that the income last year, 1905, was £76,000. Of course that would modify the remarks I made to some extent, in this way, that my scheme might be brought into operation much more speedily than if the income was only £56,000. Of course it is easy to see now, on looking at the Parliamentary paper, the mistakes and omissions that the Bursar of that time made. But that is not of much importance; I thought it of much more importance to ascertain whether the present financial statement laid before you is correct; and accordingly, as, although I am not a financier, I still have had a little experience in financial administration, I have examined it with that view. I find that in the year 1905 the fees put down as paid by students amounted to £10,154 4s. 0d. (page 9).^{*} The number of students in January, 1906, was 1,114 (page 21).[†] That means, I assume, that the number of entries in the four preceding years was 1,114. If you tot up the entries in the four preceding years you will find that they come to 1,076. That, however, is not of very much importance from the point of view which I am going to mention. We must in all cases deduct from the number of fee-paying students certain persons, such as Sizars, who pay no fees, and Scholars, who pay a fee of a guinea a quarter; but we may take it, to be on the safe side, that there were in January 1906 at least 1,000 fee-paying students in the University. Now, the fee that a student pays is sixteen guineas a year, and 1,000 fee-paying students would therefore pay in the year £16,800. I find myself unable to reconcile that with the figure of £10,154 4s. put down in these accounts.

3206. Have you made enquiries at the office with regard to this?—No, I have made no enquiries at the office.

3207. I do not find any fault at all; I only ask for information, because, of course, a discrepancy appears here, and very often apparent discrepancies of

this kind may best be explained by making a few enquiries?—As a matter of fact I did not make any enquiries.

Dr. COFFEY.—I asked the Provost a question in that connection when he gave evidence. The fees paid to the Junior Bursar are not put into the total.

CHAIRMAN.—That is in his evidence, is it?

3208. Dr. COFFEY.—Yes?—Where are these fees put?

3209. They appear in the incomes of the Junior Fellows?—

Well, the explanation is not clear, as all the annual fees are paid to the Junior Bursar, but to proceed. The entries in the year 1905 were 266, and if we deduct from them certain persons, that is Sizars, who pay no entrance fees, and assume that 250 persons paid fees, that comes to £3,750, and if that is added I make the fees that were paid in 1905 £20,550. Then, if you take the entrance fees distributively, each student will pay £20 11s. The same thing occurs as regards the previous years, 1902, 1903, and 1904, in which the fees are £8,022, £8,049, and £8,658. I merely mention these things as requiring explanation. The second point that struck me was with regard to the dividends from investments. The Parliamentary paper gives the dividends from investments in 1888 as £7,107 0s. 3d. That was practically the same as in 1901, when they were £7,203 3s. 6d. In the year 1902 they jumped to £9,022 12s. 7d, which is an increase of £1,900, representing, I should say, a capital of £60,000 or thereabouts. I find also in the statement that from October 1890 to October 1903 there was spent on buildings £58,492 15s. 1d. These two sums make together nearly £120,000, and it is difficult to see where they come from. Moreover, it may be worth while to remark, that while all this was going on, whenever anyone proposed any improvement he was always told that there was absolutely no money whatever. Some six or seven years ago, when I was a member, as I am still, of the Academic Council, I proposed the creation of a Chair of Classical Archaeology, and went to some little trouble to make a statement to the Council of what had been done in various countries where these operations were being carried on, and also what was being done in the various Universities in England and elsewhere, and particularly in America; but I was met by a letter from the late Provost, who was absent on that occasion, stating that there was no money. The proposal was opposed also, on the same grounds, and also on the merits, by the present Provost, and an amendment carried to the effect that if anyone was willing to endow the Chair the Council would be willing to create it.

^{*} Appendix to First Report (Cd. 3176), 1906, page 9.

[†] *Ibidem*, page 21.

§ A Memorandum by the Provost of Trinity College with reference to certain observations in Professor Brougham Leech's evidence is printed at page 495.

3210. CHAIRMAN.—Since then they have never appointed a Professor of Archaeology?—Never; the subject has never been mentioned.

3211. What year was that?—I think it was in 1898—about 1898. Another point in examining these accounts that appeared to me to require explanation was the fact that in 1905 there is put down as part of our receipts—that is of our income—a refund from the Income Tax Commissioners, the sum of £679 17s. 8d. Now the word “refund” indicates, at any rate, that that money had been paid over beforehand, and I cannot understand how that is to be counted as receipts or as income any more than the deductions immediately following of £2,320 14s. 9d., put down as income tax deducted from payments made. It appears to me that that is not income. If you pay a man a salary and deduct certain moneys from that salary for the purpose of paying it over to the Income Tax Commissioners it appears to me incorrect to put that down under the head of receipts.

3212. Is not that a mere question of form? We do not want to go into anything that is only a matter of form. Supposing it is put down on both sides. We think you should hardly occupy our time with mere questions of form?—Very well. I do not think it a question of form, but I will waive that point. Then, confining myself to points that appear to be incorrect, I will proceed. There were several cases in which I checked the figures. I find the Divinity Examination fees stated to be £230 10s., and adding up the fees paid to the Divinity Examiners I find they should amount to £202 19s. There is only a difference, it is true, of thirteen per cent., but still that is something. In 1905, I find it stated that the sums paid to the Junior Fellows amounted to a gross sum of £18,909 15s. 6d. On adding the items together I find it should be about £800 more. These are merely tests, and I mention them as being possibly matters in which correction might be made. Finally, with regard to the last financial point that I make, I find that there is a loan from the Bank of Ireland on which interest has to be paid. There was no loan in 1901, but in 1903 there was paid as “interest” on loan £1,039—I suppose at five per cent., representing about £20,000 in 1903. It was reduced in 1904 to £550, and in 1905 it had come down to £249. I do not see why, if we have such a large sum invested, we should pay interest to the Bank of Ireland at five per cent. That is all I have to say on that head. Next, I should like to mention some points in connection with the system of government, to which I attach great importance. Three plans have been laid before the Commissioners. One is in No. 18*—that is the plan of the Bursar, Dr. Tarleton; one is No. 5,† and one is my own in No. 15.§ It appears to me that the Bursar’s plan preserves the worst features of the existing system. He preserves the examination system for Fellowship, and declares that that is the only safeguard against political or religious bias. He forgets that the Council have for twenty-eight years been electing Professors, and that no idea of this sort has ever come into their minds. Furthermore, the system that he suggests is complicated in the extreme, with its Provisional Fellows, its Tutors, its Tutor-Professors, and its Tutor-Assistant-Professors; and he preserves the distinction between Senior and Junior Fellows, which I think is also objectionable. One remarkable point in it is that at the election of the annual officers he brings in for one day three additional Senior Fellows, the result of which, of course, would be to keep these same lucrative offices now enjoyed by the Senior Fellows with the Senior Fellows still. He also, as I said, preserves the examination system for Fellowships, which I believe to be the fatal malady of the whole institution. It prevents us from getting in any new blood. The incomes are so small that the Arts Professorships have to be given to Fellows. I may mention, too, that after payment of certain small sums by the Junior Bursar he proposes to divide the residue between the Tutors, Tutor Professors, and Tutor Assistant Professors. That excludes some of the Professors who lecture in Arts, too, one of whose grievances is that they receive no dividends from those fees which they help to earn. The scheme, No. 5, of certain Fellows and Professors, resembles mine to some extent, but I think, in the first instance, it is a good deal more complicated, and, secondly, there is a very serious

objection to which it appears to me to be open. They propose that the governing body should be ten in number, which I think is too large, and also I think an uneven number is more convenient. They propose that there should be one representative of the Senate. Now, the Senate is a body that has no cohesion; it never meets except occasionally for the purpose of transacting some business such as graces sent down by the Provost and Senior Fellows, and the result of having one member elected by the Senate would be that there would be a good deal of canvassing and electioneering; and as the best men often cannot or will not do this, it might happen sometimes, as it has happened before, that somewhat inferior men would get elected. In any case he would be an outsider, not in touch with the College work, and would practically have no power; and in order to get a governor of this sort you have to put in motion considerable and somewhat expensive machinery. They propose also that the Bursar and Senior Lecturer should be members. I am disposed to think that it would be better that the Bursar should be a business man entirely, and that it should not be necessary for him to have previously passed an examination for Fellowship. As a matter of fact I believe most of the real work is done in the Bursar’s office by the assistants, and I suggest, on the other hand, that the Bursar should be a business man, and that the Provost should take over the work of the Senior Lecturer, which work is light, but responsible. The Senior Lecturer has to decide in doubtful cases whether men are to be allowed their examinations or not, and whether they are to have what is called a post mortem examination—that is, whether after they have failed in one subject they are to be re-examined in that subject. That is a practice which has been adopted since, I think, my time, and I think it is objectionable, as it may often lead to partiality and injustice. But the most serious objection to this scheme that I have to mention is the suggestion that all the Faculties should elect the six members together. I have suggested that each Faculty should send forward one. The other is the present system, and the result of it is that the larger Faculty can practically control the election, and that a smaller Faculty may be left out of it. Now, that is not by any means a theoretical danger, and I will ask leave to illustrate it very shortly. Save for a few years during the whole time the Council has been in existence there has been one representative of the Law School on the Council. There was one occasion, however, on which no representative was there, and that is the only occasion when the vital interests of the Law School were affected. When the measure was brought before the Council no representative of the Law School was a member of the Council, and that was passed without any representative being heard on behalf of the Law School. I should like, if I may, to mention how that came to pass. The Medical Faculty, a large Faculty, have always claimed, and the claim has been admitted practically, to have two seats out of the four on the Council, and the Law Faculty has claimed to have one. At the General Election when the four members of the Council (Professors) are elected as representatives of the Professors who are not Fellows, the Medical School can, in consequence of their numbers, easily secure two seats, and they also at the bye-elections can make certain of securing the vacant seat unless, of course, all the other Faculties unite together, which I think would be practically impossible. In the year 1901, for one reason or another, the Medical Faculty put forward only one candidate, and the fourth Professor elected was the Regius Professor of Divinity, the Medical Faculty having only one. In June, 1902, this important question of the fusion of Law and Arts came forward, and at that moment it so happened that I had to resign my seat on the Council, as my time was coming on for re-election, and if I wanted to go up for re-election of course I could not be a member of the electoral body. Accordingly I resigned, and I proposed to my colleague, the other Regius Professor, Professor Hart, that he should stand, and he agreed to that and went forward, but the Medical Faculty on that occasion put forward a candidate of their own, on the ground, as they said, that the second seat to which they had been entitled had been grabbed by the Divinity School. The result was, of course, that there

H. Brougham
Leach, Esq.,
M.D.

was no representative of the Law School on the Council when that important motion was carried whereas there were two on the Council, the present Provost and the Registrar of the Law School, who were members of the Committee who were pressing it forward. Master Pigot, who was a member of the Council, and the only legal member, took my view very strongly. I went to him and suggested that under the circumstances he should move the Council to call in and hear the two Regius Professors, and I undertook to be in attendance, and my colleague was in attendance also for that purpose. The Council, however, refused to hear us, and the matter was carried without a word said by either of the Law Professors. I mention this to show in the first place the danger of having all the Faculties united together to elect the members of the Governing Body, and, secondly, I think it illustrates the value of the Council as a deliberative and executive body. To revert, however, to the government, I think that the number of seven, being a smaller number, is a better one, and we have a good instance of what can be done with a governing body of seven in the fact that the three Queen's Colleges—including Queen's College, Belfast, which at one time had 600 resident students—have always been governed by the President and six of the Professors, two of whom have been the Bursar and Registrar, who, of course, have their professorial duties to perform along with the duties of Bursar and Registrar. Another suggestion in this paper is, that every Professorship should be provisional for three years, and at the end of three years, if the Professor is doing well, he should be permanently elected. Now, I have never heard that suggestion before, and I do not think any man of real merit would accept a Professorship on those terms. With regard to the Fellowship system they propose that there should be an annual examination, but that it might be suspended when the Governing Body wished, but that meanwhile a Deputy might be appointed. Now, the Deputy appointed to do the work of the Fellow who was going to be elected the year following would be probably the very person who would be reading for the examination. He would be handicapped both ways, both as regards preparation for the examination and as regards the work which he was doing. The Readerships which they also propose to establish are a very good thing indeed with a view to post-graduate research, but if they keep up the Fellowship examination the same mischief will go on, and the Readers instead of doing post-graduate work will, in all probability, be preparing themselves for the examination. And lastly, on this point, they suggest that the Bursar should be a Fellow who is not occupying a Chair, but I say in reply to that why limit it to a man who has passed an examination? You will get a better business man with better training as a Bursar for less money if you do not ask him to go in for a high class examination in Mathematics, Latin, or Greek. I feel that to insist upon a man passing such an examination is to run a very good chance of preventing him from being a good business man. The next head that I should like to discuss would be what I call the unproductive expenditure. Under this head, first, I will take the senior offices, which are held by the Governing Body. They are nine in number. I will not say they are all absolutely sinecures, five or six of them practically are; the Vice-Provost, the Catechist, the Senior Dean, the Senior Proctor, the Auditor, and the Librarian. Those are all officers that appear to me, some of them, to have practically nothing to do, and the others very little indeed. They, all put together, are paid close upon £1,200 a year. Then there are three other officers, the Registrar, the Bursar, and the Senior Lecturer, who are paid far more heavily, but they altogether, in my opinion, would not do more than what would occupy about half the time of a good business man. The duties of the Registrar are simply to keep the minutes of the Board who meet on Saturday during term time, and he is the official channel of communication with the outer world. The Senior Lecturer's duties appear to me to be very light, though they are responsible. With regard to the Librarian, I should imagine his work is extremely light, inasmuch as we happen to have an Assistant Librarian of very great merit, who stands exceedingly high in reputation with his brother Librarians, and who, if he were paid half as much again as he receives, would, in my opinion,

be cheap at the money. There is no doubt in my mind that he ought to have supreme control; his heart is in his work, and he is absolutely up-to-date in it, and there is no necessity at all, I think, for any such office as that of Librarian being distributed and going from one to another of the Senior Fellows. With regard to the Bursar, the Senior Bursar, as he is called, I cannot say anything about the present Senior Bursar, who, I have no doubt, is extremely attentive to his duties. But there can be no doubt that the heavy work is done by the Accountant and the Assistants, and I would suggest—as it appears to me reasonable to suggest—that all the financial work of the College should be done in one office, and that it should not be distributed as it is. For we find that besides the Senior Bursar there is also a Junior Bursar, who receives £371 12s. 4d. per year. The duty of the Junior Bursar is to receive the students' fees twice a year, half of which he pays over to the Senior Bursar, and the other half of which he distributes among the Junior Fellows. It is very pressing work for two or three weeks twice a year. It is hardly necessary to remark that the Students do not pay their fees until the last moment, which is the first Friday in May and the first Friday in November, and the Junior Bursar is very busy receiving them and disposing of them afterwards at those times. The last gentleman who took the position was a very distinguished scholar, who, as we all thought, filled the Latin Chair well. In due course he left that, and proceeded to tot up figures for a week or two twice a year, and meanwhile the Board had considerable difficulty, I believe, in filling up his place, as there was no very eminent Latinist among the Fellows. One would have thought, perhaps, that two Bursars were sufficient, but there is a third Bursar in the shape of the Senior Proctor, who receives the Degree fees, which amounted in 1905 to £3,935 2s. 6d., and he, I believe, puts them over into the *cista communis*, or common chest. I believe it would be a more reasonable and safer method of managing the business that those fees should be paid into one office.

3213. Has the Proctor no disciplinary duties?—None, that I know of. As far as I know his duties consist in receiving those fees four times a year and reading out the names at the Commencements. I never heard of the Senior Proctor having any disciplinary duties at all; they are discharged by the Junior Dean with occasional reference to the Senior Dean. I am now on the head of unproductive expenditure, and the next point I wish to notice is the amount of the Examination Fees in Arts. The Examination Fees in Arts which were paid to the Fellows in 1905 amounted to £1,522. It appears to me that with such incomes as they receive, fees should not be paid for examinations, especially when the result of this is to decrease their other work, that is to say, it reduces the Lectures very considerably having such an immense number of examinations, which is, of course, very heavy work. The effect of that is, as is pointed out in Miss White's paper—and I adopt her view—that it reduces the number of Lectures very considerably, so that a student practically gets only eighteen weeks' Lectures in the year. As the average income of the Junior Fellow is £817 17s., I think that sum of £1,522 extra fees in Arts is unnecessary, and, of course, as I said, the examinations have an effect upon the time devoted to Lectures.

3215. How many terms are there?—Three terms; three or four weeks at the beginning of a term are taken up you will find by these multiplied examinations.

3216. I thought the number of weeks devoted to lecturing was about six in each term?—Six in each term.

3217. Sir ARTHUR RÜCKER.—Seven we were told yesterday?—I think you will find it is six.

3218. CHAIRMAN.—I think the term is about ten weeks, and about three weeks we were told were taken up by examination, leaving about seven for lectures?—Miss White makes it about six weeks. I fancy she is not far wrong, but it can easily be discovered. The next point I have to mention on this head is the Fellowship examination, and the expense of it. I have never yet heard anybody allude to this point. As you know, the Professors do all the high class professional or expert teaching, and a considerable proportion of the

higher Arts teaching. The Fellows do much the larger portion of the higher Arts teaching, but they also do all the inferior teaching, as I may term it, such as the lecturing of the passmen. You would think therefore, at any rate, that the work of the Professors was at least as important as that of the Fellows. When a Professorship becomes vacant, the successor is elected without any trouble, delay or expense. On the other hand when a Fellow is elected once a year, in June, as far as I can make out, the cost of each Fellowship election comes to about £700 or £800.

3219. In fees paid to the Examiners?—In fees paid to the Examiners and prizes given to the unsuccessful students to keep them going till the next round; the Madden Prize, I understand, is between £300 and £400, and to that the Board adds a prize of £60, so that the Madden Prizeman, as a general rule, gets a prize of close upon £400. They also give prizes of £60, sometimes lower, to the other unsuccessful students. There were only three candidates at the last examination and the other two who came behind the gainer of the Madden Prize each got a prize of £60. Then as regards the fees to the Examiners I have not been able to find out exactly what they were beyond this, that every Fellow who is not a Professor, and who is called in to examine gets a fee of £25. Of course it is an exceedingly important and very heavy examination, and I do not know that anyone would be inclined to object to such a fee as that.

3220. The examination lasts for several days?—Several days, twelve days more or less in a number of different subjects. There are, I believe, eight non-Professors among the fifteen examining for next year, so that that would be £200, and I do not know as regards the six or seven Professors who are examining what fees they get, but I presume they get something, probably not much less than the others. My informant, whom I asked upon this subject, one of the Fellows, was not able to tell me that. The result of this is that every Fellowship examination costs about £800.

3221. I do not quite follow that. You do not mean that the examination costs that, but that the prizes given do?—That amount is spent.

3222. Take the Madden Prize. It is a special fund, is it not?—It is a special fund; yes.

3223. The College could not appropriate that to themselves?—Certainly not.

3224. Then it is not any expense to the College?—I agree entirely. This is no censure whatever. My point is that in connection with the Fellowship examination there is spent every year about £800, which could be much better employed. As a matter of fact they cannot do anything with the Madden Prize except that, but there may be some change made in the regulations. What I want to point out is that if the Fellowship system is a bad one and the men are damaged, as I think they are—and I believe some of them think so themselves—by this system, why keep it up and spend £800 when it is very easy to get an alteration made which would enable this Madden Fund to be diverted into another channel. That is the point I want to make—that in connection with the Fellowship examination there is £800 spent which I regard as unproductive expenditure, inasmuch as it is directed to keeping up a system, which, in my opinion, is essentially bad. That is an argument—in my opinion a strong argument—for endeavouring to put an end to the Fellowship examination as soon as possible. In fact I may sum it up very shortly by saying that if that was done you would get better men for smaller salaries. You would save this £800, and you would also save the creation now of new vested interests which, in transitional times, are, of course, a very serious thing for the College resources. The next item of unproductive expenditure which I wish to mention—my remarks apply rather to the future than to the past—is as to the salaries of the Divinity Professors, which are out of proportion to those of other Professors, and I think should be brought down, considering the present and future position. If the Commissioners had a statement of the work done by each Fellow and Professor that would be a very helpful thing, and if you compare the work done by a Divinity Professor with the work done by the Professor of Modern History, who receives £80 a year, the contrast is rather startling. In the old times I think this was reasonable, because then there were great prizes in the Irish Church. The Professors of

Divinity were very learned and distinguished men—as they are now—they were then Fellows or ex-Fellows, and the Professor of Divinity was obliged to resign his Fellowship in order to accept that, but since 1880 these Professorships have been thrown open and for the future we may expect that they will not be held by Fellows, inasmuch as very few Fellows indeed are now ordained, and it is doubtful whether any one of them at this moment would be equal to such a task. In any case I submit that when a man holds, as in the case of Archbishop King's Lecturer, a Chair, which may be regarded as not a principal Chair, that is that he does not devote his whole time to it, but is engaged in some active profession, an income of £725 a year is excessive having regard to the work done.

3225. That is a Chair of special foundation, is it not?—I think it was originally a small sum, and increased afterwards.

3226. It is not paid out of the general funds of the College, is it?—My belief is that by far the larger portion of it is. I do not know what portion, but the matter is a small one. With regard to what I may call unproductive work—that is akin to this unproductive expenditure—work done for which nothing is paid. I would mention with regard to the Divinity and the Law Schools that in these Schools no fees are charged, whereas heavy fees are charged in the Medical School, the Engineering School, and also in the new Military School, which charges £20 per annum for two years. In my opinion if fees were charged in the Divinity School it would be better, both for the Church and the College, and, I think, better for the men themselves. We all know now that Divinity as a profession is both the easiest and cheapest profession to get into, and therefore a number of men drift into it who practically find themselves able to do nothing else. I think this was shown to some extent, or illustrated, by the fact that when certain Commissions were offered in the army during the Boer war there was a much greater rush from the Divinity School than from any other School in the College. It seems to me, therefore, that if these unproductive items of expenditure were corrected, and fees were paid, both in the Divinity and Law Schools, there would be a considerable gain of money, such as would have enabled the College, with the greatest ease, to have at once taken advantage of Lord Iveagh's munificent offer. The next point I wish to mention is the multiplicity of examinations. I have already suggested in my paper that this arose originally from the objectionable practice of giving degrees to persons who did not reside. However, the result of it is that at present there are twelve pass examinations in the year, with certain supplemental examinations for those who have failed to pass in the first instance. Besides these there are at the beginning of each term (because the examinations are held at the beginning and not at the end of each term) a number of Honor examinations in different subjects. Therefore, at the beginning of each term—that is, to cover the lecturing of the previous term—there are six of these examinations for Junior Freshmen, seven for Senior Freshmen, eight for Junior Sophisters, and six for Senior Sophisters, making in all twenty-seven. When you multiply that by three you have eighty-one Honor examinations in that year, and you must add three more, because at the end of the senior year there are nine Moderatorships, and therefore that makes eighty-four of these examinations in the year. There are also a large number—I did not count them—of other examinations for various prizes of all sorts, and, of course, there is a great desire to secure these prizes, many of which are of monetary advantage. In my opinion, this system of Honor examinations gives rise to an immense amount of cramming, in the making up of the courses, which have to be made up very well indeed. This constant cramming and making up gives the student, in my opinion, no time to think; he is too much devoted to the books and to finding out what is likely to be asked, and getting various tips, and so on, in Classics. He really has no time to study the language or become a scholar in the real sense of the word. This system brings about a reduction of the time available for lectures, and therefore, of course, diminishes the teaching. It seems to me to reach its most exaggerated point in the case of the Scholarship examination. I

should say in all those examinations there is a great deal of *viva voce*, and I think that is objectionable, inasmuch as it introduces a great deal of chance into the business, and also the more nervous students suffer a good deal by it. In the *viva voce* for the Scholarship examination, which is set out on page 133 of the present Calendar, there are twelve authors prescribed which the candidate has to have on the tip of his tongue. I will only mention one branch, and that is the Greek Poets. In this department he has to make up eight books of Homer, three plays of Sophocles, and three plays of Euripides. He has an equal amount in Greek Prose, Latin Prose, and Latin Verse, and the fact is that he is so much occupied, as a general rule, in making up this work—all those *viva voces*—and finding out what the Examiners are likely to ask, and so on, that he is obliged, practically, to throw over all his other work. He is obliged to neglect Composition, which is very important for a Classical Scholar, and various other things. Moreover, he is taken up for these *viva voces* while at his other work; he is interrupted in his other work by his name being called out, and this often has a very serious effect on a nervous student, keeping him on the *qui vive*—on the alert—all the time he is actually doing his work. Then, if the Examiner cannot get through all in three hours, he has to give a different examination to those who have been omitted, and this brings another element of chance into the examination which is also objectionable. All examinations ought to be conducted on principles of absolute fairness and impartiality as far as possible. That is one of the objections to *viva voce*; it imports a good deal of chance. I made a remark in my paper that a man now could get a University Scholarship without being even able to write a good piece of Latin Prose, and some of my friends in College thought that somewhat severe. But I have an illustration which indicates that I was correct—an incident which happened within the last two or three years; that is to say, one of our scholars went up for the Indian Civil Service and got a nought—got no credit for his Latin Prose. I am bound to say he succeeded in the examination, having been a good examinee, and managing to drag in a considerable number of subjects; but, as a matter of fact, he got no credit for his Latin Prose—a scholar of the University of Dublin got no credit for his Latin Prose composition in an Indian Civil Service examination! I would suggest, therefore, with regard to this, that *viva voce* should disappear from the higher examinations such as Scholarship and Honor degrees; I consider that the *viva voce* should be abolished, and that more stress should be laid upon Composition and the translation of unseen passages, both of which I regard as the real tests of scholarship; and there might be added to that something like what they have at present—a History paper, along with an English Essay. Furthermore, I think the time given to the most important part—what I regard as the real test of scholarship, Composition—is too short; that is to say, one and a half hours for each paper: three hours in all I think is the time given to it at Cambridge and Oxford; it was, at any rate at Cambridge in my time. The next matter I have to mention is in connection with the Law School. I shall be very short upon that, I hope, but I think it is of very great importance, as I believe a mistake has been made. In the years 1901 and 1902 there was a considerable difference of opinion, and I was the leader of a vigorous but wholly unsuccessful effort to prevent the fusion of Law with the Arts—to prevent the overlapping of teaching in Trinity—overlapping in the way of teaching the same subjects as were taught in the King's Inns School—and also I thought that our financial interests were being sacrificed by increasing our legal teaching—establishing a new Professorship—and at the same time by fusing Law with the Arts, preventing ourselves from ever asking for the fees which we were entitled to. That was the main point of my contention, and I drew up, and had printed, a scheme for the reconstruction of Legal education, of which I have a copy here. I might also mention that I have copies of the Report of the Committee, and of my reply to it, and of the rejoinder of the Committee, as well as that of Mr. Justice Bewley, now Sir Edmund Bewley. In his paper, objecting to what has been done, he supported my views, and vigorously. I have here a

copy of his paper, and also a copy of the paper of Professor Hart.* The Commissioners, I think, understand that the Law education is conducted jointly by the King's Inns and by Trinity College, with two Professors of the King's Inns and four Professors of Trinity College. But I hope I shall not be accused of want of modesty if I say that the Trinity teaching is much superior to the King's Inns teaching, for the very simple reason that it could not possibly be otherwise.

3227. I think we must hardly go into the details of the King's Inns. Our concern is with Trinity College, and I do not think it would be suitable to criticise the proceedings at King's Inns?—Perhaps not, but as the two branches of the school are run jointly it is difficult without giving a short statement of the facts to make myself clear.

3228. I think we are aware of what has been said on the subject?—Then, I will pass over that, and I may state, as a matter of fact, in order to explain to the Commission what is done in each case, that the King's Inns Professors are as follows:—One, a Professor of Equity, Pleading, and Practice; the other a Professor of the Law of Personal Property, Contract, and Tort. Now, in Trinity, we teach these subjects with the exception of Pleading and Practice; that is to say, we teach Equity, Personal Property, Contract, and Tort. We teach four of the six subjects taught in the King's Inns. We also teach the following subjects:—Roman Law, Jurisprudence, International Law, the Law of Real Property, and the Statutory Law of Irish Land—which is very important now for Irish students—Criminal Law, Constitutional Law, and History, the Law of Evidence, and Private International Law. That is the division of the work. I was going just now to mention the division of the payment for the work—the money—that is to say, the remuneration that the Trinity Professors get for that is three guineas a year.

3229. For each student?—For each student a guinea a year. Each of the three Professors gets one guinea a year in respect of each student, which comes to about £30 a year for each of the three Professors. The fourth Professor, as I think I explained in my paper, does not get anything, because his Professorship was instituted in 1902, and no change was made then. But what I was going to mention was that this arrangement was brought about by a Committee consisting of three distinguished members of the King's Inns Bench and two Mathematicians appointed by the Board; and they persuaded the Board and the Council to fuse Law and the Arts, to extend the teaching, and to bring about the present arrangement. I mentioned, I think, that I object to that on the following grounds:—That it was financially unfair to the College, that it was bad policy that the teaching should overlap, and that altogether it was an arrangement in which the bargain appeared rather to resemble that between Glaucus and Diomedes in ancient times. However, the Council did not take that view, and the existing system is established under which we do a great deal of the teaching, and do not receive for it what we should receive. What I would suggest, then, with regard to this, is that an additional Professorship should be established in Trinity which should include Practice and Pleading, so as to cover all the work done by the King's Inns, and Conveyancing, which is taught by neither body. Conveyancing is the one thing taught neither at King's Inns nor at Trinity. If that was done the Trinity Law School would be, in my opinion, a complete School of Law.

3230. But is there not a good deal of difficulty in that. This is not a new subject to some of us. The Inns of Court in London, or King's Inns in Ireland, would rather seem to be the bodies teaching the thing practically. The Universities would rather seem to be the bodies to teach Theory of Law?—The scientific part.

3231. The scientific part—no doubt, if you like to put it in that way. The arrangement come to now between King's Inns and Trinity College comes to this: certain subjects are taught by one body, and certain subjects are taught by the other body, and there is overlapping?—Beyond question.

* See page 373 et seq.

3232. If you introduce two new Professors of practical subjects?—One new Professor.

3233. Well, one new Professor of practical subjects—you would be either making the whole of the teaching overlap, or have King's Inns expecting you to do that which you cannot do?—I want to make it overlap to such an extent that the King's Inns would adopt the same position as that which is held by the corresponding body in Edinburgh—that is to say, do what they do in Edinburgh. The Faculty of Law there calls to the Bar, and does not care where a man is educated. Where he is educated he pays his fees.

3234. The English and Scotch systems are very different in that respect. I believe most of the countries who have adopted the Roman system require a degree as a condition for admission to the Bar—that has never been the case in England or in Ireland as far as I know?—The fact that it has never been the case does not prove that a change would not be desirable now. I have put forward other reasons why it would be advantageous that all the teaching should be done in Trinity, showing how much it would conduce to the comfort and advantage of the students.

3235. I can only say that I think if we in England could come to some such arrangement as you have in Ireland some of us would be very much pleased?—It would be a very great advantage to you.

3236. You have perhaps misunderstood me. I said that if we in England could come to such arrangement as exists in Ireland, we should be very glad?—That would be impossible, because of Oxford and Cambridge being so far from London; but I do not think that Oxford or Cambridge would agree to the financial arrangement to which we have assented.

3237. However, to pursue that question would be to go too far afield?—That is so. I have stated pretty clearly what my views are in the statement I put forward; and I have also mentioned the fact—although I do not wish to criticise the King's Inns—that the present arrangements are not convenient to the students, who take two hours practically to attend a lecture and have to walk through the slums about a mile. It is very inconvenient to the students; the lectures are held at an inconvenient hour, and then, again (I think the Chief Baron is an authority upon this) there is the necessity of a man's training for teaching. I remember a remark of his in giving evidence before the last Royal Commission on Universities, in which he says this:—"Knowledge and the ability to impart knowledge, are two very different things." Now, an intelligent man after a year or two at his work begins to understand how to lecture and how to examine, but according to the present arrangement—

3238. Are you not going into the subject of the King's Inns again?—Yes—I pause there. I think the Committee will quite understand. What I should then suggest is (and here I may remark that to me it is a pleasant thing that an influential member of the King's Inns is a member of the Commission), that the whole thing would be improved, and greater satisfaction given to the students, if all the teaching were done in College. Even the King's Inns students who are not Trinity men like very much to come into the College, to some extent, because it identifies them with the place, because it is a more convenient centre, and for other reasons. I am only just suggesting, of course, but I think it is a great pity that arrangements should not be made whereby our examination for the degree of LL.D. would entitle a man to be called to the Bar. I think I am absolutely correct in stating that our examination for LL.D. is a much higher examination than the ordinary examination for a call to the Bar. Now, the next point that I wish to mention is in connection with an effort to improve the position of women students, which we are anxious to do. There are now sixty-nine women undergraduates on the roll, and they pay in fees about £1,400 a year; and I think they have a right to ask what they are to get in return for that. As a matter of fact, as far as I can see, they get now the right to be lectured, and to be examined, with the men, and the right to compete with them for certain prizes. As far as the lecturing is concerned, I think it would be much better that they should be lectured by themselves, and this for two reasons:—In the first place, because, owing to the size of the classes, a large amount of the teaching is indifferent. This is not by any means the teacher's

fault, but if you have a very large class, and not all the students of the same mental attainments, you have almost to lecture down to the least intelligent. This is aggravated, I think, in the case of the women students, because the average woman student, in my opinion, is of higher mental attainments than the average man, for the following reason: Men come mostly to Trinity for the purpose of entering professions, and are very thankful if they can get their degrees in any way whatsoever, doing a minimum of work. The women, on the other hand, come mostly for the purpose of entering the profession of education, and are more eager to learn. Accordingly, when they are lectured with this class of men in very large classes they find they are taught very little. This has some connection with the frequent examinations and with the fact that our Term lectures to some extent are assumed to be a preparation for those examinations. But to illustrate the pace of the slowest, at which the examiner has to go, I have known a case where Euclid was the subject for examination and where the lecturer did not even finish the First Book during the term. So that, in fact, all the class were obliged to go to grinders to get through, the more intelligent because they got no teaching, and the less intelligent because, no matter how much teaching they got, they would have a hard time of it. I think in this case the Board have to some extent fallen short of what they might have done to give an adequate return for the money paid to them. I would refer also to their resolution of the 21st March, 1903, in which they undertook, if eight female students in the same class desired to be lectured in any convenient place, to supply a lecturer.

3239. We have had that case brought before us. Some reason was given why it was not done?—I pass from that. The second, I think, is a more serious difficulty, or grievance, and that is that there is no Collegiate life provided for the women, and no attempt, apparently, is being made to provide it. Now, I think that that could be done, though possibly at first sight the proposal may be a little startling. However, one becomes accustomed gradually to startling proposals. Of all the burdens that the College has to bear the greatest is that of the Provost, whose income has been ascertained to be £3,539, and putting one thing and another together, the upkeep of the house and so on, it probably costs the College something like £4,000 annually. Now, though vested interests must be respected, we can hardly expect that that will be maintained in the future. I have been at some pains to find out what is paid to the heads of other institutions, and I find that the principal of the University of Edinburgh receives £1,200 a year and a house, and the Principal of Glasgow, £1,100 a year and a house; and I am informed that both those gentlemen take an active and real part in the administration of the University. Moreover, the existing Provost's House is too large, and in some ways inconvenient, being mostly made up of sitting and reception rooms, and it certainly would be unsuitable in the future. I consider that the Provost's income should approximate to those of the Principals of Edinburgh and Glasgow. What I would suggest would be that some other quarters should be found for the Provost in the College, either by building a lodge, such as the Oxford and Cambridge lodges, which might be done for £8,000 or £10,000, or possibly even some of the existing buildings might be used for that purpose; and if that were done you would have a portion of the College grounds detached, severed by walls and railings, which would make, in my opinion, an admirable site for an academic residence for women students.

3240. Do you propose to give the Provost's House to the ladies?—I propose that it should be used for lecture rooms, and that there should be a number of courts built in the Provost's Garden, after the fashion of Gilton.

3241. You would keep the ballroom in the Provost's House just as it is, would you not?—I have no objection to the ballroom. It would make an excellent lecture room. It might be used for many purposes. What is known as the Provost's Garden would make an admirable site for a number of small courts, such as we are familiar with at Oxford and Cambridge, and what is known as the Fellows' Garden, which is practically never used, would make an admirable tennis and hockey ground and croquet ground. I think the problem might be solved in that way. The income of the future Provost would be insufficient to

keep up that great mansion, and if, as I have said, a lodge were built for him—

3242. I think we need not go into the details of your scheme?—Well, I waive that altogether; but, at any rate, it would solve this problem of academic residence, and we know well what the value of academic residence is, and what value we set upon it ourselves. I regard it as the most important part of College life, and when women students are paying these heavy fees I think some effort in the future ought to be made to bring it about. Moreover, I believe it would be an excellent policy, because when it is found that this present system continues (if the lecturers are not separated, and if no academic residence is provided) I think it likely that with regard to the women students the entrances will fall off. They will prefer the academic life of the Alexandra College, along with the smaller fees of the Royal University, and that, I think, is quite possible if the Royal University is reconstituted. I think that gives my idea upon that subject. I hope it is not too startling to suggest that the Provost's House should be handed over in the future to our lady friends. The only other point I think I ought to mention is with regard to the Scholars. This is the last matter which I would mention. It appears to me that the Scholars, who are members of the Corporation as well as all the Fellows, have not been quite equitably treated. The emoluments of the Fellows and Scholars were settled in the year 1758. The Senior Fellows were to receive £100 Irish, the Junior Fellows, £40, Irish, and the Scholars £20, Irish. Now, it is not very easy to tell the change in the value of money, but the changes have been considerable. The purchasing power of money is only about one-third of what it was then, and accordingly if the same proportion was observed the Senior Fellow would have £300, the Junior Fellow, £120, and the Scholar £60.

3243. What is the equivalent in English money of £300 Irish?—About £270.

3244. LORD CHIEF BARON.—£100 Irish is £92 6s. 2d. English?—Of course, it is well known to every member of the Commission that the incomes of both the Senior and Junior Fellows far surpass that sum, but the Scholars' incomes have remained the same; that is to say, taking the change in the value of money now, what the Scholar gets is only one-third in value; that is to say, he gets £20 a year Irish, which is worth about £6 or £7 now.

3245. What do the Scholars receive a year?—They receive £20 Irish. My point is that they receive only £20 Irish, the sum that was allotted to them in the middle of the 18th century. They are members of the Corporation. The finances have been controlled, according to the Charter of Charles I., by the Provost and Senior Fellows, and I merely point out the result now. That while the incomes of the Senior and Junior Fellows have very greatly increased, the income of the struggling man, the Scholar, has been very much reduced, and that £20 Irish then is worth £6 or £7 now. They get their commons and half the rent of their rooms, but they are obliged to pay half the rent of their rooms—for their own property—and there is also taken from them four guineas a year in fees; and, therefore, if you take from the £20 Irish, that is £18 English—if you deduct the four guineas a year fees, and half the rent of their rooms, you leave the struggling Scholars with a very small sum, indeed. Moreover, the standard of living has considerably risen. That is the position of the Scholars, and I would submit that it is worth the consideration of the Commission. I do not think I have anything further to say.

3246. I have only one question to ask. What improvement would you suggest should be made in the position of the Scholars?—Well, an exceedingly simple improvement would be to give them, we will say, £60 a year instead of £20 Irish. I would suggest that as a minimum. Also my suggestion was to stiffen up the Scholarship examination, and not to give it to any man who could not write Latin Prose, and I would remit his fees altogether, and remit his room rent. A University Scholarship, as you know, is thought very highly of. It takes a tremendous amount of labour to get it, though, as I say, in consequence of the examinations, the labour is not directed into the right channels.

3247. Under the charter was it considered that this £20 a year should be allotted to the Scholar, and that practically from that time, as long as he remained a Scholar, he would have his education without any expense whatsoever. No matter how poor he was, if

he entered the College and got a Scholarship, then he should have his education free of expense, and the whole world was open to him in the future?—Of course, that view might be taken. My point was that he had not been treated in any way as his brother members of the Corporation were.

3248. I am agreed with you in that, and I am trying to follow it up. I, myself, attach a great deal of importance to the position of Scholars?—I am glad to hear that that is so. He ought to have his education free, I think, and to have his rooms free.

3249. You are aware, I suppose, that at present in College Scholars frequently are obliged to engage in tuition?—Oh, dear, yes.

3250. In order to enable them to live?—Oh, dear, yes.

3251. If, then, the provision from the College was sufficient to enable them to live, and devote their entire time to their studies, we might expect a higher class of learning—a higher class of Scholarship?—I entirely agree. That supports my argument.

3252. SIR THOMAS RALEIGH.—There are two questions I should like to ask you. One is about *viva voce*. I understand that that is at present considered an important part of the examinations of Trinity College?—A very important part, and the marks allotted to it are very considerable in the Scholarship examination. I am almost sure that it will be found, if there is a calendar in the room (I do not like to speak from memory) that the same value is given to *viva voce* as is given to composition.

3253. MR. BUTCHER.—We are told sixty out of 250 marks in the Classical Scholarship?—Quite so.

3254. And in each Honour examination twenty out of 110?—But is it not the same as composition—is not the *viva voce* at both allotted the same number of marks as are allotted to composition, and in one case, I think, a translation of an unseen passage?

3255. It may be so. I have not the paper before me?—It is found in the calendar.

3256. SIR THOMAS RALEIGH.—We cannot go into details. On general principles we attach some importance to the *viva voce* at Oxford, and I will give two reasons. I put them to you to see whether you accept them. One is, that a man has, perhaps, not done himself justice on paper from the want of the power of expression, and so on. You can follow him up and encourage him a little, and he can show his knowledge in *viva voce*, and so he does better than he would have done if he had only had the paper. That is a good thing, is it not?—You can, of course, follow him up, but the result of following him up would depend upon the examiner, and you may do him a great deal of harm if he is a nervous man; but I will go as far as this—that if *viva voce* is used more or less for the purposes of correcting doubts, it may be a very valuable thing, and that, I think, is illustrated by the B.C.L., Oxford. I was asked to examine in 1903, and I was greatly struck by that examination. The main portion of the examination is by papers, and that is done early in June.

3257. I know that system?—Then, when they have read all the papers the examiners meet early in July, and the Constitution makes it necessary to examine everybody, but they only really examine *viva voce* if they have a doubt as to whether a man should be placed in the First, Second, or Third Class. I approve of that entirely.

3258. The second reason is, where a man has evaded your questions on paper, you can then follow him up and find out by a sort of cross-examination whether he does or does not know his subject?—I think if a man evaded my questions on paper I would not want to follow him up.

3259. Sometimes you do not know the spirit in which he does it?—There may be some advantage in it, but still it must be used with great care by the examiner, and every examiner will not use that care. It is too risky, and it introduces the element of chance too much.

3260. The only other subject I wish to ask you about is the plan of Law teaching. The plan you suggest is to bring all the Law teaching into Trinity College. I suggest to you an alternative plan, namely, that Trinity College should give instruction, if necessary, in the History and general principles of Law, and that the King's Inns should supplement that by having lectures by practical lawyers, coming at a later stage of the student's course. Do not you think that is a

better plan than yours?—No; I am not prepared to say it is a better plan, but I am bound to say this—it was the plan, I think, three or four years ago, and the existing plan is what I object to so much. What you propose now is to go back to the plan that existed before 1902. At that time we lectured in Roman Law, International Law, and Jurisprudence, and in the Law of Real Property, but we were embarrassed to some extent, and that principle, which is defensible if properly worked, was invaded by the Reid bequest, which directed that there should be a Professor to lecture on Criminal Law and Penal Legislation, and, in my view, that spoiled the balance between the scientific side and the practical side, which, up to that time, had existed. But, then, there is this difficulty—I should doubt very much whether the Honourable Society of the King's Inns would be able to cover all which would be included in the practical work, and that was their great difficulty. I should much prefer my own plan, which, as I pointed out in my scheme, would be advantageous to the Honourable Society of the King's Inns.

3261. Dr. JACKSON.—I should like to ask you one or two questions about matters of detail. First of all, you have remarked that ten would be too large a number for the Governing Body, I think?—I have remarked that it would be rather a large number. Seven would be a better number, because it is a smaller number, and an uneven number, and then there is no casting vote.

3262. Do you suggest that they should do no business unless the seven were present?—Oh, dear no; but the more you add to the number the slower they do the work. The Academic Council consists of seventeen persons, and I have often thought that three persons would do it better and in half the time.

3263. You think seven would be a large enough Governing Body?—It happens to be eight at present. I object to eight. I say that seven would be large enough.

3264. You are assuming that seven would be a good number for the Governing Body. Would it be the Governing Body both of the College and of the University?—Yes. Practically it is impossible to distinguish them; they are so closely connected.

3265. And this Governing Body of seven would have to do all the Academic work of the most important sort, and all the Collegiate work of the most important sort?—Yes, but as to all the Academic work and all the Collegiate work I may make this remark—that the University is a going concern; it is a business; and all the Academic work and all the Collegiate work, as far as the Governing Body are concerned, would amount to a very little. In fact, I go so far as to say that one business man, if really good, would do it better than the seven. *Ὁὐκ ἀγαθὸν πολυ-κοινωνίῃ εἶς κοίταρος ἔστω.* That was a good motto.

3266. That is a view to which I should not assent?—No, not in the case of a University, but I have had some experience, as a Governor myself, of two very important institutions—the Registry of Deeds and the new Registry of Titles. I happen to be the head of both of them, and my experience has led me to think—I do not want to say much about them, but my experience has led me to think that dual government—divided government—is not a good thing.

3267. In Cambridge, I am familiar with the governing body of the University and with the governing body of a College, which, though smaller than Trinity College, Dublin, is still of considerable size, and certainly we find that we want two or three hours a week for the University Council, and two or three hours a week at the very least for the College Council, and that there is still a good deal of other work to be done. This being so, we want a considerable number of people in order to have the proper division of labour. Do you think that a body of seven would be able to do the work both of the House and of the University?—I am perfectly certain of it, but you must remember that the analogy between a College at Oxford and Cambridge and the College at Dublin is misleading. There is an enormous difference between a University composed of a number of Colleges and a University composed of one College, and that so identified with the University that you can hardly tell the difference. That is the reason why these comparisons are so misleading. People talk of putting an additional College into the University of Dublin, as if it were the same thing as putting an ad-

ditional College into Oxford or Cambridge. Now, you can introduce an additional College into Oxford or Cambridge without disturbing the University in the smallest degree; but you cannot introduce another College into the University of Dublin without creating a new University and practically changing the whole government and largely altering the constitution of the College itself. It makes an enormous difference.

3268. I do not want to follow you into that question, but I want to ask one more question in connection with this matter of the Governing Body. You think that a body of seven would be large enough, and I gather than you would like the seven to represent Faculties or subjects of study?—Yes, certainly.

3269. If you are taking those seven persons to represent Faculties, or subjects of study, would you be certain to get amongst them the proper people to do the superintendence of the house, the looking after the fabric of the College, the servants, the cooking, and all the domestic things?—I should consider that seven intelligent men regulating these things would be worth very little if they could not do that much.

3270. You do not want any special faculty for household management?—I think not. They are matters of administration.

3271. And, therefore, you would choose persons to represent the Faculties, and then distribute the domestic duties as best you could amongst them?—Certainly—as in the College of Belfast.

3272. I should have thought that it was desirable sometimes to have an aptitude for household government where you have so large a household to manage as there is in this case?—I do not think you would gain anything by adding three say, and making the number ten for that purpose.

3273. I will pass on to another matter. I could not quite follow you in your remarks about the Bursars, but possibly that might be because I did not properly understand what the duty of a Junior Bursar is. Has the Junior Bursar anything to do with the control of the servants?—Nothing whatsoever, as far as I know. As far as I know his sole duty is, twice a year to receive the students' fees in the first week in May and the first week in November. He distributes the funds; he pays over about half into the *cista communis*, and distributes the remainder of the money among the Junior Fellows. I think that is his sole duty.

3274. Is there any functionary, can you tell me, who deals with the matters which I indicated—concerning the house, the servants, and so on?—The Chief Steward, I think, regulates that.

3275. Who is he?—Mr. Marshall, who has a residence in the College, and a salary of something between £250 and £300 a year.

3276. And he, I suppose, is controlled by the Governing Body?—Certainly.

3277. He is not a member of the Society?—Oh, no.

3278. Then, as to your argument about the expenses of the Fellowship examination. It seemed to me that if you are reckoning amongst the expenses the prizes distributed, you might just as well reckon the Fellowship itself—the £40 Irish. But I should better understand your accounts if you were to separate the rewards distributed from the actual cost of examining, and, when you come to the actual cost, do you think that £25 an examiner, if that is the sum, is at all excessive, considering the labour?—I think I have said already that I consider that a very reasonable fee. What I object to is the paying of a large sum of money for holding examinations which keep up a very vicious system. My argument was that the work done by the Professors is at least as important as that done by the Fellows. If a Professorship becomes vacant you elect another Professor without delay, trouble or expense; if a Fellowship becomes vacant you wait till the following June, and there is delay, there is trouble, and there is expense. As far as the fees paid to the examiners are concerned I would not for a moment quarrel with them. It is most important to understand that.

3279. Thank you. I think I understand. I, too, should say that the Fellowship system might be improved in certain respects; but it is not the expense of the examination which seems to me objectionable?—That is not the worst feature by any means.

Leech, Esq.,
M.D.

3290. And, as regards the fact that certain prizes are given away by the same examination, and that one is a very considerable prize, that seems to me immaterial?—I agree entirely that the expense is by no means the worst feature.

3281. Then, again, as to what you said with regard to the Scholars, I think I should largely agree with your conclusions, but I should a little object to your way of reaching them. You say that the Senior Fellows now have a very considerable sum, and that the Junior Fellows now have a very considerable sum, and that the Scholars originally had half as much as the Junior Fellows, whereas, now they have not; but surely the Senior Fellows as Senior Fellows receive £100, the Junior Fellows as Junior Fellows receive £40, and the Scholars receive £20. The old amounts and the old provisions are preserved. It is only when you go beyond the Foundation payments that you get the inconsistency of which you speak?—Quite so; I agree.

3282. It seems to me, therefore, that that is rather a misleading way of suggesting that the Scholars are insufficiently paid?—Well, perhaps, I had better not argue that. If you have arrived at the conclusion at which I have arrived, I think it will save trouble to dispense with argument.

3283. But I have something to say about that. I notice that you assented to the proposition that originally the Scholars were intended to have their education, and, I think, their keep, free?—Well, their commons—that is dinner only.

3284. Do you think that that is the best way of giving away Scholarships now-a-days, as things now are?—I think that most of them would undeniably rather have the money, but at the same time I am not prepared at this moment to say that it is not a judicious way of helping the Scholars, as it keeps them there, keeps them in College, tends to promote Academic life, and induces them to dine every day in College.

3285. I think that you and I are not quite on the same ground. I am not raising the question as to whether they should be paid in kind or paid in money. I do not very much care about that. But I want to ask you whether you think that there is something to be said for giving a Scholar a small payment as a right, and then increasing his stipend if he is really in need of it?—I do not quite like that investigation of private means. I would rather give the reward to any man who has obtained it by merit, and not investigate his circumstances so as to ascertain whether he was really in want of it or not.

3286. LORD CHIEF BARON.—On the principle that they were all poor in Ireland?—Very few of them do not want it. I may say that I was in the majority myself.

3287. DR. JACKSON.—Is it not possible that the consequence may be that a man who has an ample allowance from home adds to it as much as another man wants for his whole subsistence, and that that first man becomes a rich man amongst his contemporaries, and sets a bad example instead of the good example that reading men should set?—My answer is that we must take the chance. In every walk of life you will find that the man who has an independent income has an advantage: that is beyond question. I do not think there is any way of obviating that. A man with a large income can go to a first-rate school, and take the Scholarship from another man who wants it more. How can you prevent it? It is impossible.

3288. You do not think that the tutor could recommend additional payments to the man who really was in need?—I think it is an invidious task to put upon tutors, and it would lead to things being done that we would not altogether approve of. A man, perhaps, who was not absolutely in need would endeavour to prove that he was in need, possibly, and might exaggerate a little.

3289. With intent to deceive?—I think that might arise, and I certainly should prefer not to investigate those things at all.

3290. MR. BUTCHER.—I suppose from what you have said you consider that the danger to which Dr. Jackson has alluded probably exists more in Oxford and Cambridge than in Dublin—the danger of wealthy men enjoying funds which were originally rather intended for the poorer men?—I have no doubt that is so; yes, I think the Chief Baron went very near the

mark when he said we were mostly—I use the word “mostly” instead of the word “all”—poor in Ireland.

3291. And those who are distinctly poor, and can put in a claim of poverty; are specially provided for by Sizarships?—By Sizarships, yes—well “poverty”—I would not say poverty, but want of sufficient means has to be proved in order to enable a man to compete for a Sizarship.

3292. I am not quite sure what a Sizarship is worth—can you remember roughly?—A Sizar pays no entrance fee, no tutorial fees, no fees at all, and he gets his commons free. It is a valuable prize. I do not think he gets any payment in money.

3293. He pays no entrance fee you say?—He is let off the sixteen guineas a year, and he gets his dinners free.

3294. I will not go into any other details, but, as you have thought out all these questions very fully, perhaps you will in a very few words give me your opinion on the larger question of the addition of a new College to the University of Dublin?—I am quite prepared to do that. I avoided it altogether in my Statement laid before the Commission, because I was not absolutely certain that it was within the scope of the Reference; but my opinion is that it is absolutely the worst of all the schemes that ever have been proposed for the reconstruction of University education in Ireland. It would, I think, damage Trinity College considerably, and we could hardly hope to escape, I think, some friction. But at any rate my view upon that subject is that if that were done the result would be that that new College would be a University itself within ten years, and meanwhile there probably would have been a good deal of damage done to Trinity. My view is that events are shaping in that way, and whatever is done, whether you put a new College into Trinity or a new College within the Royal University, I believe that within ten years that College will be an independent University. Federal Universities do not now hold together, as a general rule. We have examples of that in Yorkshire, and we shall have soon, I think, some examples of that in Wales. I do not know whether I am going a little beyond the bounds, when I say that the real statesmanlike thing is to establish a University for Catholics, give them what they want, what they ask for, and what in my opinion they are determined to have. I believe it would be better for them and better for us, because it would promote competition with us, which we want very badly. I believe we have been, up to this, losing ground and dying from monopoly—want of competition—and I believe if there was a University for Catholics such as was referred to in the Report of the previous Royal Commission (and the grounds for it are there stated very forcibly) that would prove to be the true solution of the University question, and I also believe that whatever else is done it will ultimately result. That is my opinion.

3295. Your objection, then, to a second College within the University of Dublin would extend, I infer, to the proposal to have one University for all Ireland—a Federal University—embracing four, or five, or six Colleges?—That would be just perhaps a little worse, although the one is so bad that it is hard to conceive of there being a worse. I do not like to say what I think about that scheme.

3296. DR. DOUGLAS HYDE.—You would not object to a separate University being established, with a Catholic atmosphere?—No.

3297. I mean established in Dublin?—Not in the least. Of course we are not friendly to atmospheres, but I would not object to it in the least. In fact if it is to be established there must be an atmosphere.

3298. And if the fees in this College were lower than in Trinity College you would not object to that?—I have suggested that the fees in Trinity College should be cut down; I think they are a good deal too high considering the value that is given. But I should rather endeavour to keep the fees pretty even. I think educational institutions ought not to be trying to undersell one another.

3299. You said that you objected to the system of *post mortem* examination?—Yes; so I do.

3300. We had an eloquent defence of them yesterday?—I should have liked to have heard it.

3301. It appears that there are so many subjects for examination in Trinity College that it is quite a common thing for students to get a nought in one. Do you think that there are too many subjects

for examination?—No, I would not say that—I think the subjects are not so well prepared as they ought to be. In my opinion—I have mentioned it already—the Irish Schools are not as good as they ought to be. We need not go into the reasons. The education given is not so good, and I think the boys come up very badly prepared; and I think also the examination for entrance into Trinity is too easy. I can illustrate that by saying that I happen to be the examiner appointed by the Honorable Society of the King's Inns to examine students for admission as law students who are not in any University. They are examined in two or three books of Latin, a little Latin Composition, English History, and English Literature. A good many of them fail, and when they fail I recommend them to enter Trinity College or the Royal, and they go down and enter Trinity College and they can become students at once without passing any further examination: the special examination I give is a very simple and a very easy one.

3302. I did not quite follow your point about lady students in Trinity. You thought the addition of sixty or seventy lady students made the classes so large that they could not be properly lectured?—Not exactly that; the classes are so large already that they cannot be properly lectured, and the addition of these sixty-nine lady students aggravates the difficulty. The classes are not only too large, but numbers have to be taken together without any reference to what the mental attainments of each person are, and therefore you find in each class boys who are entirely different as regards mental attainments from the others, and the lecturer has to adapt himself to the meanest intelligence in the class. The result is that the more intelligent boys get practically no teaching at all. And it is worse for the lady students, because they are considerably higher as regards mental attainments than the lowest class of men, the most inferior class, to whom the lecturer has to adapt his teaching.

3303. I only wish to point out that the addition of sixty or seventy would not make any considerable difference?—It is so bad already that you cannot make it much worse.

3304. With regard to the female students it has been suggested that the lectures in the Alexandra College should count as lectures for a qualifying course in the same way as those of Trinity College?—Should be recognised you mean?

3305. Should qualify for a course in Trinity College? Do you agree?—Yes; I am inclined to agree with that suggestion, but I would prefer a more regular Academic residence, and I would also prefer that the Alexandra students should be lectured by the officials of Trinity College.

3306. And if the suggestion were adopted of setting aside the Provost's house and gardens and the Fellows' gardens, would you keep them still railed in as they are at present—a separate portion of the College?—Well, there are three or four doors giving easy access. I would hesitate before I pulled down those railings.

3307. DR. COFFEY.—With reference to what you said as to the financial condition of the College, you think that large savings could be effected in many departments?—Yes.

3308. And in case there were another College or University established in Dublin in competition with Trinity College, could the latter, from its own resources, face such competition?—Yes, I think so.

3309. Even with reduced fees?—I think so. That is a matter for the future.

3210. But reviewing the whole table of income and expenditure, there is a margin, you think, for great economy?—Certainly.

3311. And therefore for saving against reduction of fees. Would you think it desirable if the financial sheets were so published as to show the total sum of money expended on the Arts Faculty, or the Arts Department, the Medical School, the Law School, and the Divinity School each year?—Yes; my view is that the more information is given, and the clearer that information is the better.

3312. And it is desirable for all the University and College teachers that each year there should be a published balance-sheet showing in detail how the money is spent in each Department?—Yes; that would be a very useful thing, but I object rather to any distinction between University and College teachers.

We are all both University teachers and College teachers, and that shows how close is the connection between the University and the College.

3313. In your own view about the character of the College and University, you have told us, I think, that it is hard to distinguish them—it has been said already that the University is an aspect of the College?—In the Act of Union, you know it is called the "University of Trinity College."

3314. On page 61,* section 2, under "Reconstruction and Administration" you make the suggestion that the whole of the Fellowship and tutorial system should disappear?—Yes.

3315. Does not that in fact recognize the College system within the University system—that paragraph?—Well I do not wish to commit myself to anything beyond what I have said. The existing tutorial system and the Fellowship system are, I think, unsound. I think I may be allowed to suggest its demolition without being committed to anything else.

3316. But that is a revolution in the system of the University of Dublin?—Certainly; and we want a revolution.

3317. Within such a University would it be possible, supposing the view was generally held that the tutorial system should not disappear out of the University of Dublin—would it not be possible to have another Fellowship and tutorial system?—Yes; possibly you might create more complications, but I should prefer the simpler plan.

3318. And what if the revolution were not accepted?—Then perhaps we must do the best we can. That could be done if you were constructing a new University, as has been done lately elsewhere, and I do not think any of those complications have been introduced into any of the new Universities that have been established; they have their Professors, Lecturers, Assistants, and so on, and they have got good men and pay them good salaries. That is the system I should like to see replacing the University system.

3319. Would the effect of your system be to convert a University of one type as it is at present, into a University of quite another type?—I do not think it would make much difference. You would call the teachers by other names—that is all. I do not think you would change the type of the University by any means.

3320. Do you not think it would tend to do away with the residential value of the College?—I do not think so at all.

3321. How would it differ from such a University as that of Edinburgh for instance?—Because there is no College in the University of Edinburgh.

3322. But a College which would merely be a house of residence is not the same thing as Trinity College is at present?—It appears to me that matters would remain very much as they are if those changes were introduced. You would call the teachers Professors and Lecturers—you possibly would not call them Fellows.

3323. In case the abolition of the Fellowship system did not become a fact, would you still think that the incomes received by the Fellows should be reduced—that they are high for the resources of the College?—Beyond question they are as compared with the incomes received by men doing similar work, or a higher class of work, in other Universities, and with the incomes of our own Professors, whose average income (excluding the Divinity Professorships, which are held by ex-Fellows) I make out to be £394 9s. 4d.

3324. In connection with your suggestions of improvement in the Law School, am I right in saying that your suggestion is that the main burden of teaching for legal education should be undertaken by Trinity College?—Yes; it practically does it now. The main burden is borne by Trinity College now. I gave you a list of the subjects which are taught at Trinity College, and of those which are taught at King's Inns, and I mentioned that four out of the six subjects taught at King's Inns were taught by us. I think I am justified therefore in saying that the main burden is borne by us.

3325. Do you not think, in that connection, that the Royal University graduates might make a claim that their University should be recognised by the Benchers for legal education, and that in that way Trinity College would lose many of the students who now come there?—I should take the chance of that, and rest upon the value of the teaching given. It would certainly act as a stimulus, and that would be a very

LONDON.

Leech, Esq.,
LL.D.

good thing perhaps for the College. I believe in competition. I should not object in the least to any of the Universities having the same privileges as we have and then let us each stand upon our own merits.

3326. Are you aware that a protest was made to the Robertson Commission by some of the Law students against the privilege which Trinity College now enjoys in connection with the preparation of students for Law?—I am not certain. I may have heard of it.

3327. In the Appendix to the Report there is a document which was sent in signed by a number of Law students in Dublin protesting against that privilege?—I should not much mind that, because my view is that the privileges we enjoy are not by any means so great as we ought to enjoy. They consist at present in doing a large amount of work for a small amount of pay. That is my position as regards Call to the Bar and Legal Education.

3328. But if your view as to legal education were adopted, would you have any objection to the Royal University, or a future University such as that you have described, being equally privileged with Trinity College?—None whatever; I should like it.

3329. Mr. KELLEHER.—You objected to a system of government in the University in which the Governing Body would be elected from the Professors and not from the Faculties on the ground that the larger Faculties would dominate the smaller, and you instanced the present Council in that regard?—Yes; I instanced one case in which it happened, when the most important question affecting the Law School that ever came before the Council came up for consideration, and the Medical Faculty dominated the position.

3330. But in connection with that, is there not a system of minority representation?—Oh, no.

3331. Is there not a system of voting by which each elector has a number of votes equal to the number of places vacant, and may cast all the votes for one candidate?—There is at the general election, but not at the bye-elections, of which I was speaking.

3332. Is it not the case at present that there are two members of the Faculty of Law on the Council, and no member of the Faculty of Medicine?—It is so beyond question, but the Medical Faculty might have had two members, and they did not care to.

3333. In instancing the present wasteful system of government, you stated that the work of the Bursar is mainly done by the Accountant and his assistants?—I am not absolutely able to make a very definite statement on this subject. Probably the present Bursar does a great deal of work, and looks after the various matters connected with his office exceedingly well; but this is an office that goes about, and is transferred from Fellow to Fellow—gentlemen who are not, as a general rule, business men.

3334. CHAIRMAN.—In a general way, the office is not transferred every year—it is held for several years?—Generally speaking, the office is held for several years.

3335. Mr. KELLEHER.—You said that the bulk of the work is done by the Accountant and the assistants, but perhaps you are not aware that there are no assistants?—I imagined there was more than one assistant to the Bursar.

3336. In speaking of the waste of time due to preparing for honour examinations, you arrived at a total of eighty-four examinations?—Yes.

3337. You did not suggest that each honour candidate presented himself for each of these eighty-four examinations?—No, I did not suggest that, and I do not think any member of the Commission understood me as suggesting anything of the sort.

3338. In your estimate of the advantages of Scholarship, you stated that the scholar has been rather badly treated, and that his position has been left the same as before, while the position of the tutor, and of the Senior and Junior Fellow, has been very much improved?—Yes; you may put it that way. What I stated was that a scholar being a member of the Corporation ought at any rate to have had some advantage when the position of other members of the Corporation was so much improved. You must remember that the scholar has had his position disimproved in consequence of the change in the value of money.

3339. But the other members of the Corporation of course get nothing more as Fellows—merely as members of the Corporation—they get nothing more than they got before?—Quite so.

3340. And the scholar, as a member of the Corporation gets no more than he got before, and no less?—Yes.

3341. But you, of course, understand that the remission of three-fourths of the fees means a gain of twelve guineas a year?—Yes.

3342. And that the average amount of half the rent of his rooms is £6 a year?—Yes.

3343. And that the value of the dinners is anything from £20 to £30 a year?—It is hardly so much.

3344. The cost of dining would be 11s. 8d. a week?—Yes.

3345. So that all told the scholar has about £60 a year?—Yes, possibly, if he dines every day.

3346. Another point. You suggested that the house work is looked after by the Chief Steward, and in answer to Dr. Jackson you said the Chief Steward was not a member of the Corporation. As a matter of fact is he not an ex-inspector of police?—I believe he is.

3347. You suggest that the Lecturer adapts his teaching to the capacity of the worst student in the class. Is that a fair description of the class of teaching done in Trinity College?—Well, I have known it to have happened; that is all I can say. As a general rule, I think a Lecturer is bound to make himself clear to the meanest intelligence in his class; I believe they all try to do that, and I really cannot find fault with them for doing it. I guarded myself specially on that very point by saying that though the teaching was insufficient it was not the fault of the teacher or Lecturer; I most specially guarded myself.

3348. Even as regards that, do you not think the difficulties in such a matter would be very much got over if there were a division of the classes of some kind according to ability at the beginning of the term?—I suggested that myself.

3349. And it is done now, is it not?—If it is done now it is only lately; it was not done three or four years ago.

3350. Sir ARTHUR RÜCKER.—You said just now that if there were a second University established in Dublin, the existing University being continued, you thought there ought to be some arrangement for equalising the fees; who do you think would have any power to interfere in such a manner with the fees charged by the Universities?—I do not know that I can answer that question; I think, as a general rule, that when a University is established, that is done by the Government, and I believe it is settled at the time what the fees are to be. I believe that is the practice. I am sure many gentlemen here are much more familiar with that than I am.

Sir ARTHUR RÜCKER.—I have had experience of two such cases, one being the University of London, but that was done in neither of those cases.

Mr. BUTCHER.—In Scotland it was found necessary to equalise the fees.

Dr. COFFEY.—As regards Medical Education there are three Schools of Medicine—Cecilia-street, the College of Surgeons, and Trinity College, and by agreement they all charge the same fee.

3351. CHAIRMAN.—You have given us a good deal of information about the finances of the College. Has your attention been drawn to the question of whether there is any waste in connection with the domestic affairs of the College? For instance, the kitchen is often a source of great waste; is there any reason to suppose there is waste there?—My attention has never been called to it, and therefore I will say nothing about that.

3352. Then, Mr. Butcher has called your attention to what is sometimes called the general question as to what ought to be done. You have expressed your objections to the formation of a new College within the University of Dublin; you have said that it would possibly interfere with and injure Trinity College without ultimately resulting in union. Would the same objection offer itself to the formation of a new College in the Royal University?—It would not apply to the same extent, but I think it would not be a good plan, and if I may mention the reason I will tell you—that is to say, the reason why it is not so good or statesmanlike a plan as the foundation of a University for Catholics.

3353. Supposing a University for Catholics was out of the question; what would you say then?—I presume you are referring to what was suggested by the Robertson Commission, but that was to establish a fully-equipped College in Dublin practically as a portion of the Royal University, the other constituent Colleges being the three Queen's Colleges.

3354. I was not putting the three Queen's Colleges; I was rather suggesting a new College in the Royal

University without attending to the question of the three Queen's Colleges?—It is very difficult to answer the question, because my most solid objection to it is the want of balance between such a College and the other Colleges, which would be a part of that University. You would have the most influential College in Dublin itself, and the other less influential Colleges scattered throughout the country, and that is, I think, a very serious objection; you come then to find that the College on the spot, absolutely next door to the University, will dominate the University, and I think that creates a very serious difficulty as regards any suggestion of that sort, and also a further argument for the establishment of an independent University.

3355. It would not have the evil effect of interfering with or injuring Trinity; to that extent you agree that the best course is to establish outright a new University?—I have no doubt whatsoever about it,

as the result of upwards of forty years' experience of education in Ireland.

3356. Mr. BUTCHER.—May I make just one small correction in something you said. We are told now that Trinity College has founded a Chair in Classical Archaeology—it is quite a new thing, I understand?—I never heard of it, and I am a member of the Council.

Mr. BUTCHER.—It is in a document* we received the other day.

3357. Mr. KELLEHER.—The Council would not know of a Lectureship? Would you kindly tell me what was the date of the appointment?

3358. Mr. BUTCHER.—The document has only just been sent in?—It has been sent in then, I presume, since I wrote my paper calling attention to the fact. I regard that as a very satisfactory piece of news.

The witness withdrew.

JOHN MACNEILL, Esq., and T. W. ROLLESTON, Esq., Representatives of the Gaelic League, called in and examined.

3359. CHAIRMAN.—You both, I think, appear as representing the Gaelic League?—(Mr. MacNeill.)—Yes.

3360. I think you, Mr. MacNeill, have prepared a document which you desire to read to us?—Yes, I desire to make reference to sundry matters touching the subjects of enquiry of the present Commission. I am one of the two Vice-Presidents of the Gaelic League, a Bachelor of Arts of the Royal University of Ireland, and a Governor of the School of Irish Learning. The Gaelic League is an Association of an educational and propagandist character, consisting of affiliated branches in every part of Ireland, and among Irish men and women in other countries, and having for its objects the study and cultivation of the Irish language and literature, and the preservation and extension of Irish as a living tongue. As an Irishman I could not be content to have my children educated in Trinity College. The College and the University are a provincial and British institution, not a national and Irish one. Trinity College was, no doubt, founded as part of a scheme of invasion, conquest, and spoliation. The fact does not justify it in remaining an anti-Irish institution in the twentieth century. *De facto*, Ireland is a co-ordinate part of the United Kingdom, not a conquered dependency. Ireland should, therefore, be as free as any other part of the Union to develop on her own distinctive national lines. This appears to be the theory of the State, under which Ireland has a distinct internal government, judicature, police system, and educational system. As a part of the educational system, Trinity College has hitherto insisted on being out of harmony with the whole national ideal, and thus maintains the status of conquest against the legal status of co-ordinate nationality. Professing fidelity to the Legislative Union, it has done more than any other factor to prove the Union unreal and illogical. The present Provost has repeatedly asserted his favourite doctrine that Ireland consists of two nations, a view which clearly harks back to the period of conquest. One of the two is the historical Irish nation, the other is the nation of Trinity College. The Vice-Provost, in a letter to the Press, has described Trinity College as "the only successful British institution in Ireland." (*Irish Times*, October 22, 1903.) One of the Senior Fellows (Appendix to First Report, page 48) cannot imagine any meaning in that "pompous expression" a National University, but thinks that the Catholic Bishops might do something to enable his own University to deserve the title. He has never heard of the "National" Universities of England. It is clear, at all events, that no suspicion of nationality attaches to the University of his experience. If Dublin University were in any appreciable degree as distinctively Irish as Oxford and Cambridge are distinctively English, my evidence would be unnecessary. In Statement XIII., Appendix to the First Report of this Commission, Mr. Edward Gwynn says:—"It is only too notorious that the country is divided from end to end by a deep chasm, which differences of race, of religion, of class, and of politics have formed, and are still widening. The most sagacious observers are agreed that, after all the remedial legislation which the last hundred years have seen, the schism is more profound, the feeling of alienation more intense, than when Lord Lyndhurst's famous

phrase was uttered." I claim the closest attention for this statement by a Fellow of the College. It requires no unusual sagacity of observation to see that questions of race, religion, class, and politics are rather the media than the causes of the widening schism. No further cause need be sought than the obstinate maintenance of the theory of a persisting conquest in defiance of the theory of the constitution. The alternatives presented to the Irish people are—to bow to this theory of conquest, or to renew perpetually the struggles of the seventeenth century. The protagonist of the theory is the College of the second nation, the only successful British institution in a country which is not British. I cannot, however, allow Mr. Gwynn's account of Irish public life to pass unqualified. The chasm has not proved impassable. Among the younger generation of the Conservative and Protestant element, there is visible a steady tendency to come away from the hopeless policy of conquest and attach themselves to the national side. I am not speaking of politics, but of the movement in favour of a distinctive national life and culture. I could write out on the spot from my own knowledge a long list of the names of sons and daughters of the nobility, landed gentry, professional and middle classes, mostly of English ancestry, who during the past few years have turned their backs on the anti-national tradition of their families, and entered heart and soul into the national educative and constructive movement. For them, the anti-national ideal represented by Trinity College has become squalid and barren—has lost its hopes and its attractions. It promises them nothing but a miserable provinciality for all time. They feel that a self-centred and self-developing Ireland is a better and happier country to live in than a vulgar Ireland which is content to ape and parrot the national life of England. I am not desired, and I do not desire, to enter into the question of the political relations of Trinity College, although I think that if this inquiry is destined to bring out the whole truth upon the points of reference, even that disagreeable question ought not to be shirked. The question that I have raised is one outside of legitimate politics, and therein lies its gravamen. I submit that the maintenance in Ireland as the only real University in the country of a University which can be described as British, and which, as I am about to show, keeps up a frigid and unsympathetic attitude towards everything distinctively Irish in the field of education, is harmful alike to education and to the public peace and welfare. Apart from the general spirit and tone of the institution, an Irish University should be a centre of the cultivation of specifically Irish branches of learning and culture. The chief of these branches at present are the study of the Irish language, literature, and philology, and the study of Irish history and archaeology. I do not propose to set forth at length the reasons why these studies should be established and encouraged in an Irish University. I assume that the evidence taken on this subject by the Commission of 1902 is applicable to the present case—especially the evidence of Dr. Douglas Hyde and Mr. Edward Gwynn. Further instructive evidence on the subject was presented to the Commission on Intermediate Education. It is, however, pertinent to point out that on that occasion the detailed evidence hostile to Irish studies was tendered exclusively by Fellows

and Professors of Trinity College, and was rebutted by a consensus of educational witnesses, Irish, English, French, German, and of other nationalities, who were familiar with the subject and its bearings. On the other hand, the evidence of Mr. Edward Gwynn before the 1902 Commission was entirely favourable to the vigorous and generous encouragement of Irish studies in an Irish University. The importance, even in a world-wide sense, of the higher studies in Irish as suited to a University, is not now seriously disputed, except by the Education Reform Association of Belfast (Statement fifty, Appendix to First Report of this Commission, final paragraph.) The intelligence of this Association does not appear at its best where the Association says of the Irish language, that "its cultivation will deprive them" (the youth of Ireland) "of the only equipment which a corrupt system has now left them—a knowledge of the English language." This pronouncement does not deter me in the hope of making myself understood by the Commission. The Irish language and literature are recognised in Trinity College to the following extent:—There is a Professorship of Irish; an annual Sizarship in Irish; an annual prize or prizes amounting in all to £20 for students who distinguish themselves in Irish; lectures by the Professor of Irish in connection with the Divinity School; the Bedell Prizes of £40 per annum under the Divinity School; the Kyle Prizes, of about £11 per annum, under the Divinity School, and a Lectureship in Celtic Philology. There was no Professorship of Irish until 1840. The present Professorship was then founded by "the Society for promoting the Education of the Poor of Ireland through the medium of their native Language," commonly called the Irish Society. This is an exclusively Protestant body. The poor of Ireland who speak the Irish language are all Catholics. The aim of the society is to give a Protestant education to these poor Catholics, in short, to proselytise. I need hardly say that the proselytising of the poor by wealthy Protestants has been and is a leading cause of religious antagonism in Ireland. We have here a trust for this purpose accepted and administered up to the present day by Trinity College.

3361. CHAIRMAN.—Is Trinity College the trustee of that fund?—Yes, at the present time Trinity College is the trustee of that fund; it has been since 1840. The full name of the Society which founded the Bedell Chair is given in its own Reports—

3362. Just let me understand what are the trusts—the trusts are to maintain the Professorship, I suppose, not to proselytise?—That will be explained more fully later in my paper, when I come to deal with the nature of the Professorship.

3363. What I want to know is this. You say the College is trustee of the fund, and I want to know what that fund is?—The fund is a capital sum handed over to Trinity College for the establishment of a Professorship in Irish.

3364. Without reference to Protestantism, or to proselytising?—Yes; those things are not required in the terms of foundation, I believe.

3365. Dr. JACKSON.—Is there any reference to the Divinity School?—In the foundation?

3365A. Yes?—None, I think.

3366. CHAIRMAN.—You do not object to that foundation, I understand; so far as it goes, it is all right?—So far as it goes, yes; but my point will be developed further as I go on. The full name of the Society which founded the Irish Chair and the Bedell Scholarships in Trinity College is given thus in its own Reports:—"The Irish Society for promoting the Scriptural education and religious instruction of the Irish-speaking population, chiefly through the medium of their own language." "The chief aim of your Society," says the Annual Report for 1897, "in undertaking this work of educating the Irish-speaking population, is to spread amongst them a knowledge of the Holy Scriptures, which are able to make men wise unto salvation. The study of language—whether Irish or English—interesting though it be in itself—is to the Irish Society of secondary consideration."

3367. I do not follow you in this. Of what consequence is it what the Irish Society does, if it does not affect Trinity College. If the Irish Society, with the worst of aims, has founded a good Fellowship in the College, we do not care what the Society wishes to do. With regard to the Bedell Scholarships I should like to know whether that was in any way ecclesiastical?—Purely in connection with the Divinity School

3368. What were the terms of the foundation?—Entirely religious.

3369. But what are the terms?—I have not the terms. The statement that Irish is of secondary importance has just been quoted by me.

3370. I really do not think we ought to inquire into what the Society does?—I shall show that in the case of Trinity College not carrying out the terms of the trust Trinity College has bound itself to refund the capital money to the Society.

3371. Of course, it might in that case revert in law to the founders, but we have nothing to do with that in this inquiry. I will assume that this Society is founded for very evil purposes, but if it has founded a good Professorship, is not that, so far, a good thing?—I do not, of course, object to the founding of an Irish Professorship, but I shall show that the whole tendency of it is of a sectarian character.

3372. That you must show from the documents—not from the Society?—Yes, I will show you that.

3373. Only, please, do not go into the history of what the Society is doing?—This statement explains the nature of the Irish foundation in Trinity College. The holder of this sectarian Chair, and the authorities who administer this sectarian trust, have submitted to the Commission a statement (Statement I., Appendix to First Report) embodying the following declaration:—"It would be most injurious to the interests of higher education in Ireland, and to those of Trinity College, that there should be incorporated in the University of Dublin a Roman Catholic or denominational college, in which access to the teaching staff and Governing Body would depend, *either in theory or in practice*, not merely on literary and scientific attainments, but also on religious denomination"; and, again, it is claimed that in the thirty years since Fawcett's Act they "have thoroughly acted on these principles, in spirit as well as in letter." We shall see the value of this protestation, no doubt made in good faith, in the case of the Irish Chair. The present Professor of Irish was first elected Professor in 1896, and was elected in 1904. The "literary and scientific attainments," which justified the authorities in electing him in accordance with "the spirit and letter" of the principles they assert, are absolutely unknown in the circle of students, scholars, and teachers of the Irish language. The College Authorities may believe themselves unbiased in the application of their principles, but in sight of the facts, it would be idle to expect the Irish public to adopt so complacent a view. The Professor was an organiser of the Irish Society previously to his appointment in Trinity—and I think up to the date of his appointment in Trinity College. Down to the year 1889, and perhaps later—at all events since the election of the present Professor—the Professorship of Irish appeared in the College Calendar under the head of Divinity. It was placed between the Professorship of Ecclesiastical History and that of Pastoral Theology. Down to the same time, the Irish texts prescribed for the Sizarship Examination were the Epistle to the Romans, the Epistle to the Hebrews, and the Four Gospels. Since then the letter has been changed, but what about the spirit? The change followed a vigorous criticism by the Gaelic League. The incumbents of the Irish Chair, including the present Professor, have been officers or members of this proselytising and exclusively Protestant Society. The Professor of Irish is required to hold examinations for the Divinity School. (Calendar, p. 199.) The Professor of Irish is an *ex-officio* trustee of the Kyle Irish Fund for the benefit of students of the Divinity School. (Calendar p. 200.) In short, he must be a sound Church of Ireland Protestant. As examiner for the Divinity School, the Professor of Irish examines students in "the Thirty-nine Articles proved from Holy Scripture," "the Church Catechism in Irish by heart, and proved from Holy Scripture," and "the Book of Common Prayer compared with Scripture." (Calendar, page 200.) The further qualifications required of the Irish Professor are not evident from the Calendar. Outside of the Divinity School, only one course in Irish is prescribed, the entrance course for Sizar, naturally a somewhat elementary one. Though innumerable Irish texts and books of instruction on Irish have been published during recent years, in response to the urgent needs of students, I am not aware that the present Professor of Irish in Trinity College has ever published a line of Irish text,

grammar, or any other form of instruction in the language. There is no means of knowing what extent of Irish scholarship is required in the Professor to satisfy the principles of the College authorities. In addition to the endowment provided by the Irish Society, the College itself contributes about an equal amount for the remuneration of this essentially sectarian Professorship. The Society's endowment is of the nature of a sectarian loan, and is accepted by the College subject to the condition that, should the Professorship lapse, the principal is to be paid back to the Society for the special purposes of the Society.

3374. Where do you get that from?—I presume that all these documents are before the Commission.

3375. Where does it say anything about the lapse of the Professorship?—I take it for granted it is in the Deed.

3376. Where do you get it from?—You may take it, no doubt, as only from hearsay.

3377. I think you should have something better than that to bring before us?—The documents are before the Commission.

3378. Can you produce the documents?—I cannot produce the documents of Trinity College.

3379. You have made a statement—an allegation as to fact—and I ask you what is your authority for making it?—I can give no better authority than I have given you. Evidently, in the view of the founders, the Professorship is a good investment of sectarian funds, and the College a suitable trustee. The association of the Professor with the Divinity School shows that the College is still faithful to the trust. The College prizes in Irish are set forth on page 164 of the current Calendar. They were founded in 1842, shortly after the arrangement with the Irish Society. They amount to £20 per annum, and are placed at the disposal of the Professor of orthodox Irish. An examination is held, but no course is prescribed, and what the value of the distinction may be, the Professor only knows. The £20 so awarded is the entire amount allotted by the College for the encouragement of the study of the Irish language outside, if it is outside, of the Divinity School. The Calendar does not reveal the least trace of any plan or scheme of Irish studies, except in the Divinity course for the Bedell Scholarships. The total prize money annually awarded for distinctions in Irish is £71, of which £51 goes exclusively to Church of Ireland Divinity students. The Professor of Sanskrit and Comparative Philology receives £100 per annum as Celtic Lecturer. Presumably this is an accident of the present incumbency, for a Professor of Sanskrit could not always be expected to know the Celtic languages. The Calendar (p. 127) states that "The Professor of Sanskrit and Comparative Philology lectures in each term on Celtic Philology." This condition, if it be a condition, would be fulfilled by a single lecture in each term. There are no prizes or distinctions in the subject of these lectures. So far as the College is concerned, the lectures may be delivered to the furniture, but the outside public are allowed to be present. There is not a trace of evidence of the existence in Trinity College of studies in Irish of a higher kind than might be expected in a secondary school. The studies of which meagre evidence exists are precisely of the nature to which the Professor of Sanskrit and his colleagues took such strong objection in their evidence before the Commission on Intermediate Education. The whole status of Irish in the College shows that Irish is merely tolerated because and in so far as it is felt to subserve the purposes of the Irish Society and the Divinity School. It is unnecessary for me to dwell on the Bedell and Kyle Prizes in Irish, as they belong to the Divinity School exclusively (see Calendar, pp. 199, 200). The Bedell Prizes were founded by the Irish Society, no doubt in recognition of the satisfactory results of its previous foundation. All these Irish foundations for sectarian purposes in Trinity College have come into existence since 1840, and illustrate the widening of the breach alluded to in Mr. Gwynn's statement. The Professor of Sanskrit and Celtic Lecturer has done highly valued work for Irish Philology. But neither he nor the College appear to have succeeded in fostering to any degree higher Irish studies within the College. I quite believe that Dr. Atkinson's other duties make it next to impossible for him to do anything in this direction. If so, his Celtic Lectureship cannot be imputed for merit to Trinity College. I do not know

whether Mr. Edward Gwynn's Irish learning has been acquired in Trinity. If it has, he is almost alone in the history of the institution. But I am informed that he learned most of his modern Irish among the benighted people of Kerry. By way of contrast the classes of Father Edmund Hogan in University College have helped to produce a number of editors of Irish texts and researchists in every department of Irish philology. The Royal University makes provision for the study of Irish in every stage of its Arts Course, including the degrees of Bachelor and Master of Arts, and has founded a valuable Studentship in Irish, and Fellowships in Celtic Literature. The late Provost, Dr. Salmon, went so far as to say that "All the modern cultivation of the Irish language originated in Trinity College." Notwithstanding the great dignity and reputation of the man, he was misled here by somebody or something, for the statement is ludicrous. It was made under the pressure of a criticism not confined to Ireland. But the fact that it could have been made, and by such a grave authority, renders me apprehensive lest venturous assertions of a similar kind may be presented before this Commission, and may tend to disguise the real part taken by the University in Irish education and in Irish life. The protestations of liberality, freedom, the open door, etc., that we have heard of late from Trinity College are enchanting the Irish public.

"When the devil was sick, the devil a saint would be;

When the devil was well, the devil a saint was he."

The present Provost has laid claim for the College to a number of men distinguished in Irish learning during the past century. Such claims are a sign of grace, a tardy admission of the fitness of Irish learning to adorn an Irish University. But none of those men acquired any part of their Irish learning from the teaching of the College, or got any encouragement from the College to acquire it. Their chief masters were two poor men, Eugene O'Curry and John O'Donovan, whose gigantic labours were the fruits of an education built up by rustic tradition in remote countrysides, and representing a spirit which Trinity College has always done its utmost to starve out. The attitude of the College towards Irish studies is in sharp contrast to its opportunities. Dublin is the very centre of what may be called modern Celticism, the one spot from which the monuments of Celtic antiquity as well as the existing Celtic languages are most accessible. Trinity College has ignored these opportunities because it is inspired by a firm tradition of hostility to whatever stands for an Irish nation—a primitive spirit of racial antagonism kept alive in a modern seat of learning. The neglect of Irish studies in Trinity College is a thing of wider evil than the perpetuation of the chasm in Irish life. Sir Henry Maine, M. D'Arbois de Jubainville, and others have shown the importance of these studies in the history of law. They have just the same importance and for the same reasons in the history of literature, politics, and other branches of social science. In all these respects, the study of Irish brings us into touch with an unbroken and almost independent tradition leading back to the beginning of civilisation. A short time ago, the Italian archaeologist Boni discovered in an Irish poem the key which he had sought for in vain elsewhere to the problem of the origin of that hearth of civilisation, the Roman forum. I may add that the sole copy of the poem referred to has been preserved in the library of Trinity College. The library of Trinity College contains the second finest collection of Irish MSS. in the world. Some of the MS. volumes are unique and priceless, forming documents of the first importance in world-history. The contents are mainly imaginative literature in prose and verse, and mediæval writings on history, law, religion, grammar, medicine, etc. A large part of this literature bears intimately on the separate development of a civilisation outside the bounds of the Roman Empire and Roman institutions. The College authorities have hitherto made no attempt to publish a correct and adequate catalogue of these Irish MSS. There is a printed catalogue of all the MS. in the library. The Irish section of this catalogue would not cause surprise if it had been published by an auctioneer instead of by a University. A MS. catalogue was compiled for the College as far back as 1840 by the famous scholar O'Donovan, but it covers only about half of the MS.

in the collection. The task of completing the catalogue appears to have been entrusted to a half illiterate and wholly unscholarly scribe, who also edited O'Donovan's part, omitting what he calls the discursive parts of it. His own work is characterized on almost every page, sometimes often on a page, by blunders and grotesqueries. He does not seem to have been entrusted with the correction of his proofs, or with the preparation of the index to the catalogue. The catalogue is full of typographical errors of an extreme kind, and these errors are repeated in the index. For instance, the name of the poet Eochaid O'Flainn appears in the catalogue as O'Kevin and in the index as O'Kerin. Three or four versions of the same piece are often catalogued and indexed under different titles and without any cross-reference. The number of Irish MS. volumes in the collection is 164. But some of these volumes contain scores of distinct pieces. The catalogue description is compressed into 108 pages, about enough to fairly indicate the contents of two or three of the principal volumes. The information given is sometimes an almost useless minimum. For example, page 302 deals with a collection of poems chiefly concerning the resistance offered by the Irish dynasts of Wicklow to the English Government under Queen Elizabeth. Regarding five of these poems the name of the author is given, and no further information. This is an instance taken at random. The preface to the Catalogue, p. vii., apologizes for the incompleteness of the Irish section. The excuse given is want of time. But one can see how differently the College proceeds with a subject more zealous and congenial. Immediately before the Irish section in the Catalogue comes a collection of MSS. of a totally different kind. They originally belonged to the archives of the Court of the Holy Inquisition at Rome. The records are of two kinds. There are thirteen volumes of Papal Bulls and Briefs. I am not jealous of the treatment accorded to these. A single page of the Catalogue disposes of the thirteen volumes. The remainder of the Roman collection consists of fifty-four volumes of the proceedings of the Roman Inquisition. To these are assigned forty-one pages of the Catalogue. Each case has been gone through and minuted, the minimum of information giving the name of the incriminated person, the nature of the charge, and the sentence of the Court. In many instances, much fuller particulars are extracted, and not infrequently there are long passages cited *in extenso*. There is no sign of lack of time or zeal in the preparation of this section of the Catalogue. During the past twelve-month, I was engaged in the preparation of a course of lectures on early Irish History to be delivered in University College, Dublin. It was necessary to have recourse to the oldest available documents, some of them in Trinity College library. The Catalogue was sometimes useful, but it sometimes proved quite misleading and sent me on wild-goose chases. On the other hand, I was fortunate enough once or twice to stumble on pieces of information which ought to have been indicated in the Catalogue, but were not. On the whole, the meagre and careless nature of the Catalogue entries caused me the loss of many valuable hours. The library is hung around with specimens of MSS. in many languages. I think there is not a single specimen taken from the unique and priceless Irish MSS. in possession of the College. Every means of stimulating the interest of students and frequenters of the library in this branch of learning appears to be methodically neglected. To sum up, the position of the College with regard to Irish learning is this: it tolerates a miserable modicum of modern Irish studies under the auspices of a sectarian and proselytising movement; it pays a Celtic Lecturer who has not succeeded in attracting students to higher Irish studies, and who is terribly intolerant towards the lower studies vaguely represented by his reverend colleagues. That is all. The treatment of Irish History by Trinity College has been even worse than its treatment of Irish Literature and Philology. I need not go beyond the preliminary statement by Mr. Wardell, the Professor of Modern History (Appendix to the First Report of this Commission, p. 72), where he claims to have been "the first to deliver a lecture on Irish History in Trinity College," and makes it evident that the innovation was due to a strong feeling peculiar to himself, and not to any illumination of the ruling spirit. Though Mr. Wardell desires to be recognised as a reformer, he has not quite broken with

the obscurant tendency of the institution wherever Ireland is concerned. He says that the greater portion of Irish history "lies in the Record Offices of the United Kingdom, France, and Spain." This is tantamount to saying that the greater part of Irish history is the record of English aggression. It recalls the dictum of the late Professor Fitzgerald, also of Trinity College, and a Commissioner of Irish Primary Education, who held that Irish children should be taught that their ancestors were naked savages until they were clothed and civilised by Elizabeth and Cromwell. The Irish history contained in the Record Office forms one of the most sombre pages in the history of mankind—a story of violent laws and lawless violence. The great and distinctive part of Irish history, the part which attracts the learned of the world, is largely represented by the neglected Irish MSS. in the library of Trinity College. Here, indeed, there is need of research, but the right kind of research is not encouraged by the College or even by the Professor of History. Irish archaeology is altogether neglected by the University. I am not aware that any lecture on the subject has ever yet been delivered in Trinity College. The effects are apparent outside of the College. We have archaeological societies, but the damp climate is against them, for what passes with most of their members for the study of archaeology is the organisation of picnic parties. Some of the most remarkable monuments of antiquity are scandalously neglected.

3380. CHAIRMAN.—I am afraid we cannot go into the question of the preservation of monuments; that is outside our functions altogether?—Some of these monuments, I may say, are of a peculiar character and value with regard to the Irish language, and with regard to history. There are the Ogham Stones, containing prehistoric inscriptions in an alphabet peculiar to themselves, and in a form of language nowhere else recorded.

3381. I think we can hardly go into the details of the monuments throughout the country. Of course there is now a Professor of Archaeology, and he will probably attend to them, but the question as to how they are to be protected is outside our present functions?—I am not dealing with their protection.

3382. But I do not think we can go into the question of what they are, either. We know that there are a great many very interesting objects of the kind scattered through Ireland, but the subject altogether is beyond the scope of this Inquiry?—These monuments are scattered over the country, exposed to every sort of mischance, neither sought after nor protected. There are only two living students of them, and one of the two is a Welshman. For all this neglect Trinity College holds a prime responsibility. The active spirit, no less than the inactivity of the institution is to blame. The whole intellectual movement of modern Ireland is in the direction of a distinctive national culture. This movement has brought a new life into the country, and in particular has focussed the attention of the people on the question of education. Trinity College has held sullenly aloof from the movement, and the strongest opposition to it has come from leading Trinity College men. The evidence already published by this Commission, however conflicting it may be on other points, is at one in establishing the central fact, the existence of gravely abnormal and morbid conditions in Irish life. Out of these conditions arise in part the acute and difficult problems that the witnesses have endeavoured to deal with. My case is that the special cause of all these evils is the maintenance, under the guise of peace, of the spirit of an era of conflict and conquest, and that the propagating centre of the theory of conquest is Trinity College. It is Trinity College that maintains the doctrine of a second nation and the claim to be a British institution. So long as these things are kept up we shall have civil war without weapons. This theory of a British conquest is at once the provocation and the justification for almost any degree of resistance. It minimises the claims of order and of law. It could only be excused on the grounds of a prospect of success, and there is no such prospect. I refer again to the evidence of Mr. Gwynn, who cites a member of the Commission in his support, to the effect that the Irish people, instead of drawing together, have for half a century been steadily organising themselves into hostile camps. I assert that a quite sufficient cause

of this great evil and public danger, is to be found in the rigid anti-national attitude of Trinity College and the section of the public within its sphere of influence. This attitude is a leading character of "the place which Trinity College, Dublin, and the University of Dublin now hold as organs of the higher education in Ireland," and is an effectual bar to "their usefulness to the country." It explains why I, or any other Irishmen who identify themselves with the Irish nation of history, could not be content to entrust the education of our sons to the care of such an institution. The anti-national character of Trinity College has done more than depriving the College of the sympathy of the body of the people. These are in no way attracted by proposals, from whatsoever quarter, to draw their young people into the College. But Trinity College has also lost caste with the section of the people who long monopolised it. In former times it served the higher educational needs of the whole of this section, rich and poor, noble and commoner. Nowadays the Irish nobility will not allow their sons to be educated in Dublin, and even wealthy commoners prefer as a rule to send their sons to England for a genuine English education. I cannot supply statistics on this point. It is a matter of public knowledge. As regards the nobility, it can be easily settled. It appears from the College Calendar that the distinction of *nobilis* or *filius nobilis* is still officially recognised. It is possible therefore to ascertain how many students from time to time on the College roll are so distinguished. The fact is that those whose position demands it, or whose wealth commands it, do not look to Trinity College for the best education. They regard Trinity as disclassed and provincial. The College no longer serves to bring together the intellect of the aristocracy and of the people, even within its limited sphere of influence. It has created a second gulf in Irish life.

3383. I do not know whether you have much more to read to us?—Very little more.

3384. Very well; will you kindly go on, and then when you have finished we will adjourn for luncheon?—For this state of things Trinity College must thank itself. Its contempt for everything Irish has recoiled on its own head. If the College had been animated by a national spirit, if it had even responded to the national spirit such as existed among the Protestant gentry and men of wealth up to a century ago, if it had done anything to make them feel that they were Irishmen, they and their children, and their children's children would have chosen it before any other place. Trinity College would have maintained its prestige, and would have benefited itself to no small extent. It would have benefited Ireland still more. In that case, we should not have seen the almost complete divorce between wealth, property and

rank, on the one side, and the national interest and public duty on the other. The agrarian, economic, political and social evils of the country would at least have been softened and mitigated. Dublin would have remained in some degree what it was before the Union, one of the brightest, most intellectual and cultured, and most progressive capitals of Europe. That dismal chasm in Irish life, at all events, would not have been a principal factor in the problem of Irish University education. I think that something of my case with regard to the part which Trinity College has taken, and the part it ought to take, in Irish education, underlies the following words by the veteran philologist Windisch, of Leipzig University: "If the Irishman, as Irishman, is to feel himself happy in his home, this ennobling thought may well conduce to it, that his land may be proud of its past and the remains of its past. The making little of Irish characteristics and of the Irish language most certainly does not conduce to the rendering happy of the Irish people and of the cultured classes who are planted among them. Englishmen, too, should recognise in Ireland that which is worthy of recognition. To take from Irishmen an opportunity of gaining a firm foothold in the Irish language and through it in the Irish past would be, in my opinion, both unjust and unwise." If asked what I should propose as a remedy for the present anti-national condition of Trinity College, I should begin by adopting the proposals of Mr. Edward Gwynn before Lord Robertson's Commission. A Faculty of Irish studies should be created, including a Professor of modern Irish, a Professor of ancient Irish, and a Professor of Irish history and archaeology, or separate Professorships of history and archaeology. The conditions of the existing Professorship of modern Irish would have to be wholly changed, unless there were to be a Professor of Catholic Irish side by side with the Professor of Protestant Irish. The College Library, on which a generous expenditure appears to be maintained, should be provided with a *catalogue raisonné* of the Irish MSS., and this catalogue ought to be published as a separate volume. The library should hold out every possible facility and inducement to students of Irish. A complete plan of Irish studies should be drawn up, leading students to what is most necessary and valuable in this branch of learning as such—original and systematic research. Valuable prizes and distinctions should be a part of the plan. But the good effect of all these things would be minimised unless they were accompanied by an entire change in the tone and spirit of the College and University—unless the University ceased to be the spear-head turned in the wound and became frankly and cordially an Irish institution.

LONDON.

Nov. 8, 1906.

John MacNeill,
Esq., and T.
W. Rolleston,
Esq.

After a short adjournment.

3385. We heard a very full statement from Mr. MacNeill; have you anything to add to it, Mr. Rolleston?

(Mr. Rolleston).—Yes, sir. The evidence which I wish to lay before the Royal Commission will be mainly directed to the neglect shown by Trinity College to those Irish studies which can be carried on, or at least carried on to a considerable extent, with the aid of the English language alone—the question of the Irish language having been dealt with by Mr. MacNeill, with whose observations I desire to identify myself. Of course it may be said, and indeed it is important to say, that all Irish studies lead one sooner or later up to the Irish language. History and archaeology, for instance, would very soon come to a standstill for a student who could not read Irish, or who had not at least access to a considerable quantity of translated material. Still, taking facts as they are, a great deal can undoubtedly be done through the medium of English to lay the foundations at least of a scholarly training in Irish history and archaeology, and to excite interest in Irish literature. This, I submit, is one of the clearest duties of an Irish University. We shall see how Trinity College has fulfilled it. I wish, however, at the outset, to express my strong sense of gratitude for all that Trinity College did for me during my four years' residence there after an education at an Irish school, St. Columba's College. Speaking for resident students, and of course for those only, I can certainly testify that we could, and did get in Trinity College the kind of culture which it is the province of

a University to give—a culture which is of course more an intellectual impulse than a set of opinions or a store of information. No one who has within any measure received such a gift can ever think coldly or ungratefully of the institution which bestowed it on him. In calling attention, therefore, to the one great blank in the intellectual life of Trinity College I do so from no hostile standpoint, but from that of a pupil and friend who wishes to see his *alma mater* extending her influence into every sphere which an Irish University ought to occupy. As an Irish University, the great defect of Trinity College is that it takes practically no cognizance of Ireland. Of course there are historical reasons for this. The University was founded to meet the needs of a body of English colonists who were heartily convinced that beyond the English Pale everything was, as Sir John Davies put it, "incivility, confusion, and barbarism." Incidentally it was to aid in civilising, which to the English mind always meant Anglicizing, and, after the Reformation, Protestantising the natives. This was the standpoint even of so strong a patriot as Swift. It was the standpoint of so humane and liberal a spirit as that of Bishop Berkeley. It was not until the very end of the 18th century that the idea began to dawn upon the minds of leading men among the then dominant section of the population that there could be anything worthy of attention, anything capable of becoming the basis of a higher development, in the language, literature, legends, history, and social and artistic culture of the native Irish. It was then that we find Henry Flood leaving his generous bequest for endowing an Irish Chair and

LONDON.

John MacNeill,
Esq., and T.
W. Rolleston,
Esq.

collecting Irish MSS. to Trinity College—a bequest which the University never obtained. It was then that we find Lord Edward Fitzgerald and his friends in the '98 movement studying the Irish language as part of the duty of a patriotic Irishman. The opening of the Parliamentary franchise to Roman Catholics in 1793—an event of far greater intrinsic importance than their admission to Parliament in O'Connell's time—and their admission by Act of Parliament of the same year to graduate in Trinity College, were clear signals to the Irish Protestant gentry that the old colonization policy was dead, and that they must look forward, ere long, to shaking down on equal terms with their Roman Catholic and Celtic fellow-subjects. To do this, it would obviously have been of advantage to them to know something of the inner mind of Celtic Ireland—then predominantly Irish speaking—and of what it had been and had done in the past, so that there should have been a certain community of knowledge and of historic background between the two races and religions, and a sympathy and intelligence resting on that knowledge. The total lack of this might even, as events in our own day have only too forcibly illustrated, prove disastrous to the small minority embedded in the large alien population now to be armed with education and with political power. The abortive bequest of Flood, a very far-sighted political thinker, was doubtless based on these considerations, and the hint which it gave to Trinity College was a golden one. But Trinity College was unhappily deaf to the hint, and missed one of the greatest opportunities of its history. The course which the University took at this juncture of continuing to regard itself as the University of the Pale long after the boundaries of the Pale had been obliterated, had the effect, if I may borrow a medical metaphor, of encysting it as a foreign body in an Ireland now rapidly growing into national self-consciousness, and isolating it from all vital contact with the nation's life. It was not for want of advice and remonstrance that Trinity College adopted and persisted in this attitude towards Irish studies. I may quote a striking passage from the "History of the Archbishops of Dublin," published in 1838, by a Protestant writer, Mr. John D'Alton. Dealing with the history and position of Trinity College he writes: "Its manuscript room is so richly supplied, but at the same time so sealed from ordinary access, that it may well be termed 'the cemetery of Irish history,' a character, perhaps, too much in accordance with the constitution of the College itself, for, although it has sundry Professors of its own endowment, and others, as those of divinity, mathematics, astronomy, and political economy, principally of private foundation, yet it has no Professor of the history, antiquities, or statistics, moral or physical resources, of the country with which its *alumni* should, in their future lives, be conversant. James I. urged the propriety of such an appointment; Charles I. warmly approved of it; Bishop Bedell, while Provost, endeavoured to effectuate it; James II. actually appointed one; and a very large bequest was, in more recent years, designed by Doctor Flood for the endowment of such, but his will was overruled at law. The reproach, however, of such a deficiency in our Irish University will, it is hoped, be speedily removed under the liberal administration of the present Provost, Dr. Sadlier." Mr. D'Alton was a great deal too sanguine in his hopes of reform. Sixty years later—in 1899—it was possible for a Quarterly Reviewer in an article on Irish education, to write as follows:—"The great University of Dublin, which should be expected to take the lead in showing how Irish studies may be combined with breadth of culture and pursued with sanity and scholarship, as well as with patriotic feeling, holds aloof in contempt. In that University it is possible to graduate either in literature and modern languages, or in history and jurisprudence, as well as in Classics and in Science. Yet, in spite of the admirable material which has long been available,, there is not in the whole Literature course a single work relating to the imaginative literature of Ireland, nor in the whole History course a single book upon any period of Irish History." At the present day the College Calendar reveals the same state of things as in 1899 and 1838, except in one particular. In the present year, for the first time, Irish History is represented, and very well represented, in the History honour course. Professor Wardell, in his Statement before this Commission, quoted by Mr. MacNeill, declared his belief that he was the first Professor who had ever delivered a lecture on Irish His-

tory in Trinity College. This is an important step in advance, but of course it is not nearly enough to give the one subject of Irish History its due position in an Irish University, not to mention the kindred subjects of the Irish language, of the Literature, both Irish and English, and the very important one of Irish Archaeology, which the eminent Italian Archaeologist, the Commendatore Boni, has recently declared to be an almost virgin field from which results of the deepest interest may be expected in connection with the study of the origins of Latin civilization. It must be borne in mind that the negative influence of this attitude on the part of Trinity College is very far-reaching. It not only affects all the future life of the ordinary Trinity graduate, who in the crowding interests of his later career very seldom finds his way over the fence which Trinity College has erected between himself and Ireland, but it governs the curriculum of all the schools which work up to the University. The natural result is that the Irish Protestant gentry and clergy have grown up more ignorant of their native land and of the minds of the people among whom they have to live than are, I suppose, the gentry of any country in Europe. I come from that class myself; I know their mind if I know anything in Ireland, and I say that, as a body, their ignorance of Ireland and the Irish is something almost incredible. They are as much at sea in attempting to understand and deal with the forces that are moulding the future of Ireland to-day as if they were a set of Chinese mandarins. I hold Trinity College mainly responsible for this result, so unfortunate to the class in question, so unfortunate also to the country to which it belongs. The vacancy which a Trinity College training leaves in the mind of its *alumni* on the side of Irish studies and interests was very strongly brought home to my mind by a personal reminiscence, after I had contrived more or less to fill up the vacancy in after years. It happened that immediately after taking my degree I made a rather extended canoeing excursion on Irish waters with a College friend. We went from Navan down the River Boyne, coasted up by sea to Dundalk, thence went by Carlingford Bay and Newry to Lough Neagh, down the Lower Bann, and up Lough Foyle to Londonderry. If we had planned the tour for the purpose we could hardly have passed through a region of more surpassing interest, not only scenic, but legendary, romantic, archaeological, and historical. Yet absolutely all we knew or suspected of the scenes we passed through was that William III. had won Ireland at the Battle of the Boyne, and that Derry had stood its famous siege against King James. The rest of the country was to us merely so much woodland and water; yet I think I may say that there were no two members of the University whose minds would have been more eagerly receptive of other interests if they had come at all within their ken. We knew, I should say, everything that was then commonly known about Stonehenge, though we had never seen it and probably never should. But we passed within half a mile of the great cemeteries of the Pagan Kings of Ireland on the Boyne, monuments, some of them over 3,000 years old, whose walls are sculptured with the earliest tracings of Irish decorative art—and we did not so much as know of their existence. We had never heard of Cuchullin, the central figure of Irish heroic legend, who had his dwelling at Dundalk. Near by, unknown to us, was Ardee, a place which still carries in its name the memory of one of the most striking and beautiful episodes in the epic literature of Europe. We knew nothing of O'Donnell and O'Neill and the great Elizabethan wars of which they were the protagonists. The Battle of the Boyne and the siege of Derry were events which had a critical influence on English History, and our guides took good care that we should know all about them. But for all the rest, we might as well have been wandering through the mountains of the moon. It does not take much to kindle a train of interest in the mind of a student who reads for the love of reading. In the English Literature course in my time—if I may again give a concrete illustration from my own experience—Matthew Arnold's "Essays in Criticism" was one of the books to be studied—a most admirable choice. I recollect how this led me to Matthew Arnold's poetry—then to his work in social and religious criticism—how one of his essays set me learning German to read Heinrich Heine, how a sentence or two in another induced me to take up Epictetus, and, shortly after I had left College, to publish a translation of him. I remember, again, how the reading of Scott's "Bonnie Dundee" as a boy set me on the study of the lives of Claverhouse and Montrose and

the wars of the Scottish Covenanters. Every student has experiences like these, and the Modern Literature course in Trinity College is strewn with what I may call literary fingerposts, pointing the student to many fascinating fields of study. But all these fingerposts point to something in England or on the Continent—there is not one to turn the Irish student's mind towards his own country. There does, of course, exist an important private foundation for Irish historical study in the Helen Blake Scholarship, and it is right to mention that in recent years subjects have not infrequently been set for the Vice-Chancellor's Prizes in English Verse and Prose which direct the student's mind to Irish topics. But these features at present hang quite loose in the T.C.D. system—no other part of the curriculum (except, in this year, the History honour course) sheds light on them or they on it—they are not connected with any organised course of Irish studies, and consequently they have no general influence on the type of culture given by the University. They are regarded as a preserve of a very few specialists—not to say cranks. I may mention that a few years ago Mr. Commissioner Nunan of Uganda offered to members of the University Philosophical Society a gold medal for an examination on some epoch of Irish History. Mr. C. Litton Falkiner and I were chosen to conduct the examination. We offered a choice of two epochs, gave a list of works to consult, and did all we could to promote a healthy competition; but only a single candidate presented himself. The promotion of a more general interest in Irish History and Literature would therefore seem to be one of the most obvious steps that, in the words of the reference of the Commission, might be taken by Trinity College to increase its usefulness to the country. There is little doubt that private endowments for much-needed research work in Irish History and Archaeology would soon be forthcoming if T.C.D. gave the lead in the matter and made Irish studies an organic part of its curriculum. Private benefactors whose minds might turn in this direction would certainly be repelled by the present official attitude of the University. Before concluding my Statement, I wish, briefly, to advert to a circumstance falling within my own knowledge, connected with the Irish Professorship in T.C.D., the leading facts about which have already been laid before the Commission by Mr. MacNeill. When the last vacancy occurred, Dr. Douglas Hyde was a candidate for the post, Mr. Lecky, then a Member for the University, was an elector. I had the honour to be acquainted with him, and I approached him in order to represent the claims of Dr. Hyde. His reply amounted to this, that the post was not open to general competition—it had a religious character; it was essential, he said, that the Professor be qualified to give instruction in preaching in the Irish language. There being no such thing, I regret to say, as a congregation of Irish-speaking Protestants, this means proselytism among Roman Catholics. The sectarian, I might add the missionary, character of the Professorship, is thus manifest. In saying this I intend no reflection on the present occupant of the post, for whom, and for whose Irish learning, I have every esteem and respect. But that such a subject as the Irish language should be relegated by T.C.D. to a foundation of such a character, is one of the strongest proofs that could be afforded to anyone who has the smallest acquaintance with Ireland of the utter want of intelligent sympathy and understanding between the University and the Irish people. This Professorship seems to me a scandal of the first magnitude. It is extraordinary that it could ever have come into existence—it will be still more extraordinary if it can survive exposure.

3386. CHAIRMAN.—I do not quite follow you. Why do you say this Professorship seems to you a scandal of the first magnitude?—Because it is a sectarian appointment. It is a scandal not that there should be a sectarian appointment, but that the sole provision for the teaching of the modern Irish language in the University should be relegated to a sectarian foundation.

3387. It is not the Professorship that is a scandal, but the want of other Professorships?—I think the Professorship in an undenominational University is a scandal.

3388. But the Professorship is quite undenominational?—No, it is distinctly denominational.

3389. I cannot find it to be so?—You will find in the calendar that the Professor is co-trustee for funds intended for denominational teaching.

3390. That might well be, but it does not make the Professorship denominational?—The Professorship

could not be held by anyone but a Protestant, because he is co-trustee of funds for Protestant teaching. No Roman Catholic could be trustee for funds intended for the promotion of something which upset his religion. The Irish Professor is the official co-trustee named in the calendar.

3391. The trustee of the whole funds, but the terms of his election are entirely open to anyone, and have no connection with religion of any sort or kind?—The terms of his foundation, but the College calendar distinctly makes him out a sectarian officer.

CHAIRMAN.—I fail to see it, but I daresay you are right. Your point is not so much that the Professorship is a scandal, as the absence of other Professors is a scandal?

3392. LORD CHIEF BARON.—Do you mean that the whole provision for Irish in Trinity amounts to a scandal?—Yes.

3393. You mean the want of other provision is a scandal?—I do not think an undenominational University should accept a sectarian endowment. Its Professorship of Irish ought to be either in the Divinity School or out of it.

3394. CHAIRMAN.—Now, I follow you?—In my opinion, nothing could have been more injurious to the Irish language and to Trinity College than the foundation of that Professorship, because it was sectarian from the outset, and carries that sectarianism still. I maintain the College calendar makes the Professor as such a co-trustee of a denominational fund, and thereby makes him a sectarian person. Whatever the theoretical case may be, he practically could not be anything else, and that this is present to the minds of the electors is clear from what Mr. Lecky said to me, as I have already stated.

3395. Dr. DOUGLAS HYDE.—If you had a full supply of Professors would you still look on it as objectionable that there should be this other Professor in another department?—Not if that department was distinctly connected with the Divinity School, and entirely within a ring fence.

3396. I understand your argument is this, that that particular Professorship is within that ring fence?—It is, and it is not. It occupies an extremely anomalous position. The Professor is bound to examine students out of the Divinity School and give them instruction, but, at the same time, his lectures are open to the public, and the conditions of his appointment involve his sectarian character, as you see in the calendar. Therefore, his position is anomalous. The idea apparently was to obtain by a side-wind what it was not desirable or politic to do openly and boldly.

3397. LORD CHIEF BARON.—I should like to ask you a question as to the provision which you think ought to be made for the teaching of Irish in Trinity College?—I think there ought to be, in the first place, a Professor of the Celtic languages and literature, embracing all the Celtic languages and literatures, and I think that should be associated with an assistant Professorship or Lectureship in the subject of modern vernacular Irish, Irish, that is to say, from the Elizabethan period down to the present day.

3398. CHAIRMAN.—You mean in regard to Archaeology, I suppose?—I think a Chair of Irish Archaeology would be a very desirable appointment, but I should not like to insist upon it that it be founded out of College funds. If the University were to give something of a lead in these matters we should probably have private endowments for subjects of this sort.

3399. LORD CHIEF BARON.—The question I have to ask you is irrespective of the College funds; separate the questions arising as to how economies can be effected in the College funds, leave out, in fact, the question of funds, can you give us a full statement of what you consider would be proper provision for teaching the Irish language, its origin and cognate languages, and the archaeology and history of Ireland?—That is a large question.

3400. You are here to give us assistance, and we are appointed as a Commission to report what steps we think ought to be taken for the purpose of increasing the usefulness of the College. Therefore, I should like to have presented to my mind, not any very great detail, but some general idea of it?—I have already said I think there should be a Professorship of the Celtic languages and literatures, with an Assistant Professorship devoted to the vernacular, the Irish of the present day from Elizabethan Irish down. Then, there might be a Professor of History, as at present,

LONDON.

John MacNeill,
Esq., and T.
W. Rolleston,
Esq.

and with him might be associated an Assistant Professor of Irish History, who should be expected to pay special attention to the subject of Irish studies that might be properly associated with history.

3400a. Would you expect those Professors to lecture?—Certainly.

3401. You approve of the system of instruction embracing both the Tutorial and Professorial system?—Distinctly.

3402. Have you any suggestion to make in reference to the courses of studies, whether there is any course of studies ending in a Moderatorship in which Celtic literature should be introduced, or should have more weight than at present?—The Moderatorship course embraces English literature, and a choice of any foreign language, French or German, and, I think, to those foreign languages should be added modern Irish, so that the student might take out his Moderatorship in English literature and modern Irish, as well as English literature and French or German.

3403. Then, going to an examination that is a very important one, the Scholarship examination, do you think any provision should be made for Irish in that examination?—The Scholarships at present are in classics and science, and I do not think it is at all desirable to introduce Irish into either; but I think it might be desirable to have a third Scholarship, not for modern Irish alone, but for Celtic languages and literatures.

3404. The Scholarships at present, I think, are divided into different classes. There are the old Foundation Scholarships, then there are Scholarships founded since my time, Mathematical Scholarships, and I think there have been some Scholarships, of which Mr. Kelleher can tell us. Therefore, it is possible to found a Scholarship in a subject not included in the Foundation Scholarship course?—No doubt.

3405. Therefore, I want to know whether you suggest that any encouragement should be given to Irish by having a special Scholarship, or more than one special Scholarship, for it, or whether it might be joined with other subjects of the Scholarship course for certain particular Scholarships?—I think either of those suggestions might suit. For myself I think I should like to see Irish joined with general philological studies, but not added to the Classical Scholarship course. I would keep that distinct.

3406. Do you think there is any great objection to join Celtic subjects with classics?—I cannot see it at all; I think they rather run into one another. Classics is a very large subject, and Irish is such a difficult subject, into which scholars are only just beginning to hew their way, that it would be putting too much of a load on the mind of the Scholar to ask him to take Irish into the Classic Scholarship course.

3407. CHAIRMAN.—A Scholarship in philology with special reference to the Celtic languages?—That would meet the difficulty perfectly.

3408. LORD CHIEF BARON.—I was going to suggest that, because my view is that one of the most interesting parts of this study of the Irish language is the mode in which it leads up to philology. It is probably unique among all known languages in the structure of some of its grammatical parts of speech?—Yes.

3409. And you would be content, then, if there were a Scholarship for the elements of philology with some special reference to Celtic philology and to Celtic literature?—Certainly, but all that would depend upon the appointment of a Professor of Irish languages.

LORD CHIEF BARON.—I assume that.

3410. CHAIRMAN.—It has been suggested to me that I anticipated you with a question before you had finished your Statement. Will you now finish?—My reading will be very soon finished, but, before I actually go on, in reference to what I have been just asked, I should like to mention something else. I was asked something about Irish history and Irish philology, and about the Literature Course. I have pointed out already that there is no work relating to Irish literature in the Literature Course, and quite apart from the encouragement of the Irish language I would plead for something in the way of encouragement to the study of Irish subjects generally, which might be given by the introducing of the works of Anglo-Irish writers in the English literature course; for instance, the works of Sir Samuel Ferguson might be distinctly represented there. Dr. Whitley Stokes once described Ferguson's "Canary" as the noblest English poem ever written by

an Irishman and Professor Dowden has spoken of Ferguson in very laudatory terms, indeed. He says there is more of the epic quality in Ferguson's poems than in all that Tennyson has ever written; yet Tennyson is represented in an extravagant manner in the Literature Course, and Ferguson is unrepresented. No writer abounds more than Ferguson in the literary finger-posts, as I have called them, which would strike the mind of the student in Irish matters, and lead him on. The state of things which Mr. MacNeill and myself have been charged to lay before the Commission may be summed up in one sentence: Ireland feels itself boycotted by Trinity College. The College has remained to this day the University of the English Pale. No reforms or concessions on the religious side of the question can ever make it an Irish national institution so long as this attitude of disdain and aversion for things Irish is persisted in. A change in this attitude, whether associated with religious concessions or not, would prove, in my opinion, the most valuable of all possible reforms as a solvent of the mutual prejudices and ignorances which degrade our country, trouble its peace, and retard its advancement.

3411. Dr. JACKSON.—I should like to put this question to you. I suppose that posts might be established in the University, either for the teaching of Irish to Irish-speaking people, or to encourage Irish reading and speaking, or for the promotion of the scientific study of Celtic origins and Irish history; are you thinking of all those three objects, or only of some of them?—Of all three.

3412. And do you think that the second is one of importance?—You mean the spread of the Irish language—yes, I do.

3413. Could you make it clear to me, who am a stranger, what the situation is in that respect? Are there many people of the educated classes who are already familiar with Irish?—Yes; the number is gradually increasing. The last Census showed that there are 600,000 persons who are able to speak both English and Irish in Ireland.

3414. And the number who speak Irish is growing?—Distinctly, in proportion to the population; that is to say, the last Census showed the number of bilingual persons to be almost exactly the same as the previous Census, ten years before, but the population has undergone a great reduction in that period, and the proportion has been more than maintained.

3415. Sir THOMAS RALEIGH.—How many speak Irish?—28,000, or thereabouts, I think, speak Irish only.

3416. Dr. JACKSON.—In fact, if Trinity College, Dublin, were to do something substantial for the encouragement of Irish studies, it would be meeting a need and not merely trying to create a demand?—Distinctly meeting a need; a need that has grown up quite outside Trinity College.

3417. Am I not right in thinking that in respect of my third point, the encouragement of the scientific study of Celtic origins, there has been important work recently done—investigations, archaeological in character, in folk-lore, and so on?—Yes, undoubtedly.

3418. Mr. BUTCHER.—There was a view expressed before the Robertson Commission to this effect—that in all undergraduate courses modern Irish must, if not actually compulsory, play an important part; and modern Irish must rank in all examinations on a par with English and other modern languages. Does that agree with your view?—No. Allow me to say that in this I am speaking for myself and not for the Gaelic League. The Gaelic League would probably say yes.

3419. What would you say?—For myself I should not like under present circumstances to make Irish a compulsory subject for matriculation, for instance, in Trinity College.

3420. What part do you think it might fairly play in the ordinary undergraduate course? Put aside for a moment the Honours Examination, where the philological study of Irish, including the old Irish, would probably come in?—I should not be inclined to make either old or new Irish a compulsory part of the ordinary graduates' Arts Course. I would make Irish history such a part, but I would not at present in Trinity College make the Irish language, the vernacular, a compulsory part of the University course.

3421. Do you think, however, it could come in as an optional study in a general course for the ordinary Degree?—Yes. I would put it on a level with any foreign language in Trinity College. Wherever French or German or Italian would come in I would say, "or Irish."

3422. I presume that must be the modern Irish—that old Irish would be too difficult a subject to bring in to any pass Degree?—That is only for specialists.

3423. And when you come to modern Irish literature, what is the literature—first in prose and then in verse? The prose literature is mainly of a religious kind, is it not?—Do you mean the literature of the Irish language?

3424. Yes?—It is religious and historical. Of course there is Keating's History of Ireland, and beyond that I do not know that there is very much in prose. There is not much prose literature in modern Irish.

3425. In modern Irish literature the prose literature is rather meagre?—Yes, rather meagre, and mainly religious. But Mr. MacNeill can tell you a great deal more about that than I can.

3426. I only want in general terms to see how it would fit in to a University course. Would that be in accordance with your view, Mr. MacNeill?—(Mr. MacNeill).—I could hardly agree with that view. There is a great deal of imaginative prose literature, but most of it is still unpublished.

3427. Do you mean in the form of romances, and the like?—Various things of that kind, and other things. (Mr. Rolleston).—I refer to literature from Elizabethan times down. I cannot speak of unpublished work as Mr. MacNeill can.

3428. Looking at a Pass man's curriculum, one must rather consider what is published and accessible?—(Mr. Rolleston).—Certainly.

3429. Then in modern Irish verse, of course the epic has gone, and there is not much drama?—There is no drama to my knowledge up to the present revival, but there are plenty of lyrics.

3430. And I suppose it is mainly lyrical?—I should say so, yes.

3431. And those lyrics, I imagine—I do not want to use any disparaging words—are monotonous, I was going to say, but I will say are similar in type?—I should hardly say that. There is one well-known conventional type of lyric, the Aisling or Vision, which every poet took up as a theme or exercise and played his own variation upon, but outside that there is a considerable amount of variety. Keating's lyrics are different from Sullivan's or O'Rahilly's.

3432. Are the lyrics mainly of the plaintive kind?—No.

3433. What kind of variety can you get in modern Irish literature?—There is a considerable amount of variety. The lyrics are humorous, or they deal with episodes in the poets' life. Many of them resemble the things that you find in Burns; some of them are amatory, and some of them are satirical.

3434. Apart from the purely literary side, looking at modern Irish as an educational instrument, it has been said that there are difficulties in making it an educational instrument, that there is very little fixity in its rules of syntax and in its pronunciation. I suppose the pronunciation itself is a difficulty?—It is not nearly so difficult as English.

3435. It differs so very much in different parts of the country—I mean the spoken language?—Not more than English does, probably not so much.

3436. And are the rules of syntax, etc., sufficiently fixed?—Yes, quite sufficiently. There is no real disagreement amongst scholars.

3437. I am referring to the evidence of Mr. Gwynn that he gave before the other Commission. It is not worth going into it in detail, but that particular point of the fluid constructions and the uncertainty of orthography and pronunciation was emphasized by him?—There is, of course, something to be made of it, but not much. Since Elizabethan times there has been a certain want of standard of cultivated Irish, but the difficulty is not at all a serious one. The Gaelic League is teaching Irish to thousands of people continually and issuing Irish books, and it finds no difficulty at all in dealing with the matter except in the case of one writer, who insists on very special modes of orthography.

3438. Just to sum it up, would you regard the ancient or modern Irish as being the more important element in University education?—I have already explained that I do not think ancient Irish should enter into the general education of the University at all. That is an affair for specialists.

3439. LORD CHIEF BARON.—Do you mean by that middle Irish?—I include middle and ancient together. I was putting those both together. Taking ancient and middle Irish together. I should say that the value

of the literature is far higher than that of modern Irish from Elizabethan times down to the present.

3440. Mr. BUTCHER.—That is what I have understood, and that is one of the difficulties, that the better literature is the thing you cannot teach to the ordinary man?—To the ordinary man you cannot, but if you teach modern Irish to the ordinary man he will often be led to make some acquaintance with the other. The teaching does not begin and end in the lecture room.

3441. Have you any commission from the Gaelic League to say what place they think Irish ought to take in the University curriculum?—No, I have not been instructed about that. They would like it to take the most prominent place you can possibly give to it.

3442. Dr. DOUGLAS HYDE.—Do you know that in the Royal University of Ireland the Irish language ranks equal with French and German and English, and you can take up any of them you like?—I was not aware it ranked equal with English.

3443. Do not you think that in Trinity College the same thing might be brought in with a great deal of advantage; that is to say, make it an optional subject?—Not in the place of English.

3444. Mr. BUTCHER.—May I ask whether in the Royal University you may take Irish instead of English as an option?—No.

Dr. DOUGLAS HYDE.—It counts equal with English—it has the same number of marks.

LORD CHIEF BARON.—I think English is compulsory, is it not?

Dr. HYDE.—Yes.

Mr. BUTCHER.—English is compulsory and Irish not?

3445. Dr. DOUGLAS HYDE.—That is so, but Irish counts equal to English. (Mr. Rolleston).—And it should in Trinity, too, I think. As far as I remember the modern literary course in Trinity, you must take English and you may add French or German, or whatever it may be, and I think the foreign language counts equally with English, and Irish would do so too.

3446. You would like to see that done?—Yes.

3447. You said a thing that interested me very much indeed. You drew attention to the fact that we have in Ireland a considerable amount of Anglo-Irish literature represented by some big names, such as Mangan, Moore, &c. In Trinity College, when you were there, was there any book of Belles Lettres written by an Irishman?—There are Goldsmith and Swift, for instance, but these, although Irishmen, are distinctly not Irish authors. There was not and is not any Irish book on the course.

3448. Do you think Ireland has produced a sufficient crop of Anglo-Irish literature of enough value to be placed on a literature course in Ireland?—Distinctly. I think every Trinity College student ought to be acquainted with selections, for instance, from Mangan's Poems and with Ferguson's Poems. I should certainly put one book of Ferguson's, "The Lays of the Red Branch," on the literature course instead of one of Tennyson's. The first writer who made me aware of the fact that Ireland was something more than a geographical expression was Mr. Standish O'Grady, and one or two of his books might be, with great advantage, put on the Honours course in literature.

3449. The Calendar says there is a Lectureship in Celtic Philology, but did you ever hear of anyone who ever attended any lecture in Philology in Trinity College?—Never.

3450. Have you, Mr. MacNeill?—(Mr. MacNeill).—Never.

3451. I think you have conveyed very much the views, as far as I know them, of the Gaelic League in this matter. Professor Jackson was not quite certain whether, if Trinity College established a Professorship of Irish, it would be meeting a need, but you know what the School of Irish Learning has done?—Yes, I am acquainted with that. I am one of the subscribers to it. It is a very remarkable institution indeed. It is a school founded entirely by voluntary subscriptions for training students, persons who already know the modern language, in the ancient language, and getting them to work on the great mass of untranslated Irish manuscripts that exist in Trinity College and elsewhere. It has attracted a large number of students, and is a great success. It is a thing that has struck the imagination of the Irish people very much, and at present I believe it

finds local habitation within the walls of University College in Stephen's Green.

3452. LORD CHIEF BARON.—And in Clare-street also?—It began in Clare-street.

3453. DR. DOUGLAS HYDE.—It is in Dawson-street now. That was a purely voluntary institution?—Yes.

3454. Was not that an attempt of the Irish people outside Trinity College to do for themselves what you would expect Trinity College to do for them?—Yes; it is what one would expect to be done in an Irish University.

3455. Is it not a fact that it is ancient documents entirely that the School of Irish Learning deal with?—Entirely.

3456. It has nothing to do with the work of the Gaelic League proper?—No.

3457. The Gaelic League spends about £7,000 drawn from voluntary sources on the more modern language?—Yes.

DR. DOUGLAS HYDE.—I think that answers the question that there may not be a need.

DR. JACKSON.—I did not say there was not a need. I put the question to bring out a definite statement, which statement I expected.

3458. DR. DOUGLAS HYDE.—With regard to the poetry that Professor Butcher has spoken about, what is your opinion of the lyric poetry of Ireland?—My opinion of its literary quality, do you mean?

3459. Not only of its literary qualities, but of its metric, which is an important point?—That is a part of the literary quality, one may say. My opinion of it is distinctly high. I think it suffered, necessarily, perhaps, from lack of ideas and lack of thought; it is not a poetry with any critical spirit behind it, but poetry with a great deal of passion and of lyrical feeling behind it; and, as Dr. Hyde has mentioned, with an extraordinary development of metrical complexity.

3460. Do you know in any of the other modern languages anything approaching the Irish system of metre?—No.

3461. Would not that alone be an indication of value to a person even exclusive of the thought; you do not say that Keating is thoughtless, for instance?—No; I must certainly withdraw what I said about the want of thought as regards Keating. But Keating lived at the very beginning of the modern epoch, at the time when Irish was spoken by cultivated persons—and he was a cultivated man.

3462. Is not the poetry of the historical schools as elaborate as anything?—Yes.

3463. And as clear cut?—Yes.

3464. And as valuable for mental exercise as any Greek or Latin you can find?—As a mental exercise distinctly.

3465. As to the difficulty about the orthography, surely Irish is not in as fluid a state as English was 300 years ago, when Shakespeare wrote his name in three different ways?—Not at all; it is a little more fixed than that.

3466. DR. COFFEY.—Some of the witnesses from Trinity College who have come before the Commission have suggested that a Moderatorship in Irish might be founded. Do you think that the establishment of a Moderatorship would go far to meet the demands which you have made?—Do you mean without history?

3467. I take it a Moderatorship means that it would be possible for a student to take his B.A. degree with Honours in Irish, joined perhaps with English?—Yes. The Moderatorship at present takes the form of the English language, combined with French or with German, and you would propose to place Irish *pari passu*.

3468. It has been suggested that a Moderatorship might be founded in order to satisfy the prevailing sentiment in Ireland?—Yes.

3469. Do you think it would be adequate?—Not by itself.

3470. You insist that in order to establish Irish as a growing part of the College curriculum there should be a professorship?—Yes.

3471. And assistants?—It would be worthless without. You must have a system of training and organised courses of studies.

3472. In reference to the undergraduate course, which Dr. Butcher referred to, you have spoken of Trinity College as giving the true type of University education over and above the professional education?—Yes, in my time.

3473. And that is the claim the College always has made. Now, inasmuch as the College is one of the great organs of education in Ireland, is not it desirable that, even in the undergraduate course, there should be much introduction of matter which would turn the attention of the student to his own surroundings?—Certainly.

3474. It will occur to you, for instance, that place names, family names, and all the local environment in the country districts of Ireland are interwoven into the Irish language?—Yes.

3475. They are based upon names of Celtic or Gaelic origin?—Yes.

3476. Do you think it possible, from your own knowledge of the undergraduate course in Trinity College, that some mode of instruction of that type might be introduced into the ordinary undergraduate course, the Pass Course?—I think it might. I have already said that I thought Irish history ought to enter into the ordinary Pass Course as a compulsory part, and this would come in as a branch of that. I have not tried to define, nor should I like to define offhand, exactly what the Irish History Course should consist of, but anything likely to increase the interest of the Irish students should be adopted.

3477. From your own knowledge of the undergraduate course, do you see any direction in which, without overloading—in fact, by reduction of the existing subjects of instruction—it might be possible to introduce this matter into the ordinary undergraduate course?—I should introduce it in connection with Irish history.

3478. Take such a subject as Astronomy. Would you remove Astronomy from the curriculum of the Pass Course, and introduce Irish history as a compulsory subject instead?—That is a question I should not like to answer offhand.

3479. MR. KELLEHER.—Astronomy is a three months' course, and you could scarcely have a three months' course in Irish?—That is so.

3480. DR. COFFEY.—You have such a subject compulsory, and it appears not to be thoroughly gone into; in that way it might be possible to have it replaced by Irish history?—I think a certain amount of Astronomy is a desirable thing to have, and it is a matter in which you can go a certain distance without going very far; but in the Irish language the very beginnings are very difficult. I do not think I would go further than what I said—that Irish history ought to be made a compulsory part of the course; and I should like to introduce in connection with Irish history everything that would tend to make the student more interested in his native country.

3481. I want to ask Mr. MacNeill one or two questions. You spoke several times of the character of the University as being distinctly provincial?—(Mr. MacNeill)—Yes.

3482. You mean by that, appealing to a section of the population?—That is one sense in which it could be called provincial; but I also meant that it was provincial in that it looked on Ireland as a province—that it represented no more to Ireland than a local University, such as Birmingham represents to the district in which it is situated.

3483. Are you of opinion that the introduction of this Irish matter into the course of training in Trinity College would put it in touch with the whole population, with all the interests of Ireland?—No; I do not enter on that question at all. It would introduce the section, be it large or small, for which Trinity College makes provision to a more full, national view of Irish life, and a fuller sympathy with the country.

3484. If it should turn out that Trinity College is not getting its students largely from the country, but mainly from the city of Dublin and certain districts in Ireland, is that state of things likely to be changed by the introduction of much Irish matter into the curriculum; is it likely to be touched by that question?—I have not considered the thing from that point of view. There are other questions, of course, and very difficult questions, with regard to the position of Trinity College, and I do not think that these questions would be seriously affected by the greater or less study of Irish and kindred things in the College.

3485. If Trinity College retained what may be called its present tendencies, even though introducing the Irish matter, do you see any possibility of its becoming, for instance, more conciliatory towards the traditions which are represented by the name of Geoffrey Keating?—Undoubtedly, I think the College

would be more liberal and conciliatory towards all schools of opinion in the country.

3486. Would such a change in the College enable it to take such a position as an organ of education in Ireland as to attract all types of Irish students—I mean Catholics as well as Protestants?—My opinion is that it would not.

3487. What is your reason for that?—I can only speak in that matter for myself. My opinion is that if Trinity College were to become, say, to-morrow open in every way and attractive to the whole population, instead of now only to a section, it would necessarily be such a seat of conflict with regard to matters that in Ireland are perhaps held of higher importance than elsewhere, as seriously to interfere with its position as a seat of learning.

3488. May I put it this way: if Catholicism has been a great unifying principle for the Celtic people—the Irish-speaking people, and their descendants of the last two centuries and more—do you think the introduction of Irish into Trinity College would so change the character of the University and the College as to make that system acceptable to the mass of the Catholic population?—No, I do not think so.

3489. By itself it would not do it?—By itself it would not.

3490. Do you see any way in which the University of Dublin might be so modified as to bring about that result?—Possibly. I am far from being an expert in these matters of distinction between the University of Dublin and Trinity College, and so on, but it does seem to me that another College, under the University of Dublin, if it were possible, might give satisfaction to the section of the population which Trinity College does not satisfy.

3491. And from the point of view of the development of Irish, which do you think would be best for the future—the separate sections of the people, as represented by religious denominations carrying on their work in quite independent Universities, or carrying on their work in Colleges so associated, that there might be a common place of competition, rivalry, and emulation amongst them?—I myself am of opinion that the best University work in Ireland will be done by Universities that are not exactly exclusively denominational, but Universities which recognise the denominational divisions of the people, and are very largely based on that principle. In fact, I think the best University work would be done in Ireland for the section that are not provided for by Trinity College, by setting up what would be at least as Catholic a University, a distinct University, as Trinity College is a Protestant University.

3492. You think that the natural working out of that system would be that after University life has been passed there would be co-operation for the common good of the country amongst the graduates of both Universities?—Yes. I think the absence of co-operation would disappear if the causes of friction I mentioned in my evidence were removed.

3493. In which do you think it is more likely to be attained most rapidly—by the foundation of a second College in Dublin University or the foundation of an independent University?—It is clear, I suppose, that if the two collegiate institutions could be brought near each other as a physical matter the students would be thrown more closely together, but if you are going to have a separate College, somewhere far away from Trinity College—

3494. But take it in Dublin?—Even in Dublin I do not think it would make a very great difference whether you have a separate College or a separate University.

3495. LORD CHIEF BARON.—I suppose you think if you cannot get a separate University you at least ought to have a separate College?—Undoubtedly.

3496. There is a question with reference to the class of Irish studies that you would think right in Trinity College. Of course you know that in the examinations under the Intermediate Act the students are examined in Irish, practically in modern Irish. Is not that so?—That is so.

3497. Now in passing from the secondary schools up to the University, would not you hope that ultimately in the University a student in Irish would acquire some little philological knowledge on that subject?—Certainly.

3498. And you would look upon that as one of the most interesting and valuable features in the Irish studies of the University?—Yes, as a branch of learning, certainly.

3499. Then would not you think it an advantage that students in the University instead of being taught only modern Irish should be brought on to middle Irish?—Certainly, in the University.

3500. I mean in the University?—I would.

3501. That is at the commencement of their course you would be satisfied with modern Irish, but gradually advancing each successive year more into middle Irish?—Yes.

Mr. KELLEHER.—Just one question about the position of Irish in Trinity College. I will assume that the Gaelic League would admit that it is not the business of the University to give first lessons in a language.

Mr. MacNeill.—Lessons of a primary and elementary character.

3502. First lessons, beginning with the alphabet?—No, I should think not.

3503. The work that the Gaelic League has been doing has not had very much effect, so far, on the people who have gone to Trinity College, so that the number of students going to Trinity College knowing enough Irish to be able to take advantage of the lectures of the professor must be necessarily very small?—Yes, if they are relying entirely on the Gaelic League for their instruction.

3504. And since very few boys come to Trinity College from the Catholic schools in which Irish is taught, we have practically very few who know any Irish when they come, and the Gaelic League would not expect the University to begin to teach those who were absolutely ignorant?—It would be very unfortunate; but if no beginning has been made before I should say it would be much better for the University to begin than to leave them always in ignorance.

3505. Unless the University were to make it compulsory that an undergraduate should study Irish, I do not see that the undergraduate would have very much temptation to make a beginning. The point I wish to make is that it seems undesirable in the distribution of the finances of the University to apportion any large sum for Chairs which may have no teaching value, to the lectures of which no student may go, as in the case of the Celtic lectures delivered by Professor Atkinson?—I could not agree with that. I think it is very well to have Chairs in the University even if the number of students who take advantage of them is extremely small.

Mr. Rolleston.—They are centres of research.

That is all right, but so far as actual teaching is concerned, the University has very little opportunity of teaching Irish, because no students present themselves in Irish.

Mr. Rolleston.—We have Sizarships in Irish.

These are, unfortunately, nearly all those who have provision made for them, and that case has been covered. Provision is made for those, but the University has not made provision for any others.

Mr. MacNeill.—I think I can give an answer to that which I hope may be satisfactory. The kind of education given in Trinity College directly affects the education given in a large number of secondary schools throughout Ireland, especially Protestant secondary schools. Now the foundation and the placing on a proper basis of Irish studies in Trinity College would infallibly operate upon those secondary schools, so that the present rate of circumstances with regard to the supply of students would be completely changed. For example, fifty years ago St. Columba's College had a Professorship of Irish, but that Professorship was occupied by one of the chief Irish scholars of the time, John O'Donovan. That Professorship has been allowed to lapse. The reason why it has lapsed, in my opinion, is that the interest in those studies has not been maintained in the chief centre of Irish education. If it had been maintained, St. Columba's and other schools would be supplying students capable of being taught by a University Professor in Irish.

3506. That is dealing altogether with the past history. I was rather thinking of the present condition of affairs, in which the students who wish to learn Irish do not go to Trinity College, as a rule; and it would seem rather a waste if Trinity College were to incur any great expense in the foundation of Chairs for teaching and not for research only?—For a year or two probably the students would be very much limited in number, but the action of the University on the secondary schools would remedy that state of things very quickly.

3507. Mr. KELLEHER.—I am sure the University would be very glad to get the expert advice of the

Gaelic League on this matter. It is certainly to my knowledge engaging a considerable amount of attention?—It is.

Dr. DOUGLAS HYDE.—Did you study German at Trinity College?—(Mr. Rolleston).—I began it before I left College.

3508. My recollection is that the lectures in German were almost at the beginning of the language?—I never attended lectures in German.

3509. They also begin at the beginning of the language in Hebrew and in Arabic?—Probably.

3510. I think that covers the objection?—Yes, I think so.

3511. CHAIRMAN.—You suggested that Gaelic or Irish should be treated as the equivalent for German, French or Italian. Now, is it not the case that each of those languages gives an opening to the student to a very large amount of literature, with which I should suppose—I speak as an ignoramus—that the Irish language had nothing to compare. Is not that an important consideration in the encouragement of a particular language?—I think that would be a good point provided the University was in some place outside the bounds of space or time, but we are talking of an Irish University, and although it may not open the door to a great literature comparable to those of France and Germany it will open the door to Ireland.

3512. You think the local colour should prevail over the intellectual difference?—Yes.

3513. LORD CHIEF BARON.—Sufficient to give them an option?—Yes.

3514. Dr. JACKSON.—Is Irish literature at the present time actively growing?—There are new books in Irish literature continually being produced.

3515. Are those books natural growths or are they artificial growths? Are they the works of scholars who are interested and who are trying to imitate, or are they produced in the natural course of events?—Some are; for instance, Father O'Leary's works.

3516. I was thinking of recent developments in the South of France, and I was wondering how far your movement corresponded with the movement that there has been there?—I do not think our movement has produced anything so interesting in the literary sense as Provence.

3517. I gather that you think that it is more a national movement and rather less of a literary device?—I am not very well acquainted with Provence, although I know a little of the literature that has sprung from it. The Irish movement is certainly a national one—there is not the slightest doubt about that.

The Witnesses then withdrew.

Rev. J. E. H. MURPHY, M.A., Professor of Irish in the University of Dublin, called in and examined.

Rev. J. E. H.
Murphy, M.A.

3518. CHAIRMAN.—You are Professor of the Irish language in the University of Dublin?—Yes.

3519. And the Professorship which you hold was founded, I think, in the year 1842?—Strictly, sir, in the year 1840, as I will show.

3520. Have you the exact terms of the Trust creating that?—I have a copy of it with me in my bag.

3521. Will you just tell us what the terms are?—I do not want all the formal part of the Deed, but the nature of the Professorship?—This Deed was drawn up subsequently to the appointment of a Professor, and was intended to set forth the various conditions under which the Professor held his office. This Deed was drawn up more than two years after the founding of the Professorship.

3522. I suppose it regulates the appointment?—It does; shall I read it?

3523. What I want to get at are the terms of the Trust. I do not want to hear all the recitals, and so on, unless they are of importance. I do not think we need trouble you to read it all through. If you will let me look at it I may be able to pick out what I want. [*The Deed was presented to the Chairman.**] I will not keep you waiting while I try to find the passage—I cannot find it on the spur of the moment.—Shall I read my opening statement to you now?

3524. If you think it is important, yes?—In the minutes of the meeting of the Board of Trinity College, Dublin, held on July 5th, 1838, the following resolution appointing a Professor of Irish in Dublin University appears:—"Resolved—That a Professor of the Irish language be appointed on the following conditions:—The trustees of the fund raised for founding said Professorship to vest in Government securities in the name of the Provost, Fellows, and Scholars of Trinity College all the sums that they have collected, or may hereafter, for the purpose specified.—That the trustees shall nominate to the Board the person whom they think fit to be the Professor, and that the Board shall have the full power of accepting or rejecting such nomination—in the case of a rejection that the Trustees shall nominate again and successively until an appointment be made.—That the Board shall have full control and power over the Professor so nominated and elected, as they have over other Professors.—That the Trustees pledge themselves to vest a sum that will yield seventy pounds sterling per annum interest for the Professor—to which the College shall add thirty pounds a year with rooms and twenty pounds annually for premiums." That is the full text of the minutes of that date. In the minutes of the meeting of the Board held on October 17th, 1840, there appears this:—"Read a letter from Henry Monk Mason, Esq., relative to the Irish Professorship, informing the Provost and Board that owing to the delay arising from the accounts of an executor not being got settled, a small deficiency still exists in the sum of £70, to be

paid by the Trustees to the Professor when appointed, and praying the Board to proceed forthwith to the appointment, on the faith of the Trustees doing all in their power to procure the sum still deficient.—This Board consent to perform their part of giving £30 per annum and chambers: the Professor must wait till the deficient part of the salary is furnished by the Trustees." In the minutes of the Board meeting held on November 21st, 1840, there appears an account of the nomination by the Trustees and of the first election of a Professor by the Board, as follows:—

"The following report was read, viz.:—

"November 19th, 1840.

"At a meeting of the Trustees of the fund for endowing a Professorship of Irish in the University of Dublin—Present, The Provost in the chair; Right Honble. Thomas Lefroy, Right Hon. Frederick Shaw, Rev. Robert Daly—Resolved, that we nominate the Rev. T. De Vere Coneys as a fit and proper person to be appointed to that office, and we recommend him to the Board of Trinity College to be elected by them, to hold the office for two years.

Signed, Franc Sadlier, Provost.
Frederick Shaw.
Thomas Lefroy.
Robert Daly."

Now, this is the Board's minute on that:—"Resolved that in conformity with the recommendation of the Trustees, the Rev. T. De Vere Coneys be appointed Professor of Irish to hold office for two years." Thus the Professorship of Irish appears to have been established in Dublin University in 1840, and the first Professor of Irish appears to have been nominated by the Trustees to the Board on the 19th November, 1840, and elected by the Board to the Chair of Irish on the 21st November, 1840, in accordance with the conditions stated in the Resolution of the Board of July 5th, 1838, already cited. The conditions under which the professorship was founded are furnished at large in the Indenture (or Deed of Agreement), bearing date 4th March, 1840, copy of which Indenture, I am assured, has been furnished, or will be furnished to this Royal Commission, or the original of it if desired. From this Indenture it appears that a sum had been collected by public subscription with a view to establish a Professorship of "the native Irish or Erse language" in the University of Dublin, and that this sum of money so collected and raised had been invested in the purchase of £875 (pounds) of Stock of the Governor and Company of the Bank of Ireland for the purpose of assisting in the endowment of such Professorship: that the Right Hon. Robert. Earl of Roden, the Right Rev. Robert, Lord Bishop of Cashel, the Hon. Frederick Shaw and George Alexander Hamilton and Henry Joseph Monk Mason, Esquires—parties to the Indenture—were the first Trustees of such Professorship,

* See page 329.

and that the Provost of Trinity College for the time being and the representatives in Parliament for the University of Dublin for the time being were "*ex-officio*" members of the Board of Trustees: that the £875 (pounds) Bank of Ireland Stock produced the stipulated £70 a year interest, and was invested in the name of the Provost, Fellows and Scholars of Trinity College: that the Board of Trinity College covenanted to pay £30 annually to the Professor and to give him free rooms: that the Board of Trinity College had undertaken to give, also, £20 a year in Irish Premiums, for the encouragement of the study of the Irish language: that the Board of Trinity College were to have "the like discretion, control, power and authority over" the Professor of Irish as they "have over all or any of the" Professors of Dublin University; that the Board of Trinity College had power and authority "to accept or reject" the nomination of the Trustees, according to their judgment of the fitness or unfitness of the person nominated by the Trustees: and that in case the Trustees failed to nominate, after the lapse of six months after a vacancy in the Professorship had occurred, then the election lapsed to the Board of Trinity College (without the preliminary nomination). The manner in which vacancies in the number of Trustees were to be filled up, and other details, are fully stated in this Deed (of 4th March, 1843). By the provisions of this Deed of Agreement the stipend of the Professor of Irish amounted to £100 a year (i.e., £70 interest or dividends on the £875 Bank Stock, and £30 from the Board) with the chambers in the College. According as Bank Stock yielded a larger dividend, the £70 component of this stipend increased, till now it yields an annual sum varying between £93 and £107, according as such Bank Stock dividends vary, as stated in the reply furnished by the present Provost to a question by Mr. Lonsdale in the House of Commons recently. In the minutes of the Board meeting of November 30th, 1871, there appears:— "It was agreed that the amounts of salaries of the following Professorships should be raised and a decree obtained for carrying out the proposed alterations:— English Literature, from £140 to £240 per annum. Irish, from £30 to £100 per annum. Zoology, from £100 to £200 per annum. Sanskrit, from £100 to £200 per annum.

3525. CHAIRMAN.—You need not go through all this list. The material one is the Irish?—The material one is the Irish. By the operation of this resolution the stipend of the Professor of Irish was raised to its present value, i.e., about £102, from dividends on the Bank of Ireland £875 stock, plus £100 from the Board of Trinity College, i.e., to about £202 a year, with rooms.

To come down to recent times: In the minutes of the Board meeting, of Saturday, June 21st, 1879, occurs the following:—

"On the nomination of the Trustees of the Professorship of Irish, the Rev. James Goodman, A.M., rector of Skibbereen, was elected Professor of Irish—his appointment to date from the 25th of March last." Thus the conditions recited in the Deed of Agreement of the 4th March, 1843, were adhered to in the mode of election of my predecessor in the Chair, Professor Goodman, as well as in the mode of election of Mr. Coney.

And now, coming to the procedure followed on the occasion of my own election to the Professorship: In the minutes of the Board meeting, held on Saturday, 18th April, 1896, are the following entries:—"The Registrar laid before the Board the following resolutions, passed at a meeting of the Trustees of the Professorship of Irish, duly called by advertisement, and held on Thursday, April 9th, 1896, in accordance with the provisions of the Deed of Agreement, dated March, 4th, 1843":—"That the Rev. James E. H. Murphy be nominated as Professor of Irish." "That on this occasion the tenure of the Professorship be for two years.

"Plunket, Dublin.
"Ashbourne.
"C. Limerick.
"W. H. Lecky.
"Geo. Salmon.

"[date] April 9th, 1896."

"The Board accordingly elected Mr. Murphy Professor of Irish."

In the minutes of the Board meeting held on Saturday, the 15th October, 1898, are the following entries:—"A letter, dated 13th July, 1898, was received from the Committee under the Trust Deed for the endowment of a Professorship of Irish, stating that Lord Ardilaun was co-opted a Trustee, in the room of Lord Plunket, Archbishop of Dublin, deceased." "On the nomination of the Committee referred to in the last minute, James Edward Harnett Murphy, M.A., was re-elected Professor of Irish, for five years, from the 13th of July, 1898." In the minutes of the Board meeting, held on Saturday, January 16th, 1904, are the following entries:—"The Rev. J. Harnett Murphy, M.A., was re-elected Professor of Irish for a period of one year, beginning July 13th, 1903." "The Registrar was directed to write to Lord Ashbourne, informing him that, as the Committee of Trustees had not nominated a Professor within six months after the vacancy, the Provost and Senior Fellows, in accordance with the Deed of March, 1843, had elected a Professor." In the minutes of the Board meeting of Saturday, March 18th, 1905, is the following entry:—"It was moved by Dr. Abbott, and carried:—That Rev. James E. H. Murphy, M.A., be re-appointed Professor of Irish for five years, that term beginning from July 13th, 1904." Under that minute of the Board, I hold the Professorship to this day.

Thus, twice during my tenure of the Professorship have I been elected by the Board on the nomination of the Trustees of the endowment, and twice, also, have I been elected by the Board on occasions when the Trustees failed to nominate to the Board before six months had elapsed after a term of tenure had expired—all in strict accordance with the Deed of Agreement of date 4th March, 1843, above referred to.

Throughout my tenure of the Professorship the whole of the stipend attaching to that office has come to me from two sources: one part of it, an annual sum varying from £93 to £107, but usually about £102, from the half-yearly dividends on the £875 Bank of Ireland Stock already referred to as endowment, which sum has been on all occasions but one paid to me through the Senior Bursar of Trinity College—on the excepted one occasion it was paid to myself directly by the Bank; and the other part of it, an annual sum of £100 (by operation of the Decree referred to in the minute above cited, of date November 30th, 1871) has been paid to me by the Senior Bursar of Trinity College in quarterly sums of £25, less income-tax. Besides these, small sums have been paid to me annually by the Bursar, as examiner's fees.

I have never received anything from any other source in respect of my duties as Professor of Irish. I am not subject, and I never have been subject, at any time, to any authority or direction or influence or discipline, as Professor of Irish, except to the Board of Trinity College, according to the terms of the Deed of Agreement of 4th March, 1843.

I have thus fully furnished evidence as to the foundation of the Professorship of Irish in Trinity College—as to the manner in which the Professor has been elected—as to the sources from which the emoluments attaching to the Chair have been derived—and as to the discipline under which the Professor exists, because of the strange views respecting the Chair of Irish which prevail in quarters where an accurate knowledge of these matters might be assumed to exist, which strange views have even been published by a no less presumably well-informed gentleman in the affairs of Trinity College than Dr. Douglas Hyde, one of the members of this Royal Commission, who had been educated at Trinity College, Dublin, is an LL.D. of the University of Dublin, and had even enjoyed the honourable distinction of being an (Irish) Bedell scholar in connection with the Divinity School of Trinity College, notwithstanding that the course of examination for that Scholarship, included "the Thirty-nine Articles," and notwithstanding that the money value of the Scholarship, £20 per annum, came to him out of the funds of the Irish Society, which he now usually refers to as a "proselytising Society."

3526. CHAIRMAN.—I think it would be better to confine yourself to a statement of facts rather than controversy with a member of the Commission?—Shall I quote the expressions referred to?

3527. CHAIRMAN.—No, we want to get the facts!—Surely, sir. The endowment of the Irish Chair in Dublin University, the £875 Bank of Ireland Stock,

was raised by subscriptions by noblemen, gentlemen, and gentlewomen, some of whom, no doubt, were interested in the work of this Irish Society; but by the "Irish Society" not one penny was subscribed to this endowment, as an examination of the Society's Reports for the years 1838-1843 will show.

3528. CHAIRMAN.—I do not think we need go into the Irish Society. We will look at the documents of the foundation and consider what they are?—For myself, I have never received a penny in salary or fee as Professor of Irish or otherwise from this Irish Society. It has been stated that I have.

3529. You have already told us that?—As an expert in Irish many years ago I occasionally examined at their request some of their Irish teachers and pupils, just as I have also done some expert Irish work for Roman Catholic clergymen; but in the one case, as in the other, without fee or reward. I trust that now, and for the future, statements which are not founded on these facts will not appear.

3530. I should like to know a little of what you have done in the way of teaching?—My Irish lectures take the form of (a) hearing my pupils translate passages set to them in preparation for the lectures, in examining them on the grammar, and on the dependence of the words upon one another, and in explaining the construction of passages which exhibit unusual idioms and collocation; (b) in explaining the references to historical personages and events, and to matters archaeological, which present themselves in the text books; (c) in correcting the pupils' exercises in Irish composition. The books prescribed for lectures and examinations during my tenure of office are the following:—

Ṭrí Dìonṡaorte an Dáir.
Deata fain-ḡianáin Saṡne.
Orde Cloinne Lir.
Orde Cloinne Tuirneann.
Uirneac.
Duana 'Donnéata ruaró Mic Conmaṡa.
An Siolla Deacair.
Gaṡṡra an Lomnoctáin.
Laoró Oirín ar Ṭír na n-ḡs.
Leabair Ecṡpṡur.
An ḡear Leabair ve Samuel.
Saṡm Uáiti.
An Saṡṡeal ve náir naorí ḡóin.
Mac-ṡíonairṡa fínn.

The Board of Trinity College have always left the choice of text-books and the nature of the lectures entirely to my own discretion; they have never interfered with me in reference to the examinations, and they have always confirmed my awards as to Irish premiums. Twice I had thought that the £20 at my disposal, for awarding premiums, was too small a sum, considering the number of candidates who presented themselves for examination, and the high standard of the answering, and I asked the Board for an increased grant on each of these occasions, and the Board granted my request. I lecture twice a week at least—sometimes three times a week—during term, to each of three classes (junior, middle, and senior). The lectures are open to the public, I believe. They are attended by all classes of students—students in Arts only, students in the School of Divinity, students in the School of Law, students in the School of Physics—whose names are on the College books. Occasionally I have had coming to my lectures men who had long before ceased to have any connection with the College—a civil engineer, a medical gentleman, and two clergymen. A year ago I had two young ladies, students of Trinity College, attending my lectures. In my first two years of office there were, on an average, only about five students attending my lectures. This was also the average during the years in which I lectured during Hilary term, as deputy to the late Professor Goodman. During last year I had an average of eleven pupils attending my lectures. As many of the pupils who attended my lectures had come to me with not more than a knowledge of the Irish alphabet, the progress of the pupils is often slow, and the knowledge imparted necessarily very elementary, in the junior class. It is difficult, in a three years' course, to make much out of such materials. Yet I have had pupils who succeeded in acquiring the language, in almost every detail, before leaving College. At the end of

each year's course of lectures an examination for premiums is held for each of the three classes in the subjects of the lectures, and money premiums, amounting to £20, are awarded upon the result of these examinations.

The Board awards an Irish Sizarship every year to the best answerer in Irish at the Sizarship Examination, if sufficient merit be shown. Upon that course I do not lecture, because it is an entrance prize. A sizar pays no fees in Arts and gets commons free. The course for Irish Sizarship, as set forth in the Calendar, published last January, is:—

- A thorough knowledge of Irish grammar.
- Passages are set for translation at sight from Irish into English, and from English into Irish.
- Candidates are examined, *viva voce*, in these books:—

Gaṡṡra Lomnoctáin.

Poems of 'Donnéat Ruaró Mic Conmaṡa.

There are, besides, special prizes in Irish:—The Bedell Scholarship and the Kyle Irish prize, in connection with the Divinity School, for which only Divinity students, or those who purpose to be ordained in the ministry of the Church of Ireland, are eligible. These prizes have been provided by private subscription, and not from College funds.

3531. Do you examine for these?—I do, sir. I am coming to that statement. The Senior Lecturer usually gets the Professor of Irish to examine for these prizes. But the Professor neither lectures nor assists pupils in their courses.

For the further encouragement of the study of Irish I should like to see Pass and Honour Courses established in Irish for each of the four classes in Arts, placing Irish as an alternative subject, like French and German, which a student may take up if he so likes; credit to be given for attendance at Irish lectures, as given for attendance at lectures in French and German, in the keeping of terms; and, added to this, I would like to see a final Moderatorship given in this subject. The examinations for these purposes could be made quite as difficult as those in any other language.

The Chair of Irish, apart from the work done in the Lecture Room in College, has helped Irish students abroad in other ways. The Rev. T. de Vere Coneys, the first Professor of Irish in Dublin University, published an Irish-English Dictionary—the first which gave the declension and gender of nouns, the comparison of adjectives, and the principal parts of verbs, furnishing at the same time exact references to texts as to all these data. That book remains to this hour the only published Irish-English Dictionary which gives all these details. The Rev. Daniel Foley, the second professor of Irish in Dublin University, published an English-Irish Dictionary—not as complete or helpful as Irish students might wish, because not furnishing examples as to what words (of those he gave) should be used in special cases, no doubt owing to the need, which he felt, of keeping the work within a reasonable limit as to price. Yet this book, until a year or two ago, was the only Irish-English Dictionary, worthy of the name, which was within the ordinary student's reach, for the older Dictionary, by M'Curtin, had become very scarce and expensive. These two books, it is material to note, had been quoted freely as *authorities* in a recent discussion as to Irish words between the present Professor of Irish in Maynooth Theological College and the Rev. Mr. Dineen, who edited an Irish-English Dictionary lately for the Irish Text Society. The Rev. Thadæus O'Mahony, the third Professor of Irish, a profound scholar of the ancient Roman and Greek Classics, translated most of the ancient (Irish) Brehon Laws into English. The Rev. James Goodman, the fourth Professor of Irish, was well known as a profound modern Irish scholar, a veritable *cornu copie* of the modern Irish language. Jointly with me he edited an Irish version of St. Luke's Gospel. I do not like, sir, to refer to anything I have done myself.

3532. CHAIRMAN.—There are one or two questions I should like to ask you. There is no connection, is there, between the Bedell Scholarships and the Kyle Irish Prize?—None whatever.

3533. When I say that, is not the professor *ex-officio* a Trustee of the Kyle Prize Fund?—He had

been, but he has not been for seven years or thereabouts.

3534. But it is provided he shall be, is it not?—The words of the original Kyle trust, I believe, made him a Trustee.

3535. This is what I find in the Calendar, that the funds collected shall be invested in Government Securities or Bank Stock in the joint names of the Provost and Senior Fellows of Trinity College, the Professor of Irish, and the Dean and Archdeacon of Cork for the time being?—Yes, but about seven years ago, at the instance of the Rev. George Salmon, the then Provost, the Archdeacon of Cork, and the Dean of Cork and myself transferred our connection with that trust to the Provost himself.

3536. Then you have had no connection with it since?—None whatever, nor had I before that. Although my name appears there, I have never had anything to do with it; I was never asked a word about it, or consulted as to how the money should be distributed.

3537. Did you sign cheques for it?—Never.

3538. I do not how they got on then. Then you are a Trustee for the Bedell Fund?—Never.

3539. Your only connection has been that you were occasionally appointed by the Senior Lecturer to undertake the examination?—That is all.

3540. Other than that there is no connection?—That is all.

3540A. With regard to the terms of your professorship, as far as I can learn, it has no connection whatever with any particular theological school at all—it is perfectly undenominational?—Quite so, as far as I know and as far as I ever knew.

3541. CHAIRMAN.—So far as I can see that is so.

LORD CHIEF BARON.—How is it that your professorship has anything to say to the Divinity School in Trinity College?—I never knew that it had.

LORD CHIEF BARON.—I thought there was some allegation on some side in that respect.

3542. CHAIRMAN.—It has been published in the Calendar, I think, as one of the professorships connected with the Divinity School?—The Calendar is not always accurate.

3543. But as a point of fact it has been so published?—It may have been, but it has not been brought to my notice.

3544. LORD CHIEF BARON.—You have students who are not Divinity students, I suppose, attending your lectures?—I have so stated. There are medical men and legal men and men who are simply studying in Arts. As a matter of fact, I may say that I had not a single Divinity student last year, although I had eleven pupils.

3545. DR. DOUGLAS HYDE.—May I ask about the terms of the Trust under which the Irish Professorship was first established? I think you have handed in the Indenture?—The copy is in your hands.

3546. I find in looking over this document that the money was contributed not, apparently, by public subscription, but by the Irish Society of that time?—There was not a single shilling contributed by the Irish Society of that time.

3547. If that is so, how do you explain this passage: "If at any time the Professorship should cease to be filled up, the Board and Provost shall hand back the money to the Trustees for the time being of the Society for promoting the education of the people in Ireland through the medium of their native language, to forward the objects of that Society"?—I think that if I contributed a sum of money for any object, and that that object failed, I have a right to decide to what other object it should go.

3548. But is not that at least a *prima facie* proof that the Professorship of Irish was founded and paid for by the Irish Society, who stipulated that if at any time the Trust should fail the money should be handed back to their Trustees again?—I think you are misreading the Deed. They had nothing to do with the stipulation; it is the Trustees of *this* Fund that act on behalf of the subscribers.

3549. Do you think that a public contribution was made throughout Ireland to the Trustees, not coming from the Irish Society at all, and that the Trustees (who might have allocated the money to anybody else), allocated the money to the Irish Society who had not given the money?—These questions make it necessary for me to read a passage which you, sir, ruled I might not read.

CHAIRMAN.—The first question is what does the Deed say as to the foundation?

DR. DOUGLAS HYDE.—I will hand it to you, Sir.

CHAIRMAN.—It is a badly written document and I cannot read it very well, but I do not think the fact that the ultimate Trust is in favour of the Irish Society is at all conclusive. It does not show in the least that they contributed to it. Whether there is any recital about early subscribers, I do not know.

LORD CHIEF BARON.—The recital is: "Whereas it has been thought expedient to establish a Professorship of the native Irish or Erse language in the University of Dublin and a sum of money has been collected and raised and invested in the purchase of £875 of the Stock of the Governor and Company of the Bank of Ireland for the purpose of assisting in the endowment of such Professorship."

CHAIRMAN.—That shows that the suggestion is not right—it was collected for that purpose.

DR. DOUGLAS HYDE.—The Indenture, I think you will find to be signed on behalf of the Irish Society by Mr. Monck Mason, who was the Secretary.

CHAIRMAN.—That does not affect it even then. The recital is that it has been collected for that purpose.

DR. DOUGLAS HYDE.—Then who was the money collected from? I take from the Calendar of 1901, the following: "In the year of 1840, a sum of money was subscribed by some noblemen and gentlemen connected with the Irish Society for the purpose of aiding the foundation of a Professorship for Irish."

CHAIRMAN.—It says there were noblemen and gentlemen who were connected with the Society, not that the Society did it. We have nothing to do but to consider the Deed of foundation.

DR. DOUGLAS HYDE.—But I am considering who first gave the money to establish the Chair.

CHAIRMAN.—It was the people who, according to the Deed, subscribed for the purpose of founding this, and beyond that you cannot go.

DR. DOUGLAS HYDE.—Persons belonging to the Irish Society.

CHAIRMAN.—That is of no consequence. They might have belonged to any Society. It is an immaterial fact.

3550. DR. DOUGLAS HYDE.—I do not know that it is altogether immaterial, because a good deal was said to-day by other witnesses about the Chair having been originally founded by the Irish Society and having borne the impress of the Irish Society during the years. But leaving that for the present, you were kind enough, Mr. Murphy, to give us the names of five occupants of the Chair. The first was the Rev. T. De Vere Coneys?—Yes.

3551. And I think he was a clergyman and an officer of the Irish Society?—Very likely; I do not know.

3552. The next was Professor Foley?—Yes.

3553. I think he was the same?—I do not know.

3554. Was not Mr. O'Mahoney the same?—I do not know.

3555. Then the fourth was Mr. Goodman, a most admirable and delightful person, but he was certainly the same, an officer?—I do not know.

3556. I know. The fifth was yourself, a very worthy occupant?—Thank you.

3557. But when you were appointed—I do not wish to press the point—I think you were, according to the Annual Reports of the Irish Society, the conductor of their periodical meetings in different parts of the country?—I have already said that I was consulted by the Irish Society as an expert in Irish matters many years ago. I occasionally examined at their request some of their Irish teachers and pupils, just as I have done some expert Irish work for Roman Catholic clergymen, but in the one case as in the other without fee or reward.

3558. I only notice in looking over the Annual Report that the Society express their thanks to you for having been one of their conductors of periodical meetings in different parts of the country?—Of the kind I described to you, and thanks were all I got.

3559. It was very interesting what you told us about the number of students attending your classes, because when I was in College I attended my dear friend Mr. Goodman's classes, but only one or two

LONDON.

Rev. J. E. H.
Murphy, M.A.

others turned up to them. There must have been a considerable increase of interest in the subject?—I am thankful to see that there is.

3560. The Trustees who make this appointment it would be interesting to know something about. One of them is the Provost?—Yes, *ex-officio*.

3561. And I think associated with him were Lord Ardilaun and Lord Plunket?—After the death of Lord Plunket Lord Ardilaun was elected a Trustee of this Endowment, in his room, and Lord Ardilaun could not therefore have been associated with him.

3562. He was associated with him at the time?—With the Provost, yes.

3563. That means that the two trustees of the Irish Society, together with Bishop Graves and Mr. Lecky, were the people who made the appointment?—But who were the trustees connected with the Irish Society? Lord Plunket was no trustee of the Irish Society, and the Provost was no trustee of the Irish Society, but they were Trustees of this Endowment of the Irish Chair.

3564. I think you will find Dr. Salmon was a trustee of the Irish Society?—The deed sets forth that the Provost, as Provost of Trinity College, and the two representatives of the University, as representatives of the University, were trustees, and it was not because the Provost may have been a Chancellor of St. Patrick's Cathedral or may have held many other official positions accidentally that he was that trustee.

3565. Lord Ardilaun is the second trustee of the Irish Society?—I do not know.

CHAIRMAN.—Is it worth while to pursue that? The trustees have the right of co-option, and it is immaterial for the purpose of our enquiry whether they happen to be members of any particular society. I suggest to you that it is not a material question.

3566. Dr. DOUGLAS HYDE.—It is immaterial in a way, and in a way it is material, because this Professorship is a very intricate thing, and the witnesses that have been before us to-day seem to think it had been run more or less in the interests of the Irish Society?—They said all that, and thought all that, without the facts before them, and we cannot help these strange ideas prevailing.

3567. I only wish to point out that there are certain reasons for it when we find that the appointment to the Irish Professorship is vested in the two trustees of the Irish Society?—Not one of them is, I think, trustee of the Irish Society. They are official Trustees connected with this College Trust, and they are so named in the deed.

3568. Does that mean that Dr. Salmon was not a trustee of the Irish Society?—I do not know how many offices Dr. Salmon held outside Trinity College. I am only connected on this occasion with what the deed sets forth as to this particular Trust.

3569. Dr. DOUGLAS HYDE.—You may take it from me that Dr. Salmon and Lord Ardilaun are two trustees of the Irish Society?—Perhaps so.

Dr. DOUGLAS HYDE.—And they are two of the five people who make the appointment. I do not lay any particular stress upon it, but I think it well to bring it out in view of what has been said to-day; and I should like also to point out the fact that it was quite natural, when we find in the Calendar that a number of noblemen and gentlemen connected with the Irish Society founded the Chair. Under those circumstances it is quite natural to imagine that the Irish Society had something to say to the Chair; and it is more natural to think it when we find that the five occupants of it have been all Protestant clergymen, and all at one time or other serving the Irish Society. If there had been any mistake made it is well to have it cleared up.

3570. CHAIRMAN.—We have not that before us. I daresay you are quite right, but the witness says he does not know?—I have no knowledge of the matter. I am only here stating the facts.

3571. Dr. DOUGLAS HYDE.—Could you explain why it was that Dr. Salmon, in giving evidence before the Robertson Commission, said it was only as a dead language they cultivated Irish in Trinity College?—Dr. Salmon knew nothing of Irish; and he might naturally make a mistake. He had never attended one of my lectures, and he might naturally make a mistake about a language of which he knew nothing, absolutely nothing. What, you, sir, want to bring out seems to me to be this: that the mere opinion of

one who knew nothing about the subject is to be set up in evidence against the statements made by one who knows something about the subject.

3572. I was not thinking of such a thing at all. I wanted to call your attention to the fact that he had said so, and I wanted to know why you thought he said so?—There are many sayings which have gone abroad.

3573. You have two very valuable prizes, the Bedell Scholarships, which you give away?—I do not give it away. When I am examining for it I make sure not to give it away. I make it very necessary that the person who gets it must know something about his work.

3574. By giving away I mean that in your school you had the bestowal of the most valuable prizes?—We had better adhere to language which is accurate.

Dr. DOUGLAS HYDE.—I am sorry if I have offended your æsthetic sense.

3575. LORD CHIEF BARON.—I think Dr. Douglas Hyde was quite accurate in his language?—Perhaps so.

3576. Dr. DOUGLAS HYDE.—Where did the funds for the Bedell Scholarship come from?—They are paid directly by the Irish Society. You know, for you were a Bedell scholar, and got the money from them.

3577. That is the reason I had a good opportunity for knowing. Dr. Bernard seems to think the money did not come from them, but from another source?—Dr. Bernard, if he stated that, stated what did not come to his knowledge, and what was mere matter of belief.

3578. He only said he thought so. Then I find that £1,000 were set aside in the year 1841 by the Irish Society for prizes in Trinity College. Do not the £20 which the Board at present allows you to give in prizes come from that source?—Not a penny. That £1,000 had reference to a scholarship that was founded at that time, and which preceded the present Bedell Scholarship. As soon as the Bedell Scholarship was set up that £1,000 disappeared. The Bedell Scholarship succeeded as a representative of that £1,000.

3579. I find in the reports of the Irish Society the following: "That we desire again to state our thankful appreciation of the foundation of a Professorship in the University for the cultivation of the Irish language; and, further, in aid of the same object, we approve of the allocation of £1,000, as a commencement, of establishment of exhibitions for young men studying the Irish language?"—Yes.

3580. Can you tell us what became of that £1,000?—The £1,000, I have already stated, was then voted for the purpose of that exhibition. The title of the thing was changed, and the exhibition developed into the Bedell Scholarship.

3581. It is from that £1,000 the Bedell Scholarships are paid, but not the £20 in prizes?—The £20 in prizes come directly out of the funds of Trinity College.

3582. In looking through that deed hurriedly, I thought I saw the allocation of £20 in prizes mentioned in it?—That is part of the covenant of the setting up of the Professorship.

3583. CHAIRMAN.—That is what it is covenanted to pay?—Yes, straight out of the funds.

3584. Dr. COFFEY.—Do you think it desirable that any steps whatever should be taken to take away any misconception that there may be of the relation of Irish to the Divinity School in Dublin University?—It has no connection.

3585. But you think no steps whatever need be taken?—None whatever. The Calendar has been rather obscure about it. All that need be done is to put a clear statement of the case in the Calendar instead of the obscure statement that had appeared up to this year.

3586. There must be some misconception in the minds of those who drafted the Calendar as to the position?—It is very natural that the misconception should exist in the minds of outsiders when a misconception exists in Dr. Douglas Hyde's mind, who knew so much about it.

3587. I speak neither of Dr. Douglas Hyde nor outsiders, but of those who drafted the Calendar?—I am not responsible for the Calendar; the Calendar had been obscure.

CHAIRMAN.—I do not know where it is in the Calendar.

Dr. COFFEY.—It has been changed in recent Calendars.

3588. DR. DOUGLAS HYDE.—It used to be sandwiched in a couple of years ago between the Professorship of Ecclesiastical History and the Professorship of Pastoral Theology?—It was in the lists. In the lists of the College staff you refer to, the name of the Professor of Irish happened, by accident I believe, to be placed between the names of those other Professors; but it was a mere accident.

3589. DR. CORREY.—If the Professors of Irish were not called upon to examine for the Bedell?—I have already said the Senior Lecturer asked me to examine for the prize, and I did so.

3590. If the Professor of Irish were not called upon by the Senior Lecturer, who would be called upon?—I do not know at all. Somebody, no doubt, connected with Divinity.

3591. And knowing Irish?—Yes.

3592. Is there any such person in the College except yourself?—As a matter of fact, my son presented himself for the prize, and they obtained two examiners to examine my son for that prize.

3593. Outsiders for the time being?—One of them; yes.

3594. As a matter of ordinary procedure, you are probably called upon?—I usually am called upon.

3595. Do you not think that the misconception which prevails, in some minds at least, in regard to the position of Irish in relation to the Divinity might arise in this way: in part from the existence of the special Bedell and Kyle prizes, and because the Professor of Irish does not devote his whole time to it, but is a clergyman, with other functions to discharge?—I do not know from what cause it arises. I cannot tell you anything as to the probable cause.

3596. What I wish to come to is this. Would you think it desirable that the Professor of Irish in the College should give all his time to the subject, provided that he got proper remuneration?—Yes, provided he was remunerated properly.

3597. Do you think that in the interests of the College such a Professorship should be established?—I believe it would be desirable, if the College could afford it, to have a Professor of Irish whose sole business would be to teach Irish.

3598. And sufficiently paid for it?—And sufficiently paid for it.

3599. And that would tend to add to the number of students who take Irish?—I do not know.

3600. You cannot offer an opinion as to whether it would increase the number of students?—I cannot, but I think it would be a desirable thing.

3601. CHAIRMAN.—Do you know where the original of this Deed is?—I have been told that a copy has been furnished to this Commission.

3602. May we keep this copy for a little while?—Certainly.

3603. LORD CHIEF BARON.—If it do nothing else it will put an end to the misapprehension?—I think so.

3604. DR. DOUGLAS HYDE.—There is one question about the Library in Trinity College—the Irish books. Are any of your students working on them at all?—Do you mean published books or manuscript texts?

3605. Manuscript texts?—Not that I know of.

3606. Have any occupants of the Irish Chair ever published any poetry from that vast receptacle of manuscripts at Trinity College?—I could not answer for them, but as far as I know they have not.

3607. Or prose or historical works?—The Professor of Celtic has, as you know, published the . . .

3608. I know that, but I speak of the Irish Professors. Have any of the members published Irish texts?—As far as I know they have not, beyond the dictionaries I have referred to and the Brehon Laws. Dr. O'Mahoney published, I think certainly, two volumes of the Brehon Laws.

The Witness withdrew.

Rev. J. E. H.
Murphy, M.A.

The Commission adjourned until the following morning.

TENTH DAY.

FRIDAY, NOVEMBER 9TH, 1906,

AT 10.45 O'CLOCK, A.M.,

At the Royal Commissions House, 5, Old Palace Yard, Westminster, London, S.W.

Present:—The Right Hon. Sir EDWARD FRY, P.C., D.C.L., LL.D., F.R.S., F.B.A. (Chairman);
The Right Hon. C. PALLES, P.C., LL.D., Lord Chief Baron of the Exchequer in Ireland;
Sir THOMAS RALEIGH, M.A., D.C.L., K.C.S.I.; Sir ARTHUR RÜCKER, M.A., D.SC., LL.D.,
F.R.S.; HENRY JACKSON, Esq., D.LITT., LL.D.; DOUGLAS HYDE, Esq., LL.D.; DENIS J.
COFFEY, Esq., M.A., M.B., F.R.U.I.; S. B. KELLEHER, Esq., M.A., F.T.C.D.;

and J. D. DALY, Esq., M.A., Secretary.

LONDON.

Rev. T. HAMILTON, M.A., D.D., President of Queen's College, Belfast, called in and examined.

Nov. 9, 1906.

Rev. T.
Hamilton,
M.A., D.D.

3609. CHAIRMAN.—You have been good enough to come here to assist us, you being the President of Queen's College, Belfast?—Yes; that is so.

3610. You are aware, no doubt, that many plans have been suggested to us in the course of this Inquiry, and that there are a certain set of plans and schemes of which the leading feature may be taken from Lord Dunraven's plan, which is the combination of Trinity College, the Colleges of Cork and Belfast, and a new College to be established in Dublin under one University. We should like to know what view you take of that from the point of view of your College?—May I begin by saying that I sincerely hope that some settlement may be arrived at on this question? In Belfast we feel particularly strongly on the subject, because I fancy, more than almost any other part of the country, we are suffering from the unfortunate University connection that we have, and from the uncertainty of what the future will bring, as well as from the sad results of past legislation.

Now, I have very few remarks to make with regard to the question which you have put to me, but may I say, in the first place, that I understand that the solution which your lordship has mentioned would involve the destruction of the Royal University? If the Queen's Colleges are introduced into the University of Dublin, in some shape or form, and if, as I suppose, a College, sufficiently attractive for Roman Catholics, either University College, Dublin, or some other of the same kind, is also to have a place in that University, there would, of course, be no room for the Royal University. Therefore, I presume that I may take it that this proposed solution would mean the placing of all Irish University education within what one may call one pen.

3611. Of course it is conceivable that the Royal University might be left standing as a degree-granting body for the students who came from none of the affiliated Colleges?—But so far as regards a teaching University there would be but one. Well, I feel very strongly as to the evil of setting up Universities, apparently for the purpose of destroying them within a few years. In Ireland we have had some sad illustrations of that. The Queen's University was established in 1850. It did, in the opinion of a great many of us, a large amount of valuable work, but, just when it was in the heyday of its prosperity, in 1879 it was suddenly cut down, with very little warning. The Royal University was established in the same year, and came into active operation a few years later; and if, in turn, it is to be cut down after a career of twenty-five or twenty-six years, this unfortunate state of things will be repeated. I submit, my lord, that this method of dealing with Universities, and with University education, in Ireland or anywhere else, is unfortunate, and is not likely to advance University education. As a matter of fact, the graduates of the old Queen's University

were transferred by Act of Parliament to the Royal; but so strongly did many of them feel as to the iniquity of this transaction, that to this day they call themselves graduates of the Queen's University, and as far as possible do not recognise themselves as belonging to the Royal at all. Now, if the same thing is to be done over again, with regard to the men who have graduated in the Royal University during the last twenty-five or twenty-six years, we shall have a similar state of things, which, I venture to say, would be, at least, unfortunate.

May I, again, point out that the Royal University has been, within its limits, extremely successful? It seems to me it would be a strong step to destroy it. It has made steady progress year by year. This year over 3,700 students have come in for examination, the largest number that we have ever had. Nor is this simply a spurt for one year. It is a point which has been reached by steady steps, year after year, for a considerable time. I think in some ways the Royal University may claim to be the National University. It has by far the largest number of University students; it has a great width of area, drawing its students from all quarters of the country, and most evidently it has proved itself to be adapted to the conditions of Ireland, and acceptable to the people. And, withal, it has only an endowment of £20,000 per annum, which really does not come out of the State Exchequer, because it is drawn from the funds of the late Established Church of Ireland. It seems to me that it would be a pity to destroy a University which, within its limited means and notwithstanding its disadvantages, of which no one is better aware than I am, has been doing such a large and widely extended work in Ireland. Besides, it seems to me that, in a very easy manner, the Royal University might be made a University of the highest rank without much trouble, and on lines of very little resistance. I presume that the Commission is aware of a resolution which was passed by the Senate of the Royal University on the 7th March this year—a resolution which was proposed by Dr. O'Dwyer, the Roman Catholic Bishop of Limerick, and which I had the honour to second. The resolution was "That the Report of the Royal Commission" (that is the Commission of 1901)—

3612. Yes, we know; Lord Robertson's Commission?—The resolution was: "That the Report of the Royal Commission in its animadversions on this University as an Examining Body, indicated truly the essential defect in its Constitution, and we believe that its reform in this respect so as to make it a teaching University, with Colleges adequately constituted and brought into organic connection with it, is a matter of urgent need both for the University itself and for the interests of Higher Education in the country." This resolution was carried, and it is, as the Commission will observe, in harmony with the finding

of the Commission of 1901. It seemed to us, and to the Senate of the University, that this was the true solution of the problem, that it was a solution that might be very easily arrived at, and that, though possibly not the ideal solution, if we had everything that we should like to have in this world, it is a solution under which the University might do a really splendid work for the country, and under which the constituent Colleges might be relieved from the various grievances to which they are now subjected. The meaning of that resolution, according to the ideas of the mover and seconder, was that the University should be re-formed on academic lines, that there should be connected with it—really connected with it—teaching Colleges, that these Colleges should have as large an amount of autonomy as possible; and that the Senate should exercise a careful supervision, but should leave the Colleges to strike out for themselves according to the necessities of the different parts of the country in which they are placed. That solution, taking everything into account, is, it appears to me, with all respect, a much better one than that which has been placed before the Commission. Now, with regard to the solution itself, may I make a few observations?

3613. If you please?—In the first place it would mean the placing of all higher education in Ireland, as I have said, within the pale of one University.

3614. You are now speaking of the Dunraven scheme?—I am. The Commission are no doubt, as well aware as I am, that this is a plan which has been tried in other countries and has proved a failure. It was tried in France. Napoleon, as we all know, demolished the various Universities of France in, I think, 1808, and established one national University. Well, I think there is no difference of opinion as to the results of that action—France has returned, as far as she has been able to return, to the old régime.

3615. That is to say, re-constituted the old Universities?—Re-constituted the old Universities. I am not aware of any country in the world, which, with advantage, has placed all its higher education under one University. Wales, possibly, is an exception, but Wales may, perhaps, be taken as part of England; and I understand that in Wales the arrangement that has been come to has not at all proved an ideal arrangement, and that, if it were not for various difficulties, the people of Wales would be very glad to have Universities scattered over the country. Well, I do not think that what has proved a bad thing elsewhere should be given to Ireland. I think there is no doubt that the modern trend is, not to concentrate University education in one University, but to scatter it over the country. Of course we all know what has happened in England—how federal Universities have been broken up; and we know how many Universities have been established in England in the last very few years. Why a system that has been abandoned elsewhere should be introduced into Ireland, with the authority of this Commission, I am at a loss to understand.

3616. May I just interpose one question? Does not this objection to federalisation, which I quite follow, apply, to a certain extent, to the re-constituted Royal University?—Possibly in appearance, yes, but I should think not really, because an essential part of the scheme which was proposed to the Royal University was that the constituent Colleges should be as nearly as possible Universities, without being so altogether.

3617. You think the bond would be a much slighter one?—Very much slighter.

3618. And therefore less likely to break?—Less likely to break and giving more freedom to the different parts of the country.

3619. Your idea is to have an alternative examination in different subjects, trying to keep the value as far as possible equal, I suppose?—That is so, and to allow a place like Belfast, the characteristics of which are of course as different as possible from those of Dublin, to strike out in its own direction, and allow Cork, which is different, again, from both Belfast and Dublin, to strike out in its own direction. Let each arrange its own curriculum, to be approved by the Senate of the University, but only to be approved.

3620. But it was found in the case of the Northern Colleges that one of the difficulties which created friction was the fact that all the ceremonials of the University were held in Manchester. I suppose you

would hold that each College should have the conferring of its own degrees?—Certainly.

3621. And I suppose there would be a Chancellor or Vice-Chancellor in whom would be vested the powers of dealing with these matters?—And you could have a pro-Vice-Chancellor; but I certainly think the ceremonials should be dispersed over the country.

3622. Other difficulties have arisen with regard to the University Committees, or Senates, or whatever the Governing bodies may be—those members who happen to be domiciled in the University have a great advantage over those that are more distant. What do you say to that?—I do not exactly follow the objection.

3623. Supposing Cork elected a certain number on the Governing Body of the University, and Belfast a certain number, and the College in Dublin a certain number, those elected in Dublin, supposing the meetings were held in Dublin, would have the advantage of being on the spot, whereas the others would have to come from a distance, and have to interrupt their work at their own Colleges?—The same thing exists in the Royal University, and we do not find difficulties. We have Cork, Galway, Belfast, and Dublin men.

3624. And you find they attend?—Oh, yes, they attend.

3625. How does it work there?—It works admirably; in fact possibly the men living at a distance attend more regularly than those in Dublin, because they come up specially for the purpose and remain to the end of the meetings.

3626. However, I interrupted you?—Well, I was saying that I think it would be a pity to establish in Ireland a system that has been discredited elsewhere. Everybody knows that in olden times Ireland was renowned for its learning. But I am afraid that if, in ancient days, it was one of the most learned countries in Europe, some people might point to it now as one of the most ignorant. That is not the fault of Ireland. In my opinion we have one of the cleverest and most quick-witted people on the face of the earth. The fault is not theirs, but that of the systems under which they have been taught, and I am perfectly convinced that if some system, such as I have shadowed out, were established in Ireland, we should see higher education, not only brought to the doors of the people in its best form, but taken advantage of to a very much larger extent than it ever has been in modern days in our country. But to return to the action of the Royal University—it passed a further resolution* on the 25th October of this year, on the motion of Dr. Delany, the President of University College, Stephen's Green, seconded by the Roman Catholic Archbishop of Tuam, Dr. Healy. The resolution was passed unanimously. I have no doubt the Commission has it. I have not a copy of it here.

3627. Yes, we have it?—The purport of it was to protest very strongly against the placing of all higher education in Ireland in one University. That resolution was passed unanimously.

3628. Was it a full meeting of the Council?—A large meeting of the Senate.

3629. The Senate?—Yes. And when your lordship recollects the constitution of that Senate, that we have upon it Protestants, Roman Catholics, representatives of all Churches, Heads of Colleges, Teachers in Colleges, and members of all Professions, clerical, medical, and legal, you have a body which, I think, speaks with exceptional authority; and when you recollect that that Senate has been dealing with Irish higher education now for twenty-six years, and has had full experience of all the difficulties under which it has to be carried on in Ireland, I think that a very large amount of value ought to be attached to the deliverance of such a body of men.

I should like to say, again, that Queen's College, Belfast, is entirely opposed to the solution which your lordship has mentioned to me. I thought it right, before coming up to give evidence here, to convene a meeting of the Professors, because I felt certain that their views would be of very much greater weight than any opinion of mine. That meeting was held on the 2nd of this month, and the following resolution was passed unanimously:—"That the Corporate Body of Queen's College, Belfast, does not think it desirable that this College should be introduced into the University of Dublin, or be connected in any way with that University, and it requests the President to lay this, its unanimous opinion, before the Royal Commission."

Rev. T.
Hamilton,
M.A., D.D.

LONDON.
Nov. 9, 1906.

Rev. T.
Hamilton,
M.A., D.D.

That resolution was proposed by Professor Samuel Dill, Litt.D., LL.D., whose name I have no doubt is known to many in this room.

3630. I have read some very interesting books of his?—And it was seconded by Professor Gregory Smith. They are both Oxford men: Professor Dill, a Belfast man, ultimately went to Oxford and Professor Gregory Smith, a Balliol man, came to Belfast last year. That resolution was passed unanimously, and when the Commission recollects that the Body which passed it is composed of men of the highest standing in the world of learning, some of them Oxford men, some Cambridge men, some Edinburgh men, some Graduates of Continental Universities, some Graduates of Dublin University, and some *alumni* of our own, I think that a very great amount of intrinsic weight necessarily attaches to the resolution. It was passed not only unanimously, but with the most earnest hope that it would be acted upon.

Now, I should say that that resolution does not indicate any unfriendliness in the world to Trinity College, Dublin. There is none; on the contrary, there is the utmost fraternity between Trinity College, Dublin, and Queen's College, Belfast, and I hope always will be. There are the kindest relations in many ways between the two Colleges. Personally, I have the most friendly connections with Trinity College, and several of our Professors act as extern Examiners in the University of Dublin; so I hope the Commission will not imagine that, in the slightest degree, that resolution was dictated by any kind of unfriendliness towards Trinity College or the University of Dublin. But there were one or two considerations which weighed strongly with us. In the first place, I think it is generally recognised—at least when I was actively engaged in clerical work I found it so—that a marriage between two parties, one wealthy and the other very poor, is not likely to turn out happily. Of course, there is the case of King Cophetua and the beggar maid.

3631. That is a long time ago?—A long time ago. It is not generally desirable. So if you put together a College with an income of over £70,000 and a College with an income of barely £13,000 a year, there is no equality between them. And I do not suppose that the wildest dreams of this Commission would lead them to believe that either the Crown or anybody else would raise the income of Queen's College, Belfast, to the sum of £70,000 a year. That was one consideration which weighed with us. In the next place, it is always equally unfortunate, I think, to have a forced marriage between two people who do not want to be married. Now, so far as I understand, Trinity College, Dublin, as represented by its Governing Body, does not want this connection with us, and the resolution I have placed before the Commission shows that Queen's College, Belfast, does not want it. It would be an unhappy kind of marriage if the two were brought together against their will.

Then, again, it seemed to us, and it seems very strongly to myself, that there is a very considerable amount of incompatibility between Trinity College, Dublin, and Queen's College, Belfast. The ways, the life, the atmosphere, the methods of the two places, while in both cases excellent for the purposes of each, are entirely different. May I give one illustration? Let us take the Degree in Medicine. In Trinity College, Dublin, a man wishing to take a Degree in Medicine must first become a Graduate in Arts. Now, that lengthens the course considerably, and adds very much to the expense of the Degree. In Belfast, as one of the Colleges of the Royal University, a man can take, and usually does take, his Medical Degree without taking a Degree in Arts. He is obliged to go a certain way in the Arts course and pass certain examinations, but not to the length of a Degree. I give that as one illustration, out of many, of the differences between the two places, and these differences being as they are, I think it extremely likely that any such union as foreshadowed would end in disaster. It would be felt as a hardship, to take the one case I have put before the Commission, to render it compulsory for a Belfast man to take a Degree in Arts before taking a Degree in Medicine; and, on the other hand, in Dublin it would be felt to be a serious climbing down to alter their system requiring the Arts Degree before the Medical is granted.

Then, again, it seems to me that the suggested solution would have a very prejudicial effect on Trinity

College, Dublin, and Dublin University. Neither of them under the proposed scheme could possibly be what it is now. A new Governing Body would require to be, I take it, established in Dublin University, and I should fear very much that there would be introduced a struggle for ascendancy on the part of rival creeds and conflicting interests of all kinds, a sort of struggle with which, unfortunately, we are not unfamiliar in Ireland, both in Higher Education and lower down. In the interest of Trinity College I should deprecate that sort of thing extremely. The University of Dublin has an ancient history; it occupies a most honourable position in the country, and it seems to me that it would be to degrade it, and to endanger its usefulness, to bring it within the arena necessarily implied in the solution now referred to. In the same way the change, we think, would have a bad effect on Queen's College, Belfast. Undoubtedly, it would occupy a very secondary position in the proposed union of Colleges. As regards money, it is immensely poorer than Trinity College, and, as regards influence, it is undoubted, I think, that the Dublin College would have by far the larger amount of weight. Our College in Belfast is acceptable to the people. Its systems, its ways, and everything about it are in harmony with the ideas of the people of Ulster. This was proved in a very effective manner last year, when the public subscribed a fund of £70,000 for the purpose of improving the equipment of the College. I think that no other proof is necessary to show that it possesses the confidence and is in harmony with the ideas of the people of the North of Ireland. But to change its systems and make the great alterations which unquestionably would be involved in the solution now under consideration would be, I fear, to alter all this, to endanger its popularity, and seriously to interfere with its usefulness. Really, I can see no solid argument for this solution either as regards Trinity College, Dublin, or Queen's College, Belfast, and I am afraid that its adoption would be attended by serious dangers, not only to these two Colleges, but to learning and to Ireland—dangers so serious and so great that for my part I cannot view them without dread.

I therefore much prefer the solution proposed by the Commission of 1901, and I should hope that this whole question will not be viewed, as too many people have got into the habit of viewing it, from a sectarian or denominational point of view, but from a point of view which is apparently the one which is apt to be lost sight of, and yet is the one which ought to be kept before the minds of all who are anxious for the advancement of Higher Education in the country, the point of view of the best way of promoting the education of the people of Ireland. These few words convey the ideas at which I have arrived with regard to this question.

3632. You have been for some years, I suppose, a member of the Governing Body of the Royal University?—For sixteen years.

3633. Therefore, you have had a long experience. Do you find that that Body works harmoniously in spite of the religious differences of its members?—With the utmost harmony.

3634. Therefore, you have an existing Institution which works well?—It works remarkably well.

3635. And you say, do not throw that away?—Exactly.

3636. LORD CHIEF BARON.—I have only one question to ask. You object to a Federal University?—In the ordinary sense of the word, yes.

3637. Well, I wish you to explain a little more in detail, for I do not quite comprehend it, the distinction in principle in relation to federalism between the plan that you advocate, that is a reformed Royal University with affiliated Colleges in Cork and Belfast and a new College in Dublin, and that which you object to—Lord Dunraven's plan, which is the existing University of Dublin, with Colleges in Cork and Belfast, and, two Colleges in Dublin, viz., Trinity College and a new College?—In the first place, the solution which proceeds on the lines of a reformed Royal University gives Ireland its two Universities. I deprecate very much, as I have said, the placing of all Higher Education in the country under one, and I think it is a most important point—that under the Royal University solution, the solution of the Commission of 1901, we should have two and not one. Again, the Commission, of course, know, as practical

men, that we cannot always in this world get the ideal best. Oftentimes the best is unattainable, and we have to take what is the nearest to it rather than get nothing at all. I do not for a moment say that a Federal University is the best type of University. I do not believe that, but having regard to the circumstances of Ireland, and having regard to the proposed type of Federal University, which is not a Federal University of the ordinary kind, but one distinguished in several points from others of the sort, I think it is the best thing for Ireland at present. The Colleges, under the solution advocated by the Senate of the Royal University, would be as nearly as possible Universities without the name. They would be under the control of the Senate; their standards would be approved by the Senate; their curricula would be approved by the Senate; a careful supervision would be exercised over them by the Senate, and it would be a non-sectarian body fully representative of all interests in the country, and of the Colleges. It seems to me that that is a very different kind of solution from a Federal University such as there was in England in the case of the Victoria University.

3638. I am not speaking of the Victoria University—I would rather not go into that at present. I am speaking of the proposition of Lord Dunraven?—I think for the reasons I have mentioned there are very marked differences between the two.

3639. Sir THOMAS RALEIGH.—You have given us certain resolutions passed in your own University and College against the plan of a single University. Now, I have read what has appeared in the Irish papers about those resolutions, and I observe that a number of speakers and writers have laid stress on the argument that a single University would centralise everything and make all teaching and examinations uniform. But you now come and propose a federal scheme of a Royal University which does not involve these changes, which leaves to each College autonomy as to its curriculum and its examination. If the discussion could have been confined to a plan of that kind, do you think that your University and College would unanimously have rejected it?—Do you mean would have rejected a proposal to have a Federal University with autonomous Colleges?

3640. With autonomous Colleges, yes?—Do you mean having one University of that kind for all Ireland?

3641. For the whole of Ireland, yes?—They object strongly to having one University for the whole of Ireland.

3642. Even if it leaves them practically all the powers that they have now?—I think so, and they object, as I have said, to having that one University the University of Dublin, for the reasons, among others, that I have adduced.

3643. Supposing it were put to you in this way—I am not advocating anything, you will recollect; I am only trying to get all the pros and cons out as far as possible. Supposing that it were put to you in this way, that you begin with a strong constitution, and then federate the whole of your Colleges, leaving out Trinity, and put down a University which, from the necessities of the case must be a rival University of Dublin?—But Ireland would have two Universities; and our objection to all higher education being in one camp would be done away with, because we should have two.

3644. Do you think, as head of a College which might almost be described as a University in itself, that it is a good thing to have two Universities in one town?—Well, Dublin has had two Universities for fifty-six years.

3645. Yes, and here we are investigating the results?—Yes. Well, a great many of us deprecate very much the action of 1879, by which the Queen's University was destroyed. Dublin is the capital of the country. Ideally, I suppose, it is not a good thing to have the seats of both Universities in one place, but Dublin is the capital, it is a central place, and practically I have never found that any great difficulty arose from two Universities being there.

3646. You have spoken of the evils of centralization, and one of your examples was the University of France. Now, I have read in books about that. That University in France was, no doubt, an instance of Napoleonic over-centralization. At the same time, there are many Frenchmen who think it was a most valuable stage in the transition from the old Universities before the Revolution to the modern Universities

now growing up in many of the large towns of France. Do you think there is anything in that idea as applied to Ireland that a single University, while one would not regard it as a final settlement of the University question, might be regarded as a useful transition stage leading up to the formation of Universities certainly in Cork and Belfast, and possibly elsewhere?—Certainly, I for my part fully realise that the time must come when Belfast, at all events, will have a University of its own. That time has not yet come. Belfast is not ripe for that solution, but I quite fall in with the idea that you have thrown out—that the proposed solution of changing the Royal University into a true teaching University, with constituent Colleges, which would be almost Universities, would be a very important step towards the realisation of that end, which must be realised, in my opinion, some day—whether I shall live to see it or not is another question.

3647. But you dismiss as impossible the notion of making the University of Dublin the basis of such a scheme as you allude to?—I do.

3648. Sir ARTHUR RÜCKER.—I should like to ask you whether in arriving at your view that there should be at least two Universities in Ireland, you have arrived at it because you think that it is desirable, if it were possible, that there should be competition between two Universities of similar type, or do you think that the types of the two Universities ought to be really different?—I think they must be different. The types of the Royal University and Dublin University at present are extremely different. The Dublin University is old, and the Royal is new, and, I think, it may be said, without any disrespect to Trinity, that the Royal proceeds on more modern lines than Trinity. The same thing applies to Queen's College, Belfast, as compared with Trinity College, Dublin. We in Belfast do not falter in our allegiance to the old Humanities, and I hope we never shall. I am strongly in favour of keeping Latin, Greek, and Mathematics in the position they used to occupy. But, alongside of them we have introduced a Modern side with great advantage, and we are being pressed by the people of Belfast to go still further in this direction. They want very much to have a Faculty of Commerce; they want a great deal of weight and importance attached to such things as Electrical Engineering, and other Arts and Sciences connected with technical education; in fact, many look forward to a junction some day between Queen's College, Belfast, and the Municipal Technical Institute there. What I mean to say is that we are pushing strongly the modern side of education, both literary and scientific. Then, again, the Royal University is the University of the people; its fees are low; it caters to a large extent for people of limited means. It opens its doors as widely as it can, and on as easy terms as it can, and in that respect is very different from the University of Dublin, whose Degrees can only be taken at a large expense.

3649. Then, you would feel no grave objection to the introduction of a Dublin College into the Royal University?—None whatever, provided it were constituted on right lines.

3650. May I put it this way—your feeling is, that whereas a Federal University, such as the Northern Victoria University was in England, in which the Colleges were of the same type, might possibly succeed, it would be somewhat analogous to bringing in a federation in England in which Oxford and Cambridge were constituents on the one side, and Manchester and Sheffield on the other?—Precisely so.

3651. That is your objection?—Yes.

3652. There is one other point. You spoke of making the Royal University a true teaching University. You know generally that the University of London has been lately made a teaching University with a number, at first, of independent Colleges all in the same town, and we have come to the conclusion in London that no University can be a successful University if it does not itself teach—if it merely supervises a number of Colleges it falls back into the place very much of the old London University as an examining body. Now, how do you get over that difficulty with regard to your Federal University?—Well, might it not be possible to make the Professors of the constituent Colleges University Professors?

3653. Elected by the University?—Elected by the University.

3654. You would be prepared to go as far as that?—I do not mean to say that they would be elected by the University to be the Professors in the Colleges, but that the University should take them as they are and constitute them University Professors, and teach through them.

3655. That is merely a change of name and dignity, not a real control of the teaching body?—At present the Royal University does its teaching by means of Fellows who are obliged, in virtue of being Fellows, to teach in Colleges approved by the University. I do not say for a moment that that is an ideal state of things, because in many ways it is most objectionable, but I mean to say that on some such principle I think it is conceivable that the University might become actively a teaching body, which, I think, is very desirable.

3656. Through the acceptance of teachers nominated by the Colleges—that is what it would come to?—And controlling those teachers and their teaching.

3657. But what I want to come to is this—how far the autonomy of which you spoke is really consistent with control of the teaching body. What sort of control would you give to the University of Dublin over the teacher in Belfast?—The same control as the Royal University now has over a teaching Fellow.

3658. What does that amount to?—Well, the Royal University Senate only appoints a man a Fellow who is recommended to it by the authorities of the College in which he teaches. He is obliged to teach there, and a return is submitted to the Senate of the University every year of the teaching that he gives, the time he occupies, and so on.

3659. But you would not allow the University to have any more effective control. If it took, to take your own instance, a strong view one way or the other as to whether an Arts Degree should be a necessary preliminary to giving a man a Medical Degree, would you allow it to give effect to that view in opposition to the views of the College?—Well, the College would be represented on the Senate.

3660. But if the Senate opposed any particular College would you allow it, in a crucial case, to override the College?—In the last resort the Senate must have supreme power.

3661. You would be prepared for that?—Yes, I think so. Of course, there would be provision for Visitation in extreme cases—Visitation by the Crown.

3662. With regard to the admission to these various Colleges, would you allow the Universities to control the admission to the teaching classes—admission to the rank of undergraduate—would you allow them to control Matriculation?—You mean the standard for Matriculation?

3663. Yes?—I should think there ought to be a uniform standard for matriculation all over the country, controlled by the Senate.

3664. You do not think the Matriculation at the Dublin College would be any different from that at the College of Belfast?—I do not think so. At present there is no difficulty. The Royal University at present practically governs the matriculation in all its Colleges. In Belfast we simply accept the results of the Royal University matriculation as satisfying us.

3665. I must say, as Sir Thomas Raleigh did, I am not advocating any view, but only trying to get the points. You do not think that any change in Trinity College which is at all likely to be made would make it a useful member of such a federation?—No; I do not think so.

3666. Dr. JACKSON.—Just one or two questions on the same lines, in order that I may clear up my ideas. To what extent is the examination of the Royal University common at present? It is one examination, is it not?—Do you mean the Matriculation Examination?

3667. Well, I was thinking of all the examinations?—I should think so. Of course, the Colleges have Scholarships of their own, for which they examine.

3668. Yes, Scholarships?—For which courses are set.

3669. But between the Matriculation Examination and the Graduation Examination, have you a half-way examination?—No.

3670. You have an entrance examination and a graduation examination?—That is so, and we have two intermediate examinations between matriculation and graduation.

3671. That is what I meant by a half-way examination. I suppose that all the students take those examinations in common?—All.

3672. The subjects are the same with, I suppose, slight differences of course?—They are absolutely uniform.

3673. Then your assumption is that, if there were to be a teaching College added to the Royal University, the same thing would hold?—I think so.

3674. So that when you speak of autonomy you do not mean that one College would be free to take a course of its own other than that prescribed by the Royal University?—I take it that the courses of any single College would require to be approved by the Senate of the University.

3675. And the Senate would have substantial powers all round in the teaching Colleges. All the Colleges would be teaching Colleges, I suppose?—That is so.

3676. Only there would be some students offering themselves who did not belong to the constituent Colleges?—I presume you mean students who did not belong to any College.

3677. But who offered themselves for examination?—Well, I think the recommendation of the Commission of 1901 was that the Royal University, under the altered circumstances, should cease altogether to give degrees to men who had not attended Colleges.

3678. And you are accepting that view?—I am accepting that. I suppose a good deal of hardship would be inflicted upon certain people in the country if all at once we closed that door to them, but ultimately we should be glad to see it closed, because I think it has wrought nothing but evil to the education of the country.

3679. In fact I may take it that you support the recommendation of Lord Robertson's Commission?—Certainly.

3680. Dr. DOUGLAS HYDE.—Have you many Roman Catholic students in Belfast College?—Not so many as we should like.

3681. Have you any idea of the proportions between the Protestant students and the Roman Catholics there?—I can give you in a rough way the numbers we had last Session. We had over 400 students in all, and as nearly as possible, if I remember rightly, we had twenty-four or twenty-five Roman Catholics.

3682. You said the College in Belfast was in harmony with its surroundings in Ulster—in point of fact it is really in harmony with only half its surroundings—possibly the better educated and the wealthier half. But what does the other half do? Do they go to Cork or get degrees from private tuition?—Well, I suppose a number get Arts Degrees through private tuition. Of course, they cannot get Medical Degrees except by going through a College.

3683. Have you had any experience of them migrating to Cork to get Medical Degrees in Cork?—No; I do not think so.

3684. Dr. COFFEY.—When the scheme of a single University was before the body of Professors in Queen's College, Belfast, was the question of fees in the constituent Colleges considered—that is, the relation of the fees in Trinity College to the other Colleges?—It was, I think, present to all our minds.

3685. And did you fear that if this modification of Dublin University were carried out, the fees of Trinity College, which are already so heavy, might be reduced, and therefore that College might attract a very large number of students from different centres?—Well, under that proposed solution we thought that undoubtedly one of two things would happen—either the fees of Trinity College would have to be reduced to something like the fees in Belfast, or the fees in Belfast raised to somewhat of the level of those of Trinity, either of which we thought for many reasons both very undesirable and very unlikely.

3686. So that Trinity College would secure the preponderating influence if it reduced its fees?—Certainly.

3687. Then, on the other hand, if the Board of Trinity College was averse to a reduction of fees—if they considered the fees as at present arranged a matter of vital importance to the teachers in the College, and retained their existing system, and if also the

more or less denominational drift persisted—that is, the Church of Ireland student continued to go to Trinity College, the Catholic to the new College and the Presbyterian to Belfast—if that arrangement were adhered to would there be then any special advantage possessed by the wealthy College, that is by Trinity College, in the new Federal University?—I do not exactly understand.

3688. If the fees were not changed in Trinity College, but remained as they are, would it have any special advantage then?—In my remarks I was rather speaking of the preponderating influence on the Senate of a great, old, wealthy College like Trinity College as against Belfast; it was not with regard to such things as fees.

3689. Then, another point. If a reformed Royal University should be established does it not practically put a fence round Dublin University and Trinity College, and separate them from all community of intellectual rivalry with the other University Colleges in the country?—Well, at present there is a pretty broad line of demarcation between the Royal and Dublin University, but not a fence in any offensive sense.

3690. Yes?—From time to time we have Trinity College men as Examiners in the University, and we have students who to some extent take courses in Trinity College, and then go to the Royal.

3691. What I was rather thinking of was this—whether you know if many Trinity College teachers have passed into the other Colleges of the country—into the teaching staff of the other Colleges—under existing arrangements?—We have in Belfast Trinity College men as teachers, and Trinity College has on its staff men who have been Professors in Queen's College, Belfast.

3692. But have you many in Belfast who have been teachers in Trinity College or who have been distinguished graduates?—Yes, from time to time we have had them. We had the late Professor Purser, Professor of Mathematics; we have Professor Fitzgerald, Professor of Engineering, and there have been others from time to time.

3693. From your knowledge, do you think the number of graduates of Trinity College, on your staff, is in any way commensurate with the prestige and position of Trinity College?—Well, in Belfast our practice is when a Chair falls vacant to have the claims and merits of all the candidates fully weighed, and I think it is universally recognised in the North of Ireland that the best man, in our judgment at all events, and in the judgment of the Crown, gets the post. A man is under no disqualification, certainly, because he may happen to be a graduate of Trinity College, Dublin, because we have taken such a man in many cases; but, on the other hand, no man would be taken merely because he was a Trinity College man.

3694. But what I wanted to ask you was whether that line of demarcation was operating to a considerable extent in such a way as to keep the Trinity College men aloof from the other Colleges of the country—that they do not seek appointments in them?—But in many cases they do. I think, speaking from recollection, that for posts recently vacant in our College, we have had candidates from Trinity College over and over again.

3695. In case you had a federal relation with Dublin University, would not one of its advantages be that it would bring the Trinity graduates into closer association with the graduates and with the staffs of the other Colleges?—Possibly, to some extent.

3696. Mr. KELLEHER.—You said that if the Royal University were reconstituted according to the lines that you have sketched for us, after a time the Belfast Queen's College would demand University powers?—I did not say so absolutely, but I expect that in process of time that will be the result, just as in the case of Liverpool.

3697. And in the process of time the College in Dublin would of course demand University powers?—I am not so well acquainted with things in Dublin and that part of the country as I am with regard to Ulster, therefore I do not know that I should speak on that subject, nor would any opinion of mine upon it be of the slightest value, I am afraid.

3698. If it did occur that a College, which would mainly be of course for Roman Catholics, established in Dublin, did desire to become autonomous before the College in Belfast was ready to be made auton-

omous, do you not think that a considerable amount of friction would arise: that one party would be trying to break away and the other party would be suing for a restitution of conjugal rights? Do you not think it would be necessary in a few years' time to have another Royal Commission to inquire into the conditions?—On the proposed scheme of the reformed Royal University, each constituent College would be autonomous from the first.

3699. But would not have the power of granting degrees?—It would not have the power of granting degrees.

3700. Do you think that that would probably lead to friction at some future date?—Well, one cannot legislate for the future very far in advance, I am afraid.

3701. But would you, to avoid the possibility of such a danger, be prepared to accept straight away University powers for Queen's College, Belfast?—As I have said, I do not think that Belfast and the North of Ireland and Queen's College itself are yet ripe for that solution.

3702. Not even to avoid future trouble and the pains of this breaking away process would they accept the larger powers now?—Well, those dangers and pains are simply matters of conjecture, and lie away in the future; I do not know that we can consider them at present.

3703. CHAIRMAN.—May I just put what I understand to be your scheme for this University. You would have it a Federal University in one sense; you would have, as I understand, one measure of examination for all the Colleges affiliated to the University; after the men had matriculated and become members of the various Colleges you would give each College freedom in the choice of subjects; you would give to the University body the duty of maintaining the equation between the value of the different subjects and maintaining uniformity of standard. Is that the kind of idea?—Yes, and one other very important feature shadowed forth by the Commission of 1901 was that the University examinations should in every case be conducted by at least two examiners, one of these two the teacher of the students in question, and the other an extern Examiner. For example, any examination of a Belfast student should be conducted by a Belfast Professor in conjunction with an extern Examiner.

3704. LORD CHIEF BARON.—They would be University examinations, would they not?—Certainly.

3705. The students of each of the affiliated Colleges would compete with on another?—Certainly.

3706. And University honours would be granted at those examinations?—At the Honours Examinations—yes.

3707. Then the result would be that the Honours classes in each College should be very similar to each other?—As they are at present.

3708. I know, but it should be so?—Oh, yes, certainly.

3709. You do not contemplate that there should be any University Professors, in fact, that is as distinguished from College Professors?—I do not see how that would be possible under existing conditions.

3710. Then the Honours teaching would not be identical in each College?—Well, I fancy it would. At present in Belfast College we simply teach the Honours courses laid down by the Royal, and I do not see why that system could not be pursued under altered circumstances, *mutatis mutandis*.

3711. You are aware, of course, of the systems of Oxford and Cambridge—there are University Lectures as distinguished from College Lectures in both of these Universities; is not that so?—That is so.

3712. And therefore each student is at liberty to avail himself of the benefit of the Lectures of probably the best Lecturers that can be obtained in the country. You observe that that is a different system from the system that you propose?—Certainly, because I do not see how it would be possible for students in Belfast to avail themselves of those distinctly University Lectures which would, I presume, be given in Dublin.
